It certainly could not be denied that the sum of 2.051¢ is in truth 35/256ths of 15¢. However, it is not suggested how this establishes that the unmentioned and anonymous figure of 15¢ represented a price to be paid *by Trusts to Pauley.* Fortunately, there is no need to speculate here as to what the 15¢ figure *did* represent, since as already explained above it admittedly constituted the price to be paid *by Colorado Interstate* for the gas to be marketed from these wells—and when Pauley and Trusts executed their agreement of January 28, 1954 they were operating in the context of a situation where they understood and contemplated that this was to be the case.

It is concluded that the Mizel theory is completely fanciful; that it is unsupported by anything in the express terms of the Pauley-Trusts agreement; and that it does not make any sense whatever in the context of what the parties were doing. In order to adopt the Mizel theory here, it would be necessary to conclude that Trusts had some reason for desiring to purchase this gas from Pauley at a price of 15¢ per Mcf, despite the fact that it was contemplated that the gas would subsequently be marketed to Colorado Interstate for the same price. It would have to further be concluded that Trusts recognized that such a pointless purchase of this gas from Pauley at a price of 15¢ per Mcf would trigger its 11¢ contract with Mizel, and accordingly undertook to avoid this risk by camouflaging the price payable to Pauley in Par. XIII, Art. VI, as a 2.051¢ price. The mere statement of this theory is enough to discredit it.

Acutally, to the extent that we may regard Par. XIII *arguendo* as providing for a "purchase" of this gas by Trusts from Pauley, this portion of the agreement is similar in nature to a standard percentage-type casinghead gas contract, under which the price to be paid by the plant-purchaser to the producer-supplier is expressed as a stated percentage of the plant operator's ultimate gross realization from the resale of the residue gas at the tail-gate of the plant. The only difference here is that, at the time of the instant contract, the proceeds to be derived from the marketing of this gas were already known, in the sense that the gas was to be marketed to Colorado Interstate at a price of 15¢ per Mcf. Accordingly, instead of merely providing that Pauley should receive 35/256ths of the ultimate gross realization from the marketing of this gas by Trusts, the parties were able to spell out the return to Pauley in terms of 35/256ths of the 15¢ marketing price, or 2.051¢ per Mcf.

Certainly under a standard percentage-type casinghead gas contract, providing that the seller was to receive X% of the ultimate gross realization, if the residue gas were ultimately marketed by the plant operator for 15¢ per Mcf no one would seriously contend that the price payable to the producer-supplier by the plant operator was the 15¢ ultimate gross realization. Similarly here it is obvious that, to the extent we are to regard the instant situation as involving a "purchase" of gas by Trusts from Pauley, the price paid by Trusts to Pauley was *not* the ultimate gross realization of 15¢ per Mcf, but rather the 2.051¢ per Mcf expressly set forth in Par. XIII, Art. VI—being Pauley's 35/256ths proportionate share of the 15¢ ultimate gross realization.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the Presiding Examiner *finds and concludes*, in addition to the findings and conclusions hereinbefore stated, that:

(1) Henderson Trusts did not purchase gas in quantities of 100,000 cubic feet daily, or more, at a price of 15¢ per Mcf on or prior to June 7, 1954 under the Pauley-Trusts agreement.

(2) The escalation clause of the Mizel-Trusts contract was not triggered on or prior to June 7, 1954.

(3) The correct rate, effective as of June 7, 1954, for the sale of natural gas by Mizel to Henderson Trusts under Morris Mizel, *et al.*, FPC Gas Rate Schedule No. 2, is 11¢ per Mcf, as reflected in the original billing statement filed by Mizel with the Commision on December 6. 1954.

ORDER

WHEREFORE, IT IS ORDERED, subject to review by the Commission on appeal, or upon its own motion as provided in the Commission's Rules of Practice and Procedure, that:

(A) Mizel's "Request for Substitution of Corrected Billing Statement" is denied.

JOSEPH ZWERDLING,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NEW ENGLAND POWER COMPANY, PROJECT NO. 2323

ORDER ISSUING LICENSE (MAJOR)

(Issued October 29, 1963)

Application was filed on October 1, 1962 by New England Power Company (Applicant) of Boston, Massachusetts, for license under Section 4(e) of the Federal Power Act (Act) for constructed major Project No. 2323, known as the Deerfield River Project, located on the Deerfield River between river miles 69.8 and 11 in Berkshire and Franklin Counties, Massachusetts, and Bennington and Windham Counties, Vermont.

The project was constructed by Applicant between 1911 and 1927, and since that time there have been no major changes in the project works. The total installed generating capacity of the project is 74,200 kilowatts, and the energy generated thereby is delivered to Applicant's transmission system sold for public utility purposes.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, have advised that the plans of the project structures affecting navigation are considered satisfactory. The plans of the structures affecting navigation were approved pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, has recommended, for inclusion in any license issued for the project, two special conditions for the protection of fish and wildlife.

Applicant proposes to increase the flood storage and spillway capacity of the Harriman and Sherman dams. The crest of the earth embankment of Harriman dam would be raised 9.5 feet, and that of Sherman dam, 10 feet. The Sherman dam spillway channel would be excavated to the extent indicated as desirable by laboratory model studies. These modifications would assure the stability and safety of these structures. We are hereinafter approving the proposed modifications and are including herein a special condition relating to the operation of the Somerset Reservoir, upstream from Harriman and Sherman dams, also in the interest of stability and safety of the latter two dams.

The Deerfield River, second largest tributary of the Connecticut River, is about 72 miles in length running from north to south. The upstream 30 miles of the river is in Vermont and the lower-most 42 miles is in Massachusetts. The total drainage area of Deerfield River is 655 square miles, 348 of which are in Massachusetts with 307 square miles in Vermont.

According to available records, both above and below the uppermost project reservoir, Somerset, there have been log drives on the Deerfield River and its tributaries, and in the Searsburg and Wilmington, Vermont area. Logs were floated down the North Branch of Deerfield River to the Kent and Davis Mill where they were cut into "chair stock" and shipped to factories in Massachusetts. Canoeing has occurred from Monroe Bridge at mile 40.8 to Shelbourne Falls at mile 16.3 in the State of Massachusetts.

Before the advent of railroads, Cheapside, at about mile 1.4 being the head of "fall boat" navigation on the Deerfield, then known as Pocomptuck, was a place of considerable trade. Deerfield River flows into the Connecticut River, a navigable water of the United States from its mouth to points above the mouth of Nulhegan River at mile 344, a tributary of the Connecticut. *Connecticut River Power Co.*, Docket No. E-6346, August 14, 1951 (10 FPC 1255, 1257).

The reservoirs and hydroelectric plants comprising Project No. 2323 operate as parts of one complete project and such operation affects the stage of the Deerfield River at Cheepside, the head of historic "fall boat" navigation on the Deerfield River, and the stage of the Connecticut River into which the Deerfield flows.

For the reasons set forth in Opinion No. 357 pertaining to Public Service Company of New Hampshire's Project No. 2288 (27 FPC 830, 834), the license herein granted shall have an effective date of Aril 1, 1962, and a termination date of December 31, 1963.

The Commission finds:

(1) The Deerfield River and its tributaries from points upstream from the Somerset Reservoir to its confluence with the Connecticut River constitute navigable waters of the United States. The Deerfield River Project is located upon navigable waters of the United States.

(2) The interests of interstate or foreign commerce are affected by the project.

(3) Applicant is a corporation organized under the laws of the State of Massachusetts, is qualified to do business in the States of New Hampshire and Vermont, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a license for the project.

(4) Public notice of the filing of the application has been given. No protest has been received. No conflicting application is before the Commission.

(5) The issuance of a license for the project will not affect the development of water resources for public purposes which should be undertaken by the United States.

(6) Except as recited in finding (7) below, the hereinafter described transmission lines included in the application for license are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(7) Applicant included also in the application a single circuit 115 kv line from Sherman Station via Sherman Junction to the Harriman 115 kv substation as part of the project. However, since 1961, more than 90% of the power flow between Sherman Junction and the Harriman 115 kv substation has originated at Yankee Atomic Electric Company's plant. Therefore, only 0.1 mile of the 115 kv line between Sherman Station and Sherman Junction is a part of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project.

(8) Although not included in the application for license, the following described transmission lines are parts of the project within the meaning of Section 3(11) of the Act and should be included in the license for the project:

(a) The double circuit 69 kv line, 36.6 miles long, from Deerfield No. 2 Station to Ware substation;

(b) The double circuit 69 kv line, 16.6 miles long, from Deerfield No. 4 Station to Vernon Station, under Commission license for Project No. 1904; and

(c) The 69 kv line, 3 miles long, from Searsburg to Pole 33.

(9) The project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

(10) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charges is 98,900 horsepower, and the amount of anual charges to be paid under the license for the project, based on such capacity, for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(11) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to New England Power Company (hereinafter referred to as the Licensee) under Section 4(e) of the Act for a period, effective as of April 1, 1962, and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2323, located on

the Deerfield River, navigable waters of the United States subject to the terms and conditions of the Act, which is incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) The project consists of:

(i) All lands constituting the project areas and inclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the licensee or by the United States; such project area and project boundary being more specifically shown and described by a certain exhibit which formed part of the application for license and which is designated and described as follows:

Exhibit J: (FPC No. 2323-1) General Map of Deerfield River Project

(ii) Project works consisting of:

Dams, Reservoirs and Powerhouses

Deerfield Plant No. 2—located about 11 miles upstream from the confluence of the Deerfield River and the Connecticut River, consisting of: a concrete gravity dam about 70 feet high and 447 feet long; a pond about 1.5 miles long with a maximum operating elevation of 294.66 feet, U.S.G.S. datum; three steel penstocks 11 feet in diameter and 35 feet long; a steel frame and brick powerhouse containing three hydro-electric units with a generating capacity of 1,600 kw each; and appurtenant mechanical and electrical facilities:

Deerfield Plant No. 3—located upstream from Plant No. 2, consisting of: a concrete gravity dam about 15 feet high and 475 feet long; a pond about 1.3 miles long with a maximum operating elevation of 402.66 feet; a concrete conduit 677 feet long; a paved forebay canal 880 feet long; a concrete intake structure; three steel penstocks 10 feet in diameter and 159 feet long; a steel frame and brick powerhouse containing three hydrolectric units with a generating capacity of 1,600 kw each; and appurtenant mechanical and electrical facilities;

Deerfield Plant No. 4—located just upstream from Plant No. 3, consisting of; a concrete gravity dam about 50 feet high and 510 feet long; a pond about 2 miles long with a maximum operating elevation of 473.66 feet; a brick lined tunnel 1,514 feet long; an earth forebay 12,000 square feet in area and 35 feet deep; a concrete intake structure; three steel penstocks 10 feet in diameter and 154 feet long; a steel frame and brick powerhouse containing three hydroelectric units with a generating capacity of 1,600 kw each; a switchyard; and appurtenant mechanical and electrical facilities;

Deerfield Plant No. 5—located about 19 miles upstream from Plant No. 4, consisting of: a concrete and rock-filled timber crib dam about 40 feet high and 151 feet long; a pond about 0.75 mile long with a maximum operating elevation of 1,027.66 feet; conveyance sections of tunnel, concrete conduit, and canal totaling 16,721 feet; a concrete surge tank 46.5 feet high; three steel penstocks 7 feet in diameter and 535 feet long; a steel frame and brick powerhouse containing three hydroelectric units with a generating capacity of 5,000 kw each; a switchyard; and appurtenant mechanical and electrical facilities:

Sherman Plant—located just upstream from Plant No. 5, consisting of: an earth-fill dam 100 feet high and 875 feet long with a concrete gravity spillway; a pond about 2 miles long with a maximum operating elevation of

1,107.66 feet; a concrete and brick intake structure; a steel penstock 13 feet in diameter and about 240 feet long; a steel frame and brick powerhouse containing one hydroelectric unit with a generating capacity of 7,200 kw; and appurtenant mechanical and electrical facilities;

Harriman Plant—located just upstream from the Sherman Plant, consisting of: an earth-fill dam 206 feet high and 1,250 feet long; a morning glory type spillway; a reservoir about 9 miles long providing 116,075 acre-feet of seasonal storage with a usable drawdown of 92 feet from a maximum operating elevation of 1,497.66 feet; a concrete lined tunnel 12,812 feet long; a steel differential surge tank 34 feet in diameter and 184 feet high; three steel penstocks 9 feet in diameter and 620 feet long; a steel frame and brick powerhouse containing three hydroelectric units with a generating capacity of 11,200 kw each; 2 switchyards; and appurtenant mechanical and electrical facilities;

Searsburg Plant—located just upstream from Harriman Reservoir, consisting of: an earth-fill dam about 50 feet high and 612 feet long with a concrete gravity spillway; a pond about 0.9 mile long with a maximum operating elevation of 1,755.66 feet; a wood stave conduit 8 feet in diameter and 18,412 feet long; a steel differential surge tank 50 feet in diameter and 34 feet high; a steel penstock 6.5 feet in diameter and 495 feet long; a steel frame and brick powerhouse containing one hydroelectric unit with a generating capacity of 4,000 kw; and appurtenant mechanical and electrical facilities;

Somerset Reservoir—located on the East Branch of the Deerfield River about 6.2 miles upstream from Searsburg Dam, consisting of: an earth-fill dam about 104 feet high and 2,101 feet long with a concrete gravity spillway with provisions for 3 feet of flashboards; a spillway channel about 800 feet long, 45 feet wide, and from 6 to 30 feet deep; a regulating reservoir about 5.6 miles long providing 57,345 acre-feet of storage with a usable drawdown of 81.7 feet from the spillway crest elevation of 2,133.58 feet; and appurtenant facilities.

Transmission Lines

1. A double circuit 69 kv steel tower line 3.97 miles long from Deerfield No. 2 to Deerfield No. 4, with a tap to Deerfield No. 3, 0.52 miles long;

2. A double circuit 69 kv steel tower line 14.7 miles long from Deerfield No. 4 to Deerfield No. 5;

3. A single circuit 69 kv wood pole H-frame line 14.3 miles long from Deerfield No. 5 to Searsburg, with a connection to Harriman;

4. A single circuit 115 kv wood pole H-frame line 0.1 mile long from Sherman to Sherman Junction; the location, nature, and character of which are more specifically shown and described by the exhibit hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L1, Sheet 1 of 3 (FPC 2323–2) Deerfield No. 2 Development, General Layout;

Exhibit M, Ten typewritten pages, "General Description of Equipment and Appurtenances of the Project," filed in the Commission October 1, 1962.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) The license is also, subject to the terms and conditions set forth in Form L–3, December 15, 1953, entitled "Terms and Conditions of License for Constructed Major Project Affecting Navigable Waters of the United States" (17 FPC 385–389), which terms and conditions, designated as Articles 1 through 17, are attached hereto and made a part hereof, except for Articles 7, 15 and the last sentence of Article 11; and subject to the following special conditions set forth herein as additional articles:

Article 18. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, one (1) cent per horsepower on the authorized installed capacity (98,900 horsepower) plus two and one-half (2½) cents per 1,000 kilowatt hours of gross energy generated during the calendar year for which the charge is made; or such other amounts as may hereafter be determined as necessary to reimburse the United States for the costs of administration.

Article 19. The Licensee shall for the protection of navigation, construct, maintain, and operate at its own expense such lights and other signals on fixed project structures in or over navigable waters of the United States as may be directed by the Secretary of the Department in which the Coast Guard is operating.

Article 20. The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the Vermont Fish and Game Department or the Massachusetts Division of Fisheries and Game, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 21. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interest in lands, reservoirs, waterways and project works as may

be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provision of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 22. The Licensee shall install additional capacity or make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 23. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, and on such conditions concerning the equitable sharing of benefits by the Licensee as the Commission may order.

Article 24. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount; Provided, that the Licensee may reserve, from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property, and Provided, further, That the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the License.

Article 25. The Licensee shall construct maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or interested State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 26. The Licensee shall within one year from the date of issuance of this license, file with the Commission Exhibit F (full detail as to project

lands) and Exhibit K (details maps of properties) in the form required by the Commission's rules and regulations.

Article 27. The Licensee shall commence reconstruction at Harriman and Sherman developments to raise the dams and deepen Sherman spillway channel within one year of the date of acknowledgment of acceptance of this license, shall thereafter in good faith and with due diligence prosecute such construction, and shall complete construction of such project works within two years from the date of acknowledgment of acceptance of this license.

Article 28. The Licensee shall not operate the Somerset Reservoir above the level of the concrete crest of the spillway El. 2133.58 feet U.S.G.S. until the low level outlet conduits are operating at full capacity. The outlets shall remain fully open until the level of the reservoir has receded to concrete crest.

Article 29. The Licensee shall within six months from the date of issuance of this license, file wth the Commission an application for amendment of this license to include the following transmission facilities:

(a) The double circuit 69 kv line, 36.6 miles long, from Deerfield No. 2 Station to Ware substation;

(b) The double circuit 69 kv line, 16.6 miles long, from Deerfield No. 4 Station to Vernon Station (No. 1904); and

(c) The 69 kv line, 3 miles long, from Searsburg to Pole 33.

Article 30. The Licensee shall be responsible for and shall minimize soil erosion and siltation on lands adjacent to the stream resulting from construction and operation of the project. The Commission upon request, or upon its own motion, may order the licensee to construct and maintain such preventive works to accomplish this purpose and to revegetate exposed soil surface as the Commission may find to be necessary after notice and opportunity for hearing.

Article 31. No lease of the project or any part thereof whereby the lessee is granted the occupancy, possession, or use of the project, or any part thereof, shall be made without prior written approval of the Commission; and the Commission may, if in its judgment the situation warrants, require that all the conditions of the license, of the Act, and of the rules and regulations of the Commission shall be applicable to such property so leased to the same extent as if the lessee were the Licensee: Provided, that the provisions of this article shall not apply to leases of land or buildings or other property while not required to achieve the purposes of the license.

(D) The exhibits designated and described in paragraph (B) above are hereby approved.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Commissioner Ross will set forth his individual views in an order granting another license application shortly to be issued. While not stated at this time in order to allow the immediate issuance of this license, the views to be expressed are nevertheless applicable to this license. See 30 FPC 1338 at 1341.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-17

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 29, 1963)

On July 19, 1963, Northern Natural Gas Company (Applicant) filed in Docket No. CP64-17 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the delivery through its Peoples Division of 300 Mcf of natural gas per day on a firm basis to Lehigh Sewer Pipe and Tile Company (Lehigh) at its plant in Lehigh, Webster County, Iowa. Estimated annual sales will be 93,800 Mcf, of which 87,300 Mcf will be firm. No additional facilities are required to render the proposed service.

Peoples Division presently serves Lehigh's requirements with interruptible gas. Lehigh desires firm gas due to the high cost of maintaining and operating stand-by facilities. Furthermore, alternative fuels cause defects in the coloration of the products.

Pursuant to due notice, a public hearing was held in Washington, D.C., on October 16, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The proposed transportation and delivery of natural gas hereinbefore described, as more fully described in the application in this proceeding, will be in interstate commerce subject to the jurisdiction of the Commission, and such proposed transportation and delivery is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed transportation and delivery of natural gas by Applicant is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of

record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to transport and deliver natural gas to Lehigh Sewer Pipe and Tile Company as hereinbefore described, all as more fully described in the Application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of such Regulations.

(C) The transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission Regulations under the Natural Gas Act within 30 days from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL.; AMERADA PETROLEUM CORPORATION, DOCKET NOS. G–18346, CI61–727, CI62–216, CI62–525, AND CI62–805; AMERADA PETROLEUM CORPORATION, OPERATOR, ET AL., DOCKET NO. G–20200

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING PROPOSED SETTLEMENT AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 29, 1963)

On August 5, 1963, Amerada Petroleum Corporation (Amerada) filed a motion for severance of the above-entitled Amerada dockets from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, for approval of settlement proposal and issuance of permanent certificates of public convenience and necessity.[1]

The settlement proposal is similar to the Humble Oil & Refining Company settlement conditionally approved by the Commission by order issued August 7, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.* and provides the following:[2]

(1) In respect to the Amerada Rate Schedules listed in paragraphs (2), (3) and (4) below, a moratorium on rate increase filings from April 1, 1963, through March 31, 1968; except that such filings may be made (1) prior to April 1, 1968, to the extent that the maximum statutory suspension period under Section 4(e) of the Natural Gas Act may be extended beyond 5 months or the Commission may hereafter be authorized to lengthen such suspension period, and (2) at any time for reimbursement of one-half the amount of increased State or Federal taxes or payments in lieu of taxes, provided that

---

[1] The instant proposal is a modification of a proposal submitted on May 10, 1963, and rejected without consideration of the merits by our order of June 3, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.* A motion for reconsideration was denied on July 19, 1963. Several parties had objected to the original proposal.

[2] See Appendix for further details.

such increase does not exceed the reimbursement to which Amerada is entitled by contract.

(2) Permanent certification at settlement rates of 20.625¢ per Mcf[3] inclusive of tax reimbursement, for gas delivered[4] pursuant to Amerada's Rate Schedules Nos. 82 (G–18346), 90 (CI61–727), 91 (CI62–525) and 96 (CI62–216).

(3) Permanent certification at a settlement rate of 19¢ per Mcf, inclusive of reimbursement for payments under Section 6(a)(9) of the Outer Continental Shelf Lands Act,[5] for gas delivered pursuant to Amerada's Rate Schedule No. 98 (CI62–805).

(4) Permanent certification at the contractual initial rate of 19.75¢ per Mcf inclusive of tax reimbursement for gas delivered pursuant to Amerada (Operator), *et al.*, Rate Schedule No. 86 (G–20200).[6]

(5) Prospective upward or downward adjustment of settlement rates according to any applicable area rate or rates determined in Area Rate Proceeding, Docket No. AR61–2.

(6) Collection of the increased rates now in effect subject to refund in Docket No. RI62–505,[7] to be continued subject to further orders of the Commission in that suspension docket.

(7) Extension of the make-up period for gas paid for but not taken to 4 years in any case where the contract provides a lesser make-up period.

(8) Refund of amounts above the settlement rates collected for gas delivered from February 1, 1963, on, under Rate Schedules Nos. 90 (CI61–727), 96 (CI62–216) and 91 (CI62–525) pursuant to the Commission's order conditionally approving Amerada's rate settlement in Docket Nos. G–9385, *et al.*, issued February 1, 1963.

(9) Since payments for gas delivered subsequent to March 31, 1963, under Rate Schedules Nos. 82 (G–18346) and 98 (CI62–805) have been made at rates above the settlement rates, the differences will be refunded.

No party has filed an answer to this motion and settlement proposal and we find the settlement proposal, as herein modified, in the public interest.

In keeping with our present policy we shall require that Amerada pay interest on the amounts to be refunded at 7 per cent per annum, such interest to accrue through the last day of the month in which the settlement proposal was filed, August 31, 1963.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters

---

[3] All volumes expressed at 15.025 psia.

[4] The term "delivered" is used in the proposal as in other proposals approved by us. In the context of the proposals we interpreted the term to include gas required to be taken during the moratorium periods but paid for and not taken. Our approval of this settlement is also conditioned upon such interpretation.

[5] 67 Stat. 462.

[6] Includes 50% interest of Newmont Oil Company.

[7] Related to Supplement No. 2 to Amerada's F.P.C. Gas Rate Schedule No. 86 (G–20200).

should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

With the exception noted below, the pipeline purchasers (shown in the appendix) which will receive refunds and whose overall purchased gas costs will be affected substantially by this settlement will pass on the refunds and adjust their rates in accordance with their latest rate settlements.

Transcontinental Gas Pipe Line Corporation (Transco) the purchaser in Docket No. CI62–805 contended, in the recent Socony and Gulf settlements[8] that the flow through provisions in its settlement in Docket No. RP61–13 do not apply to producer rate schedules not Specifically included in its settlement agreement. Since Amerada's Rate Schedule No. 98 (C162–805) is not specifically referred to therein and in order to avoid a situation in which a pipeline obtains and keeps the benefits of refunds and a reduction in gas purchase costs even though it may be, in the absence of such refunds and reductions in gas purchase costs, earning a reasonable rate of return on invested capital, we shall require Transco to report to the Commission the amount of refund and interest which it receives as a result of this settlement, the estimated amount reductions in purchased gas costs, the proposed disposition of the refunds and the proposed rate adjustments, if any, to reflect the reduction in gas purchase costs. We shall require Transco to hold the refunds and amounts equal to the reductions in purchased gas costs which will accrue as a result of this settlement in a special account subject to further orders of the Commission.

In accordance with the above we shall sever these Amerada dockets from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, omit the intermediate decision in regard to these dockets[9] and issue certificates of public convenience and necessity in accordance with the applications, settlement proposal and conditions of this order.

The Commission finds:

(1) Amerada Petroleum Corporation is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Amerada is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

---

[8] See our order of October 9, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, *supra*, p. 979.

[9] The hearings in the Union Texas Petroleum, *et al.*, consolidated proceeding concluded July 25, 1963.

(6) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that Transco be required to submit the reports and account for the refunds, interest and purchased gas cost reductions as ordered below.

(7) No party has opposed the waiver of the intermediate decision in these proceedings.

The Commission orders:

(A) The motion for waiver of the intermediate decision is granted.

(B) The matters in the Amerada dockets and the Amerada (Operator), *et al.*, docket listed in the caption to this order are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued upon the conditions set forth herein to Amerada Petroleum Corporation and to Amerada Petroleum Corporation (Operator), *et al.*, for the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in Amerada's applications and settlement proposal herein.

(D) The certificates issued by paragraph (C) above, are granted upon the express condition that Amerada comply fully with the terms of the settlement proposal as modified which settlement is expressly approved, under the conditions of this order.

(E) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal as modified, Amerada shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchasers, showing separately the amount of principal and interest so paid and the bases used for such determination, together with releases from the purchasers showing receipt of the refunds in conformity with the settlement as approved.

(F) Upon full compliance of Amerada with all the terms of this order and of the settlement proposal, Amerada shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(G) The certificates herein issued are not transferable and shall be effective only so long as Amerada continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(H) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(I) The grant of certificates herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Amerada, particularly any proceeding under Section 5 of the Natural Gas Act or Section 5(c) of the Outer Continental Shelf Lands Act and is without prejudice to claims or contentions which may be made by the Commission, Applicant, the Commission staff, or any affected party herein in any other proceeding.

(J) The refunds required by the settlement proposal and this order, together with interest thereon computed at a rate of 7% per annum and accruing through August 31, 1963, shall be paid within 45 days from the date of issuance of this order.

(K) Within 15 days from the date of receipt of refunds and interest required by this order, Transco shall submit a report to the Commission and serve a copy on its jurisdictional customers and the various state utility commissions wherein it does business, setting forth the amount of refund and interest received, the estimated annual reduction in purchased gas costs due to Amerada's rate reduction, its proposed disposition of such refunds and its proposed rate adjustments to reflect the reduction in gas purchase costs. Pending Commission action and further orders respecting such proposed disposition and adjustments, Transco shall hold such refunds, interest and amounts equal to the reductions in purchased gas costs which accrue as a result of this settlement in a special account (without interest obligation).

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; UNION PRODUCING COMPANY, DOCKET NOS. CI60-344 AND CI61-1111

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT PROPOSAL AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 29, 1963)

On June 13, 1963, Union Producing Company (Union) filed a motion for severance of the above-captioned Union proceedings from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.*, (hereinafter referred to as the Unon Texas Proceeding) for approval of the attached settlement proposal and for the prompt issuance of certificates of public convenience and necessity.

On July 1, 1963, the Pennsylvania Public Utility Commission (Pennsylvania) filed an answer in opposition to Union's motion. By order issued July 15, 1963, in the above-captioned proceedings the Commission denied Union's motion without passing on the merits of the settlement proposal.

On July 31, 1963, Pennsylvania filed an amended answer to the Union motion, withdrawing its opposition. Subsequently, on August 15, 1963, Union filed a motion for reconsideration of our order denying its motion.

The terms of the Union proposal conform to the other settlements emanating from the Union Texas Proceeding which have been approved by the Commission[1] and provides for an initial rate of 20.625¢ per Mcf[2] for a sale from South Louisiana, (Docket No. CI60–344) and 19.0¢ per Mcf for a sale from the Federal domain offshore Louisiana (Docket No. CI61–1111), both effective April 1, 1963; a five year moratorium on rate increase filings (subject to the usual exceptions); and extension of the make-up period to four years in the rate schedule which provides for a lesser make-up period.[3]

The temporary authorizations under which Union is now selling the subject gas contain no refund conditions and Union does not propose to make refunds of any amounts above the settlement rates collected for gas delivered prior to April 1, 1963, the effective date of the proposed rate reductions.

We find this proposal generally to be in the public interest and shall approve it subject to the following reservations and conditions.

In the context of the proposal we interpret the term "delivered" as used in paragraph 1 of the proposal to include gas required to be taken during the moratorium period but paid for and not taken and our approval is conditioned upon such interpretation.

Our approving this settlement and issuing certificates of public convenience and necessity for these sales shall not in any way be construed as deciding the justness or reasonableness of any of Union's rates or prejudging the questions to be decided in the Section 5(a) proceeding pending in Union Producing Company, Docket No. G–18354.

Since payments for gas delivered subsequent to March 31, 1963, under the instant rate schedules have been made at rates above the settlement rates, we shall require that Union refund the differences. In keeping with our present policy, we shall require that Union pay interest on the amounts to be refunded at a rate of 7 percent per annum, such interest to accrue through the last day of the month in which the settlement proposal was filed, June 30, 1963.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

Transcontinental Gas Pipe Line Corporation, the purchaser in Docket No. CI61–1111, will flow through the refunds and adjust its rates in accordance with the provisions of its rates settlement in Docket No. RP61–13.[4]

[1] See orders issued August 7, 1963, (Humble Oil & Refining Company) and October 9, 1963, (Gulf Oil Corporation and Socony Mobil Oil Company, Inc.) in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979, respectively.

[2] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[3] See appendix for further details.

[4] See *Transcontinental Gas Pipe Line Corp.*, 27 FPC 187.

The flow through provisions of our orders in the recent Southern Natural Gas Company rate case[5] do not refer specifically to Docket No. CI60–344. Therefore, in order to avoid a situation in which a pipeline obtains and keeps the benefits of refunds and a reduction in gas purchase costs even though it may be, in the absence of such refunds and reductions in gas purchase costs, earning a reasonable rate of return on invested capital, we shall require Southern to report to the Commission the amount of refund and interest that it receives as a result of this settlement, the estimated annual reductions in purchased gas costs, the proposed disposition of the refunds and the proposed rate adjustments, if any, to reflect the reduction in gas purchase costs. We shall require Southern to hold the refunds and amounts equal to the reductions in purchased gas costs which will accrue as a result of the settlement of Docket No. CI60–344 in a special account subject to further orders of the Commission.

In accordance with the above we shall sever these individual dockets from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, omit the intermediate decision in regard to these dockets[6] and issue certificates of public convenience and necessity in accordance with the applications, settlement proposal and conditions of this order.

The Commission finds:

(1) Union Producing Company is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Union is able and willing properly to do the acts and to perform the services proposed. and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that Southern be required to submit the reports and account for the refunds, interest and purchased gas cost reductions as ordered below.

(7) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motion for waiver of the intermediate decisions is granted.

---

[5] *Southern Natural Gas Company*, Docket No. G–20509, *et al.*, Opinion No. 379, issued February 18, 1963, 29 FPC 323, Opinion No. 379–A, issued April 19, 1963, 29 FPC 779.

[6] The hearings in the Union Texas Petroleum, *et al.*, consolidated proceeding concluded July 25, 1963.

(B) The matters in the Union dockets listed in the caption to this order are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued upon the conditions set forth herein to Union Producing Company for the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in Union's applications and settlement proposal herein.

(D) The certificates issued by paragraph (C) above, are granted upon the express condition that Union comply fully with the terms of this order and the settlement proposal, as modified, which settlement is expressly approved, under the conditions of this order.

(E) Within 45 days from the date of issuance of this order, Union shall refund to the respective pipeline purchasers the difference between the amounts collected for gas delivered subsequent to March 31, 1963, and the amounts that would have been collected under the settlement rates for gas delivered since that time together with interest computed at a rate of 7 percent per annum, such interest to accrue through the last day of the month in which the settlement proposal was filed, June 30, 1963.

(F) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal as modified, Union shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchasers, showing separately the amount of principal and interest so paid and the bases used for such determination, together with releases from the purchasers showing receipt of the refunds in conformity with the settlement as approved.

(G) Upon full compliance of Union with all the terms of this order and of the settlement proposal. Union shall be relieved of any further refund obligations in these certificates proceedings and said proceedings shall terminate.

(H) The certificates herein issued are not transferable and shall be effective only so long as Union continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(I) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however,* that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(J) The grant of certificates herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Union, particularly any proceeding under Section 5 of the Natural Gas Act or Section 5(c) of the Outer Continental Shelf Lands Act and is without prejudice to claims or contentions which may be made by the Commission, Applicant, the Commission staff, or any affected party herein in any other proceeding.

(K) Within 15 days from the date of receipt of refunds and interest required by this order, Southern shall submit a report to the Commission and serve a copy on its jurisdictional customers and the various state utility commissions wherein it does business, setting forth the amount of refund and

interest received, the estimated annual reduction in purchased gas costs due to Union's rate reduction, its proposed disposition of such refunds and its proposed rate adjustments to reflect the reduction in gas purchase costs. Pending Commission action and further orders respecting such proposed disposition and adjustments, Southern shall hold such refunds, interest and amounts equal to the reductions in purchased gas costs which accrue as a result of this settlement in a special account (without interest obligation).

FUELS RESEARCH COUNCIL, INC., NATIONAL COAL ASSOCIATION, UNITED MINE WORKERS OF AMERICA, AND MID-WEST COAL PRODUCERS INSTITUTE, INC. v. MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP62-57

ORDER GRANTING PETITION FOR AN ORDER REQUIRING MICHIGAN WISCONSIN PIPE LINE COMPANY TO SHOW CAUSE WHY IT SHOULD NOT BE REQUIRED TO FILE AN APPLICATION FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PROHIBITING USE OF FACILITIES CONSTRUCTED WITHOUT APPARENT AUTHORIZATION

(Issued October 30, 1963)

On September 6, 1961, Fuels Research Council, Inc., a Delaware corporation with principal place of business at Room 220, Coal Building, Washington 6, D.C., National Coal Association, a Delaware corporation with principal place of business at the Coal Building, Washington 6, D.C., United Mine Workers of America, an unincorporated organization with principal place of business at 900–15th Street N.W., Washington 5, D.C., and Mid-West Coal Producers Institute, Inc., a Delaware corporation with principal place of business at 307 North Michigan Avenue, Chicago 1, Illinois (Petitioners), filed a petition for an order to issue, under Section 1.6(d) of the Commission's Rules of Practice and Procedure, directing Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) "* * * to show cause why it should not be required to file an application for a certificate of public convenience and necessity for certain unauthorized pipeline facilities now being used to deliver natural gas for boiler fuel consumption to the Weston steam electric generating station of Wisconsin Public Service Corporation (Public Service) near Weston, Wisconsin."

Petitioners allege that Michigan Wisconsin, without first having obtained authority therefor pursuant to Section 7 of the Natural Gas Act, constructed in the fall of 1960 and placed into operation the facilities required to deliver to Public Service large volumes of gas for use by the latter in its Weston electric generating station. Petitioners state that the facilities which Michigan Wisconsin constructed in order to serve the Weston plant consist of a tap, approximately .8 mile of 8-inch pipeline to interconnect with

facilities constructed by Public Service, and a metering station to measure the volumes of gas delivered to Public Service for consumption in its Weston plant. Petitioners also allege that deliveries of gas to the Weston plant began in December of 1960, that gas consumption at Weston in that month totaled 68,914 Mcf, and that from December 1960 through July 1961, a total of 3,215,422 Mcf was delivered by Michigan Wisconsin to Weston.[1]

Petitioners further allege that the use of gas by Public Service at its Weston steam plant replaces coal "* * * produced by members of Petitioners" and Petitioners aver that there is an abundant supply of coal readily available to meet the entire fuel requirements of the Weston plant. Petitioners also cite cases in support of their assertion that the facilities constructed and operated by Michigan Wisconsin for delivering gas to the Weston plant are used for the transportation and sale of natural gas in interstate commerce and are therefore subject to the jurisdiction of this Commission.

Michigan Wisconsin filed on October 6, 1961, an answer to Petitioners' petition for an order to show cause, and in its answer Michigan Wisconsin states (pp. 2–4):

> Contrary to the allegations of the Coal Interests, the facts are that the delivery of natural gas to Public Service for use in its Weston Plant was requested by Public Service, along with service to certain new communities in Wisconsin in Docket No. G–20569, and was explained by the witness for Public Service under cross-examination by counsel for the Coal Interests in the hearing in that matter on May 10, 1960 (T. 842–856). Indeed, this was one of the grounds upon which the Coal Interests opposed Michigan Wisconsin's request for a temporary certificate in an answer (p. 5) which they filed on June 1, 1960, and opposed Michigan Wisconsin's certificate application, in a brief (p. 7) which they filed on July 8, 1960, in that proceeding.
>
> By its Opinion No. 336 the Commission issued the certificate to Michigan Wisconsin and granted the requests of Public Service (24 FPC 177). A service agreement which Michigan Wisconsin and Public Service executed and which specifically covered the Weston delivery point was accepted for filing by the Commission effective as of September 1, 1960.
>
> Thereafter, in the hearings on the applications of Northern Natural Gas Company and Michigan Wisconsin in Docket No. G–20570, *et al.*, covering the sale by Northern Natural of 75,000 Mcf per day to Michigan Wisconsin, the witness for Public Service testified on September 13, 1960—again under cross-examination by counsel for the Coal Interests—that Public Service planned to use a portion of its gas in its Weston plant; that Public Service was constructing a 2.5 mile line from the plant to a metering station to be built by Michigan Wisconsin; that the gas would be used in a *new* generating unit being installed in the plant while the existing unit in the plant *continues to use coal* (T. 2671–79). Following the issuance of the Commission's Opinion No. 345 approving the Northern Natural-Michigan Wisconsin project, Michigan Wisconsin executed a new service agreement with Public Service which again covered the Weston delivery point and which the Commission by order of August 31, 1961 accepted for filing effective as of September 1, 1961.
>
> The allegations of the Coal Interests are thus entirely without merit

[1] Page 432 of Public Service's Annual Report for 1961 shows that 6,040,461 Mcf of gas were consumed at the Weston plant for generation of electricity in the calendar year of 1961.

and the order to show cause as requested by them should *not* be issued, as hereinafter more fully set forth. [Emphasis is intrinsic part of quotation.]

As we understand Michigan Wisconsin's answer, it is claiming that it received authority to construct the Weston measuring station in the order accompanying Opinion No. 336 issued August 6, 1960, in Michigan Wisconsin *Pipe Line Co.*, Docket No. G–20569, 24 FPC 177. Paragraph (A) of that order reads as follows (24 FPC 177 at 189):

(A) A certificate of public convenience and necessity hereby is issued authorizing Applicant to construct and operate the facilities and to make the sales proposed herein, all as more fully described above, in the Applicant's application, *and in the evidence in this proceeding*, for the transportation and sale of natural gas in interstate commerce for resale, subject to the terms and conditions of this order. [Emphasis supplied.]

Since neither Michigan Wisconsin's application nor Public Service's petition to intervene filed in Docket No. G–20569 refers to the facilities required for delivery of gas to the Weston plant, it necessarily follows that if Michigan Wisconsin ever had a certificate in Docket No. G–20569 authorizing construction of the Weston measuring station and appurtenant facilities, such certificate authority is confined to whatever authorization was granted by the phrase "* * * and in the evidence in this proceeding * * *" as that phrase is used in paragraph (A) of the order accompanying Opinion No. 336. However, a thorough study of the evidence in Docket No. G–20569 fails to reveal that Public Service made a specific request that we order Michigan Wisconsin to construct the facilities required to serve the Weston plant and likewise fails to show that Michigan Wisconsin ever indicated that it wanted a certificate authorizing such construction.

Page 8 of Michigan Wisconsin's answer states "* * * that the Public Service desired Michigan Wisconsin to establish a delivery point for the Weston Plant (T. 842–856)." We have searched the pages of the transcript in Docket No. G–20569 to which Michigan Wisconsin referred and the nearest statement resembling a request by Public Service for a new delivery point[2] seems to be contained in the following testimony which occurred when counsel for Petitioners was cross-examining the witness for Public Service (Tr. 853-55):

Q. Well, do you contemplate as a result of your surplus valley gas to attach the Pulliam Plant?

A. I think if we had a choice between Pulliam and Weston, we would take Weston.

Q. Are you seeking to have Michigan-Wisconsin, under its ten cent formula, construct all or a portion of the 18 miles, Stevens Point to your Weston Plant?

A. No, we do not seek to invoke the ten cent formula.

Q. You would construct those facilities yourself?

A. We would construct some of them, yes.

Q. Well, would Michigan-Wisconsin construct some of those?

---

[2] As Petitioners correctly observe on page 7 of their petition, Michigan Wisconsin cannot claim that the Weston delivery point was established under Section 2.55(c) of the Commission's Rules of Practice and Procedure because the Weston plant is approximately 20 miles north of Stevens Point, Wisconsin, which is the nearest to the Weston plant of any "local community" in which Public Service presently distributes natural gas for resale.

A. I expect that there has been some part that they might, yes.

Q. And in what docket are you seeking a connection for Michigan-Wisconsin's pipeline in order to run the service to the Weston Plant?

A. We have not made an application.

Q. Do you propose to make an application or a request for a new delivery point in order to serve your Weston Plant?

A. We would like to see them furnish a delivery point, yes.

Q. Would you seek that connection in Michigan-Wisconsin's application [in Docket No. G–20572] pending before the Commission, in which it is seeking additional volumes of gas from Northern Natural?

A. I am not familiar enough with the proceedings, Mr. McGrath, to answer that.

It is incredible that Public Service's witness would have testified in the manner set forth in the foregoing excerpt of the cross-examination in Docket No. G–20569 if, as Michigan Wisconsin's answer alleges, Public Service had actually requested in Docket No. G–20569 that Michigan Wisconsin be ordered to provide a delivery point for the Weston Plant. Other testimony of the witness falls short of indicating that natural gas would actually be used by Public Service in its Weston Plant. For example, the witness stated that Public Service's valley gas would "perhaps" be sold to either its Pulliam plant at Green Bay, Wisconsin, or to its Weston plant in the Wisconsin River Valley (Tr. 842). He further stated that no natural gas was available in the area where the Weston plant is located and that the closest community, Stevens Point, where Public Service distributes natural gas was at least 18 miles south of Weston (Tr. 843; 852). He also said that Public Service "might" have two or three million Mcf available for one or the other of the steam plants or both of them, and that he thought Public Service would begin constructing facilities to serve Weston "* * * as soon as we are assured that we can go ahead with it." (Tr. 844; 852). In fact, so far as we can determine, at no place during the cross-examination of Public Service's witness did he ever unequivocally state that gas would be used at the Weston plant.

Michigan Wisconsin's answer also alleges that the Petitioners opposed the granting of Michigan Wisconsin's application for a temporary certificate and filed a brief opposing the granting of Michigan Wisconsin's application on the ground that gas would be used by Public Service at the Weston plant. However, the Petitioners' answer filed June 1, 1960, to Michigan Wisconsin's request for a temporary certificate states that Public Service will have gas *available* for use "* * * as boiler fuel in one of its electric generating stations (Tr. 844)." Thus, Petitioners' answer shows ostensibly that they were unaware that Public Service had made a final choice as to which of its electric generating plants would be using gas, much less that they were participating in a proceeding involving a request by Public Service that Michigan Wisconsin be required to construct and operate facilities for the delivery of natural gas to the Weston plant.

Later, on July 1, 1960, when Petitioners filed their brief on the merits, their primary complaint as to markets was directed to the fact that Michigan Wisconsin's failure to present witnesses in support of its alleged market requirements had foreclosed them from "* * * ascertaining aggrievement and otherwise protecting their interests, thus effectively nullifying their intervention and the rights accorded thereby" (p. 3). Because Public Service had requested that Michigan Wisconsin be ordered under Section 7(a) of the Act to deliver natural gas to four newly-proposed Wisconsin communities, Petitioners, as indicated *supra*, had had an opportunity to cross-examine a wit-

ness presented by Public Service, and in their brief Petitioners did point out that Public Service was apparently going "* * * to use approximately 3,000,000 Mcf for electric generation (Tr. 844)," but at no point in their brief do Petitioners specifically oppose Michigan Wisconsin's providing a delivery point for the Weston plant.

Nor have we been able to find any mention of a Weston delivery point by Michigan Wisconsin or Public Service in either of those companies' initial or reply briefs filed in Docket No. G–20569. We do note, however, that the following "10-cent formula" argument in Michigan Wisconsin's reply brief would have been extremely incongruous in Docket No. G–20569 if Michigan Wisconsin had actually been proposing to construct .8 mile of 8-inch pipeline, a measuring station, and other facilities to make deliveries of gas to the Weston plant (p. 13):

> * * * We feel that Michigan Wisconsin should not be required to build facilities on the basis of interruptible loads, which usually are closely competitive with alternate fuels. If the interruptible load were lost to the distributing company, Michigan Wisconsin, at the least, would lose the sale of the gas and the commodity rate applicable thereto. Moreover, the operation of the lateral might well become uneconomic and a burden on Michigan Wisconsin's other customers.

The foregoing analysis of the evidence presented and the documents filed in Docket No. G–20569 has disclosed no reason to believe that paragraph (A) of the order accompanying Opinion No. 336 could possibly be interpreted as having authorized Michigan Wisconsin to construct the measuring station and other facilities required for the delivery of gas to Public Service's Weston plant.

Michigan Wisconsin's and Public Service's answers also endeavor to justify Michigan Wisconsin's construction of the Weston measuring station and appurtenant facilities by referring to certain service agreements "* * * which specifically covered the Weston delivery point" and which they say were accepted for filing by the Commission as of September 1, 1960. Public Service's answer states that these service agreements were dated June 20, 1960, and August 25, 1960. We note that the service agreement between Michigan Wisconsin and Public Service dated June 20, 1960, lists five delivery points (Weston, Marinette, Oconto, Peshtigo, and Stevens Point) *in addition* to those which were listed in the service agreement which was superseded by the agreement of June 20, 1960. All of these additional delivery points, *except Weston*, are required to intiate natural-gas service in communities which were certificated by the order accompanying Opinion No. 331, issued October 31, 1959, in *Midwestern Gas Transmission Co., et al.*, Docket No. G–18313, *et al.*, 22 FPC 775.[3] Since we did not issue Opinion No. 336 in Docket No. G–20569 until August 6, 1960, it is not clear to us why Michigan Wisconsin and Public Service included Weston as a delivery point in a service agreement signed nearly two months before and filed five weeks *prior* to the issuance of the order which they now cite as the source of the certificate which authorized the Weston measuring station and appurtenant facilities.[4]

[3] The possibility of Public Service's being able to use gas in its Weston plant was discussed by Public Service's witness in the proceeding in Docket No. G–18313, *et al.* (Tr. 270), but we have found in that proceeding no evidence which can be interpreted as a request by Public Service that Michigan Wisconsin be required to construct facilities for delivering gas to the Weston plant.

[4] Section 154.22 of our Regulations under the Natural Gas Act provides "* * * That no natural-gas company shall *file* under this part any new rate schedule or contract for the performance of any service for which a certificate of public convenience and necessity must be obtained pursuant to section 7(c) of the Natural Gas Act, *until* such certificate *has been issued*. * * *" [Emphasis supplied.]

The delivery points required to provide the service actually requested by Public Service and certificated in Docket No. G–20569 did not appear in any service agreements between Public Service and Michigan Wisconsin until they filed two agreements dated August 25, 1960, which added three delivery points (Mosel, Valders, and Lena) to those delivery points already listed in the aforementioned service agreement of June 20, 1960, which was superseded by the agreements of August 25, 1960. These three delivery points of Mosel, Valders, and Lena are required for natural-gas service to the communities of Mosel, Valders, Brillion, and Lena on whose behalf Public Service specifically intervened and presented testimony and other evidence in Docket No. G–20569. These were the communities which Michigan Wisconsin was required to serve pursuant to paragraph (B)(ii) of the order accompanying Opinion No. 336, 24 FPC 177, 190.

It is also pertinent to observe that even though both Michigan Wisconsin and Public Service admit that gas is being delivered by Michigan Wisconsin at the Weston delivery point, and despite the fact that Michigan Wisconsin avers that we authorized the construction of the Weston delivery facilities in the order accompanying Opinion No. 336, there is not in our files any statement showing when construction of these specific facilities was completed and when they were placed into operation. Yet, as Michigan Wisconsin knows, paragraph (G) of the order accompanying Opinion No. 336 provided, *inter alia*, that Michigan Wisconsin should comply with Subsection (c) of Section 157.20 of the Commission's Regulations under the Natural Gas Act which requires the Applicant to file with the Commission, within ten days after authorized facilities have been constructed and placed in operation, a statement, in writing and under oath, setting forth the date on which such construction was completed and service initiated.

Public Service's answer filed October 5, 1961, to the Petitioners' request for an order to show cause states (p. 2):

> * * * This Commission, prior to installation of said metering facilities, was repeatedly informed that Public Service intended to use gas at Weston and that for convenience a delivery point at Weston would be required. Public Service's [sic] witnesses so indicated in testimony on May 10, 1960 in Docket No. G–20569 (T842ff) and on September 13, 1960 in Docket No. G–20570, *et al* (T2671ff). * * *

We have hereinbefore discussed the testimony given by Public Service's witness during cross-examination in Docket No. G–20569 and we have shown that such testimony cannot be characterized as a request by Public Service that Michigan Wisconsin be ordered to provide facilities for the delivery of gas to Public Service's Weston plant. As indicated in the above quotation from Public Service's answer, its witness did testify in Docket No. G–20570, *et al.*, regarding the possible use of gas by Public Service at its Weston plant. In fact, 38 days *after* the issuance of the order in Docket No. G–20569 in which Michigan Wisconsin claims to have been authorized to construct the Weston delivery facilities, the same witness who is supposed to have requested such facilities in Docket No. G–20569 testified as follows in Docket No. G–20570, *et al.* (Tr. 2673–74):

> Q. And in what docket before the Federal Power Commission if you know was Michigan Wisconsin authorized to construct a meter station and permit a tap on your line for service to your Weston plant, if you know?

MR. TABIN: I am going to object to that. It is not within this witness' province to know when Michigan Wisconsin received permission for anything. This witness is testifying as to our gas requirements.

PRESIDING EXAMINER: Well, either he knows or he doesn't know. Do you know?

THE WITNESS: I do not know what responsibility Michigan Wisconsin has in that matter.

* * * * * * *

Q. But you have already constructed your facilities?

A. We are constructing them.

Q. And what is this maximum day that you contemplate you will use at Weston?

A. This is merely a guess, I don't know how the gas will be taken, what the operating conditions will be, when it will be necessary to take gas or desirable to take gas. I would expect that it would be somewhere in the neighborhood of, if I have my decimal point correct, about 18 or 19,000 Mcf a day.

Public Service's witness, who had been cross-examined repeatedly regarding the Weston delivery point and who, according to Michigan Wisconsin's answer, is supposed to have requested the Weston delivery facilities during cross-examination in Docket No. G–20569 on May 10, 1960, was again cross-examined about this matter in the proceeding in Docket No. G–2306, *et al.*, on April 28, 1961, at which time he gave the following uninformative answers (Tr. 6928):

Q. Mr. Goggin, who made the arrangement on behalf of Wisconsin Public Service Corporation for this new Weston delivery point?

A. It was handled by our management.

Q. Did you participate in making the arrangements?

A. No, sir.

Q. Who, if you know, did?

A. I don't think I can answer that. I don't know, I am not certain.

Q. Would that not come within the sphere of activity of Mr. Pierce Ellis?

A. It could, but whether he did handle it, I can't say with any definiteness.

Q. When were you advised that Wisconsin Public Service Corporation would be purchasing gas from Michigan Wisconsin for consumption by your company at the Weston Plant?

A. I think we have had that under consideration for some time.

Q. Yes, sir. Now when were you advised that it would become a fact?

A. I can't state precisely when I was advised to that effect.

Q. Who advised you?

A. I can't say that I can remember that, either.

Public Service, after alleging in its answer "* * * that the Commission was fully advised and clearly extended its authority prior to installation of the facilities," asserts (pp. 2–3):

> However, even were it not so, Public Service needs no authority from the Power Commission to use gas allocated to it, in its own power plant or for any other Company use. Metering stations are indispensable for the pipe line to render its service.
>
> Authority to construct delivery facilities wherever convenience requires, is implicit in the Commission's grant of gas allocation to customer utilities.

We considered an argument similar to this one in *American Louisiana Pipe Line Co., et al.*, Docket No. G-2306, *et al.*, Opinion No. 402, issued September 17, 1963, 30 FPC 698, where we pointed out, p. 712) that gas used in the generating plant there involved was part of a "sale for resale." In *City of Hastings* v. *F.P.C.*, 221 F. 2d 31 (CADC), cert, den. 349 U.S. 920, the customer had a separate contract with the pipeline supplier providing for the sale of gas directly to the customer's generating plant. This *separate* sale was considered to be a direct sale and therefore nonjurisdictional. However, Public Service's use of gas at Weston should be distinguished from the *City of Hastings* case because Public Service's use of gas at Weston appears to be very similar to the factual situation in *State Corp. Com'n of Kansas* v. *F.P.C.*, 206 F. 2nd 690 (CA8), where the court stated (206 F. 2d 690 at 701):

> * * * Both the demand charges which Northern makes in its sales of natural gas for resale to its utility customers and its commodity charges that are added to make up the full price charged for such gas are within the jurisdiction of the Commission. * * *

The record in the aforementioned proceeding in Docket No. G-2306, *et al.*, shows that the gas used by Public Service at its Weston plant is purchased under Michigan Wisconsin's ACQ-1 Rate Schedule which provides for a demand and commodity charge (Tr. 7041-42):

> Q. Could I ask you what do you mean by saying that Weston is a balancing load?
>
> A. I mean to say this, Mr. Carroll: We nominate an MDQ. We are permitted to take up to a certain ACQ associated with that MDQ. We have indicated here that we will take all of the ACQ that we are entitled to. We are working with the paper mills throughout our territory to develop interruptible loads. We are hopeful that the time will come when we have interruptible industrial loads that will absorb all this gas, but until such time we will burn it at Weston.

However, we are not directly concerned in this order with jurisdiction over the *sale* of gas to the Weston plant; we are simply endeavoring now to determine whether Michigan Wisconsin ever received authorization to construct the measuring station and appurtenant facilities required for the delivery of gas to the Weston plant. In such an inquiry it is essential that we note our disagreement with Public Service's assertion that "* * * Authority to construct delivery facilities wherever convenience requires, is implicit in the Commission's grant of gas allocation to customer utilities." Section 7(c) of the Natural Gas Act leaves no doubt as to a natural-gas company's obligation to secure a certificate of public convenience and necessity *before* it engages in the transportation *or* sale of natural gas in interstate commerce. The courts have many times explained the extent of our jurisdiction over the transportation of gas in interstate commerce as distinguished from sale of gas for resale in interstate commerce. For example, in *Panhandle Eastern Pipe Line Co.* v. *Public Service Commission of Indiana*, 332 U.S. 507, the Court stated (at p. 516):

> * * * Three things and three only Congress drew within its own regulatory power, delegated by the Act to its agent, the Federal Power Commission. These were: (1) the transportation of natural gas in interstate commerce; (2) its sale in interstate commerce for resale; and (3) natural gas companies engaged in such transportation or sale.

Again in *F.P.C.* v. *East Ohio Gas Co.*, 338 U.S. 464 at p. 468 the Court observed that "* * * throughout the Act 'transportation' and 'sale' are viewed as separate subjects of regulation. They have independent and equally im-

portant places in the Act." But perhaps the clearest court statement showing that Public Service is incorrect in concluding that authorization to construct facilities is implicit in an allocation of gas is to be found in *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 232 F. 2d 467 (CA3), cert. den. 352 U.S. 891, where the court held (232 F. 2d 467 at 472):

> * * * The gas included eventually might be for resale or direct sale but the decision of the Commission must be rendered *prior* to any of the particular gas flowing through the pipe. That decision goes to the *operation of the line itself*. When the Congress gave the Commission control over the transportation of natural gas, it necessarily gave it control over the functioning of a *pipe line's facilities*. * * * [Emphasis supplied.]

Michigan Wisconsin also alleges in its answer to Petitioners' request for a show cause order that (p. 13):

> The Coal Interests have no legitimate complaints with respect to Michigan Wisconsin or its operations. In order to assure the availability of summer gas for injection into storage to meet winter space heating demands, Michigan Wisconsin's tariff limits the annual volumes available to its customers to 190 times their maximum daily quantities. As a result, Michigan Wisconsin *necessarily* does *not* have *interruptible* gas available to the same extent as an ordinary pipeline without storage. * * * [Emphasis supplied.]

Contrary to the allegation quoted above, Michigan Wisconsin seems to have large volumes of interruptible gas available for use by Public Service in its Weston plant, according to information elicited by counsel for Petitioners when he was cross-examining Public Service's witness on July 30, 1963, in a proceeding in Docket No. CP63-230, *et al.* At that time Public Service's witness admitted that his company had "run out" of its ACQ in June of this year and in July of 1962 and that Public Service was purchasing gas for the Weston plant under Michigan Wisconsin's overrun rate (Tr. 626). The witness further stated that on January 14, 1963, when the *mean* temperature was 15 degrees below zero, Public Service consumed 16,700 Mcf of gas in its Weston generating plant (Tr. 629-30). It would appear from Exhibit 38 presented in the proceeding in Docket Nos. CP63-230, *et al.*, that all of these 16,700 Mcf of gas consumed on Jauary 14, 1963, were overrun or interruptible volumes. An indication that Public Service expects to continue using interruptible gas in its Weston plant in the future is contained in the following answer of Public Service's witness to a question asked by counsel for Petitioners (Tr. 630):

> Q. Now, sir, with the experience that you have had in the past two years in running out of your ACQ before the end of the contract year, do you still contemplate selling gas or using gas, I should say, in your Weston Plant before the heating season of 1963-64 is expired?
>
> A. According to our calculations, we will have some ACQ that we can use in it and we hope to get overrun we can use in it too.

In addition to requesting that Michigan Wisconsin be required to show cause why it should not be required to file an application requesting permission to construct the facilities necessary for delivery of gas to the Weston plant, Petitioners request that we "Direct Michigan Wisconsin to cease deliveries of gas to Public Service for use at Weston until such time as final determination of this matter is made; * * *." Michigan Wisconsin's answer avers that this request "* * * is patently absurd" and points out that the Petitioners have not shown that they will suffer any irreparable injury.

Public Service alleges that even a temporary disruption of deliveries to the Weston plant would cause irreparable and substantial injury to Public Service which can be measured only in terms of millions of dollars. Public Service further alleges that it has relied upon use of gas at Weston in (a) expending very substantial sums in the construction of gas-burning facilities at Weston, (b) in expending very substantial sums in constructing a lateral to Michigan Wisconsin's pipeline for making delivery of gas to Weston possible, (c) in making nominations of gas for the 1960–61 contract year and for the 1961–62 contract year, (d) in refraining from releasing gas under Section 7.4 of Michigan Wisconsin's Tariff, (e) in planning, promoting, and placing into effect its industrial sales program, (f) in accepting, without opposition, a demand-commodity form of rate, and (g) in budgeting its past and future operations.

If Public Service has, in fact, relied upon the use of gas at Weston to the extent described in its answer to the petition for a show cause order, it should have made a specific request that Michigan Wisconsin be ordered to provide facilities needed for use at Weston. Furthermore, its witnesses should have explained the importance of burning gas at Weston when they were given opportunities to do so during five successive hearings between July of 1959 and July of 1963. Instead, the witnesses have at all times minimized the importance of receiving gas for use in the Weston plant, and Public Service's witness specifically stated in the very hearing where Michigan Wisconsin now claims to have received certificate authority to construct the Weston delivery point that he did (Tr. 853, G–20569):

> A * * * not admit of any over-estimation. We need our MDQ to meet our maximum day's load. We were not considering annual requirements when we forecast that MDQ.

Since the amount of MDQ nominated determines the annual volumes of gas which Michigan Wisconsin's customers are entitled to receive, Public Service would necessarily have had to be considering its annual requirements needed for Weston if, as Public Service alleges in its answer, Public Service had been relying upon the use of gas at Weston when it made its nomination for quantities of gas for the 1960–61 contract year which was under consideration in Docket No. G–20569.

In any event, the thorough review of the records in five different proceedings involving Michigan Wisconsin and Public Service has failed to show that Public Service ever requested that Michigan Wisconsin be required under Section 7(a) to construct facilities to provide for the delivery of gas to the Weston plant, or that Michigan Wisconsin ever included the facilities required for delivery of gas to Weston among the facilities for which it sought a certificate of public convenience and necessity in the proceedings in Docket No. G–18313, *et al.*, or in Docket No. G–20569, or in Docket No. G–20570, *et al.*, or in Docket No. G–2306, *et al.*, or in Docket No. CP63–230, *et al.*

Since Section 7 of the Natural Gas Act and the court decisions hereinbefore cited require that a certificate authorizing the construction of specific facilities be issued *prior to* the actual construction and operation of those facilities, we have no alternative but to order Michigan Wisconsin to cease the delivery of gas to the Weston plant pending disposition of the show cause proceeding hereinafter provided for in this order. Our requirement that deliveries of gas be discontinued pending a determination of whether Michigan Wisconsin should be permitted to construct facilities required for delivery of gas to the Weston plant is not dependent upon Petitioners' being

able to show that they will suffer irreparable injury or upon the allegation of Public Service that it will suffer irreparable injury in delivery of gas to Weston is even temporarily disrupted. Cessation of deliveries pending final determination of the issues herein is simply the necessary consequence which flows from our having found no order wherein we have authorized Michigan Wisconsin to construct the facilities required to deliver gas to the Weston plant.

The Commission finds:

(1) A review of the records in five different proceedings involving Michigan Wisconsin and Public Service (Docket No. G–18313, *et al.*; Docket No. G–20569; Docket No. G–20570, *et al*; Docket No. G–2306, *et al*; and Docket No. CP63–230, *et al.*) and of Michigan Wisconsin's applications and Public Service's petitions to intervene in those proceedings, as well as the Commission's orders issued in connection with such proceedings, fails to show that Michigan Wisconsin ever received a certificate of public convenience and necessity authorizing it to construct and operate the measuring station and appurtenant facilities required for the delivery of gas to Public Service's Weston generating plant.

(2) Michigan Wisconsin should be required to show cause why it should not file an application for a certificate of public convenience and necessity authorizing it to construct the facilities required to deliver gas to Public Service's Weston plant.

(3) Pending final disposition of the show cause proceeding, Michigan Wisconsin should be required to cease deliveries of gas to the Weston plant.

(4) It is desirable to grant the petition to intervene of Wisconsin Public Service Corporation filed herein on October 13, 1961, in order that Public Service may establish the facts and law from which the nature and validity of its alleged rights and interests may be determined and show what further action may be appropriate under the circumstances in the administration of the Natural Gas Act.

(5) Good cause has been shown for the granting of the petition for an order to show cause filed September 6, 1961, by Fuels Research Council, Inc., National Coal Association, United Mine Workers of America, and Mid-West Coal Producers Institute, Inc.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company shall show cause, if any there be, why it should not be required, pursuant to Section 7 of the Natural Gas Act, to file an application for a certificate of public convenience and necessity authorizing it to construct and operate the facilities required for the delivery of gas to Wisconsin Public Service Corporation's Weston generating plant.

(B) Michigan Wisconsin is hereby prohibited from utlizing facilities, heretofore constructed without apparent authority, for making deliveries of natural gas to Public Service for use by the latter in its Weston generating station prior to the issuance by the Commission of a final order in this proceeding.

(C) Pursuant to the authority contained in, and subject to the authority conferred upon the Federal Power Commission by the Natural Gas Act, including particularly Sections 7, 14, 15, and 16, and the Commission's Rules and Regulations under that Act, a public hearing shall be held commencing December 10, 1963, at 10:00 a.m. (EST) in a hearing room of the Federal

Power Commission, 441 G Street, NW., Washington, D.C., 20426, concerning the matters involved in and the issues raised by the petition for an order to show cause filed by the Petitioners named in paragraph (5) above.

(D) The petition for a show cause order filed by Petitioners on September 6, 1961, is hereby granted.

(E) Protests or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., 20426, in accordance with the Rules of Practice and Procedure [18 CFR 1.8 or 1.10] on or before November 25, 1963.

(F) Wisconsin Public Service Corporation be and it is hereby permitted to become an intervener in the above-entitled proceeding subject to the rules and regulations of the Commission: *Provided, however,* that the participation of such intervener shall be limited to matters affecting asserted right and interests as specifically set forth in said petition for leave to intervene; and *provided, further,* that the admission of such intervener shall not be construed as recognition by the Commission that it might be aggrieved because of any order or orders of the Commission entered in this proceeding.

Commissioner Black *dissents* to ordering Paragraph (B) but otherwise concurs.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NOS. G–16841, RP61–19, ET AL.; PEOPLES GAS LIGHT & COKE COMPANY v. MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. RP63–11

ORDER APPROVING SETTLEMENT

(Issued October 30, 1963)

On October 18, 1963, the Presiding Examiner certified to the Commission a Stipulation and Agreement entered into by Midwestern Gas Transmission Company and its three principal Southern System customers in proposed settlement of the controversy over Midwestern's obligation to pass on certain refunds and rate reductions of its supplier, Tennessee Gas Transmission Company. While different periods and different Commission proceedings are involved, all of the controversies which the parties propose to settle arise out of the Commission Opinion No. 320, 21 FPC 653, certificating the construction and operation of Midwestern's Southern System.

The Commission on April 11, 1963 sua sponte raised the question of whether Midwestern was not obliged to reduce its rates effective as of October 1, 1962, in order to pass on a reduction in Tennessee's rates. Subsequently, by order of May 10, 1963, the Commission directed that, in order to give Midwestern an opportunity to support certain legal arguments, this issue of Midwestern's obligation to make rate reductions from and after October 1, 1962 should be decided by the Examiner in the pending Section 5(a) proceedings in Docket No. RP61–19, *et al.*

On April 22, 1963, Peoples Gas Light & Coke Company filed a formal complaint against Midwestern, in Docket No. RP63–11, contending that, in addition to the prospective rate reductions from October 1, 1962, Midwestern was obligated to pass on to its customers any refunds received from Tennessee with respect to the period from April 5, 1960 to October 1, 1962, to the extent that such refunds brought Midwestern's gas purchase costs for the period below the level of rates which Tennessee had in effect subject to

refund at the time of Opinion No. 320. In Opinion No. 394, issued July 12, 1963, 30 FPC 150, the Commission ruled in favor of Peoples' contention with respect to the April 5, 1960–October 1, 1962, period.[1]

The Stipulation and Agreement at which Midwestern and its principal Southern System customers have now arrived appears as an Exhibit to this order. In general it provides that Midwestern shall make all of the refunds specified in Opinion No. 394 and for the period beginning October 1, 1962, shall fully reflect the reduction of Tennessee's rates below the level in effect at the time of Opinion No. 320. The latter reduction shall be accomplished by refunds covering the period from October 1, 1962, through September 30, 1963, and thereafter by means of monthly credits on the customers' bills, in effect refunding a portion of the previous month's payments. The monthly credits shall continue until such time as a change in Midwestern's rate level becomes effective. Commission staff counsel concurred in the proposed settlement on the record.

Since the proposed settlement provides for the maximum amount of refunds and rate reductions which the Commission could have ordered after full litigation of the issues involved, it is satisfactory to the Commission and should be approved. This approval is without prejudice to any order which the Commission may issue in the pending Section 5(a) proceedings in Docket No. RP61–19, *et al.*

The Commission further finds:

(1) Upon performance of the acts specified in the appended Stipulation and Agreement, Midwestern will have satisfactorily complied with the obligations imposed by Opinion No. 320 with respect to the passing on of rate reductions and refunds of its supplier, Tennessee Gas Transmission Company.

The Commission orders:

(A) The appended "Stipulation and Agreement" is hereby approved and Midwestern shall perform the acts required thereby within the times specified.

(B) The proceedings in Docket No. RP63–11 are hereby terminated.

(C) The proceedings in Docket No. G–16841, which were consolidated with Docket No. RP61–19 *et al.* by order of May 10, 1963, are hereby terminated.

(D) This approval is without prejudice to any order or orders which the Commission may issue in the investigation of Midwestern's rates and charges under Section 5(a) of the Natural Gas Act in Docket No. RP61–19, *et al.*

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7128

ORDER AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued October 30, 1963)

Pacific Power & Light Company (Applicant), a corporation organized under the laws of the State of Maine and doing business in the States of California, Oregon, Washington, Wyoming, Montana and Idaho, with its principal business office at Portland, Oregon, filed an application on September 27, 1963, for an order, pursuant to Section 204 of the Federal Power Act, authorizing the issuance of up to 732,854 shares of Common Stock, par value $3.25 per share.

Applicant proposes to offer up to 732,854 additional shares of Common Stock to its Common Stockholders of record at the close of business on October 30, 1963, for subscription on the basis of one additional share of Common Stock for each twenty shares of outstanding Common Stock held on such record date, with a supplementary subscription privilege if the number of shares held on the record date is not evenly divisible by twenty or is less than twenty. Rights to subscribe for the additional Common Stock will be evidenced by transferable subscription warrants. The subscription price per share will be determined by Applicant's Board of Directors shortly before the proposed offering date, and will be fixed in relation to, and at an appropriate discount from the then market price of Applicant's presently issued and outstanding Common Stock. The subscription offer will expire at 3:30 p.m., New York Time, on December 5, 1963. In addition, Applicant proposes to sell to underwriters any shares of additional Common Stock for which Applicant's Common Stockholders do not subscribe, at the same price at which shares of additional Common Stock will be offered under the subscription offer, and to fix by competitive bidding the compensation of the underwriters for their commitments to purchase the unsubscribed Stock.

On or about November 6, 1963, Applicant proposes to invite sealed, written bids for the purchase of the unsubscribed Stock by newspaper publication and by distribution of a form of bid and a form of purchase agreement, together

with a statement of terms and conditions relating to the bid. All bids, whether from a single bidder or a group of bidders, must be on the form of bid furnished by Applicant and must be for the purchase of all of the unsubscribed Stock. Each bid must specify, among other things, (1) the price per share to be paid to Applicant for the unsubscribed Stock, which price shall be the same as the subscription price to Applicant's Common Stockholders; and, (2) the aggregate amount to be paid by Applicant to the bidder or bidders as compensation for their commitments and obligations in connection with the purchase by them of the unsubscribed Stock.

Unless postponed, all bids for the purchase of the unsubscribed Stock must be submitted to Applicant at Room 2033, Two Rector Street, New York, New York, before 11:00 a.m. New York Time, on November 13, 1963. Each bid must be accompanied by a certified or official bank check or checks in the aggregate amount of $250,000 payable in New York Clearing House funds. Each of the bidders must agree that in case any shares of unsubscribed Stock are acquired and sold prior to the expiration of thirty days following the day upon which the subscription period expires for a price in excess of the purchase price plus $1.00 per share, the bidder will pay to the Applicant, in addition to the purchase price, a sum equal to 50% of excess. Unless Applicant rejects all bids, which it reserves the right to do, or excludes a bid or bids for reasons specified in the statement of terms and conditions relating to bids, Applicant will accept the bid which provides for the lowest aggregate amount of compensation to be paid by Applicant to the bidder or group of bidders.

Applicant will utilize the proceeds of approximately $17,150,000 to be obtained from the proposed issuance of additional Common Stock toward repayment of up to $23,000,000 principal amount of Promissory Notes, under a Credit Agreement dated as of August 15, 1961 as amended by a Letter Agreement dated as of August 14, 1962 (Docket No. E–7052) authorizing the Applicant to issue up to $45,000,000 short-term notes. As of August 31, 1963, Applicant had a total of $8,000,000 notes outstanding and it expects to issue $15,000,000 additional notes prior to November 30, 1963. The notes were and will be issued to provide funds for Applicant's 1963 construction program estimated total $52,000,000 of which approximately $27,975,000 has been expended through August 31, 1963.

The principal items in Applicant's construction budget and the amounts estimated to be expended in 1963 are as follows: $18,000,000 for the 3rd unit at the Dave Johnston Steam Plant; $1,000,000 toward the construction of the 230/500 kv transmission line from Stephens Butte, California to Keno, Oregon; $650,000 for the completion of Applicant's portion of the Walla Walla, Washington-Wanpum Line; $1,300,000 for the completion of the 230 kv transmission line from Rock Springs, Wyoming to the Flaming Gorge Project in Utah; $300,000 toward the construction of the 230 kv transmission line from Muddy Ridge, Wyoming to Thermopolis, Wyoming; $835,000 toward the construction of the 230 kv transmission line from Frannie, Wyoming to Oregon Basin, Wyoming via Garland Dome; $300,000 for the completion of a 115 kv line from Lebanon, Oregon to Sweet Home, Oregon; $850,000 for the completion of the Walla Walla substation; $432,000 for the completion of the Rock Springs substation; $485,000 for completion of the Diamond Hill substation at Corvallis, Oregon and $16,444,000 for electric distribution facilities.

Written notice of the application has been given to the Public Utilities Commission of California, the Idaho Public Utilities Commission, the Public Service Commission of Montana, the Public Utility Commissioner of Oregon, the Washington Utilities and Transportation Commission, and the Public

Service Commission of Wyoming, and to the Governor of each of those States. Notice of the application has also been given by publication in the Federal Register on October 12, 1963 (28 F.R. 10985), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before October 23, 1963 with the Federal Power Commission, Washington 25, D.C. No protest or petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore determined and set forth in the Commission's order issued March 28, 1962, *Pacific Power & Light Company*, in Docket No. E–7025.

(2) The proposed issuance of Common Stock, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance of Common Stock is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance of Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service and is reasonably appropriate for such purposes.

(5) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance of Common Stock, upon the terms and conditions and for the purposes specified in the application, as described above, is hereby authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Common Stock at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the subscription price per share to be received by Applicant for the Common Stock and the compensation to be paid to underwriters under the proposed arrangement as described above.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of costs, or any other matter whatsoever which is now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2082

ORDER APPROVING REVISED PROJECT EXHIBITS AND ADJUSTING ANNUAL CHARGES

(Issued October 30, 1963)

On May 23, 1963, Pacific Power & Light Company, licensee for Project No. 2082, filed for Commission approval nine revised prints of Exhibit K–4 (FPC Nos. 2082–47 through –55) and a revised sheet of Exhibit F–7 showing minor revisions in project land ownership in the John C. Boyle Development, as between the licensee and the United States.

Commission approval of Exhibit F is not required.

The licensee has authorized Commission staff to make the minor changes on the tracings on file with the Commission. This was necessary with respect to only three tracings and these tracings have been corrected. The errors requiring the corrections were discovered by the licensee in a re-calculation of the area of lands occupied by the development.

The effect of our approval of the revised exhibit prints would be to show a reduction of 2.96 acres of lands of the United States occupied by the project, and a resultant reduction in the annual charges for such occupancy from $847.22 to $841.30.

The Commission finds:

(1) Exhibit K–4 FPC Nos. 2082–47, –52 and –53), as revised by the staff, conforms to the Commission's Rules and Regulations and should be approved as part of the license for the project.

(2) Exhibit K–4 (FPC Nos. 2082–47, –52 and –53) now part of the license and which has been superseded, should be eliminated from the license.

(3) The decreased amount of annual charges for recompensing the United States for the occupancy of its lands by the project is reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The revised Exhibit K–4 prints described in finding (1) above are hereby approved as part of the license for Project No. 2082.

(B) The Exhibit K–4 prints described in finding (2) above are hereby eliminated from the license for the project.

(C) Subparagraph (b) of Article 35 of the license for Project No. 2082 is hereby modified, effective as of October 1, 1963, to read as follows:

(b) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, exclusive of those used for transmission line right-of-way, $841.30.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

[LETTER-ORDER DIRECTING NATURAL GAS PRODUCERS TO RESPOND TO QUESTIONNAIRES]

OCTOBER 30, 1963*

TO THE PARTY ADDRESSED:

In order to assist the Commission in the proper administration of the Natural Gas Act, and to provide essential data needed for programing additional area rate proceedings, certain cost and related operations data must be obtained with respect to your gas production operations in the year 1962, all of which is more fully particularized in the two enclosed questionnaires.[1]

The first enclosure, a two-page general questionnaire, is entitled, "Summary Lists of Respondent's (1) Gas and Oil Production and (2) Field and Cycling Plants by Pricing Areas—Year 1962". The completion of these lists will provide, in summary form, pricing area information concerning the two producing activities described in the title of the questionnaire. It should be completed and returned to the Secretary of the Commission on or before December 3, 1963.

The other, and the major questionnaire, is entitled "Questionnaire—Costs and Statistics Pertaining to Oil and Gas Production, Exploration, Gas Systems, and Field Gasoline and Cycling Plant Operations—Year 1962". It is a revision and consolidation of the two former Appendix A operating data and Appendix B cost and statistics questionnaires answered by various natural gas producing respondents in the Permian Basin and Southern Louisiana Areas. Certain modifications, largely organizational and clarifying in nature, have been made by the Commission Staff on the basis of experience in the area proceedings now in progress. However, the data sought at this time is still basically the same as that previously furnished but it pertains to a more recent year and expands the amount of information concerning trends of costs and operations. An index to the questionnaire is also enclosed.

Accordingly, in conformity with the provisions of Section 10(a) of the Natural Gas Act, and as a natural-gas company subject to the jurisdiction of the Commission, you are required to complete and file with the Secretary of the Commission on, or before, the dates fixed in the attached reporting schedule, three copies of the data and statistics required by the enclosed questionnaire entitled "Questionnaire—Costs and Statistics Pertaining to Oil and Gas Production, Exploration, Gas Systems, and Field Gasoline and Cycling Plant Operations—Year 1962."

By Direction of the Commission

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

GEORGIA POWER COMPANY, PROJECT NO. 2177

ORDER APPROVING REVISED EXHIBIT L DRAWINGS

(Issued October 31, 1963)

On June 25, 1963, Georgia Power Company, licensee for Project No. 2177, filed for Commission approval revised Exhibit L drawings showing the project

---

*Modified; reconsideration denied, 31 FPC 34; 944; 1541.

[1] Omitted in printing.

structures as constructed. Flashboards have been added to the spillway section and minor revisions were made during construction.

The Chief of Engineers, Department of the Army, has approved the plans insofar as the interests of navigation are concerned.

The Commissions finds:

The following described revised Exhibit L drawings conform to the Commission's rules and regulations and should be approved as part of the license for the project and Exhibit L, Sheets 8 and 9 (FPC Nos. 2177–15 and –16), now part of the license and which have been superseded, should be eliminated from the license.

Exhibit L, Sheet 8: (Revised February 11, 1963) (FPC No. 2177–24) Entitled "North Highlands Dam — General Plan, Elevation, and Typical Section of Dam" and

Exhibit L, Sheet 9: (Revised February 11, 1963) (FPC No. 2177–25) Entitled "North Highlands Dam — Powerhouse — Plans and Transverse Sections".

The Commission orders:

The revised Exhibit L drawings described in the above finding are hereby approved as part of the license for Project No. 2177, and the Exhibit L drawings described in the same finding as being as superseded are hereby eliminated from the license for the project.

OPINION NO. 408

GRARIDGE CORPORATION (OPERATOR), ET AL.,[1] DOCKET NO. G–19246, ET AL.

OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued October 31, 1963)*

Syllabus

1. Commission *concludes* that price should not be reexamined in producer succession certificate proceedings. PP. 1158; 1160.
2. Justice and equity require that where same sale under same terms is being made to same purchaser it should be made at same price—mere change in ownership of producing properties does not require price review. P. 1161.
3. While certificates are not transferable, issuance of instant certificates permits successors to continue predecessors existing sales—there were, in effect, no new sales. P. 1161.
4. Since these are not new sales, certificates may not be used as justification that proper "price line" is represented by prices in successor contracts at time succession contracts were executed or at any other time. P. 1162,
5. In producer succession proceedings, non-transferability provision of certificate is intended to focus on successor himself, not on the full scope of the 7(e) requirements. P. 1162.

---

[1] The parties and dockets in this proceeding are more fully referred to in ordering paragraphs (A) and (B) of the order hereto.

*Rehearing denied, 30 FPC 1524.

6. Out-of-line rates are not to be perpetuated; Commission states that any question as to reasonableness of permanently certificated sales is to be resolved in area rate proceedings and not successor certificate cases. P. 1163.
7. Principal effect of holding that prices may be reviewed upon every transfer would be to inhibit transfers, thus interfering with normal functioning of the industry without assuring any commensurate benefits to customers. P. 1163.
8. Commission *issues* certificates of public convenience and necessity authorizing continued sales of gas, under Section 7 of the Natural Gas Act. P. 1164.

Commissioner Black *dissenting*, joined by Commissioner Ross

Sherman S. Poland for Magna Oil Corporation.

Cecil E. Munn for General American Oil Company of Texas

Cecil N. Cook and *Neil Powers, Jr.* for U. S. Oil of Louisiana, Inc.

Tom Burton for Continental Oil Company

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

O'CONNOR, *Commissioner:*

Introduction

This is a certificate proceeding under Section 7(c) of the Natural Gas Act (Act) involving 18 applications by independent producers (Applicants) for certificates of public convenience and necessity authorizing certain sales of natural gas. The case is before us pursuant to our order issued May 29, 1963, providing for the omission of the intermediate decision procedure. The basic question presented is whether a producer who has succeeded to another producer's interest under a gas sales contract, and seeks a certificate authorizing the continuance of the sale for which the predecessor was issued a final, permanent certificate, must adduce evidence again establishing that the sale meets the requirements of public convenience and necessity in regard to price. More succinctly put, should the price level issue be opened in producer succession certificate proceedings?

Applicants' predecessors-in-interest were previously granted final, permanent certificates, but since those certificates were not transferable,[1] Applicants, having succeeded to their predecessors' interest, have filed the present applications to continue their predecessors' sales. Supported by the Commission's Staff and a distributing company intervener, Public Service Electric and Gas Company (Public Service), Applicants contend that certificates should be issued authorizing them to continue those sales without having to adduce price evidence. In contrast, certain distributing company interveners, joined by the New York Public Service Commission, contend that Applicants must adduce evidence showing that those prices are "in line" or stated differently that successor applications should be treated the same as new sales applications, insofar as initial prices are concerned.

We conclude that certificates should be issued to Applicants authorizing them to continue their predecessors' previously certificated sales without having to adduce evidence again establishing that those sales meet the requirements of public convenience and necessity in regard to price. We conclude, in other words, that price should not be re-examined in producer succession certificate proceedings.

Procedural Background

We originally set for hearing numerous certificate applications, including most of Applicants', in the *Union Texas Petroleum, et al.*, certificate proceeding in Docket No. G-13221, *et al.* By one order issued March 14, 1963, and by certain other orders and notices in that proceeding, we severed Applicants' dockets from that proceeding and consolidated them in this case, and also per-

[1] The certificates issued the predecessors provide in varying language that such certificates "are not transferable and shall be effective only as long as the applicants continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act, and the applicable rules, regulations and orders of the Commission thereunder."

mitted interventions. The parties held a pre-hearing conference in this case on April 26, 1962, and as a result entered into a Stipulation and Agreement which was placed in the record at the one-day hearing on May 14, 1963 (Tr. 9–12).

By the Stipulation, the parties agree that Applicants are able and willing properly to do the acts and perform the services proposed in accordance with the sales contracts, and to conform to the provisions of the Act and the requirements, rules, and regulations of the Commission, as shown by Applicants' certificate applications and related rate schedules. Those applications and rate schedules were admitted in evidence by reference to the Commission's files, as were the certificate applications of Applicants' predecessors. Also, official notice was taken of the certificates issued to Applicants' predecessors.

Respecting ten of the dockets, in the Stipulation the parties further state that they have no objection to the issuance of certificates authorizing the sales at the prices stated in the Stipulation, which prices were deemed "in line."[3] We are satisfied that certificates should be issued authorizing those sales as required by the public convenience and necessity, and our order attached to this opinion issues such certificates.

Respecting the remaining nine dockets,[4] as set forth in the Stipulation, the parties are in dispute concerning whether Applicants must adduce additional evidence showing that the requirements of public convenience and necessity are satisfied. The parties agree that if it is determined that additional evidence need not be presented, certificates authorizing the sales in these dockets also should be issued, subject to any appeal which might be taken from such a decision. Applicants and Staff take the position that such certificates should authorize the sales at the prices listed in Column (9) of Exhibit 1 in the record (the last rates not subject to refund),[5] and not the rates listed in Column (8) of the said Exhibit (the predecessors' initial rates). It is further agreed that if the Commission decides, or the Court upon review decides that additional evidence need be presented, the hearing in this case should be reopened for such evidence.

---

[3] The Stipulation lists ten dockets but the application of Humble Oil & Refining Company in Docket No. CI63–455, formerly consolidated with this proceeding, has been severed and decided in a separate proceeding. The nine dockets, and the prices proposed are as follows: Graridge Corporation, Docket No. G–19246, 11.7714 cents per Mcf; Jefferson Lake Sulphur, Docket No. G–14307, Rate Schedule No. 1, 11.1467 cents per Mcf, and Rate Schedule No. 2, 17.5 cents per Mcf; General American Oil Company of Texas, Docket No. CI61–54, 17.5 cents per Mcf, Docket No. CI61–217, 18.5 cents per Mcf, Docket No. CI61–316, 19.25 cents per Mcf; Continental Oil Company, Docket No. CI62–1507, 14.5 cents per Mcf; Southwest Resources Inc., Docket No. G–20103, Rate Schedule No. 1, 11.75 cents per Mcf, Rate Schedule No. 2, 10.747 cents per Mcf; and San Jacinto Oil and Gas Company, Operator, *et al.*, Docket No. G–8938, 18.5 cents per Mcf; Austral Oil Co., Inc., Agent for Oil Participations, Inc., Docket No. CI63–342, 18.3 cents per Mcf.

The Stipulation also provides that if any of the Applicants are making these sales at prices higher than those shown above, but subject to existing suspension orders issued by the Commission under Section 4(e) of the Act, the Applicants shall continue to collect the higher rate but shall be subject to all of the terms and provisions of such outstanding suspension orders and shall make, if they have not already done so, appropriate motions to be substituted as Applicants in such rate suspension dockets (Tr. 11–12).

[4] Sinclair Oil and Gas Company, Docket No. CI63–463 was severed and decided in a separate proceeding.—(Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, issued October 28, 1963).

[5] The last rate not subject to refund is either the initial rate of the predecessor, or a rate which has been increased but is not subject to refund or any longer the subject of any Section 4 rate proceeding.

Contentions of the Parties

While each party does not make the same assertions, Applicants, Staff and Public Service argue in favor of placing the successor applicants in the same position as their predecessors-in-interest without further evidentiary proceedings concerning the price sought for the following reasons:

(1) Unique circumstances peculiar to producer succession certificate proceedings make it reasonable to dispense with any further showing:

(2) Equitable considerations justify dispensing with a re-examination of the price issue;

(3) It would be against the public interest to require a new showing as to the proper price because it would mean that permanent certificates at approved prices could not be relied upon in the future;

(4) In other proceedings the Commission has certificated sales at the prices of predecessors-in-interest without further showing as to price;[6]

(5) The previous orders granting certificates to the predecessors-in-interest are *res judicata* in this proceeding.

The intervener opponents to the granting of the certificates without a further evidentiary hearing on the price issue argue:

(1) Under *Catco* (*Atlantic Refining Company* v. *F.P.C.*, 360 U. S. 378) Applicants must prove that the price in the contract is required by the public convenience and necessity or is "in line" and that the prices in question are above the "line."

(2) The Commission has a continuing duty to review prices and, because certificates are non-transferable, it should review the prices sought in this proceeding.

(3) The prices in the predecessors-in-interest cases were approved during a period of "doubt" or "error" concerning the Commission's powers and duty to attach price conditions.

(4) Equitable considerations cannot be substituted for the requirements of Section 7(e) of the Natural Gas Act and the requirements of *CATCO*.

(5) *Res judicata* and collateral estoppel have no application in such a case as this.

The Commission's Determination

We are of the opinion that there are substantial public interest considerations justifying our conclusion that certificates of public convenience and necessity should be issued to Applicants authorizing them to continue their predecessors' previously certificated sales, subject to any rate proceedings involving the predecessors' rate schedules, without opening the price level issue. We conclude, moreover, that it is reasonable and appropriate to follow such a policy generally in succession certificate proceedings involving producers.

Although *CATCO* requires a "most careful scrutiny and responsible reaction to initial price proposals of producers under Section 7", 360 U. S. at 391, it also provides that "Section 7(e) requires the Commission to evaluate all factors bearing on the public interest." (*Ibid*). See also *Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1, 8.

The various applications in this proceeding (each of which was entered in evidence as an item by reference) indicate that in some instances the successor-applicants and the predecessors-in-interest are different parties only be-

---

[6] They cite, *inter alia*, Commission orders issued in *Alma M. Schrader, et al.*, Docket No. G-2813, *et al.*, on May 29, 1963 (mimeo., p. 12); in *Keating-Parket Co. (Operator), et al.*, Docket No. G-11858, *et al.*, on April 19, 1963; and *cf*, order in *Area Rate Proceeding*, Docket No. AR61-2, issued June 13, 1961 (25 FPC 1133).

cause of a change in corporate structure or partnership or personnel involved. In other instances the successors have acquired the producing properties of the predecessors and are continuing to produce from the same wells under the same contractual terms.

The sum and substance of this proceeding is that identical sales to the same purchasers are being made under the same terms of contracts which were already found in the public interest when the predecessors were issued certificates of public convenience and necessity. Nothing has been changed except the identity of the seller who continues to make the identical sale as could have been made by the predecessor, but for the fact that there has been a change in the seller-party relationship. Should interveners' arguments be followed, the mere fact of death of an individual seller would automatically require a review of the price question when the estate, or the heir seeks to be substituted as a party for the deceased predecessor. We are of the opinion that the equities of the situation favor the successor applicants.

Many of the rates charged by the predecessors or successors are under investigation pursuant to Section 5 of the Act in pending area rate proceedings; under Section 4 of the Act any attempt to increase rates would permit an investigation into the justness and reasonableness of the rates sought.[7] Certainly, the initial price is an important issue in certificate proceedings for new sales of gas. We do feel, however, that this proceeding on Section 7 successor applications is not the proper place to try the price issue when the predecessors have certificates, no longer subject to review. Justice and equity require that where the same sale under the same terms is being made to the same purchaser, this Commission should allow it to be made at the same price—and do not require a review of the price merely because of a change in ownership of the producing properties.

Intervenors would have us treat the sales under these contested applications as *new* sales insofar as initial price is concerned. Yet no new consideration passed between the pipeline purchasers and the successors; no new bargaining took place between those parties; the service to the pipeline is the same; the pipeline purchaser was not an active participant in the "new" sale by the successor (who took over by assignment the predecessors rights and obligations). While certificates are not transferable, the effect of the issuance of these certificates is to permit the successors to continue existing sales of the predecessors; there were, in effect, no new sales.

If intervenor's contentions were adopted, the successor, upon receipt of a certificate would be freed of any Section 4 obligation which would apply against a predecessor who, having a prior permanent certificate had filed for a rate increase. As a *new* sale the successor would be seeking an *initial* price which is not subject to the suspension and refund provisions of Section 4 of the Natural Gas Act. Thus, some of those ten Applicants, whom the intervenors were willing to concede should be granted certificates without contest, would be entitled to the rate the predecessors were collecting subject to refund at the time the successor acquired the property as an *initial* price— up to the "line" without making them subject to the same refund conditions imposed on the predecessor-in-interest. We cannot agree that such treatment is justified. To do this would be to lose sight of the fact that these are not really new sales of gas, but rather the continuance of existing sales of gas upon succession of interests. To permit this treatment would open the doors

[7] In the Area Rate Proceeding, Docket No. AR61-2, a general rate investigation is being conducted.

to transfers of property which might circumvent the Commission's prior Section 4 suspension orders and orders providing for refunds, if required. Consistency of treatment would end in this result, which we think wrong.

On the other hand, by treating the successor like the predecessor we obtain a consistency of administration and treatment. Each successor, by stepping into the shoes of his predecessor, takes the properties and sales subject to any benefits or infirmities inherent therein.

Two other matters require disposition. First, we recognize that some of these sales were certificated at a time when the Commission was granting permanent certificates in Southern Louisiana at a price level higher that the guideline prices subsequently recognized in our Statement of General Policy, No. 61–1, as amended. However, since these are not new sales in South Louisiana, we would not permit the certificates which are here issued to be used as any justification that the proper "price line" at the time the succession contracts were entered upon or at any other time is represented by prices in the successor's contracts. These succession proceedings are unique and must be recognized as such. Secondly, addressing themselves to the non-transferability clause in the predecessor's certificate, the minority opinion states . . . . "The parties should thus necessarily have been on notice that a successor's rights and obligations would be subjected to review." This statement is unfounded for two reasons. First, it misconstrues the scope of the review intended by the non-transferability provision. This scope does not, as the minority would have it, include a reopening of the entire range of a successor's "rights and obligations", but is intended rather, to focus on the successor himself, to insure that he is not, for some particular reason, unqualified to hold a certificate. Limiting the scope of review to the successor is in order because it is only the successor which differentiates the new application from the old: the same volumes of gas from the same fields being sold to the same vendees utilizing the same facilities are present in both applications. Thus, the scope of review is not the full scope of the Sec. 7(e) requirements; it is decidely smaller. Secondly, in stating that the parties could not have relied on the predecessor's certification, the minority surely overlooks the myriad of successor certification applications that have previously come before the Federal Power Commission, in none of which the Commission either ordered or allowed conditions other than those in the predecessor's certificate. A recent application that deserves particularly close attention is found in Docket CI62–1096. There the Delhi-Taylor Oil Corporation received a certificate at 11¢ to continue sales previously made at 10¢. This Commission later amended the certificate by reducing the authorized price back to 10¢, stating:

> It appears that the certificate was erroneously issued at the 11.0 cent rate *in contravention of the Commission's policy of placing a successor in interest in the same rate status as the predecessor.* The initial rate to be paid to Applicant will be changed to 10.0 cents per Mcf. Applicant may file for an increase in rate pursuant to Section 4 of the Natural Gas Act and Section 154.94 of the Regulations thereunder."[8] [Emphasis added]

[8] *Texaco Inc., et al.*, Docket No. G–4616, *et al.*, issued August 7, 1963. The minority might also wish to reexamine such recent applications as United States Smelting Refining & Mining Co. (Operator), *et al.*, Docket Nos. CI61–176 and CI61–214 (predecessor's effective rate was 8.0¢; contract provided for an increase to 9¢ which the successor applied for in the certification proceedings; area ceiling of 11¢ for increased rates); Texaco Inc., Docket CI63–1511 (predecessor's effective rate was 5.5¢; contract provided for an increase to 9¢ which the successor applied for in the certification proceedings; area ceiling of 11¢ for increased rates) Pan American Petroleum Corporation, Docket No. CI63–960 (predecessor's effective rate was 15¢; contract provided for increase to 16¢

[Footnote continued on page 1163.]

To say that these successors could not have relied on previous dispositions of successor applications is thus hardly accurate.

Public interests considerations also support our decision in this proceeding. The history of the Commission's administration of the Act over the years has made us aware of the importance of not adding to the price uncertainty which of course to some extent is inherent in a regulated industry. To hold that prices found required by the public convenience and necessity and certificated on a permanent basis are subject to reduction merely because of a transfer of the gas producing properties underlying the sale would add greatly to price uncertainty. Producers' interests are continually changing for a variety of reasons and freedom to effect the changes in ownership dictated by normal operating conditions is, we think, indispensable to successful and efficient operations in the gas producing industry. Leases may be sold to obtain funds for future exploration and development or are acquired to obtain additional supplies to meet increased demands for gas. Unnecessarily to inhibit these transfers would result in financial uncertainty prejudicial to the economic functioning of the industry and the ability of small producers, in particular, to carry on their operations. This is not to say that out-of-line rates are to be perpetuated. On the contrary, the Commission is presently conducting area rate proceedings to fix just and reasonable rates and it is in such proceedings, and not successor certificates cases, that any question as to the reasonableness of permanently certificated sales is to be resolved.

The principal effect of holding that prices may be reviewed on the occasion of every transfer would be to inhibit the transfers, thus interfering with the normal functioning of the industry. This interference would arise without assuring any commensurate benefits to consumers. The rolling back of these few prices before us now would surely have minimal effect on the ultimate consumer's price. Further, the remainder of the producers who received certificates at above our subsequently stated guideline level would not be inclined to transfer their properties knowing that any prospective vendee would have to base his offering price on rates below those the vendor was receiving. Thus, a stalemate would be reached; we would have on our books the requirement of reopening the price issue in succession applications where previous certificates were granted at above the guideline level, but because holders of such certificates would be disinclined to transfer their property, such applications, the vehicle by which the dissenting opinion would have us satisfy our statutory duty, would seldom be before us.

Disposing of the case as we do, we reach no conclusion as to the validity of the *res judicata* and collateral estoppel arguments.

A question that remains under the Stipulation, adverted to briefly hereinabove, is whether the certificates issued to Applicants in the remaining ten dockets should authorize the sales at the prices listed in Column (9) or (8) of Exhibit No. 1. The prices in Column (9) are the last rates applicable to the sales not subject to refund, that is, either the initial price of the predecessor, or a rate which was increased but is no longer subject to refund or otherwise the subject of a Section 4 rate proceeding. The prices in Column

---

[Footnote continued from page 1162.]
which the successor applied for in the certification proceedings; area ceiling of 17¢ for increased rates). In each instance the Commission disallowed proposed increases in the certification proceedings and stated that applications must be made under Section 4(a). Thus it follows that if consistent Commission policy has been to disallow clearly justified rate increases in certification proceedings, that same policy precludes us from ordering rate decreases in certification proceedings.

(8) are the predecessors' initial prices. Staff and Applicants take the stand that the sales should be certificated at the Column (9) rates, and we agree. This position is consistent with the conclusion reached above, the Applicants should be placed in the same positions occupied by their predecessors, and is, moreover, supported by many of the same considerations that support our above conclusion.

A subsidiary issue can be disposed of briefly. Intervenors express concern that a sale proposed by one of the Applicants, U.S. Oil of Louisiana, Inc. (U.S. Oil), in Docket No. CI61–173, may have been consolidated with this proceeding by our order issued March 14, 1963, in the *Union Texas* Petroleum proceeding. They say that some of the gas for this sale is from a so-called CC–9 Reservoir, a property differing from the reservoir underlying the sale certificated for the predecessor, John W. Mecom, and the U.S. Oil's obligation to justify the price for this sale cannot be met by showing that the predecessor was issued a certificate authorizing sales from some other reservoirs. The Interveners' concern, however, is unfounded, for the *U.S. Oil* docket remains consolidated with the *Union Texas Petroleum* proceeding and will be considered there.

The Commission further finds:

(1) Each Applicant in this proceeding is, or upon commencement of the respective sales authorized herein, will be engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and is or will be a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sales of natural gas herein described, as more fully described in the respective applications and in the record in this proceeding, are being made in interstate commerce, subject to the jurisdiction of the Commission, and such sales by the respective Applicants, together with the construction and operation of any facilities, subject to the jurisdiction of the Commission, necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission, thereunder, as hereinafter ordered and conditioned.

The Commission orders:

(A) Certificates of public convenience and necessity are hereby issued to the Applicants listed in footnote 3, *supra*, authorizing their proposed sales of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission used for the said sales, as hereinabove described and as more fully described in the respective applications and in the Stipulation in this proceeding, upon the terms, and conditions of this order; and such certificates remain subject to the conditions summarized in footnote 3, as more fully set forth in the said Stipulation.

(B) Certificates of public convenience and necessity are hereby issued to Continental Oil Company, Docket Nos. CI62–1504 and CI62–1513; Irwin Miller, Docket No. CI63–179; Magna Oil Corporation, Docket Nos. G–19957 and G–19958; Southeastern Public Service Co., Docket No. CI62–1396; Superior Oil Company, Docket No. CI63–377; and U. S. Oil of Louisiana, Inc., Docket Nos. CI61–173 and CI61–174, authorizing their proposed sales of natural gas in interstate commerce for resale, together with the construction and operation

of any facilities subject to the jurisdiction of the Commission used for the said sales, as hereinbefore described and as more fully described in the respective applications and the record in this proceeding, upon the terms and conditions of this order.

(C) The certificates herein issued are not transferable and shall be effective only so long as Applicants continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(D) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Section 154 of the Commission's Rules and Regulations thereunder, requiring the filing of rate schedules applicable to the services herein authorized, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by, or against, the respective Applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objection relating to the operation of any price or related provisions in the gas purchase contracts herein involved.

Commissioner Black *dissenting, joined* by Commissioner Ross.

BLACK, *Commissioner, dissenting:*

A number of non-transferable certificates were issued to applicant's predecessors in interest prior to the time that this Commission had established guideline ceiling prices for sales by independent producers. The Commission's subsequent determination of such guideline price levels lower than the prices charged by the holders of these certificates necessarily means that we now think those prices are too high. Where it is possible to bring such prices into line, it is our responsibility to do so.

The pending area proceedings for Southern Louisiana will not result in new price levels for several years and will not operate retroactively even then. The public interest is not fully protected in the interim. We presently have the opportunity to exercise our jurisdiction to accomplish this protection in the issuance of the requested certificates. But the majority would give the Commission's blessing to the perpetuation of these out-of-line prices on the theory that justice and equity require it. Justice and equity to whom? Surely not to those pipelines, distributors and consumers who are required to pay excessive prices.

The issue here is presented to the Commission in the context of applications for *new certificates* by *new parties* pursuant to Section 7 of the Natural Gas Act. I agree fully with the majority that we are not, however, concerned with *new sales*. Therefore, the calamitous results forseen by my colleagues relating to loss of refund obligations need not concern us. If, through the process of issuing certificates to the new operators there arises any uncertainty concerning preservation of existing refund obligations, appropriate conditions can be imposed pursuant to Section 7.

Section 7(e) provides in pertinent part that "The Commission shall have the power to attach to the issuance of the certificate and to the exercise of the rights granted thereunder such reasonable terms and conditions as the public convenience and necessity may require." *Price* is certainly one of the essential elements in a determination of the public convenience and necessity (*CATCO*). The majority would have us shy away from any consideration of price, however. They tell us that this "is not the proper place to try the price

issue when the predecessors have certificates no longer subject to review." I might agree if the Commission, in issuing the original certificates, had properly discharged its responsibilities to the public by evaluating price at that time. We are not, in any event, reviewing here the predecessors' certificates. We are acting on certificate applications by new parties and Section 7 imposes upon us the obligation to examine the requirements of public convenience and necessity before awarding the certificates. Section 7(e) provides that a certificate will issue if the sale "is or will be required by the present or future public convenience and necessity." This must mean from the time of issuance forward, and contemplates an evaluation of the elements which bear upon the public convenience and necessity as we presently find them. It does not, in my view, permit us to sanctify a price determined in the past without proper Commission evaluation, but which we have subsequently decided (by virtue of our published guideline prices) is not in the public interest.

The majority expresses concern that this is not "the proper place" to try the price issue, but neglects to tell us what the proper place is. Presumably, they would say that Section 5(a) affords the Commission the necessary machinery to bring prices down that are too high. I need not examine here the delays attendant upon this cumbersome and expensive administrative process nor the legal implications of individual Section 5(a) proceedings affecting producers or prices already involved in the Southern Louisiana area case, since it is clear that the majority has no intention of pursuing these out-of-line prices separately in any event.

It is argued that to examine into the matter of price would be against public interest "because it would mean that permanent certificates at approved prices could not be relied upon in the future." Even if it were to be conceded that such "reliance" is more important than the discharge of our obligations to the public respecting the price of gas, this position is untenable because these certificates were expressly made non-transferable. The parties should thus necessarily have been on notice that a successor's rights and obligations would be subjected to review. The majority asserts that a Section 7 proceeding, if it involves a successor's interest, is "intended" to focus only on the qualifications of the applicant himself, and that price—apparently no matter how outrageously excessive it might be—is sacrosanct. I find nothing in the Act, its legislative history, or its interpretation by the courts which would support the view that we should eliminate this most important element in our determination of the public convenience and necessity, simply because the applicant for a certificate under Section 7 happens to be a "successor."

The majority also seeks to support its decision with administrative precedent. The cases cited, however, are not in point since they stand for the simple proposition that the price of gas should not be increased other than in a Section 4(a) proceeding. This is proper; and the applicants now before us have the protection of Section 4 of the Act if they think the price at which we certificate these sales is too low. The purpose of examining price in a certificate case is to protect the public against rates that are too high. This protection is, of course, not furthered by *raising* prices, even if they happen to be below the applicable ceilings, as was sought to be done in the cases cited. Therefore, I find nothing inconsistent between past Commission practice and the position advanced here. I do not, however, concur in the "policy of placing a successor in interest in the same rate status as the predecessor," as stated in at least one cited Commission decisions. In my opinion, price should be an issue in any successor proceeding involving sales of gas initially certificated prior to the time this Commission properly evaluated price in its Section 7 proceedings. The profound economic effect upon the industry which the majority predicts

would flow from such an approach, is totally unsupported by the record. This kind of conjecture should not be the basis for the Commission's order.

The implications of the majority opinion are that successor applications under Section 7 will be granted automatically; that if mistakes were made by the Commission in issuing certificates to applicant's predecessors, these mistakes will not be corrected. This approach is not consistent with our responsibility under the Natural Gas Act, and I must respectfully dissent.

Commissioner Ross *joins* in this statement.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

HUNT OIL COMPANY, DOCKET NOS. G–16422, G–18668, AND G–20009

ORDER DENYING MOTION TO TERMINATE PROCEEDINGS

(Issued October 31, 1963)

On September 3, 1963, Hunt Oil Company (Hunt) filed a motion requesting that the above-designated rate suspension proceedings be terminated. All of these proceedings involve jurisdictional sales of natural gas to El Paso Natural Gas Company (El Paso) in the Permian Basin area.

On September 8, 1958, Hunt tendered for filing a notice of change in its FPC Gas Rate Schedule No. 34.[1] On September 30, 1958, El Paso filed a protest to the notice of change contending, *inter alia*, that the alleged triggering rate was not justified. The proposed favored-nation increase from 8.0¢ per Mcf to 10.1699¢ per Mcf at 14.65 psia, plus tax reimbursement, designated as supplement No. 5 to its FPC Gas Rate Schedule No. 34, was suspended and later became effective subject to refund in Docket No. G–16422.

On September 4, 1956, Hunt and El Paso entered into a contract, designated as Hunt's FPC Gas Rate Schedule No. 36, under which Hunt would make sales of gas to El Paso at a minimum pressure of 900 psia, at the wellhead, in the Amacker-Tippett Field, Texas. The initial rate was 10.6417¢ per Mcf, at 14.65 psia, including tax reimbursement. Subsequent filings increased the rate to 13.52822¢ per Mcf and then to 15.70925¢ per Mcf, including tax reimbursement. Thereafter, Hunt and El Paso agreed that low pressure gas from the V. T. Amacker B. No. 1–67 well, which was incapable of entering El Paso's high pressure line, would be sold under the pricing terms of another contract, the casing-head gas contract dated September 4, 1956, designated as Hunt's FPC Gas Rate Schedule No. 34. On October 5, 1959, Hunt tendered for filing a notice of change in rate, decreasing the rate for the low pressure gas from 15.70925¢ per Mcf to 10.3072¢ per Mcf at 14.65 psia, including tax reimbursement. By letter of October 15, 1959, El Paso protested this filing, stating that the contract rate for low pressure gas was 8.0¢ per Mcf and that there was no agreement between the parties to support the higher rate proposed by Hunt. The proposed decreased rate, designated as Supplement Nos. 4, 5, and 6 to Hunt's FPC Gas Rate Schedule No. 36, was suspended and later became effective subject to refund in Docket No. G–20009.

On May 5, 1959, Hunt tendered for filing a notice of change in its FPC Gas Rate Schedule No. 48. The proposed increased rate, from 7.0942¢ per Mcf to 10.3072¢ per Mcf, at 14.65 psia, including tax reimbursement, designated as Supplement No. 1 to Hunt's FPC Gas Rate Schedule No. 48, was suspended and became effective subject to refund in Docket No. G–18668.

[1] This proceeding also relates to other sales not involved in Hunt's motion.

All of the aforementioned rate changes are favored-nation changes allegedly triggered by a spiral escalation increase by Phillips Petroleum Company (Phillips) in effect subject to refund in Docket No. G–14115, which, in turn, is based on El Paso's increased rate suspended in Docket No. G–12948. A hearing was held in the above-designated Hunt proceedings, and an examiner's decision was issued on October 2, 1961. In Opinion No. 365,[2] the Commission remanded the proceedings in Docket Nos. G–16422, G–18668, and G–20009, *inter alia*, to the examiner for further hearings. On July 16, 1963, the Commission issued an order approving a settlement of the proceedings involved in Opinion No. 365, but excluded the proceedings in Docket Nos. G–16422, G–18668, and G–20009, because the sales involved there are made in the Permian Basin area.

In support of its motion, Hunt states that the rates involved in these proceedings are below the area price level of 11.0¢ per Mcf at 14.65 psia for increased rates, announced in the Commission's Statement of General Policy No. 61–1.[3]

The favored-nation rates in these proceedings were suspended because they were allegedly triggered by Phillips' spiral escalation increase suspended in Docket No. G–14115. The proceeding in Docket No. G–14115 has been consolidated with the Permian Basin area rate proceeding, Docket No. AR61–1, *et al.*, which is not yet concluded. The validity of Hunt's rates may depend upon the disposition of Phillips' increased rate. It would therefore not be appropriate to terminate the above-designated proceedings prior to a determination of the validity of Phillips' increased rate in Docket No. G–14115.

Further, the rates set forth in the Statement of General Policy are applicable to pipeline quality gas. The gas sold by Hunt in the above-designated proceedings may be non-pipeline quality gas because it is casinghead gas sold at the wellhead, or low-pressure gas well gas. In effect, then, the rates involved in these proceedings may exceed the applicable area price level. We do not so decide here, but conclude that determination of these matters should await the outcome of the proceeding in Docket No. AR61–1.

The Commission finds:

For the reasons set forth above, Hunt's motion to terminate the proceedings in Docket Nos. G–16422, G–18668, and G–20009 should be denied.

The Commission orders:

The Hunt's motion to terminate the proceedings in Docket Nos. G–16422, G–18668, and G–20009, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NOS. 137, 1354, 2105 AND 2130

ORDER DETERMINING ACTUAL LEGITIMATE ORIGINAL PROJECT COSTS AND NET CHANGES THEREIN; AND PRESCRIBING ACCOUNTING THEREFOR

(Issued October 31, 1963)

The Commission has here under consideration the matters of the determination of the actual legitimate original cost as of certain dates and net changes

[2] Opinion No. 365, Hunt Oil Company, *et al.*, Docket No. G–9065, *et al.*, issued October 17, 1962, 28 FPC 623.

[3] Issued September 28, 1960, 24 FPC 818 (18 CFR, Chapter I, Part 2, Section 2.56).

therein for subsequent periods of Project Nos. 137, 2105 and 2103 and the net change in actual legitimate original cost of Project No. 1354 for the period from May 2, 1939 through December 31, 1954. These projects have been in operation for varying periods of time; and Pacific Gas and Electric Company, Licensee of the four projects,[1] has filed from time to time statements, pursuant to Sections 4.20 and 4.1 of the Commission's Regulations under the Federal Power Act, claiming various actual legitimate original project costs for the projects as of certain dates and net changes in project costs during subsequent periods.

On September 12, 1955, Licensee filed its initial statement claiming as of July 31, 1954, an actual legitimate original cost of $10,349,535.77 for the Bear River Unit of Project No. 137. It also filed statements of claimed and recorded project cost changes for the Salt Springs and Tiger Creek plants of that project, including related common plants, for the period from January 1, 1935 through December 31, 1956, and for the Electra and West Point plants, including related common plants, for the period from July 1, 1950 through December 31, 1956.[2] The aforesaid statements showed a total claimed and recorded net increase in project cost of the four above-mentioned developments, including related common plants, through December 31, 1956, of $1,530,763.35, consisting of gross project additions of $1,753,744.70, retirements of $222,412.15, and contributions in aid of construction in the credit amount of $569.20, and resulting in a claimed total actual legitimate original cost of the entire project as of December 31, 1956, of $55,179,287.33.

At various times Licensee has filed statements claiming for Project No. 1354 for the period from May 2, 1939, through December 31, 1954, project additions and retirements resulting in a $487,989.58 net increase or change in project cost over the previously determined amount of actual legitimate original cost of the project, $4,498,066.94 as of May 1, 1939.[3] The amount of $487,989.58 is comprised of gross additions of $729,697.52 and retirements of $241,707.94, resulting in a claimed total actual legitimate original cost of the project as of December 31, 1954, of $4,986,056.52.

In its initial statement for Project No. 2105 Licensee claimed an actual legitimate original project cost as of November 1, 1954, of $21,676,441, consisting of a claimed and recorded cost of $5,497,656.89 for the Lake Almanor Dam and Reservoir Development and of $16,178,784.11 for the Caribou No. 1 Development. In addition, Licensee recorded upon its books of account project additions and retirements resulting in a net increase of $179,116.42 in project cost for the period from November 2, 1954 through December 31, 1956. The claimed net increase of $179,116.42 in project cost results from project gross additions of $297,981.49 and retirements of $118,865.07.

In its initial statement for Project No. 2130, Licensee claimed an actual legitimate original cost as of January 1, 1955, of $10,438,483.12, consisting of

[1] All of the projects are located in the State of California, and licenses for Project Nos. 2105 and 2130 were issued pursuant to Section 4(e) of the Federal Power Act, those for Project Nos. 137 and 1354, under Sections 4(d) of the Federal Water Power Act and 23(a) of the Federal Power Act, respectively.

[2] The Commission, by orders issued October 11, 1946 (5 FPC 824) and April 2, 1958 (19 FPC 448), respectively, determined the actual legitimate original cost of the Salt Springs and Tiger Creek developments as of December 31, 1934, to be $18,639,525.18, and that of the new Electra and West Point developments as of June 30, 1950, to be $24,659,463.03.

[3] See Commission order issued February 27, 1950 (9 FPC 542).

claimed and recorded costs of $6,078,529.54 for the Stanislaus plant, $1,082,-024.26 for the Spring Gap plant, $1,375,508.23 for related Common plant, and $1,902,421.09 for the Melones plant. In addition, Licensee recorded upon its books of account project additions and retirements resulting in a net increase of $396,075.22 in project cost for the period from January 2, 1955, through December 31, 1957. The claimed net increase of $396,075.22 in project cost results from total project gross additions of $450,261.42 and retirements of $54,186.20, exclusive of credit amount of $146,538.60 claimed as part of initial project cost as of January 1, 1955.

The Commission's staff conducted a field examination of the books and records of Licensee and other data for the purpose of ascertaining the correctness of the foregoing claimed and recorded amounts. During and subsequent to such examinations conferences were held at various times between Licensee's representatives and members of the Commission staff. As a result of those conferences agreements, subject to Commission approval, were reached between the staff and representatives of the Licensee, with respect to certain proposed adjustments involving: (1) reclassifications within the various project accounts of amounts totalling $8,063,369.59, all as more specifically shown in the attached Schedule I; (2) eliminations totalling $1,475,-714.50 from the claimed and recorded project costs for Project Nos. 137, 1354, 2105 and 2130 during the varying periods involved; and (3) the accounting dispositions of all amounts involved in the foregoing proposed adjustments.

The net eliminations from claimed and recorded costs to be recorded in order to conform Licensee's books of account to the allowed original costs determined herein consist of the following items:

Project No. 137

Transfer of nonproject items	($14, 436. 88)
Adjust construction power to cost	(13, 816. 85)
Excess taxes during construction	(50, 282. 86)
Excess FPC annual charges	(1, 270. 80)
Excess prorated general overheads	(7, 571. 19)
Removal costs and operating expenses improperly capitalized	(99, 635. 06)
Excess interest during construction charges	(97, 005. 01)
Overstated, understated and unrecorded retirements	13, 379. 86
Value of power produced during construction	(9, 951. 51)
Project changes not claimed	7, 533. 29
Overcredits to electra plant	23, 444. 36
Sub total	(249, 612. 65)
To reconcile book cost to claimed cost	7, 371. 37
Total	(242, 241. 28)

Project No. 1354—San Joaquin No. 3 Plant

Nonproject station equipment	(94, 752. 55)
Indirect costs related to maintenance expense	(2, 799. 94)
Total	(97, 552. 49)

Project No. 2105—Claimed Initial Project Cost as of November 1, 1954

Improper transfer of land	($16, 177. 27)
Taxes during construction	(14, 392. 19)
Removal cost and operating expenses improperly capitalized	(10, 415. 13)
Unrecorded retirements	(208, 232. 26)
Adjusting construction power to cost	(48, 354. 70)
Preliminary surveys for future construction	(15, 212. 13)
Costs applicable to Project No. 1962	(25, 053. 36)
Interest during construction	(242, 693. 19)
Sub total	(580, 530. 23)
To reconcile book cost to claimed cost	(194, 200. 63)
Total	(774, 730. 86)

Project No. 2130—Claimed Initial Project Cost as of January 1, 1955

Nonproject items	(2, 332. 31)
Net understated retirements	(25, 249. 62)
Indirect and overhead costs capitalized in error	(6, 280. 41)
Unsupported and improper charges	(8, 591. 31)
Taxes during construction	(1, 465. 05)
Nonproject prorated system overheads	(54, 822. 26)
Interest during construction	(49, 750. 04)
Total	(148, 491. 00)
Project cost changes January 2, 1955 through December 31, 1957:	
Nonproject items	(194, 857. 86)
Sub total	(343, 348. 86)
To reconcile book cost to claimed cost	(17, 841. 01)
Total	(361, 189. 87)

The proposed accounting dispositions of the amounts involved in the foregoing adustments to bring Licensee's recorded project costs and changes for the four projects into agreement with the recommended project costs and changes for the projects as of the various dates on which project costs are determined herein are shown by the composite journal entries summarized in the attached Schedule II for each of the four projects. The total composite journal entry for all of the projects is set forth in column 6 of that schedule.

Staff analysis of Licensee's provisions for project depreciation applicable to inservice project properties of the projects herein considered have not been completed. The staff, therefore, recommends that the Commission defer for future consideration and determination the amounts of accrued depreciation applicable to inservice project properties of these projects as of the dates on which the actual legitimate costs of the respective project properties are determined herein other than initial costs.

By letters dated July 25, 1961, March 21, 1962, August 17, 1962, and June 27, 1962, respectively, Licensee confirmed its agreement with respect to the proposed adjustments, accounting dispositions, and resulting project costs of Project Nos. 137, 1354, 2105, and 2130.

The California Public Utilities Commission was advised by letters of this Commission dated November 5, 1962, July 3, 1962, August 24, 1962, and July 20, 1962, of the proposed adjustments, accounting dispositions, and resulting project costs for Project Nos. 137, 1354, 2105 and 2130, respectively. By letters dated November 20, 1962, July 5, 1962, September 4, 1962 and July 26, 1962, that Commission indicated that it had no objection to the foregoing.

The Commission finds:

(1) Licensee, by its agreement to the proposed adjustments, including the accounting dispositions, and resulting project costs of Project Nos. 137, 1354, 2105, and 2130 by its letters referred to above and the California Public Utilities Commission, by its letters referred to above, have obviated the necessity for notice and opportunity to protest provided in Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting dispositions, with respect to Project Nos. 137, 1354, 2105 and 2130 are reasonable and appropriate for the purposes of the Federal Power Act and, therefore, should be approved and directed as hereinafter provided.

(3) It is necessary and appropriate for the purposes of the Federal Power Act that determination of the accrued depreciation applicable to inservice project properties of Project Nos. 137, 1354, 2105 and 2130 be reserved for future Commission determination and decision as hereinafter ordered.

(4) The actual legitimate original cost of all developments of Project No. 137, as of December 31, 1956, is $54,929,674.68, classified by developments and by primary plant accounts during varying periods as shown in the attached Schedule III.

(5) The net increase or change in the actual legitimate original cost of Project No. 1354 for the period from May 2, 1939, through December 31, 1954, is $390,437.09, consisting of project gross additions of $606,246.67 and gross retirements of $215,809.58; and the resulting total actual legitimate original cost of Project No. 1354 as of December 31, 1954, is $4,888,504.03, classified by primary plant accounts as shown in the attached Schedule IV.

(6) The actual legitimate original cost of Licensee's Project No. 2105 as of November 1, 1954, is $21,095,910.77; the net increase or change in project cost for the period from November 2, 1954, through December 31, 1956, is $179,116.42; and the resulting total actual legitimate original cost of Project No. 2105 as of December 31, 1956, is $21,275,027.19, classified by primary plant accounts as shown in the attached Schedule V.

(7) The actual legitimate original cost of Licensee's Project No. 2130 as of January 1, 1955, is $10,289,992.12; the net increase or change in project cost for the period from January 2, 1955, through December 31, 1957, is $201,217.36; and the resulting total actual legitimate original cost of Project No. 2130 as of December 31, 1957, is $10,491,209.48, classified by primary plant accounts as shown in the attached Schedule VI.

The Commission orders:

(A) The provisions of Sections 4.4, 4.5, 4.22 and 4.23 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adustments, including the accounting dispositions shown in Schedule II, with respect to Project Nos. 137, 1354, 2105 and 2130 are hereby approved and directed to be made by Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed plant accounts for Project No. 137 showing

the debit balance of $10,169,618.96 as the actual legitimate original cost of the Bear River Unit as of July 31, 1954; the debit amount of $1,461,067.51 as the net increase or change in the cost of the entire project for the period from January 1, 1935, through December 31, 1956; and the total debit balance of $54,929,674.68 as the actual legitimate original cost of Project No. 137 as of December 31, 1956; all as more specifically shown in the attached Schedule III, classified by developments and primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees effective prior to January 1, 1961.

(D) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed plant accounts for Project No. 1354 showing the debit amount of $390,437.09 as the net increase or change in project cost during the period from May 2, 1939, through December 31, 1954, and the total debit balance of $4,888,504.03 as of December 31, 1954; all as more specifically shown in the attached Schedule IV classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees effective prior to January 1, 1961.

(E) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed plant accounts for Project No. 2105 showing the debit balance of $21,095,910.77 as the actual legitimate original cost of the project as of November 1, 1954; the debit amount of $179,116.42 as the net increase or change in the cost of the project for the period from November 2, 1954, through December 31, 1956; and the total debit balance of $21,275,027.19 as the actual legitimate original cost of Project No. 2105 as of December 31, 1956; all as more specifically shown in the attached Schedule V classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees effective prior to January 1, 1961.

(F) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed plant accounts for Project No. 2130 showing the debit balance of $10,289,992.12 as the actual legitimate original cost of the project as of January 1, 1955; the debit amount of $201,217.36 as the net increase or change in the cost of the project for the period from January 2, 1955, through December 31, 1957; and the total debit balance of $10,491,209.48 as the actual legitimate original cost of Project No. 2130 as of December 31, 1957; all as more specifically shown in the attached Schedule VI classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees effective prior to January 1, 1961.

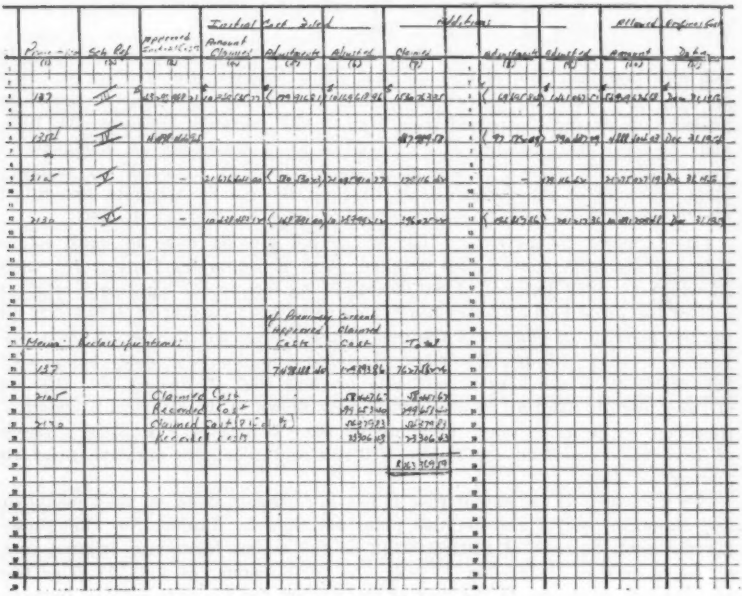
(G) The matter of Commission determination of the amount of accrued depreciation applicable to inservice project properties of Project Nos. 137, 1354, 2105 and 2130 is hereby reserved for future Commission consideration and decision.

(H) Licensee shall file with the Commission within 90 days from the issuance of this order the following documents: Three copies of FPC Form No. 7 as of December 31, 1956, for the Bear River Unit of Project No. 137 and certified copies of its journal entries for the entire project showing compliance with this order; and FPC Forms Nos. 7 for Project Nos. 2105 and 2130, together with three copies of its journal entries for those two projects and for Project No. 1354 showing compliance herewith. Two conformed copies of each of these documents are to be sent to the Regional Accountant, Federal Power Commission, San Francisco, California.

SCHEDULE I

PACIFIC GAS & ELECTRIC COMPANY, LICENSEE PROJECTS NO. 137, 1354, 2105 AND 2130

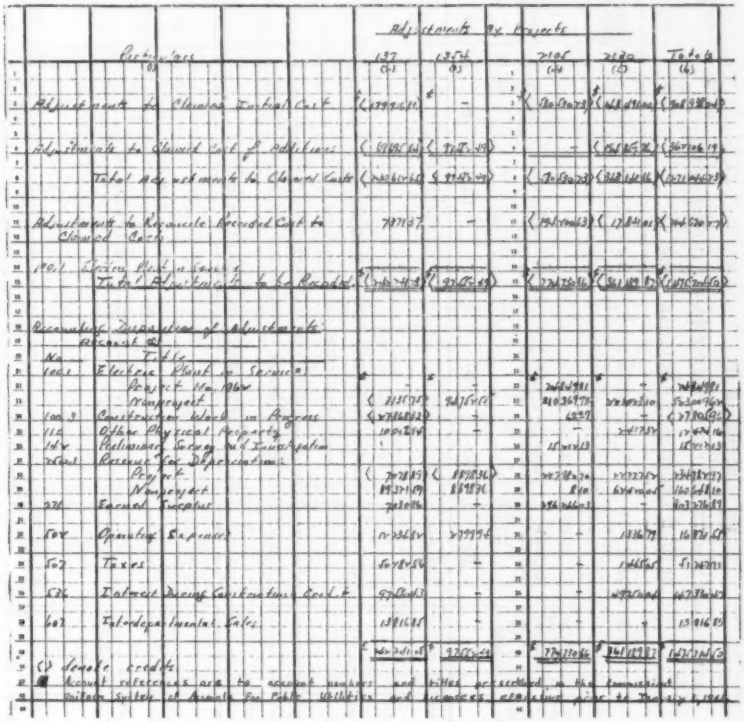
ACTUAL LEGITIMATE ORIGINAL COST SUMMARY



SCHEDULE II

PACIFIC GAS & ELECTRIC COMPANY, LICENSEE PROJECTS NO. 137, 1354, 2105 AND 2130

SUMMARY, BY PROJECTS, OF ADJUSTMENTS TO RECORDED AND CLAIMED PROJECT COSTS AND ACCOUNTING DISPOSITION TO BE RECORDED



SCHEDULE III

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 137 (MOKELUMNE)

ACTUAL LEGITIMATE ORIGINAL COST

Account[1]		Approved costs				Initial cost of the Bear River unit as of July 31, 1954			Charges to the project for the period from Jan. 1, 1935 to Dec. 31, 1956			Allowance as of Dec. 31, 1956
No.	Title	As of Dec. 31, 1934 per Commission Order issued Oct. 8, 1946	As of June 30, 1950 per Commission Order issued Apr. 2, 1958	Reclassifications	As reclassified	As claimed	Adjustments	Allowance	As claimed	Adjustments	Allowance

SCHEDULE IV

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 1354 (CRANE VALLEY)

ACTUAL LEGITIMATE ORIGINAL COST

Account [2] No.	Title	Approved original cost as of May 1, 1939 [1]	Changes from May 2, 1939 through Dec. 31, 1954			Allowed original cost as of Dec. 31, 1954
			As claimed	Adjustments	As recommended	
	A. G. WISHON PLANT					
	Hydraulic production plant					
320	Land and land rights	$1,306.53				$1,306.53
321	Structures and improvements	180,430.44	$51,371.02		$51,371.02	231,801.46
322	Reservoirs, dams, and waterways	850,828.91	74,023.04		74,023.04	924,851.95
323	Water wheels, turbines, and generators	188,445.67	26,838.80		26,838.80	215,284.47
324	Accessory electric equipment	29,581.88	928.04		928.04	30,509.92
325	Miscellaneous power plant equipment	13,915.08	14,630.59		14,630.59	28,545.67
326	Roads, railroads, and bridges	1,457.15	6,809.39		6,809.39	8,266.54
	Total hydraulic production plant	1,265,956.66	174,600.88		174,600.88	1,440,566.54
	Transmission plant					
342	Structures and improvements	1,905.44				1,905.44
343	Station equipment	98,274.28	2,870.01		2,870.01	101,144.29
	Total transmission plant	100,179.72	2,870.01		2,870.01	103,049.73
	General plant					
378	Communication equipment	1,673.44	486.72		486.72	2,160.16
	Total A. G. Wishon Plant	1,367,818.82	177,957.61		177,957.61	1,545,776.43
	SAN JOAQUIN NO. 1-A PLANT					
	Hydraulic production plant					
321	Structures and improvements	22,987.81	7,491.30		7,491.30	30,479.11
322	Reservoirs, dams, and waterways	32,555.22				32,555.22
323	Water wheels, turbines, and generators	39,825.06	(115.27)		(115.27)	39,709.79
324	Accessory electric equipment	6,088.19	14,377.32		14,377.32	20,465.51

PETITION TO ESTABLISH A UNIFORM SYSTEM OF ACCOUNTS FOR INDEPENDENT PRODUCERS OF NATURAL GAS, DOCKET NO. R-220

ORDER DISMISSING PETITION WITHOUT PREJUDICE AND TERMINATING PROCEEDING

(Issued October 31, 1963)

On July 9, 1962, the People of the State of California and the Public Utilities Commission of the State of California (California), petitioned the Commission to establish a uniform system of accounts and records for independent producers of natural gas. An Answer and Objection to the California Petition was filed by Sun Oil Company on August 8, 1962.

Shortly after the Supreme Court held in *Phillips Petroleum Co.* v. *Wisconsin, et al.*, 347 U.S. 672, that natural gas producers making sales in interstate commerce were subject to all of the requirements of the Natural Gas Act, the Commission promulgated regulations governing the filing of rate schedules and certificate applications by gas producers, but exempted producers from the regulations requiring natural gas companies to keep and maintain their accounts in accordance with the Commission's Uniform System of Accounts (Order No. 174-B, 13 FPC 1576 at 1585).

The promulgation of a meaningful uniform system of accounts for gas producers is of course interrelated with the problem of implementing a permanent method of producer regulation. A decision on this question will depend at least in part on the rationale of the Commission's decision in the area rate proceedings now underway. When we have established guidelines for producer regulation in the area rate proceedings the Commission should be in a position to determine whether a uniform system of accounts is feasible for independent producers and also whether annual reports and other means of securing regular information concerning the regulated activities of producers would be a useful adjunct of producer regulation. In the interim we shall continue to secure from producers such information as may be necessary or appropriate in particular proceedings and investigations.

In view of these circumstances, the Commission *finds:*

(1) Present consideration of California's petition to establish a uniform system of accounts for independent producers of natural gas would be premature.

(2) Good cause exists to dismiss California's petition, without prejudice to its right to resubmit it at an appropriate time in the future.

(3) The proceeding should be terminated.

The Commission orders:

(A) The petition of California filed on July 9, 1962, and designated as Docket No. R-220 is hereby dismissed without prejudice.

(B) Effective upon the issuance of this order, the proceeding herein is terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NEW ENGLAND POWER COMPANY, PROJECT NO. 2077

ORDER APPROVING PROJECT EXHIBIT

(Issued November 1, 1963)

On June 22, 1960, New England Power Company, licensee for Project No. 2077, filed for Commission approval Exhibit K maps for the Littleton Development of Project No. 2077.

No lands of the United States are involved and approval of the Exhibit K maps will not affect the annual charges for the project.

The Commission finds:

The following described Exhibit K maps conform to the Commission's rules and regulations and should be approved as part of the license for the project.

Exhibit K (3)–3: (FPC No. 2077–49) Index Project map;

Exhibit K (3)–3: Seven Sheets (FPC Nos. 2077–50 through –56) showing the Project Boundary of the Littleton Development; and

Exhibit K (3)–4: (FPC No. 2077–57) One sheet showing the Project Boundary of the Littleton-Cumerford Transmission Line.

The Commission orders:

The Exhibit K maps described in the above finding are hereby approved as part of the license for Project No. 2077.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SAN SALVADOR DEVELOPMENT COMPANY, INC., DOCKET NOS. G–19833, RI60–290 AND RI61–291

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, REQUIRING REFUNDS, AND TERMINATING PROCEEDINGS

(Issued November 4, 1963)

On September 27, 1963, San Salvador Development Company, Inc. (San Salvador) filed an Offer of Settlement in the above-designated rate suspension proceedings, pursuant to Section 1.18 of the Commission's Rules of Practice and Procedure. These proceedings relate to the jurisdictional sale of natural gas at 14.65 psia by San Salvador under its FPC Gas Rate Schedule No. 1 to Tennessee Gas Transmission Company (Tennessee Gas) from San Salvador Field, Hidalgo County, Texas (Railroad Commission District No. 4).

The following table sets forth the data pertinent to the proceedings involved herein.

Docket No.	Rate schedule No.	Supplement No.	Effective rate (cents)	Date effective subject to refund
G–19833	1	3	[1] 15.09520	4/1/60
RI60–290	1	4	[1] 17.24347	10/2/60
RI61–291	1	5	[2] 17.24347	5/24/61

[1] Includes 0.21931 cent per Mcf for dehydration deducted by buyer.

[2] Does not include the 0.21931 cent per Mcf deducted for dehydration by buyer. As of July 1, 1960, San Salvador commenced delivery of dehydrated gas; however, it did not file to eliminate the dehydration deduction until May 14, 1962.

Under the terms of the Offer, San Salvador proposes to eliminate the favored-nation, redetermination, and periodic provisions from its rate schedule, and to establish a 15.0¢ per Mcf settlement rate, inclusive of tax reimbursement, which will remain in effect until the end of the term of the contract. With regard to refunds, for the period it has been delivering dehydrated gas, July 1, 1960 to the present, it proposes to refund, with interest, the difference between the effective rate and the 15.0¢ per Mcf settlement rate. For the period during which it was delivering undehydrated gas, April 1, 1960 through June 30, 1960, it proposes to refund the difference between the effective rate and 14.78069¢ per Mcf (i.e. the 15.0¢ per Mcf settlement rate less the 0.21931¢ per Mcf deduction for dehydration by Tennessee Gas).

Tennessee Gas has joined in the Offer of Settlement and has approved the proposed contractual amendments. No objections to the settlement have been received from any interested parties.

Since the proposed settlement rate of 15.0¢ per Mcf for dehydrated gas at 14.65 psia is acceptable under the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264 issued March 27, 1963, 29 FPC 589, for jurisdictional sales of natural gas in Texas Railroad Commission District No. 4, it is believed that the public interest will be best served by accepting San Salvador's proposed settlement as hereinafter ordered.

We desire to make it clear that acceptance of this Offer of Settlement shall not be construed as approval of any future increased rates proposed by San Salvador.

The Commission finds:

The proposed settlement of the above-designated proceedings on the basis described herein, as more fully set forth in the Offer of Settlement filed by San Salvador with the Commission on September 27, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by San Salvador with the Commission on September 27, 1963, is hereby approved in accordance with the provisions of this order.

(B) San Salvador shall file, within 30 days from the date of issuance of this order, a notice of change providing for the 15.0¢ per Mcf rate, including present tax reimbursement, specified in its Offer of Settlement and a contractual amendment to its FPC Gas Rate Schedule No. 1, which San Salvador shall execute with Tennessee Gas in conformity with San Salvador's Offer of Settlement in all respects. Both the notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Within 30 days from the date of issuance of this order, San Salvador shall refund, together with simple interest at the rate of 7 per cent per annum, all amounts collected from Tennessee Gas under its FPC Gas Rate Schedule No. 1 in Docket Nos. G–19833, RI60–290, and RI61–291 in excess of 14.78069¢ per Mcf applicable to sales for the period from April 1, 1960 through June 30, 1960, and in excess of 15.0¢ per Mcf applicable to sales for the period commencing July 1, 1960. Interest shall be computed from the date of receipt of such excess amounts by San Salvador to the date of refund. San Salvador shall bear all costs incidental to the making of such refunds.

(D) Within 45 days from the date of issuance of this order, San Salvador shall report to the Commission in writing the details of its calculations resulting in refunds ordered pursuant to paragraph (C) above, together with copy of a release from Tennessee Gas with respect to such refunds.

(E) Upon notification by the Secretary of the Commission that San Salvador has complied with the terms and conditions of this order, the rate and charge of 15.0¢ per Mcf at 14.65 psia, inclusive of tax reimbursement, specified in the Offer of Settlement, shall be effective as of the date of issuance of this order, the above-designated proceedings shall be terminated, and San Salvador's refund obligations with respect to such proceedings shall be deemed discharged.

(F) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending or hereafter instituted by or against San Salvador.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL. DOCKET NO. G–13221, ET AL.; GULF OIL CORPORATION, DOCKET NO. G–19062, ET AL.; SOCONY MOBIL OIL COMPANY, INC., DOCKET NO. CI60–310, ET AL.

ORDER AMENDING ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT AGREEMENTS AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 4, 1963)

Ordering paragraph (K) of our order of October 9, 1963, in the above-captioned matters ordered, *inter alia*, Transcontinental Gas Pipeline Corporation (Transco), to hold certain funds in a special account and to make certain reports to the Commission regarding the effects of the settlement of Docket Nos. CI61–659, CI61–1630 and CI61–1640. It appears that ordering paragraph (K) should not apply to Docket No. CI61–659 because Transco's settlement agreement in Docket No. RP61–13,[1] specifically refers to this docket and Transco agrees that it is under an obligation to flow through any refunds and adjust its rates to reflect the settlement in that docket. Accordingly, ordering paragraph (K) should be amended to apply to Transco only insofar as Docket Nos. CI61–1630 and CI61–1640 are concerned.

The Commission orders:

(A) Ordering paragraph (K) of our order severing proceedings, conditionally approving settlements and conditionally issuing certificates of public convenience and necessity, issued in the above-captioned proceedings on October 9, 1963, is hereby amended by changing the period to a semi-colon and by adding the following after the last sentence therein:

Provided, however, that the holding and reporting requirements imposed by this paragraph shall apply only to refunds, interest and purchased gas cost reductions resulting from the settlement of Docket Nos. CI61–1630, CI61–1640 (Transco), CI60–440 and CI61–290 (Southern).

(B) In all other respects said order shall remain in full force and effect.

---

[1] *Transcontinental Gas Pipe Line Corporation*, 27 FPC 187, Docket No. CI61–659 is listed at page 18 of the settlement proposal of Transco but is listed under the name of Socony's predecessor in interest, Republic Natural Gas Company.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNITED GAS PIPE LINE COMPANY v. HUMBLE OIL & REFINING COMPANY, ET AL., DOCKET NO. CP64-74

ORDER DISMISSING COMPLAINT AND REQUEST FOR ORDER TO SHOW CAUSE

(Issued November 4, 1963)

United Gas Pipe Line Company (United) on September 26, 1963, filed a "Complaint and Request for Order To Show Cause" directed against certain actions which it alleges are being taken by Humble Oil & Refining Company (Humble) and Neches Valley Gas Transmission Company (Neches).

The gist of United's complaint is that it is an interstate pipeline company, subject to the jurisdiction of this Commission, and has been and is selling natural gas in interstate commerce "to the distributor in the City of Tyler, Texas" [1] under rate schedules on file with the Commission and pursuant to a grandfather certificate of public convenience and necessity issued by this Commission. In July, 1962, the contract for gas service between United and Tyler expired, but since that time Tyler has continued to accept service from United and to pay therefor under United's filed rates. During this period, however, Tyler has declined to execute a service agreement with United for future gas service. It is alleged that Humble has agreed to make available and sell to Neches, for transmission and resale to Tyler, all of the latter's natural gas requirements at a rate which will make possible the resale at a price less than United's presently applicable rate "knowing that, when the facilities necessary to transport the gas to Tyler have been completed and placed in operation, the distributor will discontinue receipt of gas from United."

United alleges "that this joint action by Humble and Neches will constitute an invasion and taking of an interstate market heretofore efficiently and economically served by United at a rate regulated by this Commission and under authorization granted by this Commission."

United requests that the "Commission hold a hearing to determine whether it is in the public interest that United be supplanted as the supplier of gas to Tyler, Texas, under the arrangement made by Humble and Neches and that it initiate this investigation and determination by issuing its orders directed to Humble and Neches to show cause, if any they can, why they should not cease and desist from effectuating the plan to supplant United as the supplier of gas to the City of Tyler, Texas.

Motions to dismiss the complaint were filed by Humble and Neches on October 14th and 15th respectively.[2] Answers to such motions were filed by United on October 23, 1963.

We have carefully examined the aforementioned complaint, the motions to dismiss, and the answers thereto and are convinced that the complaint should be dismissed.

United, in its complaint, has failed to set forth any facts which would provide the Commission with a basis for proceeding further in this matter. First and

---

[1] While the distributor is not specifically named in the complaint, reference is to Tyler Gas Service Company (Tyler). United claims that Neches and Tyler are under joint control or ownership.

[2] Humble and Neches have also filed request for deferring the filing of answers to the complaint until such time as we have acted upon the motions to dismiss. Such requests were denied by the Secretary on October 21, 1963. Appeals from the Secretary's action have been noted. In view of our action granting the motions to dismiss, action on the appeals will be unnecessary.

foremost its complaint does not contain any facts to show that the actions of Humble and Neches of which it complains involve the transportation of natural gas in interstate commerce, or the sale of natural gas in interstate commerce. In fact, in its answer to the motion to dismiss filed by Humble, United states it "* * * did not know source of the gas Humble will sell to Neches, neither does it know the route Neches' pipeline will follow, nor does it know the uses to be made of the line. United's complaint is that Humble and Neches, in concert, threaten serious injury to interstate commerce * * *."

The mere allegation that interstate commerce may be threatened by contemplated action is an insufficient basis upon which to predicate a complaint asking relief from the Commission. The threat of injury to interstate commerce to be cognizable must come from actions otherwise subject to our jurisdiction, i.e., the transportation or sale of natural gas in interstate commerce. If it were clear that United's service to Tyler were threatened by operations themselves subject to our jurisdiction we could initiate a proceeding looking into the public interest aspects of the transactions. This is not the situation. United's complaint rests only on speculation as to the nature of the operations to be carried on by Humble and Neches.

The complaint does not purport to show that Humble's sale to Neches is a sale in interstate commerce, or that Neches' subsequent transportation or sale of gas to Tyler encompasses or otherwise involves transportation or sales in interstate commerce. Humble and Neches have denied that they will.[2] If, at any time, United can demonstrate that Humble's sales to Neches are in interstate commerce or that Neches is utilizing as yet unconstructed, facilities as part of an operation in interstate commerce it can then file a complaint upon which we could predicate a proceeding. At this point, however, United's complaint, to the extent that it is based upon the bare possibility of such developments, is clearly premature.

The situation here is not analogous to that presented where what are clearly interstate facilities are used in part to make intrastate sales. *Cf. United Gas Pipe Line Company*, Docket No. CP62–161, Opinion No. 401; 30 FPC 560, rehearing pending. [Granted, 30 FPC 1073.]

The Commission orders:

The motions of Humble Oil & Refining Company and Neches Valley Gas Transmission Company to dismiss the complaint filed by United Gas Pipe Line Company be and they hereby are granted.

OPINION NO. 409

EAST TENNESSEE NATURAL GAS COMPANY, DOCKET NO. CP63–212

OPINION AND ORDER REVERSING PRESIDING EXAMINER AND DISMISSING APPLICATION

(Issued November 5, 1963)*

Syllabus

1. Commission *holds* application deficient in that it fails to include information and data required by Section 157.6 of the Regulations under the Natural Gas Act. P. 1200.

[2] It goes without saying that if Humble were to seek to abandon an interstate sale to make the gas available to Neches such action would be subject to Commission scrutiny under the public convenience and necessity standards of Section 7of the Natural Gas Act, even if the subsequent sale would be nonjurisdictional.

* Initial decision appears on p. 1201.

2. Section 2.58 of the rules permits budget-type applications for gas purchase facilities only—not pipeline facilities for sales to unnamed new customers, or increased volumes of sales to unnamed existing customers. P. 1200.
3. Commission *dismisses* application for certificate of public convenience and necessity in proceeding arising under Section 7, of the Natural Gas Act. P. 1201.

William W. Bedwell and *T. B. Taylor, Jr.* for East Tennessee Natural Gas Company

John J. Mullally for Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

Ross, *Commissioner:*

On January 21, 1963, East Tennessee Natural Gas Company (East Tennessee), filed an application for a certificate of public convenience and necessity. The application was filed "pursuant to and in accordance with Section 7 of the Natural Gas Act and the rules and regulations promulgated thereunder."[1]

The application states that East Tennessee seeks "budget-type authorization to construct and operate an unspecified number of lateral facilities as may be necessary to assure East Tennessee's ability to provide adequate natural gas service to existing customers for resale in existing service areas."[2] The application further states that "East Tennessee is unable to specify with any degree of certainty the description or locations of these proposed facilities."[3] The application alleges that "the proposed facilities [or, more properly, the application therefor] . . . are [is] consistent with the Federal Power Commission's Order No. 185."[4]

Pursuant to notice issued June 4, 1963, a public hearing was held in Washington, D.C., on July 8, 1963. The only parties to appear were East Tennessee and the Staff. At the conclusion of the hearing, Staff orally moved to dismiss the application. No ruling on the motion was made at that juncture, but after the filing of briefs, the Presiding Examiner denied the motion and entered a decision in which he granted the certificate. The case is now before us on exceptions to that decision.

At the outset, we note that the application was, necessarily, filed "pursuant to and in accordance with Section 7 of the Natural Gas Act and the rules and regulations promulgated thereunder."[5] The application was not filed pursuant to Order No. 185, except to the extent that that order amended Part 157 of the Regulations Under the Natural Gas Act.

Section 157.6 of the Regulations requires that certain information be included in an application for a certificate of public convenience and necessity.[6] The sole question in this proceeding is whether the requirements of § 157.6 apply to the instant certificate application. If that section does apply, the application is clearly deficient and should therefore be dismissed.

---

[1] *Application*, p. 1.
[2] *Application*, p. 3.
[3] *Application*, p. 3.
[4] *Application*, p. 4. Order No. 185 may be found at 15 FPC 793.
[5] See footnote 1, *supra*.
[6] In pertinent part, § 157.6 requires the filing of

(2) The facts relied upon by applicant to show that the proposed service, sale, operation, construction, extension or acquisition is or will be required by the present or future public convenience and necessity.

(3) A concise description of applicant's existing operations.

(4) A concise description of the proposed service, sale, operation, construction, extension, or acquisition, including the proposed dates for the beginning and completion of construction, the commencement of operations and of acquisition where involved.

It is obvious that § 157.6 is a pertinent regulation and must apply in the absence of any contrary provisions. East Tennessee advances two theories under which it seeks to avoid the requirements of § 157.6. Primarily, East Tennessee asserts that the behavior and practice of the Commission since the issuance of Order No. 185 indicates that that order was intended to authorize and encourage the filing of applications such as that filed herein.

Order No. 185 was issued February 8, 1956, at the conclusion of a rule-making proceeding in Docket No. R–145. In the main, Order No. 185 was concerned with a myriad of minor changes in Parts 154 and 157 of the Regulations. In addition, the Order briefly discussed the broad problem of relaxing the Regulations with respect to rate filings and certificate applications. The Order stated:

> The whole problem of possible changes in the Commission's regulations permitting greater flexibility in its procedures with respect to rate filings and certification of natural-gas facilities subject to the Natural Gas Act is and will continue to be a prime concern. One recommendation, among others, was to the effect that the Commission define "facilities" requiring certificates under the Act so as to exclude minor installations or changes in connection with the rendition of service to existing customers or markets. The Commission recognizes the desirability of dealing with minor installations on a practical basis but doubts that the Natural Gas Act authorizes it to further expand its rule excluding certain facilities from the certification requirements (18 CFR 2.55). It has recommended to the Congress that it be given such authority.
>
> In the meantime and as a substitute, the Commission advises any interested natural gas company subject to the Natural Gas Act that it may file *under Section 157.6 of the Rules* a single certificate application covering in general outline along the lines of a budget estimate the proposed routine construction intended to be undertaken by it during the current or ensuing fiscal year, *listing the facilities proposed, the estimated cost of each item, the capacity, purpose, and time of intended construction, customers affected by each facility proposed, effect of proposals upon gas supply and deliverability, rates, service, and other pertinent information.* A hearing could then be held on such a proposal and a certificate issued in accordance with the general application. At the end of the period, a statement shall be filed showing the actions taken under the certificate and any authority thereunder which was not exercised.[7]

There is nothing in the language just quoted that suggests any relief from the provisions of §157.6, except insofar as it permits the filing of a single application to cover all routine construction. On the contrary, §157.6 is expressly made applicable, and the Commission describes with some detail the information which it deemed appropriate to require "under Section 157.6." It is clear, therefore, that Order No. 185 did not relieve certificate applicants from the requirements of §157.6. Rather, it delineated exactly what the Commission thought proper to require under the provisions of that section. The Commission defined § 157.6 so that, as a minimum, the requirements of that section were read to include all of the requirements enumerated in Order No. 185.

In its *Reply Brief*, East Tennessee suggests (for the first time) that by complying with §157.7 of the Regulations it has avoided the necessity of filing the information required by §157.6.[8] It is significant that §157.7 permits the filing of an abbreviated application only "when the operations, sales, service, construction, extensions, or acquisitions proposed by an application do not require all the data and information specified by § 157.5 through § 157.16 *to*

[7] 15 FPC 794. Italics added.
[8] *Reply Brief*, p. 13.

disclose fully the nature and extent of the proposed undertaking." [Emphasis added.] Stated another way, it is only when full disclosure is otherwise effected that §157.7 permits the filing of an abbreviated application. It is clear, however, that there has been no full disclosure in the instant case. Indeed, East Tennessee alleges that it has not filed the requisite data because it "cannot know until as late as mid-September whether or not a particular lateral must be looped for service during the coming winter or can be postponed until the following winter."[9] Neither Section 157.7 nor Order No. 185 deal with *this* situation—*i.e.* the inability of an applicant to supply the information and data required by §157.6 sufficiently in advance of the requested date of construction to provide the Commission adequate time to process the application and to hold the requisite hearing (abridged or formal). Instead the obvious remedy for East Tennessee in such a situation is full disclosure in its certificate application, accompanied by a request for temporary authority with respect to items on which construction allegedly should start before a permanent certificate could be issued.[10] In view of the foregoing, East Tennessee's reliance on §157.7 and on Order No. 185 is entirely misplaced.

Both East Tennessee and the Presiding Examiner have relied to some extent on § 2.58 of Part 2 of the Commission's Rules. It is clear, however, that § 2.58 by its own terms permits budget-type applications for gas purchase facilities *only*. It is apparent that the considerations which have led us to be particularly lenient with respect to the construction of facilities to pick up gas from independent producers, who will have separately secured certificates to sell the gas (after full consideration of the terms of the sales contract), are not necessarily present with respect to proposed pipeline facilities to be utilized to make sales to unnamed new customers or even to increase volumes of sales to unnamed existing customers. In this latter case, problems of possible discrimination between customers, serious issues raised by the recent decision in *Granite City Steel Co.* v. *F.P.C.*, 320 F. 2d 711 (CADC, 1963), and questions of the economic effect of certain sales and/or construction upon other customers of the pipeline, may be presented.[11]

Despite these real differences between blanket authorization of minor gas purchase facilities and of sales facilities, it may well be possible to provide for budget type applications for the construction of certain types of facilities other than those used for the purchase of gas. We have accordingly instructed the staff to study the matter with the objective of possible rule-making in this area, and would be receptive to informal suggestions thereon from interested parties. In the meantime, however, it is essential that all parties conform to our existing regulations as defined above.

The Commission finds:

(1) The Application of East Tennessee in this docket is deficient in that it does not include all of the information and data required by § 157.6 of the Regulations Under the Natural Gas Act.

---

[9] *Reply to Exceptions*, p. 9.

[10] We stress, however, that natural gas companies should normally plan their yearly construction activities sufficiently far in advance to avoid the necessity of seeking temporary authorizations, and that such authorizations cannot be counted on as a statutory right.

[11] East Tennessee points to a number of situations in which the Commission has approved in abridged hearing proceedings applications allegedly similar to that we are rejecting here. Without conceding that the situations are in fact analogous, we do not believe that any such actions, which were taken without any consideration of the questions fully treated here, can be determinative. On the contrary, a principal reason for setting this case for hearing was to clarify the apparent confusion which had arisen as to the extent to which we had authorized budget-type applications under Section 2.58.

(2) The Decision of the Presiding Examiner filed herein should be reversed.

The Commission orders:

(A) The Decision of the Presiding Examiner is reversed and the Application of East Tennessee is dismissed.

(B) Except to the extent hereinabove granted, the exceptions to said Examiner's Decision are denied.

INITIAL DECISION
OF THE PRESIDING EXAMINER UPON APPLICATION FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 15, 1963)

LEVY, *Presiding Examiner:* This proceeding originated in an application by East Tennessee Natural Gas Company (East Tennessee), filed January 21, 1963, for a "budget-type" certificate of public convenience and necessity authorizing the construction and operation of certain unspecified lateral facilities, the total cost of which was not to exceed $150,000, with the cost of any single installation not to exceed $50,000. The proposed facilities included looping of existing lateral lines, relocation and replacement of existing lateral lines with larger size pipe, and the installation, if needed, of a skid-mounted—150 h.p. portable compressor on its service laterals at an estimated cost of $33,750.

The application recites that East Tennessee operates its system on a pack-and-flow basis which utilizes line pack to provide peak-day deliverability and thereby maintain as low a purchase demand as possible from East Tennessee's supplier. The reduction in main line pressures required to obtain maximum use of line pack adversely affects the ability of some of East Tennessee's small laterals to service existing resale customers. The application alleges that the purpose of the authorization requested is to allow East Tennessee to assure maintenance of adequate service to existing resale customers in existing service areas and to take care of unforeseen situations which are not predictable until the beginning of the heating season when it is too late to file and have processed an application for specific facilities and construct the same in time to meet winter requirements.

Pursuant to notice issued June 4, 1963, a public hearing was held on July 8, 1963, and concluded the same day. Applicant and Staff were the sole parties, there being no interveners, and briefing was concluded on August 5, 1963.

The sole issue presented is whether the application complies with the Commission's policy and regulations in respect of "budget-type" authorizations issued pursuant to Order No. 185 (15 FPC 793, 794) dated February 8, 1956.

The Evidence

The sole witness presented and cross-examined was Applicant's Director of Sales Engineering, Franklin M. Cantrell, Jr. Applicant also introduced as Items by Reference eleven "budget-type" certificates issued by the Commission during the first four months of 1963. Mr. Cantrell testified in substance that East Tennessee is obligated to meet all its customers' requirements without volume limitations. The majority of these customers are municipalities. In many instances East Tennessee will not know of increased requirements until "in late July or early August" (Tr. 15). Once the specific lateral facilities required are determined, approximately 30 days is required for right-of-way acquisition and an additional 30 days for construction. Acquisition cannot begin until after a certificate of public convenience and necessity has been issued (Tr. 29, 30). The facilities must be installed and ready for operation by

mid-November. Thus, if East Tennessee cannot obtain a budget-type certificate and must wait until it knows what specific lateral facilities will be required, it will be unable to file an application, receive a certificate, construct the facilities, and have them in operation in time to meet 1963 customer requirements.

He also testified that the authorization sought would benefit all of East Tennessee's customers, could not operate to the detriment of any, and is the most economical method of meeting customer needs for additional gas because increasing its purchases from Tennessee Gas "would raise our demand charge and our operating costs" (Tr. 57). No testimony or evidence was presented by the Staff.

Discussion

At the conclusion of East Tennessee's presentation, Staff moved to dismiss the application on the ground that it does not meet the requirements of the Commission's rules in respect of budget-type certificates in that: (1) the proposed looping of existing laterals is not routine construction within the meaning of Order 185, and (2) the description of the proposed facilities is inadequate and deficient. On briefing, the Staff also argues that "The Court's decision in the *'Granite City Steel Company'* case requires a 'new look' at budget-type certificates". Consequently, however liberal or lax the Commission may have been with past grants of budget-type certificates for inadequately described facilities, it should now insist on "strict adherence to the requirements of Order 185 and 18 CFR 157.6 and 157.7 to protect the public convenience and necessity" (Tr. 20).

Order 185 authorizes budget-type certificates for proposed routine construction. Staff insists that "routine" means customary or regular, and argues that since East Tennessee has not looped any laterals since 1958, the proposed lateral looping on the East Tennessee system is not "routine". The pertinent language of Order 185 reads as follows:

> The whole problem of possible changes in the Commission's regulations permitting greater flexibility in its procedures with respect to rate filings and certification of natural-gas facilities subject to the Natural Gas Act is and will continue to be a prime concern. One recommendation, among others, was to the effect that the Commission define "facilities" requiring certificates under the Act so as to exclude *minor installations or changes in connection with the rendition of service to existing customers or markets.* The Commission recognizes the desirability of dealing with *minor installations* on a practical basis but doubts that the Natural Gas Act authorizes it to further expand its rule excluding certain facilities from the certification requirements (18 CFR 2.55). It has recommended to the Congress that it be given such authority.
>
> In the meantime and as substitute, the Commission advises any interested natural-gas company subject to the Natural Gas Act that it may file under section 157.6 of the Rules a single certificate application *covering in general outline along the lines of a budget estimate the proposed routine construction intended to be undertaken by it during the current or ensuing fiscal year,* listing the facilities proposed, the estimated cost of each item, the capacity, purpose, and time of intended construction, customers affected by each facility proposed, effect of proposals upon gas supply and deliverability, rates, service, and other pertinent information. A hearing could then be held on such a proposal and a certificate issued in accordance with the general application. At the end of the period, a statement shall be filed showing the actions taken under the certificate and any authority thereunder which was not exercised. [15 FPC 794; emphasis supplied.]

It seems clear from this language that budget-type certificates were intended as a method of dealing with minor installations on a practical basis in connection

with the rendition of service to existing customers or markets absent their exclusion from the certification requirements. That the Commission intended "routine construction" to include minor installations or changes is further emphasized by the press release dated February 8, 1956, which accompanied Order 185:

> One recommendation which the Commission considered was that "facilities" requiring certificates under the Natural Gas Act be defined so as to exclude minor installations or changes in connection with the rendition of service to existing customers or markets. The FPC said that while it recognized the desirability of this proposal, it doubted that the Natural Gas Act authorizes the action. As a substitute, the FPC said, natural gas companies may file a single certificate application covering proposed routine construction planned during the current or ensuing fiscal year. A hearing could then be held on the proposal and a certificate issued in accordance with the general application, the Commission said, and at the end of the period a statement would be filed showing the actions taken and any authority which was not exercised. [Release No. 8308.]

Additionally, East Tennessee emphasizes that prior to 1959 it was required to loop several of its laterals, and that because of the continued load growth of its customers it will be required to either completely or partially loop many of these laterals on its extensive system, thus rendering lateral looping common and routine.

Insofar as the quantum of specificity required in the description of these facilities, East Tennessee points out that the Commission has consistently issued numerous budget-type certificates for the construction and operation of unspecified facilities since the issuance of Order No. 185. In evidence are a number of these authorizations issued during the first four months of 1963, in which the Commission's Order specifically states that the proposed facilities were "unspecified" or "miscellaneous". (See Items by Reference B through L.) On June 13, 1962, the Commission issued Order No. 247 (Section 2.58 of the Rules) in respect of budget-type certificate applications relating to gas purchase facilities.[1] Section 2.58 does not require that the proposed facilities be specified and described in detail until after the expiration of the authorization. This has been the consistent Commission practice, imposed by condition, in respect of all budget-type authorizations. Staff does not cite any Commission authority or precedent for changing this consistent practice and interpretation. The exclusion of gas sales facilities from the scope of budget-type authorizations, would defeat the basic objective of Order No. 185—to provide a workable administrative substitute for the proposed exemption from certification of "minor installations or changes in connection with the rendition of service to existing customers or markets." This is particularly true of the instant application where the relief sought involves small amounts of money for minor installations to existing customers. The Commission and its Staff should not be burdened with additional paper work and the necessity for detailed examinations of routine, minor installations.

Moreover, current Commission rulings[2] and statements are inconsistent with Staff's position. In *Medina Gathering Corporation*, Op. No. 397, issued July 16,

---

[1] The opening paragraph reads as follows:

> In accordance with the Commission's advice in Order No. 185, issued February 8, 1956 (15 FPC 793 at 794) and unless prevented by other factors, such as interventions in opposition, we will issue budget-type authorizations to natural gas pipeline companies covering the construction and operation of gas purchase facilities, after hearing under the abridged procedure, upon applications for certificates of public convenience and necessity, filed under § 157.6 of this chapter, provided that: [etc.]

[2] The Commission has the power "to interpret its own rules and any phrase contained in them." See *Norwegian Nitrogen Co. v. U.S.*, 288 U.S. 294, 325 (1933).

1963, 30 FPC 227, after the hearing herein and prior to the filing of Staff's brief, the Commission observed: (pp. 233–234)

> * * * The record reveals very little detail of the facilities to be constructed by Medina for the understandable reason that the precise number and location of the well lines, lateral lines, etc., will largely depend on the results of the producers' drilling program. In substance the authorization which Medina requests here is similar to the "budget-type" certificates which we frequently issue to pipelines pursuant to § 2.58 of the Rules of Practice of Procedure, authorizing the construction of unspecified facilities, within a stated dollar limit, for the purpose of connecting the pipeline's system with additional sources of supply. Since Medina has manifested a clear understanding that all of its facilities will be subject to our jurisdiction except those which are solely for "gathering", it will suffice to issue the certificate in the usual form, authorizing the sale "together with the construction and operation of all facilities subject to the jurisdiction of the Commission necessary therefor". The periodic reports filed by Medina pursuant to Section 157.20(c) of the Natural Gas Regulations should state in detail the description, location, costs, etc., of *all* the facilities actually constructed. If there is then any controversy over which of the facilities are subject to our jurisdiction, it can be resolved at that time.

And a recent speech by the General Counsel discusses the routine approval of minor pipeline construction as follows:

> Recognizing the impracticality of individual processing of the myriads of minor additions or changes in pipeline facilities, the Commission, several years ago, adopted rules providing for what are known as "budget" authorizations. *Under these regulations, a pipeline may secure blanket authorization to make minor additions to its facilities during the forthcoming year, subject only to specified limitations on the total cost of all installations and the cost of any single project. The application for such a budget-type authorization is general in form, but the pipeline is required at the end of the year to file a brief description of the actual facilities installed thereunder.*
>
> With respect to most other pipeline certificate applications, our rules provide for a somewhat more elaborate application sufficient to give the Commission staff and potential inteveners sufficient information to evaluate the public-interest consequences of a grant. [Address before the Mineral Law Section of the Texas Bar Association, July 5, 1963; emphasis supplied.]

Staff also argues that the deficiencies of the original application are established by the fact that at the hearing applicant was able to supply additional details of its proposed installations that were not included in the original application. The application was filed on January 21, 1963, and the hearing was held five and one-half months later on July 8, 1963. Obviously, East Tennessee had more information and details in July than in January, as to the needs of its customers and the facilities required; and, as noted by applicant, if the hearing was delayed until the end of the calendar year, East Tennessee could then specifically describe in detail all the facilities needed during 1963 to meet customer requirements.

Finally we reach the "hard core" argument which urges in substance that the Commission change its present policy in respect of budget-type applications relative to pipeline sales facilities because of the court's decision in the *Granite City Steel* case[3] and the possibility pipeline companies may use budget-type authorizations to give preferential treatment to industrial customers. Staff brief illustrates this as follows:

---

[3] *Granite City Steel, et al.* v. *FPC*, 115 U.S. App. D.C. 392, 320 F. 2d 711, decided May 23, 1963, reversing the Commission's Opinion 355 reallocation of gas from Mississippi River Fuel's industrial customers to its utility customers.

As examples of these possibilities the following situation is presented:

A. pipeline company;

B. distribution company with large industrial consumers;

C. distribution company with no industrial consumers.

The requirements of both B and C increase. B's requirements increase by reason of new industrial demands. C's requirements increase by reasons of additional domestic and commercial demands. Both B and C request A to install facilities so as to increase deliveries to meet increases in demands. A decides that it will install additional facilities to meet B's new demands but will not install the facilities necessary to meet C's demands. A, having received a budget type certificate, without further scrutiny by the Commission, could proceed to install facilities and accord preference to B over C, thus giving preference to industrial loads over domestic and commercial loads.

If the court's opinion in the *Granite City Steel Company* case is correct, the Commission in subsequent proceedings, would be bound to consider the industrial loads of B in proceedings involving allocation of supplies. It would be required to accord those industrial loads, firm or interruptible, the same treatment as those domestic and commercial loads of C. Thus C which was denied additional gas by A would have been penalized because it had no opportunity to increase deliveries to domestic and commercial customers because A had received a budget-type certificate. [Staff br. pp. 20–21.]

Staff does not suggest that these possibilities have anything to do with this applicant or this record. The only evidence presented is to the effect that all of East Tennessee's customers will benefit from the proposed facilities and none will be adversely affected (Tr. 24). Nor does Staff dispute East Tennessee's statement that it does not discriminate, that it has never refused to meet the increased requirements of any of its customers, and that it will seek authorization for additional facilities as they are needed to meet growing requirements. No evidence was presented by Staff and it does not cite any specific cases where a budget authorization was misused as a means of discriminating among its customers.

The mere possibility of abuse not shown to be present in this record is an inadequate basis for denial of an otherwise proper application. Nor is the Commission powerless to deal with the type of discrimination and abuses outlined in the Staff's hypothetical case. Moreover, if as Staff feels, the time has come for a new look and re-evaluation of budget-type certificates, the pending application is not the appropriate vehicle for determining future Commission policy in respect of the amendment or termination of procedures authorizing budget-type certificates. This is particularly important in the light of "the impracticality of individual processing of the myriads of minor additions or changes in pipeline facilities" (see General Counsel's speech, cited *supra*) and the Commission's efforts to shorten, simplify, and expedite its practice and procedures.

Accordingly, Staff's motion to dismiss the application is denied.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, including the pleadings, the evidence adduced and the briefs filed, it is found and concluded, in addition to the findings and conclusions heretofore set out, that:

(1) Applicant, East Tennessee Natural Gas Company, a Tennessee corporation having its principal place of business in Knox County, Tennessee, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of May 3, 1949, in Docket No. G–1065 (8 FPC 836).

(2) The facilities hereinbefore described, as more fully described in the application and record in this proceeding, are proposed to be used in the transportation and delivery of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed construction and operation of lateral line facilities in order to assure East Tennessee Natural Gas Company's ability to maintain adequate service to existing resale customers is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant shall submit, within 60 days after the expiration of the authorization hereinafter granted, a statement showing by project: (a) a description of the facilities installed; (b) the location of said facilities; (c) names of customers served through said facilities; (d) final actual costs of said facilities; and, (e) estimates of increased annual and peak day deliveries to each such customer.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $150,000, with no single project to exceed a cost of $50,000.

ORDER

WHEREAS, *it is ordered*, subject to review by the Commission, that:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing East Tennessee Natural Gas Company to construct during the calendar year 1963 and operate miscellaneous lateral line facilities as may be necessary or desirable to meet the requirements of its existing customers purchasing natural gas for resale.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The total expenditure for facilities to be constructed hereunder shall not exceed a maximum of $150,000 and the total expenditure for any one project shall not exceed a maximum of $50,000.

(D) Applicant shall submit, on or before March 1, 1964, a statement showing by project: (a) description of the facilities installed hereunder; (b) the location of said facilities; (c) names of customers served through said facilities; (d) final actual costs of said facilities; (e) estimates of increased annual and peak day deliveries to each such customer.

WILLIAM C. LEVY,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NEW YORK STATE NATURAL GAS CORPORATION, DOCKET NO. CP64-56

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 5, 1963)

On September 4, 1963, New York State Natural Gas Corporation (Applicant) filed in Docket No. CP64-56 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity to sell and deliver natural gas at a new delivery point to The Pavilion Natural Gas Company (Pavilion), for resale and distribution in the Village of Geneseo, which is presently being served, and in the Hamlets of Greigsville, Retsof, Piffard and Wadsworth, and in the Town of York, all not presently served. The aforesaid communities are located in Livingston County, New York.

Applicant further seeks authority to construct the facilities necessary for the above-mentioned sale. The facilities include:

(1) 1.4 miles of 6⅝-inch O.D. pipeline extending from a proposed tap on its 8-inch line No. 533 to facilities to be constructed by Pavilion, all in the Town of York. The connection will be known as the Gregsville Connection.

(2) A measuring and regulating station at the proposed connection between the facilities of Applicant and those to be constructed.

The estimated cost of the proposed facilities is $43,360.00.

The increased market requirements of the Village of Geneseo and the estimated market requirements of the communities not now served will be supplied through the Greigsville Connection in the volumes shown below (at 14.73 psia):

Annual		*Peak Day*	
1963 (2 mos)	20,000	1963–64	420
1964	100,000	1964–65	835
1965	200,000	1965–66	1385
1966	225,000	1966–67	1550

Pursuant to due notice, a hearing was held on October 24, 1963 respecting the matters involved in and the issues presented by the application herein. No protest or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, a New York Corporation with its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant

are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, New York State Natural Gas Corporation, to construct and operate facilities and to sell natural gas in interstate commerce for resale as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within 90 days from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SUPERIOR OIL COMPANY, DOCKET NO. G–10501

ORDER DENYING MOTION

(Issued November 5, 1963)

On August 14, 1963, Trunkline Gas Company (Trunkline) filed a motion for prompt hearing in the above-designated proceeding.[1] This proceeding is a rate investigation instituted under Section 5(a) of the Natural Gas Act by order issued June 4, 1956, 15 FPC 1495. On September 3, 1963, Superior Oil Company (Superior) filed an answer to Trunkline's motion.

In support of its motion for a prompt hearing, Trunkline states that it is a purchaser of substantial volumes of gas from Superior; that it has been several years since the proceeding was instituted; that several parties have filed petitions to intervene, evidencing interest in the proceeding; that the proceeding has not been consolidated with any pending area proceeding; that it will be many months before the Southern Louisiana area proceeding commences; that the hearing would not be lengthy or time-consuming; and would not impose any undue burden upon the Commission or its staff.

---

[1] On the same day, Trunkline also filed a petition requesting leave to intervene in the proceedings in Docket Nos. G–10501 and G–20577. Disposition of the petition will be made by separate order.

In its answer to Trunkline's motion, Superior states that the motion is contrary to the Commission's policy, as announced in the *Phillips* case[2] and the *Statement of General Policy No. 61–1*,[3] and that producer rates should be determined through area rate proceedings. Superior points out that 75% of its jurisdictional sales are being made in the Permian Basin and Southern Louisiana areas, where area rate proceedings are already under way,[4] and that 80% of Superior's sales to Trunkline are made in Southern Louisiana. Superior states that its sales to Trunkline under FPC Gas Rate Schedule Nos. 1 and 3 are subject to rate suspension proceedings in Docket Nos. G–18168 and G–20577, respectively, and that Superior should not be subject to a multiplicity of concurrent hearings with respect to the same rates. It is Superior's position that a decision with respect to the Section 5(a) investigation could not be reached more rapidly than the Southern Louisiana area rate hearing, but, even if it could, the rates determined in the 5(a) proceeding would be only interim rates until the area rate proceeding is concluded. Superior also alleges it would be injured if it should be required to participate in two such proceedings.

As we stated in the *Phillips* decision and the *Statement of General Policy No. 61–1*, it is our intention to establish just and reasonable rates for sales by independent producers on an area basis. An area rate proceeding has already been instituted and is well under way in Southern Louisiana where substantial volumes of Superior's gas are sold. Other proceedings will be initiated as time and staff resources permit. Unlike the situations involved in those producer cases that we have set for individual hearing[5] subsequent to the *Phillips* decision, *supra*, there are no exceptional circumstances presented here which would warrant similar action in the instant case. We therefore conclude that determination of the just and reasonable rates for sales by Superior should be made in applicable area rate proceedings.

The Commission finds:

For the reasons set forth above, the motion of Trunkline should be denied.

The Commission orders:

The motion filed by Trunkline for a prompt hearing in Docket No. G–10501 is hereby denied.

Commissioner Ross *not participating.*

Before Commissioners: Joseph S. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP60–36; GULF OIL CORPORATION, DOCKET NO. CI60–43; TIDEWATER OIL COMPANY, DOCKET NO. CI60–142

ORDER REJECTING OFFERS OF SETTLEMENT, DENYING APPLICATIONS FOR REHEARING, AND GRANTING STAY

(Issued November 5, 1963)

On July 17, 1963, 30 FPC 329, the Commission issued its Opinion No. 399 and order in the above-entitled proceeding. Applications for rehearing and motions

---

[2] Opinion No. 338, *Phillips Petroleum Company*, Docket No. G–1148, *et al.*, issued September 28, 1960, 24 FPC 537.

[3] Issued September 28, 1960, 24 FPC 818 (18 CFR, Chapter I, Part 2, Section 2.56).

[4] Docket Nos. AR61–1 and AR61–2, respectively.

[5] See, for instance, *H. L. Hunt, et al.*, Docket No. RI62–467, *et al.*, order issued June 14, 1962. [Not reported.]

for stay were filed August 13, 1963, by both Gulf Oil Corporation and Tidewater Oil Company. Concurrently therewith, the producers resubmitted petitions for issuance of orders granting permanent certificates of public convenience and necessity in accordance with their applications as modified by offers of settlement, as further modified in such petitions. In summary, the offers of settlement propose an initial rate of 20.625 cents per Mcf, inclusive of tax reimbursement, from June 22, 1962, to June 30, 1967; extension of the make-up period for gas paid for but not taken from one to four years; and refunds to United Gas Pipe Line Company of the full difference between the amount per Mcf actually collected and the settlement rate, with interest at 7 percent per annum. By order issued August 29, 1963, we stayed the effectiveness of our Opinion and Order and action on the rehearing applications to provide an opportunity for consideration of the settlement proposals.[1] We also requested all interested parties to submit statements by September 20, 1963, of their position on the modified offers of settlement.

On September 18, 1963, Memphis Light, Gas and Water Division of the City of Memphis, Tennessee, and Mississippi Valley Gas Company filed a joint opposition to the offers of settlement. Philadelphia Electric Company, on September 20, 1963, filed a statement indicating that it does not consider the settlement proposals as being in the public interest. The Pennsylvania Public Utility Commission, in a statement filed September 23, 1963, subsequent to the time set in our order, likewise indicated that the settlement proposals are not in the public interest.

In view of the oppositions filed, and in light of the reasons expressed in Opinion No. 383–A[2] in rejecting settlement proposals filed in that proceeding, we find that we cannot accept the offers filed by Gulf and Tidewater, nor grant the petitions for issuance of permanent certificates as modified by said offers.[3]

Review of the applications for rehearing fails to reveal any facts or principles of law which were not fully considered by us in issuing Opinion No. 399 and accompanying Order or which, having now been considered, warrant any change in or modification of said Order except as indicated in the following paragraphs. To the extent that our Order adopts the examiner's decision, all specifications of error and grounds for rehearing now advanced were contained in the exceptions to that decision. To the extent that we have applied additional conditions to the certificates, the applications do not convince us that we erred in our determinations. Accordingly, said applications for rehearing will be denied.

The accompanying motions request stay of ordering paragraphs (B) and (C) of the Order pending the outcome of judicial review. Consistent with our order in Opinion No. 398–A in the companion *Placid* proceeding, 30 FPC 682, we shall grant stay of ordering paragraph (C) to defer payment of the refunds for a period of 30 days after the conclusion of judicial review, or until the time limitation for the filing of such review has expired. On October 17, 1963, the Court of Appeals for the Fifth Circuit granted a motion sought by certain of the producers in the *Placid* proceeding for stay of the rate reductions required in that order. The court specified, however, that all monies paid by the pipeline purchasers in excess of the initial rate approved by us are to be accumulated in an escrow account pending determination of an appeal on the merits. Although we are convinced that the initial prices determined by us both in that proceeding and

[1] On October 15, 1963, a notice was issued extending to November 14, 1963, and December 16, 1963, respectively, the time for compliance with paragraphs (B) and (C) of the Order accompanying Opinion No. 399, 30 FPC 329, 335–336.

[2] *Texaco Seaboard Inc., et al.*, Docket No. CI61–118, *et al.*, order on rehearing issued August 27, 1963, 30 FPC 613, 618–619.

[3] See *Hugoton Plains Gas and Oil Company*, Docket No. RI60–102, order rejecting offer of settlement, issued August 20, 1963, 30 FPC 513.

in the present case are fully justified, and that no reason exists why the rate reductions should not be made effective immediately, we are constrained by the court's action to grant a similar stay of the rate reduction requirement in this proceeding.

We note that the fifth paragraph of the Order, page 336 of the decision, which has reference to the take-or-pay for provisions in the applicants' contracts was improperly designated. The correct designation is paragraph (E).

The Commission orders:

(A) The offers of settlement and applications for rehearing filed by Gulf and Tidewater on August 13, 1963, in the above-entitled proceeding are denied.

(B) The completion of the acts and compliance with the requirements set forth in ordering paragraph (C) of the Order accompanying Opinion No. 339, are hereby stayed for a period of 30 days after conclusion of judicial review of said Opinion, or until the time limitation for the filing of such review has expired.

(C) The completion of the acts and compliance with the requirements set forth in ordering paragraph (B) of the Order accompanying Opinion No. 399, the time for which was extended to and including November 14, 1963, are further stayed pending judicial review of said Opinion and until the further order of this Commission, provided, however, that Gulf and Tidewater shall deposit in a special account with a bank or trust company all sums received subsequent to November 14, 1963, in excess of the amounts prescribed by paragraph (B) of the Commission's order, shall hold such monies intact, and shall maintain accurate records thereof and make reports with respect thereto to the Commission in compliance with such requests as may be made.

(D) The designation (D) preceding the fourth ordering paragraph on page 8 of the decision is changed to (E).

(E) In all other respects said Opinion and Order is confirmed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ORDER DENYING APPLICATIONS FOR REHEARING

(Issued November 6, 1963)

Applications for rehearing of the Commission's Opinion No. 402 and accompanying order, issued in these proceedings on September 17, 1963, 30 FPC 698, have been filed by Trunkline Gas Company (Trunkline) and by Central Illinois Public Service Company (Cipsco). Trunkline's application asks for rehearing of that part of the Commission's opinion and order directing Trunkline to make connection with the facilities of the Village of Milford, Illinois, and to sell gas to Milford in an amount up to 906 Mcf per day. Cipsco's application seeks re-

hearing with respect to the Commission's requirement that Panhandle Eastern Pipe Line Company (Panhandle) connect its line at Canton, Illinois, with facilities of the City of Bushnell, Illinois, and sell gas to Bushnell in an amount up to 2,000 Mcf per day, as well as to the requirement that Trunkline connect its line with the facilities of Milford and sell gas to Milford.

Both Trunkline and Cipsco object to the Commission's order providing gas for Milford and Bushnell in the absence of Section 7(a) filings by the Illinois communities. This procedural point has been thoroughly covered in Opinion No. 402 and in the examiner's decision, and nothing is to be gained from any further discussion now. We emphasize, however, that for substantive purposes we have utilized the test and applied the standards set forth in the Act for Section 7(a) applicants in passing upon the requests of Milford and Bushnell for gas in these proceedings.

Trunkline contends that the facilities to be operated by Milford with which it has been ordered to make connection, are not facilities of the municipality as required by Section 7(a), since they are to be owned by the contractor building the facilities and leased to Milford. We find no merit in this contention. The record is clear, as the examiner has shown, that Milford will have complete control of the operation of facilities to be leased and will be required to pay all of the expenses of operation. Similarly, Milford will be required to maintain and to pay for the maintenance of these facilities. Moreover, Milford has the option to purchase the facilities, and it cannot be known now whether the facilities will be owned by Milford or by the contractor at the time the connection is made. It is clear, however, that regardless of who holds the legal title to these facilities, they will be facilities which will be part of Milford's municipally operated system, and for the purposes of Section 7(a) they may be considered to be the facilities of the municipality.

The main thrust of the applications of Trunkline and Cipsco for rehearing, insofar as service for Milford is concerned, is directed to the question whether Milford is engaged in, or legally authorized to engage in, the local distribution of gas as required by Section 7(a). The issues argued by the applicants, however, are issues which we have found to be properly within the jurisdiction of the Illinois courts and which we leave to those courts for decision. We reiterate our conclusion that Milford has demonstrated compliance with the procedural requirements of the Illinois law and that Milford has apparent authority to engage in the local distribution of gas as proposed.

The applicants' contentions that Cipsco could serve these communities at lower rates than the rates proposed by the municipalities and that the Commission's order is not in the public interest have already been disposed of by Opinion No. 402 and warrant no further discussion here.

The Commission finds:

The assignments of error and grounds for rehearing set forth in the applications for rehearing filed by Trunkline and Cipsco present no new facts or principles of law which were not fully considered by the Commission when it adopted its Opinion No. 402 and accompanying order, issued September 17, 1963, or which having now been considered warrant any change or modification in said opinion and order.

The Commission orders:

The applications for rehearing of Opinion No. 402 and accompanying order filed by Trunkline Gas Company and Central Illinois Public Service Company are hereby denied.

CITIZENS UTILITIES COMPANY, PROJECT NO. 2306

ORDER MODIFYING AND ADOPTING PRESIDING EXAMINER'S INITIAL DECISION ISSUING LICENSE FOR CONSTRUCTED PROJECT NO. 2306

(Issued November 6, 1963)*

Syllabus

1. Under Section 10(i) of the Federal Power Act Commission can, at its discretion, waive conditions of Part 1 of the Act (except 50-year license period) in issuing licenses for a complete project of not more than two thousand horsepower, and for those works constituting minor part only of complete project without regard to installed capacity. Pp. 1213–1214.
2. Effective date of license fixed as of approximate date unauthorized construction began in accordance with holding in *Public Service Commission of New Hampshire*. Pp. 1214; 1218.
3. Commission *issues* license for constructed project in proceeding arising under Section 4(e) of the Federal Power Act. Pp. 1214; 1220.

Clifton G. Parker and *Arthur S. Friedman* for Citizens Utilities Company.

Charles J. Adams, John H. Downs and *Charles E. Gibson* for the State of Vermont.

Thomas M. Debevoise and *John D. Lane* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

On August 29, 1963 the presiding examiner issued an initial decision in these proceedings granting a major hydroelectric license to the Citizens Utilities Company, of Stamford, Connecticut, for existing hydroelectric facilities on the Clyde River, and a tributary, in Orleans County, Vermont.

Exceptions to the examiner's decision were filed by the Citizens Utilities Company and by Commission staff counsel, which we dispose of by our order herein.

The Citizens Utilities Company has excepted to the presiding examiner's ruling excluding evidence relating to the question of whether the Clyde River was wholly or partially navigable; to his conclusion that issuance of minor part licenses is discretionary with the Commission; and to the presiding examiner's decision that the license herein granted should have an effective date of June 1, 1956 and terminate as of December 31, 1963. The issues raised by those exceptions have been adequately disposed of by the presiding examiner in his opinion. For the reasons therein cited and upon the additional findings herein, we deny these exceptions as being without merit.

Commission staff counsel has excepted to the second paragraph on page 1217 of the presiding examiner's decision wherein he inadvertently confuses a "minor part" license with a license "for a complete project of not more than two thousand horsepower installed capacity." It is noted that the Commission has not, in the past, drawn any direct relationship between the installed horsepower capacity of a hydroelectric project and the part which the Commission might find a minor part thereof. We conclude that the presiding examiner erred in his statement that "Section 10(i) specifically limits the issuance of a 'minor part' license to a 'complete project of not more than two thousand horsepower installed capacity . . . '." While we do not find it necessary to rule on the full scope of authority granted by Section 10(i), it is clear that the Commission is therein authorized, at its discretion, to waive "conditions, provisions and requirements of this Part, except the license period of fifty years," in issuing licenses for a complete project

*Initial decision appears on p. 1214. Rehearing denied December 9, 1963, 30 FPC 1437.

of not more than two thousand horsepower installed capacity, and, in addition, in issuing licenses for those project works which it finds constitute a minor part only of a complete project, without regard to the installed capacity.

We do not find that the foregoing error has affected the validity of the presiding examiner's findings, his conclusions, or his order. Therefore, upon consideration of the evidence of record, the parties' briefs, the examiner's decision and the exceptions thereto, we are of the opinion that the examiner's decision should be adopted as our own, except for the second paragraph on page 1217 discussed above, which should be deleted.

The Commission finds:

(1) It would not be consistent with the public interest in carrying out the provisions of the Federal Power Act to waive any of the conditions, provisions, and requirements of Part I of the Act in issuing a license to Citizens for Project No. 2306.

(2) The initial decision of the presiding examiner issued herein on August 29, 1963, should be modified as set forth and should, to the extent consistent with this order, be adopted by the Commission as its decision in this case as of the date of issuance of this order.

(3) Except as herein granted, the exceptions to the examiner's decision should be denied.

The Commission orders:

(A) The initial decision of the presiding examiner issued on August 29, 1963 is modified as set forth herein and as so modified is, to the extent consistent with this order, adopted by the Commission as its decision in this case as of the date of issuance of this order.

(B) The second full paragraph, beginning with the words "There is still another and even more compelling reason" on page 1217 of the initial decision of the presiding examiner is hereby deleted.

(C) This order shall become final 30 days from the date of issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of the license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of the issuance of this order.

(D) Except as herein granted, the exceptions to the examiner's decision are hereby denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON AN APPLICATION FOR LICENSE PURSUANT TO SECTION 4(e) OF THE FEDERAL POWER ACT

(Issued August 29, 1963)

RENDELMAN, *Presiding Examiner:* Pursuant to Commission order as set forth in Opinion No. 318, dated February 16, 1959, 21 FPC 233, 243, and in accordance with Section 4(e) of the Federal Power Act, Citizens Utilities Company (Citizens) on January 30, 1962, filed an application for a license to operate previously constructed hydro-electric project works on the Clyde River and a tributary thereof in Orleans County, Vermont.

The project consists principally of: Seymour Dam, a rock and concrete structure at the outlet of Seymour Lake; Echo Dam, a concrete ogee structure with spillway at about elevation 1,249 ft. U.S.G.S., at the outlet of Echo Pond, West Charleston Dam, a rock fill and masonry dam with concrete facing, spillway crest, elevation at about 1,059 ft. at the outlet of West Charleston Pond; a pen-

stock to a powerhouse containing a 1,000 horsepower horizontal turbine connected to an 800 kilowatt generator and appurtenant facilities; Newport Dam (Units 1, 2, and 3), a masonry dam with concrete buttress and concrete facing at the spillway crest, with elevation of about 878 feet, at the outlet of Clyde Pond; two penstocks, a surge tank, and powerhouse containing two 2,400 horsepower Francis turbines, each connected to a 1,500 kilowatt generator and one 1,000 horsepower Francis turbine connected to a 600 kilowatt generator, and appurtenant facilities; Newport Hydro Unit 11 Dam, approximately 1,000 feet downstream from Newport Dam on the Clyde River, a concrete gravity dam, an open flume to an intake structure and penstock; a powerhouse containing a 2,400 horsepower Francis turbine connected to a 1,600 kilowatt generator and appurtenant facilities.

In June, 1956, Citizens Utilities Company commenced construction of a new addition to its project works designated as Unit No. 11 for water power development, approximately one mile upstream from the point at which the Clyde River flows into Lake Memphremagog near Newport, Vermont. Such construction was commenced without having first filed a declaration of intention or application for a license as required by Section 23(b) of the Federal Power Act. On November 30, 1956, Citizens filed a declaration of intention. On June 24, 1957, the Commission instituted an investigation and after hearing thereon, the presiding examiner issued an opinion, holding that Lake Memphremagog and the Clyde River, up to a point about 4,800 feet above the junction thereof, but below Citizens' Unit No. 11 project was navigable, but that the Clyde River above that point was not navigable. Thereafter, on review, it was held by the Commission in *Citizens Utilities Company* 21 FPC 233, 242, Opinion No. 318, Docket Nos. E–6716 and E–6760, February 16, 1959, as follows:

* * * * * * *

(2) Clyde River from near its source at Island Pond to its mouth at Newport, Vermont, is a navigable water of the United States.

(3) The maintenance and operation of Citizens' Unit No. 11, Newport and Charleston hydro-electric developments, and the Echo Pond and Lake Seymour reservoirs referred to above, have affected and are capable of continuing to affect the navigable capacity of the Clyde River downstream from such facilities and will affect the interests of interstate or foreign commerce.

* * * * * * *

The Commission further ordered therein that:

(A) Citizens Utilities Company shall file an application for license under the Federal Power Act with the continued operation and maintenance of its project consisting of the Unit No. 11, Newport and Charleston hydro-electric developments and the Seymour Lake and Echo Pond dams. . . .

On appeal from the Commission's Opinion, the Court of Appeals in *Citizens Utilities Company* v. *F.P.C.*, 279 F. 2d 1, cert. den. 364 U.S. 893, affirmed the jurisdiction of the Commission and in the closing paragraph of its opinion stated:

Concluding as we do that all the petitioner's dams on the Clyde River do "affect" the navigability of the last mile of that river, it becomes unnecessary for us to decide how much, if any, of the river above Unit No. 11 is "navigable". That question, therefore, we leave open.

Citizens, contrary to the Commission's order in Opinion No. 318, *supra*, thereupon filed an application under Section 10(i) of the Federal Power Act for what was in effect, a minor part license for a term of years, containing no other provisions or restrictions. The Commission rejected the application as filed, and Citizens then sought review thereof in the Court of Appeals. Holding that "all issues now before us were fully decided in *Citizens Utilities Company* v. *F.P.C.*,

2 Cir., 279 F. 2d 1, and are here *res judicata*," the Court of Appeals dismissed Citizens' petition, *Citizens Utilities Company* v. *F.P.C.*, 295 F. 2d 959.

Following the institution of enforcement proceedings by the Commission, a stipulation was entered into between Citizens and the Commission whereby Citizens agreed to file its application as directed by the Commission in Opinion No. 318, *supra*, but without prejudice to its rights to apply for a minor part license. A hearing was held thereon at Montpelier, Vermont, on October 16, 1962, and at Washington, D.C., on November 15, 1962, on which date the hearing was concluded. In its "Order Fixing Hearing" dated July 12, 1962, the Commission included the following paragraph:

The Commission finds:

> It is appropriate and in the public interest to hold a public hearing respecting the issues presented. The hearing shall not include the matter of the Commission's jurisdiction, which was determined February 16, 1959 in *Citizens Utilities Company*, 21 FPC 233 and affirmed in *Citizens Utilities Co.* v. *F.P.C.*, 279 F. 2d 1 (CA2), *cert. denied*, 364 U.S. 893, said affirmance being later held by the Court (295 F. 2d 959) to constitute *res judicata*.

By direction of the Commission there is thus eliminated from consideration any matters bearing on the Commission's jurisdiction. This order coupled with the Commission's prior determination in Opinion No. 318, *supra*, that the Clyde River from source to mouth is a navigable water of the United States, makes reconsideration of these issues in this proceeding, as urged by Citizens, neither permissible nor necessary. The only issues therefore left for determination are (1) whether a major or minor part license should issue herein and (2) the effective date of such license.

Citizens claims "entitlement" to a minor part license under Section 10(i) of the Federal Power Act even if the Clyde River is deemed a "navigable water of the United States," basing its argument first, on the presumption that its dams are a minor part only of its entire hydro-electric facilities; and secondly, that the totality of Citizen's hydro-electric facilities on the Clyde River is "a minor part only of Citizens' complete project."

Section 10(i) states in pertinent part as follows:

> (i) In issuing licenses for a minor part only of a complete project, or for a complete project of not more than two thousand horsepower installed capacity, the Commission may in its discretion waive such conditions, provisions, and requirements of this Part, except the license period of fifty years, as it may deem to be to the public interest to waive under the circumstances: . . .

Before proceeding further it should be pointed out that although the language is quite plain, Citizens fails to recognize that Section 10(i) specifically makes the issuance of a minor part license a matter subject to the discretion of the Commission. Under this section of the Act there is no "entitlement", as such, or any mandatory obligation upon the Commission to issue a minor part license under any circumstances. In any case, Citizens' reliance upon Section 10(i) as the basis for entitlement to a minor part license is unwarranted.

The applicant directs attention to the fact that the Court of Appeals based its jurisdictional finding solely on the fact that Citizen's dams in the upper reaches of the river affect the flow of the water in the downstream portion; that these dams are but a minor part of the entire project works, and that Citizens is therefore entitled to a minor part license. It is not necessary to discuss the correctness of Citizens' version of the Court of Appeals' holding before noting disagreement with Citizens' basic presumption that its dams are but a minor part of its hydro-electric project. Suffice to say, that Citizens'

dams control the flow of water which operates the turbines, which drive the generators, which produce the power, which Citizens markets. The dams are an integral part of the project without which there would be no project. Under the circumstances and in the absence of any cited authority to the contrary, the dams concerned herein, clearly cannot be considered a "minor part" of Citizens' hydro facilities.

Citizens' additional claim to a minor part license because its hydroelectric generating facilities are a minor part only of its entire "project", is similarly not persuasive. Citizens urges that, based on capacity, its entire hydroelectric project on the Clyde River is but a minor part of its entire system, which includes diesel produced and purchased power. Based on the evidence in this case however, the fact of the matter is that Citizens' hydro facilities play a major role in the maintenance of an adequate supply of power in the area, and such facilities can therefore hardly be considered as eligible for a minor part license. Citizens' contention herein would be tantamount to a situation whereby Virginia Electric Power Company would apply for a "minor part" license for its hydroelectric facilities at Roanoke Rapids because such facilities produce only a minor part of the total power produced by its entire far-flung system, *U.S. ex. rel. Chapman* v. *F.P.C.*, 345 U.S. 153.

There is still another and even more compelling reason, why a minor part license cannot issue herein. Section 10(i) specifically limits the issuance of a "minor part" license to a "complete project of not more than two thousand horsepower installed capacity . . .". It is readily apparent that the respective installed horsepower of two of Citizens' three powerhouses on the Clyde, is more than two thousand horsepower. Moreover, if the definition of "project" as used in Section 3(11) of the Act is applied to Section 10(i), it becomes even more apparent that the total horsepower of Citizens' hydroelectric works far exceeds the limitation in Section 10(i).

Citizens' attempt to avoid the mandatory conditions imposed by Part I of the Act by obtaining a license for only a purportedly minor part of its hydro facilities must fail in any case. The Commission has at all times considered the issuance of a license for Citizens' entire project as a whole, and not for any particular part thereof. In its decision determining the navigability of the river, the Commission stated:

> * * * Citizens' developments on the river are plainly built to control the flow of the river so as to bring about the most efficient generation of power. * * * We have before us not five separate projects but project works at five locations physically interdependent and operated in coordination for power purposes, so that the entire group is maintained as a single, integrated unit of development for the purpose of exploiting the resources of the river. [*Citizens Utilities Co., supra*, 21 FPC at 240.]

In addition thereto the opening paragraph of the Notice of Application issued by the Commission on February 26, 1962, states that "application has been filed . . . for license for hydroelectric project works . . ." and then goes on to describe the project as including all Citizens' dams, turbines, generators, etc., located on the Clyde River. A project is defined in Section 3(11) of the Act as "a complete unit of improvement or development, consisting of powerhouse, all conduits, all dams and appurtenant works, and structures which are a part of such unit . . .". In the light of the above, the conclusion is inescapable that the Commission never contemplated the issuance of a license, major or minor, for anything other than the complete project works on the Clyde River.[1]

[1] As pointed out by Citizens on page 11 of its memorandum of law, the Commission at one time flatly rejected Citizens' application for a license for only part of its project.

The only other question left for determination is as to the effective date, and the term, of the license to be issued herein. The instant application falls squarely with the principles laid down by the Commission in *Public Service Company of New Hampshire*, 27 FPC 830, and presents no reason for not adhering thereto insofar as the term of the license is concerned. As concerns the effective date of the license, the Commission in the *Public Service Company of New Hampshire* Case, *supra*, stated:

> In the latter connection, it should be pointed out that if Applicant, subsequent to 1935, had built an entirely new project without securing the requisite authorization, we would not hesitate to adopt the date of such construction as the effective date of its license. We see no reason for different treatment merely because the unauthorized construction took the form of a replacement of an existing facility. Since the application now before us does not indicate the precise date upon which the construction was commenced, we are content to make the license effective as of July 1, 1958, the first day of the month in which we determined jurisdiction in Docket No. E–6807.

Resolving any doubt with respect thereto in favor of Citizens, and as indicated by the Commission, in Opinion No. 318, *supra*, it would appear that construction on the Clyde Pond Dam which raised its elevation one foot was undertaken in June of 1956, without benefit of license or declaration of intention. While the Commission in the *Public Service Company of New Hampshire* case issued the license therein effective as of the date the Commission determined jurisdiction, it is clearly indicated that the effective date of the license would have been the "date upon which the construction was commenced," had such date been known. Accordingly, since the date of commencement of construction herein is construed as June of 1956, the effective date of the license is fixed as June 1, 1956.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced, and the arguments, it is found and concluded, in addition to the findings and conclusions heretofore herein set out that:

(1) Applicant is a corporation organized under the laws of the State of Delaware and has qualified to do business in the State of Vermont.

(2) The project consists of:

(a) All lands constituting the project area and inclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2306–21) General Map of Project Area in Vermont;

Exhibit K: Sheet 1 (FPC No. 2306–15) Detail Map showing Site of Echo and Seymour Dams in Vermont;

Sheet 2 (FPC No. 2306–16) Detail Map of West Charleston Plant and Dam;

Sheet 3 (FPC 2306–17) Detailed Map of Newport Dam and Units 1, 2, 3; and

Sheet 4 (FPC No. 2306–18) Detail Map Newport Unit No. 11.

(b) The constructed development consists principally of five dams and three powerhouses described as follows:

Seymour Dam, a rock and concrete structure about 43 feet long and about 5 feet maximum height having a free overflow crest length of about 34 feet surmounted by 6-inch flashboards impounding a reservoir of about 1,750 acres at

normal full pond elevation 1,279.5 feet U.S.G.S. datum and having a usable capacity of 2,040 acre-feet within a maximum drawdown of 1.17 feet from top of flashboards elevation 1,279.5 feet U.S.G.S. The dam also contains a manually controlled gate about 5 feet wide and 5 feet high.

Echo Dam, a concrete ogee structure about 120 feet long and about 16 feet maximum height having a free overflow spillway in one section 32 feet long with crest elevation at 1,249.5 feet and one section 37 feet long and corresponding elevation of crest 1,249 feet both with reference to U.S.G.S datum impounding a reservoir having an area of about 530 acres at normal full pond elevation 1,249 feet and a usable capacity of 3,180 acre-feet within a maximum drawdown of 6.0 feet from normal full pond elevation 1,249 feet. The dam also contains a manually controlled gate about 2.5 feet wide and 4.5 feet high.

West Charleston Dam, a rock fill and masonry dam about 196 feet long and maximum height about 28 feet having a spillway about 107 feet long surmounted with 18-inch flashboards, impounding a pond about 40 acres in area at normal full pond elevation 1,060.25 feet U.S.G.S. and having a usable pond capacity of about 220 acre-feet within a maximum drawdown of 5.5 feet from top of flashboard elevation 1,060.25 feet U.S.G.S.; the dam also contains a 6-foot diameter waste gate and a sluice gate about 7 feet wide and 7.5 feet high, a 6-foot diameter steel penstock about 1,650 feet long from the dam to the West Charleston Powerhouse containing a 1,000 horsepower horizontal turbine connected to an 800 kilowatt generator operating under a design head of 57 feet and appurtenant facilities.

Newport Dam, for Units Nos. 1, 2, and 3, a masonry dam with concrete buttress and concrete facing about 365 feet long and maximum height about 22 feet having a spillway about 324 feet long surmounted by 15-inch flashboards impounding Clyde Pond having an area of about 200 acres at normal full pond elevation 881.0 feet U.S.G.S. and having a usable pond capacity of about 2,400 acre-feet within a maximum drawdown of 12.0 feet from top of flashboard elevation 881.0 feet, U.S.G.S. The dam also contains a 5-foot by 4-foot waste gate. Water is diverted through 2 steel penstocks, one 5 feet in diameter about 1,800 feet long and the other 6 feet in diameter about 2,175 feet long, and a surge tank to the Newport Powerhouse containing 3 units; Units Nos. 1 and 2 each have a 2,400 horsepower vertical Francis type turbine directly connected to a 1,500 kilowatt generator operating under a design head of 140 feet. Unit No. 3 is a 1,000 horsepower horizontal Francis type turbine directly connected to a 600 kilowatt generator operating under a design head of 132 feet and appurtenant facilities. Total installed hydroelectric capacity of the station is 3,600 kilowatts.

Newport Dam for Unit No. 11, a concrete gravity diversion dam about 114 feet long and maximum height of about 20 feet having a spillway crest about 90 feet long at elevation 741 feet U.S.G.S a canal or open flume about 2,170 feet long from the dam to an intake structure, an 8-foot diameter steel penstock about 80 feet long from the intake structure to the powerhouse, a powerhouse containing one Unit No. 11 having a 2,400 horsepower vertical fixed blade propeller type turbine directly connected to a 1,600 kilowatt generator operating under a design head of 55 feet and appurtenant facilities. The dam also contains a waste gate about 4 feet wide and 4 feet high.

The waters released by Citizens Utilities Company from their dams on Seymour Lake and Echo Pond flow downstream through the hydro-electric plant of the Village of Barton, at approximately river mile 12.2, and thence through Citizens' West Charleston plant at about mile 11.4, Newport Units 1, 2 and 3, at about mile 1.9, and finally Unit No. 11 plant about mile 1.0. The location, nature, and character of the project works are more specifically shown

and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: *General Design Drawings*

Exhibit	FPC No.	Title

Exhibit M entitled "General Description of Equipment in Project" consisting of 2 typewritten pages filed in the Commission, January 30, 1962.

(c) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(3) No conflicting application is before the Commission. Public notice has been given. No formal protest has been received.

(4) The issuance of a license as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(5) The project is best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, under the terms and conditions hereinafter imposed.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charges is 8,000 horsepower. The energy generated thereby is distributed by Applicant and sold for public utility purposes.

(7) The amount of annual charges to be paid under the license for the project for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(8) The exhibits designated and described in finding (2) above conform to the Commission's rules and regulations and should be approved as part of the license for the project.

ORDER

WHEREFORE, *it is ordered*, subject to review by the Commission, that:

(A) The exhibits designated and described in finding (2) above are hereby approved as part of this license order.

(B) This license is hereby issued to Citizens Utilities Company under Section 4(e) of the Federal Power Act for a period, effective as of June 1, 1956 and terminating December 31, 1993 for the continued operation and maintenance of the constructed Seymour Lake Dam, Echo Pond Dam, West Charleston Dam and Powerhouse, Units Nos. 1, 2, and 3 Dam and Powerhouse and Unit No. 11 Dam and Powerhouse and appurtenances (Project No. 2306) located on a tributary

of the Clyde River and the Clyde River, a navigable water of the United States in Orleans County, State of Vermont subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(C) This license is also subject to the terms and conditions set forth in Form L–3, December 15, 1953, entitled "Terms and Conditions of License for Constructed Major Project Affecting Navigable Waters of the United States" (17 FPC 385–389) which terms and conditions, designated as Articles 1 through 17, are attached hereto and made a part hereof, except for Article 7 and the last sentence of Article 11; and subject to the following special conditions set forth herein as additional articles:

Article 18. The Licensee shall pay to the United States the following annual charge, effective as of June 1, 1956.

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act one (1) cent per horsepower on the authorized installed capacity (8,000 horsepower) plus two and one-half (2½) cents per 1,000 kilowatt-hours of gross energy generated during the calendar year for which the charge is made; or such other amounts as may hereafter be determined as necessary to reimburse the United States for the costs of administration.

Article 19. The Licensee shall for the protection of navigation, construct, maintain, and operate at its own expense such lights and other signals on fixed project structures in or over navigable waters of the United States as may be directed by the Secretary of the Department in which the Coast Guard is operating.

Article 20. The Licensee shall construct, maintain, and operate, or shall arrange for the construction, maintenance, and operation of artificial propagation facilities and such other permanent fish facilities and protective devices and shall comply with such reasonable modifications of the project structures and operation in the interest of fish and wildlife resources, provided, that such construction, maintenance and operation of artificial propagation facilities and such other permanent fish facilities and protective devices and modifications shall be reasonably consistent with the primary purpose of the project and not unduly impair the power value of the project, as may be prescribed hereafter by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the Vermont Fish and Game Commission, after notice and opportunity for hearing and upon a finding based on substantial evidence that such construction, maintenance and operation of artificial propagation facilities and protective devices and modifications are necessary and desirable, and consistent with the provisions of the Act.

Article 21. Whenever the United States shall desire, in connection with the project, to construct fish handling facilities at its expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interests in lands, reservoirs, waterways and project works as may be reasonably required to complete such fish handling facilities or such improvements thereof. In addition, after notice and opportunity for hearing the Licensee shall modify the project operation as may be prescribed by the Commission, consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish handling facilities constructed or improved by the United States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish handling facilities or to relieve the Licensee of any obligation under this license.

Article 22. The Licensee shall at no time cause or permit the elevation of the water surface of Seymour Lake to be raised more than six inches higher or to be lowered more than eight inches below the crest of Licensee's present dam, said crest of dam being at elevation 1,279 feet U.S.G.S. datum. Maximum lake elevation shall be not higher than 1,279.5 feet U.S.G.S. datum and minimum lake elevation to be no lower than 1,278.33 feet U.S.G.S. datum.

Article 23. The Licensee shall at no time cause or permit the elevation of the surface of Echo Lake to rise above the crest of the present dam at elevation 1,249 feet U.S.G.S. datum.

Article 24. The Licensee shall make water releases in the interest of fish and wildlife in accordance with the following schedule:

(i) *At Seymour Dam*—Keep the gate continuously open at least one inch from the sill for the continuous discharge of water.

(ii) *At Echo Dam*—Keep the gate continuously open at least one inch from the sill for the continuous discharge of water.

(iii) *At Unit No. 11 Dam*

(a) Discharge at least five cubic feet per second of water continuously through the sluice gate in the dam.

(b) For the period April 15 to June 15 of every year discharge continuously at least ten cubic feet per second of water through the sluice gate in the dam.

(c) For the period September 15 to November 15 of every year discharge continuously at least ten cubic feet per second of water through the sluice gate in the dam.

Article 25. The Licensee shall raise and lower its gates at Seymour and Echo dams gradually in order to prevent scouring of the streambed.

Article 26. In order to determine the total flow of the river below Unit No. 11 Powerhouse, and to aid in determining releases from the sluice gate in Unit No. 11 dam, the Licensee shall: (1) maintain the existing stream gaging station in the by-passed section of the river; (2) install immediately in and maintain in Unit No. 11 Powerhouse a continuous recording watt meter to provide a precise record of kilowatt-hour output and rated to continuously reflect the discharge in cubic feet per second flowing through the turbine.

Article 27. The Licensee shall file for Commission approval a revised Exhibit K map showing the project boundary and Exhibit L for Seymour Dam within one year from the date of issuance of this license.

Article 28. The Licensee shall install additional capacity and make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 29. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, the benefits of which shall be shared equitably by the participants in such coordination.

Article 30. The Licensee shall, within one year from the date of issuance of this license, file with the Commission a recreational use plan for the project which shall include not only recreational improvements which may be provided by others, but the recreational improvements the Licensee plans to provide.

Article 31. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational

purposes, including fishing and hunting, and shall allow to a reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: *Provided*, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and *Provided further*, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. The facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

(D) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

(E) The request of the Applicant for minor and minor part licenses is denied.

MARTIN E. RENDELMAN,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NOS. CP62–243 AND CP61–339; MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP62–242, CP61–341, CP62–76 AND CP61–339; MISSISSIPPI RIVER FUEL CORPORATION, DOCKET NO. CP61–348

ORDER GRANTING REQUESTS FOR TEMPORARY AUTHORIZATION

(Issued November 6, 1963)

Natural Gas Pipeline Company of America (Natural), on September 6, 1963, and Mississippi River Transmission Corporation (Mississippi Transmission) and Mississippi River Fuel Corporation (Mississippi Fuel) on September 9, 1963, filed requests for the issuance of temporary authorization of their respective applications in the above-captioned dockets. In essence, the applicants seek an extension to December 1, 1964, of the temporary certificates issued by this Commission on October 15, 1962, as modified on November 20, 1962, in the above-docketed applications which authorizations are due to expire on December 1, 1963. On October 9, 1963, Trunkline Gas Company (Trunkline) filed an answer in opposition to the requested temporary authorizations.

In our afore-mentioned order of October 15, 1962, we set forth, extensively, our reasons for granting the temporary authorizations then requested making specific findings that, among other things, (1) there was a natural gas supply shortage in the St. Louis, Missouri, area, (2) an emergency existed within the meaning of Section 7 of the Act and (3) that the situation could not be timely alleviated because of the anticipated protracted hearings on the applications by virtue of their involvement in a comparative proceeding. Those hearings were concluded on October 15, 1963. However, when considering the time permitted for the filing of briefs as well as the time allowed for the filing of any excep-

tions to the initial decision to be issued by the Presiding Examiner and fully recognizing the complex nature of the presentations before the Examiner, we conclude that a final decision could not issue timely so as to meet the coming winter season's emergency in the St. Louis area.

Trunkline's objections, in the main, are a reiteration of its objections filed in opposition to the granting of the original requested temporary authorizations which we previously disposed of and need not now repeat. Trunkline does make reference to a new matter in its current opposition. The Commission by a grant of the authorizations here sought would permit Natural to deliver and sell to Transmission 36,750 Mcf per day at 14.65 psia under Natural's PL–1 Rate Schedule. That is the only volume and rate schedule for which deliveries are being sought by Natural to Transmission under temporary authorization. Trunkline states however that under the revised tariff tendered for filing on September 20, 1963, Natural seeks to enlarge the scope of any temporary authorization that might be granted here to the detriment of Trunkline. Under the proposed Rate Schedule I–2, Natural could deliver and sell "surplus" gas to Transmission which would result, Trunkline claims, in a reduction of Transmission's takes from Trunkline. Our order of October 31, 1963, in Docket No. RP64–12, providing for a hearing and suspending, among other things, the proposed I–2 Rate Schedule of Natural exanimates this latter argument. However, lest there be any misconception, even if we had not suspended Natural's proposed I–2 Rate Schedule, no deliveries could be made under it by reason of our grant here. Our grant under temporary authorization to meet an existing emergency situation permits Natural to deliver to Transmission only the aforementioned volume of gas utilizing the PL–1 Rate Schedule.

The Commission orders:

The temporary authorizations granted by our order of October 15, 1962, as modified, is hereby extended so as to terminate on December 1, 1964. To effectuate this authorization Natural's service agreement with Transmission, dated September 3, 1963, is accepted to become effective December 1, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

FLORIDA GAS TRANSMISSION COMPANY, ET AL., DOCKET NO. G–18338, ET AL.

ORDER AMENDING ORDERS ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 7, 1963)

On May 1, 1963, as supplemented on May 31, 1963, Florida Gas Transmission Company (Florida Gas) filed in Docket No. G–18338, *et al.*, a "Petition To Amend Orders Issuing Certificate Of Public Convenience And Necessity" by substituting City Gas Company of Florida (City Gas) for the Brevard County Gas District (District) as the resale customer and distributor of natural gas to be sold and delivered by Florida Gas for ultimate public consumption in Brevard County, Florida.

The Commission's order issued August 9, 1961,[1] in the subject dockets, authorized Houston Texas Gas and Oil Corporation[2] to provide natural gas service to District for resale, subject to the condition that an alternate financial plan be adopted because the original plan had too low a debt-service coverage ratio to meet our standards of economic feasibility. The Board of County Commissioners of Brevard County, Florida, elected not to proceed with the construction of a municipally owned distribution system. Thereafter, the principal cities in Brevard County granted franchises to City Gas to render natural-gas distribution service, those cities being: Melbourne, Eau Gallie, Titusville, Cocoa, Cocoa Beach, and Whispering Hills. The estimated third-year annual and peak day natural-gas requirements for the areas to be served by City Gas are as follows:

Annual:		
Firm	601,068	M³Btu
Interruptible	41,670	M³Btu
Total	642,738	M³Btu
Peak day	8,350	M³Btu

These quantities represent a decrease of 133,736 M³Btu in third-year annual firm requirements, a decrease of 137,298 M³Btu in third-year annual interruptible requirements, and a decrease of 2,902 M³Btu in the third-year peak day requirements. This decrease in the quantities of gas utilized in Brevard County is a result of the somewhat smaller service area proposed by City Gas, in that outlying rural areas in the County will not be served under City Gas' proposal.

Florida Gas proposes to install four separate 4-inch lateral transmission lines, together with metering and regulating stations and appurtenant facilities, from its existing Indian River Lateral to connections with City Gas at the city gates of Melborne, Eau Gallie, Indian River City, and Cocoa—a total of approximately 11.6 miles of transmission lines.

Florida Gas has entered into service agreements dated April 23, 1963, with City Gas for general service, providing for the sale of gas under Rate Schedule G of Florida Gas' FPC Gas Tariff.

Due notice of the filing of the subject petition was issued June 20, 1963. On July 17, 1963, a timely petition to intervene in this proceeding was filed by Southeastern Propane Gas Company (Southeastern) and was granted by order permitting intervention issued on September 5, 1963. No other petition or protest has been received. Notice of the hearing was published in the Federal Register on September 11, 1963; (28 F.R. 9890). Pursuant to that notice a public hearing was held in Washington, D.C., respecting the matters involved in and the issues presented by the petition to amend on September 30, 1963, through October 3, 1963. Hearings were then recessed until October 29, 1963, and, in the interim, Southeastern moved to withdraw its intervention having disposed of its properties to City Gas. Staff counsel moved orally at the hearing of October 29, 1963, that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

[1] Coastal Transmission Corporation, *et al.*, 26 FPC 318.

[2] Houston Texas Gas and Oil Corporation was subsequently renamed as Florida Gas Transmission Company. Later, Coastal Transmission Corporation was merged into Florida Gas.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the orders heretofore issued in Docket No. G–18338, *et al.*, should be amended to substitute City Gas Company of Florida for the Brevard County Gas District as the resale customer and distributor of natural gas to be sold and delivered by Florida Gas Transmission Company in the amounts set forth for resale for ultimate public consumption in Brevard County, Florida.

(2) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convience and necessity require the construction by Florida Gas Transmission Company of the facilities set forth in their petition, those being four separate lateral transmission lines totaling approximately 11.6 miles with metering and regulating stations, and appurtenant facilities; and to deliver natural gas in the quantities set forth in their petition.

(3) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) The order heretofore issued in Docket No. G–18338, *et al.*, be, and the same are hereby, amended to substitute City Gas Company of Florida for the Brevard County Gas District as the resale customer and distributor of natural gas to be sold and delivered by Florida Gas Transmission Company for resale for ultimate public consumption in Brevard County, Florida.

(B) Florida Gas Transmission Company is hereby authorized to construct the facilities set forth in their petition, those being four separate lateral transmission lines totaling approximately 11.6 miles with metering and regulating stations, and appurtenant facilities; and to deliver natural gas in the quantities set forth in their petition.

(C) Southeastern be and hereby is permitted to withdraw its intervention in the proceedings.

(D) In all other respects, the orders heretofore issued in Docket No. G–18338, *et al.*, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP64–53

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued November 7, 1963)

On September 3, 1963, Florida Gas Transmission Company (Applicant) filed in Docket No. CP64–53 an application and supplement, pursuant to Section 7(b) of the Natural Gas Act for permission to abandon approximately 1.25 miles of 3½-inch lateral pipeline and appurtenant facilities which have been used solely for rendition of direct sales of natural gas to the municipal diesel electric generating plant of the City of Blountstown, Florida.

Applicant states that due to a major breakdown of generating facilities at the plant being served with gas the same is being closed and that no further service is desired.

The City of Blountstown has agreed to pay to Applicant the sum of $21,560 to terminate the gas purchase contracts, which sum will compensate for the cost of the construction of the facilities to be abandoned.

Pursuant to due notice a public hearing was held in Washington, D.C., on October 22, 1963, respecting the matters involved in and the issues presented by the application as supplemented. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and the Commission render a decision pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is a natural gas company within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1956, in Opinion 301.

(2) The facilities to be abandoned, as heretofore described, are subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as heretofore described, is permitted by the public convenience and necessity, and an order authorizing and approving same should be issued as hereinafter ordered.

(4) A request made during the public hearing by Staff Counsel for the omission of the intermediate procedure under Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure was unopposed by any party of record, and not having been denied by the Commission is granted pursuant to Section 1.30(c)(1) of the said rules.

The Commission orders:

(A) Applicant be and is hereby permitted to abandon the facilities heretofore described, as more fully described in the application.

(B) Applicant shall advise the Commission in writing of the date of the removal of the facilities within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NORTH STAR NATURAL GAS COMPANY, DOCKET NO. CP63-268

FINDING AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued November 7, 1963)

On March 29, 1963, North Star Natural Gas Company (Applicant) filed in Docket No. CP63-268 an application, as supplemented on October 7, 1963, pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Midwestern Gas Transmission Company (Midwestern) to establish physical connection of its transmission facilities with the proposed facilities of Applicant and to sell and deliver natural gas to Applicant for resale and distribution in the municipalities of Staples and Wadena, Minnesota, all as more fully set forth in the application.

Applicant proposes to construct and to operate two lateral transmission pipelines from the point of interconnection with Midwestern's transmission line to the towns of Staples and Wadena. Applicant will also construct and operate the distribution facilities in the said communities.

Applicant estimates its peak-day requirement and sources of supply, as follows, for the first three years of service:

	Volumes in Mcf @ 14.73 psia		
	First year	Second year	Third year
Requirements	1,848	2,565	2,909
Supply:			
Midwestern	1,000	1,100	1,200
Peak shaving plant	848	1,465	1,709
Total supply	1,848	2,565	2,909

The total estimates cost of the proposed lateral lines and the distribution systems is $882,200, which will be financed through private placement, short term loans and cash generated from operations.

Applicant has received authorizations from the City of Staples and the Village of Wadena to construct and operate the gas distribution systems in each community.

On April 29, 1963, Midwestern filed an answer to the application advising that it has not objected to supplying natural gas for resale in Staples and Wadena in the amounts requested.

Applicant will construct and operate facilities to supply the additional requirements for peaking purposes.

Due notice of the filing of the application and opportunity for hearing thereon have been given by publication in the Federal Register on October 3, 1963 (28 F.R. 10695). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Midwestern Gas Transmission Company is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of May 12, 1959, in Docket No. G–16841 (21 FPC 653).

(2) Applicant, North Star Natural Gas Company, is a public utility duly organized and existing under the laws of the State of Minnesota and is authorized to engage in the business of distributing and selling natural gas in said State.

(3) It is necessary and desirable in the public interest that Midwestern be directed to establish physical connection of its natural gas transmission facilities with Applicant's proposed facilities and that it sell and deliver natural gas to Applicant for distribution in Staples and Wadena, Minnesota.

(4) Applicant should be prepared to receive natural gas from Midwestern within one year from the date of issuance of this order.

(5) The requirement that Midwestern serve Applicant, as proposed, will not place any undue burden upon Midwestern nor will it impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Midwestern Gas Transmission Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver to Applicant up to 1,200 Mcf per day, all as more fully described in the application and supplement in this proceeding.

(B) Applicant shall be prepared to receive natural gas from Midwestern within one year from the date of issuance of this order.

(C) Midwestern shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NAFCO OIL AND GAS INC. (SUCCESSOR TO OIL AND GAS PROPERTY MANAGEMENT, INC.), DOCKET NOS. G-18432 AND G-3863

FINDINGS AND ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 7, 1963)

On February 7, 1958, Oil and Gas Property Management, Inc. (Oil & Gas), et al.,[1] filed in Docket No. G-14509 a certificate application seeking authorization to sell natural gas to Northern Natural Gas Company (Northern) from certain acreage in Ochiltree County, Texas, pursuant to a gas sales contract dated August 8, 1957, between J. M. Huber Corporation and Northern, as ratified by Oil & Gas on December December 1, 1957.

On April 28, 1959, Oil & Gas and NAFCO Oil and Gas Inc. (NAFCO) filed a joint application in Docket No. G-18432 for NAFCO to assume and continue all sales of natural gas made by Oil & Gas theretofore authorized in various dockets including Docket No. G-3863. By letter from the Secretary dated May 19, 1959, Oil & Gas was advised that the portion of the Commission's order issuing a certificate in Docket No. G-3863 had been vacated and the related FPC Gas Rate Schedule No. 13 had been cancelled and rejected since the sale was a "percentage sale" as defined in Section 154.91(e) of the Regulations under the Natural Gas Act.

By order issued May 20, 1963, in Docket No. G-18432 (Docket No. G-2843, *et al.*) NAFCO received certificate authorization to continue the sales initiated by Oil & Gas which service was proposed in Docket No. G-14509, and the applications filed in Docket No. G-14509 was dismissed. The certificate theretofore issued in Docket No. G-3863 is still outstanding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the order of May 20, 1963, in Docket No. G-18432 (Docket No. G-2843, *et. al.*) should be amended as hereinafter ordered.

The Commission orders:

(A) The order of May 20, 1963, in Docket No. G-18432 (Docket No. G-2843, *et al.*) be and the same is hereby amended to authorize the continuation by NAFCO Oil and Gas Inc. of the sale of natural gas theretofore rendered by Oil and Gas Property Management, Inc., *et al.*, authorized in Docket No. G-3863, with the exception of that portion of the service theretofore rendered pursuant to Oil and Gas Property Management, Inc., FPC Gas Rate Schedule No. 13; and in all other respects, said order of May 20, 1963 shall remain in full force and effect.

(B) That portion of the certificate application filed in Docket No. G-18432 relating to the sale theretofore authorized in Docket No. G-3863 be and the same is hereby dismissed insofar as said application relates to service rendered pursuant to Oil and Gas Property Management Inc., FPC Gas Rate Schedule No. 13.

(C) The certificate of public convenience and necessity heretofore issued in Docket No. G-3863 be and the same is hereby terminated.

---

[1] The additional parties are Beacon Building Corporation, Hansford Oil Company, and D. Michael Curran, cosignatory parties with Oil & Gas to the gas sales contract involved.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TEXACO INC., ET AL., DOCKET NO. G–4616, ET AL.; PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. CI61–516; TEXOMA PRODUCTION COMPANY, DOCKET NO. CI63–1042

ORDER RESCINDING IN PART ORDER ISSUED SEPTEMBER 13, 1963*

(Issued November 7, 1963)

On September 13, 1963, the Commission issued an order in Docket No. G–4616, *et al.*, granting a certificate of public convenience and necessity to Texoma Production Company in Docket No. CI63–1042 and amending the order granting a certificate in Docket No. CI61–516. The order of September 13, 1963, stated in part that all of the sales therein were either equal to or below the ceiling prices established by the Commission's Statement of Policy 61–1, as amended, or involved sales for which permanent certificates had been previously issued. Prior to the issuance of the order of September 13, 1963, Applicants in Docket Nos. CI61–516 and CI63–1042 had been requested to advise the Commission whether they would be willing to accept authorizations conditioned to a lower rate than that for which they had applied. Neither expressed willingness to do so.

It appears that Docket Nos. CI61–516 and CI63–1042 were included in the consolidated proceeding through error and that the amendment and certificate should not have been granted in the order of September 13, 1963.

The Commission finds:

These portions of the Order of the Commission issued September 13, 1963, in Docket No. G–4616, *et al.*, granting a certificate of public convenience and necessity to Texoma Production Company in Docket No. CI63–1042 and amending the order granting a certificate of public convenience and necessity to Pan American Petroleum Corporation in Docket No. CI61–516 should be rescinded.

The Commission orders:

(A) Those portions of the Order of the Commission issued September 13, 1963, in Docket No. G–4616, *et al.*, granting a certificate of public convenience and necessity to Texoma Production Company in Docket No. CI63–1042 and amending the order granting a certificate of public convenience and necessity to Pan American Petroleum Corporation in Docket No. CI61–516 be and the same are hereby rescinded.

(B) In all other respects said order of September 13, 1963, in Docket No. G–4616, *et al.*, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP63–346

ORDER REMANDING PROCEEDINGS FOR FURTHER HEARING

(Issued November 8, 1963)

On June 17, 1963, Florida Gas Transmission Company (Applicant) filed in Docket No. CP63–346 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the

*Rehearing denied December 27, 1963, 30 FPC 1606.

construction during the twelve-month period following date of authorization and the operation of natural gas transmission facilities to enable Applicant to connect new direct industrial customers purchasing natural gas from its interstate transmission system, all as more fully set forth in the application.

The facilities proposed to be constructed hereunder include lateral lines, taps, measuring and regulating and other necessary delivery equipment to render service to direct industrial customers for various purposes, the estimated construction costs being limited to a maximum of $1,000,000, with no single project to exceed a cost of $250,000.

Pursuant to due notice, a public hearing was held in Washington, D.C., on September 4, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The application in this proceeding is subject to the same infirmities as the application of *East Tennessee Natural Gas Company* in Docket No. CP63–212 which is the subject of our Opinion No. 409 and accompanying order issued November 5, 1963, p. 1197, *supra*, and the discussion set forth therein is, therefore, equally applicable to the instant proceeding.

In view of the fact that the Applicant herein has not had opportunity to make whatever representations it deems appropriate in the premises, the proceeding in subject Docket No. CP63–346 will be remanded to the Presiding Examiner for further hearing to enable Applicant to present such evidence as it may desire in the light of the aforesaid Opinion No. 409.

The Commission finds:

It is necessary and appropriate in the administration of the Natural Gas Act that the instant proceeding be remanded to the Presiding Examiner for further hearing for the presentation of such evidence as Applicant deems appropriate in the light of Opinion No. 409.

The Commission orders:

(A) The proceeding in Docket No. CP63–346 is hereby remanded to the Presiding Examiner for further hearing.

(B) The hearing date for the remanded proceeding shall be fixed by a notice to be issued hereafter by the Secretary of the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

THE MANUFACTURERS LIGHT & HEAT COMPANY, DOCKET NO. CP63–300

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued November 8, 1963)

On May 9, 1963, The Manufacturers Light and Heat Company of Pittsburgh, Pennsylvania, filed an application, supplemented on August 27, 1963, in Docket No. CP63–300 pursuant to Section 7(b) of the Natural Gas Act for permission to abandon 4.68 miles of 16-inch transmission pipeline located in Tyler and Wetzel Counties, West Virginia, all as more fully discussed in the application.

Applicant states that the pipeline, above described, is not now of use to it because of depletion of the Sedalia Field in Doddridge County, West Virginia,

and the termination of a service contract with Hope Natural Gas Company on May 31, 1960. No customers of Applicant will be deprived of gas service by reason of the abandonment proposed and the annual expense of operating the facilities amounting to approximately $3,300 will be saved. The facilities were constructed in 1903.

Pursuant to due notice a public hearing was held in Washington, D.C., on October 29, 1963, respecting the matters involved in and the issues presented by the application as supplemented. No petition to intervene in opposition to or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and the Commission render a decision pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant is a natural gas company within the meaning of the Natural Gas Act and the facilities sought to be abandoned herein are facilities within the jurisdiction of the Commission.

(2) The facilities to be abandoned, as heretofore described, are subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment by Applicant, as heretofore described, is permitted by the public convenience and necessity, and an order authorizing and approving same should be issued as hereinafter ordered.

(4) A request made during the public hearing by Staff Counsel for omission of the intermediate decision procedure under Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Rules.

The Commission orders:

(A) Applicant be and is hereby permitted to abandon and remove the facilities heretofore described, as more fully described in the application.

(B) Applicant shall within ten days after removal of the said facilities from their emplacement advise the Commission thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NEW YORK STATE NATURAL GAS CORPORATION, DOCKET NO. CP64-35

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 8, 1963)

On August 5, 1963, New York State Natural Gas Corporation (Applicant) filed in Docket No. CP64-35 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a line tap and certain metering and regulating facilities, and the sale and delivery of natural gas to New York State Electric and Gas Corporation (New York Electric) for resale and distribution, all as more fully set forth in the application.

Applicant proposes to tap its 20-inch transmission line No. 30 in the Town of Marshall, Oneida County, New York, and to construct and operate a measuring and regulating station for the sale and delivery of natural gas to New York Electric for resale to the Village of Waterville and the Towns of Marshall and

Sangerfield, and environs, all located in Oneida County. The proposed connection will be known as the Waterville Connection.

New York Electric is an existing customer of Applicant and now receives all its gas for distribution to various cities and towns in New York from Applicant from 16 delivery points. It will construct and operate the necessary connecting line and distribution systems in the above named communities.

The estimated third year annual and peak-day requirements for the proposed market area are 80,400 Mcf and 679 Mcf of natural gas, respectively. The proposed service will not affect Applicant's gas supply or capacity. New York Electric has received the necessary authorization from the New York Public Service Commission to construct the necessary gas plant and has the required franchises to distribute gas in the respective communities.

The total estimated cost of the proposed facilities to be built by Applicant is $14,436 to be financed from cash on hand. An early authorization is requested in order that New York Electric may begin acquisition of a number of rights-of-ways necessary to begin construction in the spring of 1964.

Pursuant to due notice, a public hearing was held in Washington, D.C., on October 29, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procdure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, New York State Natural Gas Corporation, a New York corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, New York State Natural Gas Corporation,

to construct and operate the proposed facilities and to transport and sell natural gas as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale and transportation of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 10 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP62-180

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 8, 1963)

On February 6, 1962, as supplemented on April 4, 1962, Northern Natural Gas Company (Applicant) filed in Docket No. CP62-180 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain pipeline tap facilities on the Texas portion of the "West Leg" of Applicant's Permian Basin area transmission facilities; and to sell natural gas in interstate commerce to Pioneer Natural Gas Company (Pioneer) for resale, all as more fully described in the application.

Pursuant to a contract between Applicant and Pioneer, Pioneer will take over Applicant's servicing of Applicant's present and future right-of-way grantors on the said portion of the "West Leg". Pioneer additionally intends to make irrigation sales to other consumers adjacent to the "West Leg".

Under the terms of the contract, Pioneer will purchase Applicant's existing metering facilities now used for sales to right-of-way grantors. In regard to future delivery points, when requested by Pioneer, Applicant will tap its line for measuring and regulating facilities to be installed by Pioneer. Applicant is requesting "blanket authority" to construct and operate such pipeline taps as Pioneer may request for the period ending October 1, 1971, at which time the primary term of the aforementioned contract expires. It is estimated that thirty-two new delivery points will be established up to October 1, 1971.

The contract provides for the sale to Pioneer by Applicant of a maximum of 1000 Mcf per day of firm gas between April 1 and October 1 of each year, and the same amount on an interruptible basis from October 1 to April 1 of each year. The initial price is 23¢ per Mcf (at 14.73 psia).

Pursuant to due notice, a hearing was held on October 29, 1963, respecting the matters involved in and the issues presented by the application herein. No protest or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and

that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware Corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) Public convenience and necessity require that Applicant limit its deliveries of natural gas to Pioneer to a maximum of 150,000 Mcf per year.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate facilities and to sell natural gas in interstate commerce for resale as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall limit its deliveries of natural gas to Pioneer to a maximum of 150,000 Mcf per year.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NOS. CP63-204, CP64-91; GULF PACIFIC PIPELINE COMPANY, DOCKET NO. CP63-223; EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64-76

ORDER DENYING MOTION FOR RECONSIDERATION

(Issued November 8, 1963)

On September 19, 1963, we received a letter from Gulf Pacific Pipeline Company (Gulf Pacific) expressing its disagreement with the procedures specified in our "Order on Motions to Expedite Hearings" issued on August 22, 1963, in Docket No. CP63-223, 30 FPC 533. By letter issued October 9, 1963, we advised Gulf Pacific that its letter would be treated as a petition for reconsideration of our August 22, 1963, order and we allowed other interested parties until October 24, 1963, to reply to Gulf Pacific's contentions. Replies supporting Gulf Pacific's petition were filed by the City of Los Angeles and its Department of Water and Power (Los Angeles) and by Southern California Edison Company (Edison). Replies opposing the petition were filed by the Pennsylvania Public Utility Commission, Standard Oil Company of California, Western Oil and Gas Association, and jointly by Pacific Lighting Gas Supply Company, Southern California Gas Company, and Southern Counties Gas Company of California. The reply of the Pennsylvania Commission did, however, support Gulf Pacific in its request that the procedures specified in our order be revised to permit cross-examination of direct evidence and exhibits before the service of rebuttal evidence.

In our order, we specified dates and indicated procedures to be followed in a comparative proceeding which would determine the most desirable manner, from the standpoint of the public interest, of meeting the long-term needs for natural gas deliveries to Southern California. We indicated that a notice of hearing would be issued as soon after the deadline for filing applications for long-term service to Southern California as we could determine what applications, if any, acceptable for filing, would be consolidated with Gulf Pacific's:[1] a hearing conference would begin within a month of issuance of the notice; all parties would file all direct testimony and exhibits in writing within 90 days from the date of termination of the hearing conference and rebuttal testimony within 45 days thereafter; and parties would have an additional 45 days to prepare for cross-examination of all witnesses in a continuous hearing. The order expressly indicated that at this oral portion of the hearing we would permit the introduction of "such additional evidence as the examiner may permit upon being satisfied that it was not reasonably available to the offerer at the time of submitting his direct case, or in response to material submitted on rebuttal and could not properly be anticipated at the time of introduction of the submitter's direct case, and would be of substantial value in resolving the issues in the proceeding."

As we understand it, Gulf Pacific makes two basic arguments. First of all, it contends that, irrespective of the time which may be needed to prepare the

[1] That notice of hearing issued on October 21, 1963, as "Order Consolidating Proceedings, Fixing Date of Hearing Conference and Denying Motion to Consolidate and for Time to Amend," *Transwestern Pipeline Co., et al.*, Docket No. CP63-204, *et al.*

direct cases of the other applicants and parties, it will not require 90 days from the date of the hearing conference set for November 19, 1963, to prepare its case, and that the consolidated proceeding could be expedited by permitting Gulf Pacific to "go forward with the oral presentation of its case at the earliest possible moment" with the examiner being authorized to then direct the further course of the proceeding "in the light of developments as they may occur." We are convinced that *oral* presentation of the direct cases in any proceeding as complex as this can only act to waste the time of the parties and the examiner and that our requirement that the direct cases of all parties be reduced to writing is the path to expedition as well as thoroughness. Moreover, assuming that Gulf Pacific could file its direct case in writing substantially in advance of the other parties, we do not believe the overall comparative proceeding would be aided if, at that time, other parties were required to take time off from completion of their direct cases to begin preparation of rebuttal or cross-examination of Gulf Pacific's case. If there is any undue slack in the schedule we have enunciated in our August 22, 1963, order (which we doubt) then it should be used by the examiner, after clarification of the matter at the hearing conference, to cut down the 90 day period "within which" we indicated all direct cases should be filed.

The other point raised by Gulf Pacific and its supporters is with respect to our conclusion that the proceeding can be expedited by requiring the parties to file written rebuttal information in advance of cross-examination. This requirement, which, of course, parallels a similar provision in our new pipeline rate procedures (see 18 CFR 2.59(g)), reflects our view, after considerable experience with contrary procedures, that cross-examination in complex, strongly contested cases such as the present one, is all too frequently barren in result, particularly in forming the basis for rebuttal evidence, that much if not all of the rebuttal evidence which proves of real value could have been prepared prior to cross-examination, and that if it had been, the cross-examination would be less time consuming. We recognized, however, that there might well be some areas where matters clarified or brought out for the first time on cross-examination might justify additional evidence by an opposing party, and we intended to expressly provide that the examiner could authorize the introduction of such evidence upon a proper showing. To insure, however, that there can be no future question as to this matter we now wish to make clear that the "additional evidence" the examiner may permit a party to introduce at the time of the oral part of the hearing may include evidence the need for which developed only during cross-examination. With this clarification, we are convinced that the procedure we have adopted offers the best hope of bringing this necessarily complex proceeding to the earliest possible lawful conclusion.

The Commission orders:

Gulf Pacific Pipeline Company's motion for reconsideration of our "Order on Motion to Expedite Hearings" issued on August 22, 1963, is therefore denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

HALL-INTERSTATE MINING COMPANY AND WEBER APPEL, EDNA APPEL AND THEODORE R. PRATT, PROJECT NO. 568

REFERENCE TO ATTORNEY GENERAL FOR SUIT TO REVOKE LICENSE

(Issued November 12, 1963)

On June 26, 1946, the Commission issued a license to Hall-Interstate Mining Company, of Boise, Idaho, for Project No. 568 for a period of 20 years, effective as of March 10, 1945.

The project is located on Stratton Creek, a tributory of Deadwood River, in Valley County, Idaho, and affects lands of the United States within the Boise National Forest. The project consists of a log-crib, earth-and-rock-filled dam creating a small pond; a conduit, a frame powerhouse having an installed capacity of 2,000 horsepower; and a 2,200-volt transmission line 2,300 feet long.

By its order issued July 28, 1950, the Commission approved a lease agreement and assignment between the licensee and Weber Appel and Edna Appel (husband and wife), and Theodore R. Pratt and Nellie E. Pratt (husband and wife). Under the terms of the agreement, the lessees were granted the right to immediate possession of the project for the purpose of conducting a mountain tourist resort, with an option[1] to purchase the project upon making certain payments by January 1, 1955. The interest of Nellie E. Pratt in the lease agreement was transferred to Theodore R. Pratt by divorce decree of the District County of Ada County, Idaho, rendered in September 1949.

Under the provisions of the Commission's July 28, 1950 order, the lessees were made subject to all of the conditions of the license for Project No. 568, of the Federal Power Act, and of the rules and regulations of the Commission to the same extent as though the lessees were the original licensee under the license.

Article 20 of the license fixes an annual charge for reimburseing the United States for the costs of administration of Part I of the Federal Power Act, based upon the installed horsepower capacity of the project and the gross energy generated thereby during each calendar year.

Subparagraph (3) of Section 11.20 of Part 11 of the Regulations of the Commission provides that to enable the Commission to determine such administrative charge annually, each licensee shall file with the Commission, on or before February 1, of each year, a statement under oath showing the gross amount of power generated (or produced by non-electrical equipment) by the project during the preceding calendar year, expressed in kilowatt-hours.

Section 11.31 of Part 11 of the Regulations provides, among other things, that annual charges shall be paid within 30 days of rendition of a bill therefor by the Commission.

After repeated requests to the lessees for the project power generation statement required to be filed under the aforementioned Section 11.20 of the Commission's Regulations, power generation statements, not under oath, were received, and statements for the annual charges owing under the license were finally submitted to the lessees and the annual charges have been paid through the calendar year 1961.

By letters dated February 13, March 6, and April 11, 1963, the lessees[2] were

---

[1] There is no evidence in the Commission's records to indicate that the option was acted upon.

[2] Letters addressed to: Mr. Weber Appel, 2120 N. Breneman Avenue, Boise, Idaho.

requested to submit the project power generation statement for the calendar year 1962, pursuant to the aforementioned provision of the Commission's Regulations. No such statement has been received to date. This situation was called to the attention of Hall-Interstate Mining Company,[2] the licensee of record for the project, by letter dated June 13, 1963. Receiving no response thereto, we requested Hall-Interstate, by registered letter dated August 28, 1963, to submit to the Commission, within 30 days from the date of such letter, a statement, under oath, showing the gross amount of power generated by Project No. 568 during the calendar year 1962. No such statement has been received.

The Commission finds:

The licensee and lessees, by their failure to submit the aforementioned project power generation statement, have violated the terms of the license for Project No. 568 and the Regulations of the Commission under the Federal Power Act.

The Commission orders:

The licensee's and the lessees' respective violation of the terms of the license for Project No. 568 and of the Regulations of the Commission under the Federal Power Act is hereby referred to the Attorney General for the institution of proceedings under Section 26 of the Federal Power Act for revocation of the license for Project No. 568, for collection of annual charges, and for restoration of the lands of the United States involved to a condition satisfactory to the Forest Service.

Reuben Goldberg and *George Spiegel* for Michigan Gas and Electric Company

Harry A. Poth, Jr., *Richard M. Merriman* and *Peyton G. Bowman* for Michigan Gas Utilities Company

Vernon A. Swanson for Milwaukee Gas Light Company

*Initial decision appears on p. 1242.

John A. McGrath and *Thomas C. Williams* for Fuels Research Council, Inc., National Coal Association, United Mine Workers of America, Midwest Coal Producers Institute, Inc., and Upper Lake Docks Coal Bureau, Inc.

C. Louis Knight for the Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

This proceeding involves an application by Michigan-Wisconsin to lease from Michigan Consolidated Gas Company and operate the North Hamilton Storage Field in Clare County, Michigan and about 15 miles of 20-inch pipe connecting this to the Lincoln-Freeman field. Mich-Wisc. also seeks to construct about 24 miles of six-inch pipe and 1,550 additional horsepower at its Wisconsin A station to enable it to provide additional service to nine existing customers this winter.

As originally filed, the application also sought authorization to construct about 20 miles of six-inch line to provide gas to Wisconsin Public Service Coporation to serve some new communities in Wisconsin, but this was severed from the proceeding and will be tried later as Phase 2.

The cost of the facilities for serving the existing customers will be $1,186,000 and there is no question as to economic feasibility or financing. By operating the new storage field the capacity of the Mich-Wisc. system will be increased by about 45,000 Mcf per day and they will also utilize 37,200 Mcf per day which was saved by an earlier order for possible service to the upper peninsula of Michigan but which is now available for allocation to present markets.

The application was supported by Mich-Wisc.'s nine customers and the Public Service Commissions of Michigan and Wisconsin. Representatives of the coal industry[1] did not oppose authorizing the storage but sought the imposition of conditions with regard to its use. Staff counsel took no position and made no filings in the case.

The examiner found that additional gas was necessary to meet the needs of Mich-Wisc. customers this winter and that the conditions sought by the coal interests were an attempt to modify Mich-Wisc.'s overrun tariff and were not properly an issue in this proceeding.

The only exceptions to the decision were filed by the coal interests who continue to argue for the imposition of restrictive conditions on the operations of Mich-Wisc. In effect, these conditions would provide that Mich-Wisc. should not allocate any overrun gas until after the heating season is over each year and should not be allowed to sell gas from the North Hamilton field except in an emergency to continue firm service.

Based on the evidence in the record, the parties' briefs, the examiner's decision and the exceptions thereto we are of the opinion that the examiner's decision should be affirmed and the certificate should be issued conditioned upon Mich-Wisc. filing certain information with the Commission.

As a basis for their proposed conditions the coal interests argue that the facts in the record indicate that Mich-Wisc. has been using its storage to help its customers maintain service to their interruptible customers throughout the year rather than simply to meet firm demands. They argue that on the day of its greatest send-out last winter the customers of Mich-Wisc. continued to sell boiler fuel in large quantities and that no limitation was put on their overruns for this purpose.[2] The coal intersts also argue that a number of

[1] Fuels Research Council, Inc., National Coal Association, United Mine Workers of America, Midwest Coal Producers Institute, Inc., and Upper Lake Docks Coal Bureau, Inc.

[2] Michigan-Wisconsin has answered this by stating that it took one day under the contract to notify the customers that they would be cut back and that no such sales were made on the day following the maximum send-out.

customers have included interruptible service in their nominations for maximum daily quantities. Mich-Wisc. answers this by stating that if customers are willing to pay a demand charge to maintain a cushion for firm customers and sell to interruptibles, it is well within their discretion to do so.

There appears to be no real objection to authorizing the proposed facilities for Mich-Wisc. and the only question is whether any condition should be imposed on their use. The coal interests put on no witnesses to substantiate their proposed conditions and, of course, there was no chance to test their contentions by cross-examination or rebuttal evidence. In addition, the proposed limitation on authorization of overruns would in fact change the provisions of the Mich-Wisc. overrun tariff without notice to any of its customers and without a full hearing. A limitation on the use of the North Hamilton field would only result in using up other storage first rather than drawing on all storage in the most efficient manner.

However, the record does indicate that there is a substantial question as to whether in one respect Mich-Wisc. and its customers have operated in a manner wholly consistent with the public interest. Under the Mich-Wisc. tariff, customers are limited to their maximum daily quantities (MDQ) and an annual quantity (ACQ) equal to 190 times the MDQ. The contract year runs from September 1 to August 31. In 1962, almost all of the customers involved in this proceeding had used up their entire contract quantity by the early part of July and could not even have provided water heating services without authorized overruns (or unauthorized overruns at $10 per Mcf). In 1963, several of the customers had used up their ACQ in the months of May or June. We also know that last February, during the excessively cold winter, Mich-Wisc. had drawn down its storage to a point where it was forced to limit its customers to 70% of their contract entitlements.

These facts indicate that it would be advisable to obtain additional information on their operations in order to ascertain whether any proceedings to modify the tariff or condition future certificates may be necessary. We will, therefore, in granting this certificate impose a condition providing for obtaining information from Mich-Wisc. on its operating practices. Upon receipt of this information we shall determine what other proceedings, if any, may be appropriate.

The Commission orders:

(A) The additional Findings and Conclusions and the Order of the Presiding Examiner's Decision issued on August 26, 1963, in these proceedings are adopted as the findings and orders of the Commission.

(B) This certificate is expressly conditioned upon the applicant filing the following information with the Commission.

(1) Michigan-Wisconsin shall submit within thirty (30) days from the date of issuance of this order:

(a) the estimated volumes of gas by months to be withdrawn and injected in each of its owned or leased storage fields for the coming contractual year beginning September 1, 1963, and ending August 31, 1964;

(b) the estimated volumes of working gas and cushion gas planned for the end of each month for each of its owned or leased storage fields for the coming contractual year beginning September 1, 1963, and ending August 31, 1964.

(2) Michigan-Wisconsin shall submit monthly reports within (10) days of the last calander day of each month, beginning September 1, 1963 and ending August 31, 1964, stating for each month:

(a) the actual volumes of gas withdrawn and injected in each of its owned or leased storage fields at the end of the month;

(b) the actual volumes of working gas and cushion gas in each of its owned or leased storage fields, as of August 31, 1963, and the end of each succeeding month thereafter;

(c) the total volumes of gas delivered to each of its customers broken down as follows:

1. contracted-for volumes;
2. dates and volumes of authorized overrun gas;
3. dates and volumes of unauthorized overrun gas.

(d) the date of maximum delivery to each of its customers and the volumes of gas sold thereon broken down as follows:

1. contracted-for volumes;
2. authorized overrun volumes;
3. unauthorized overrun volumes.

(e) the amount of gas withdrawn from storage on:

1. the day of maximum delivery;
2. the days when any overrun gas is sold.

(f) the following information with regard to each of its customers:

1. the monthly volumes of gas sold by each customer to each of its classes of service; *i.e.*, residential, residential space heating, commercial, commercial space heating, firm industrial, interruptible industrial, unaccounted for, and company use;

2. the amount of firm and interruptible gas sold by each customer on its maximum day send-out;

3. the amount of firm and interruptible gas sold by each customer on the days when authorized and/or unauthorized overrun is purchased.

(C) The exceptions to the examiner's decision are hereby denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON AN APPLICATION FOR A CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY PURSUANT TO SECTION 7(c) OF THE NATURAL GAS ACT

(Issued August 26, 1963)

BINDER, *Presiding Examiner:* On February 18, 1963, Michigan Wisconsin filed its application in Docket No. CP63-230 in which, among other things, it sought authorization to operate under lease from Michigan Consolidated Gas Company (Michigan Consolidated) the North Hamilton Storage Field in Clare County, Michigan, as well as a 15.2 mile 20-inch pipeline connection to be built by Michigan Consolidated between that field and the Lincoln Freeman Feld. By this application Michigan Wisconsin proposes that natural gas which is presently available only on an "overrun" basis (*i.e.*, on a basis which gives no contract or other specific assurance to any distributor as to exactly how much or when such natural gas will be available) be injected into the North Hamilton Storage Field. This storage field when operation is authorized will provide initially 45,000 Mcf per day. In addition, Michigan Wisconsin will utilize 37,200 Mcf per day of its pipeline capacity which was reserved for possible service to the upper peninsula of Michigan (22 FPC 775) but is now available for allocation to its present markets (27 FPC 180). The applicant proposes to employ the above-mentioned natural gas to provide increased Maximum Daily Quantities (MDQ's) to meet the increased space heating and base load requirements of the present markets of nine of its present distributing customers for the contract year which will commence on September 1, 1963, under Michigan Wisconsin's FPC Gas Tariff.[1]

[1] The need for these additional maximum daily quantities is particularly acute for the coming winter because of the substantial increases of the customer companies to meet

[Footnote continued on p. 1243.]

In order to make the increased peak day deliveries to the present markets available, Michigan Wisconsin has also requested authorization in its application to construct and operate 13.3 miles of 6-inch partial loops of its Keokuk, Iowa, lateral; a 10.9 mile 6-inch loop of its Allegan, Michigan, lateral; and an additional 1,550 horsepower of compression at its Wisconsin A station at an estimated cost of $1,186,000. The necessity for these facilities, which for a pipeline of this magnitude are of a comparatively minor character, is not disputed. Neither is the economic feasibility nor the financing of the project in dispute.

The application as originally filed by Michigan Wisconsin also requested authorization to construct and operate a 19.3 mile 6-inch line to provide gas to Wisconsin Public Service Corporation (Public Service) for certain new communities the latter sought to serve.

In order to achieve acceleration in the processing of so much of its application as is involved in this hearing, Michigan Wisconsin filed an amendment on April 29, 1963, to set up its proposals in two phases. Phase one is limited to its proposal to meet the increased needs of the present markets, *i.e.*, to obtain authorization for the construction and operation of the North Hamilton Storage Field and appurtenant facilities, together with authorization to build facilities appropriate to accomplish the purposes of this phase of its application, namely, to increase the maximum daily quantities to some nine distributor companies to meet peak day requirements of such customers.[2]

Phase two covered service to be furnished by Public Service to several proposed new communities and is not the subject of this hearing. Phase two will be heard at a later time to be selected by the Commission.

The severity of last winter's sustained period of cold weather which was the coldest the midwest had suffered in 42 years had strained the delivery capacity of Michigan Wisconsin's storage facilities to their outermost limits. Michigan Wisconsin ascertained that the distributor customers involved in this proceeding have had a substantial increase since last year in their heating and base load requirements. The applicant and these distributor companies are not only apprehensive of a repetition this coming winter of the severity experienced last winter and its accompanying need for greater volumes for space heating and base load during peak periods but are particularly concerned that additional storage facilities be made available for the coming winter to avoid the hazards attributable to the inadequancy of present storage facilities particularly to meet the increased space heating and base load requirements which have been established to exist through uncontradicted evidence by the nine distributors seeking such increases. Such additional requirements have been established beyond cavil and are not disputed by any party to this proceeding.

Although this application had been filed on February 18, 1963, probably due to the volume of Commission business, no action had been taken insofar as setting this matter down for hearing was concerned as late as the latter part of June. Accordingly, on June 25, 1963, Michigan Wisconsin filed a motion seeking

---

[Footnote continued from p. 1242.]

peak load and base heating requirements. The demands of the customers for increased maximum daily quantities of natural gas will be discussed hereinafter.

[2] Michigan Wisconsin has contracts with some 32 customers who are either distributors or municipalities. (See Michigan Wisconsin Tariff, Item B.) Only 9 customers are involved in this proceeding. In this connection it should be noted that the Commission's Notice of Application (June 14, 1963) and Notice of Hearing Date (July 12, 1963) set forth that this matter concerns the leasing and operation of the North Hamilton Storage Field and appurtenant facilities and such additional facilities as may be needed in relation to the service of maximum daily quantities to the parties to this proceeding. There is no provision in these notices relating to any proposed overall or major change in Michigan Wisconsin's tariff and no order issued upon such notice effecting such a change would be appropriate in this case.

a hearing at the earliest possible date specifically for the purpose of obtaining an order as requested in phase one of its application. The reason why Michigan Wisconsin sought to have phase one heard immediately was so that it could satisfy the urgent need of Michigan Wisconsin's presently attached distributor customers for increased MDQ (Maximum Daily Quantity) this coming winter. A short discussion of Michigan Wisconsin and its operations may be helpful in putting this application in appropriate perspective.[2]

Michigan Wisconsin owns and operates a natural gas pipeline extending from the Hugoton Field in Texas through or into the States of Oklahoma, Kansas, Nebraska, Missouri, Iowa, Illinois, Indiana, Wisconsin, and Michigan. The company's annual supply of gas of approximately 295 billion cubic feet comes from widely diversified sources and areas. In central Wisconsin the company's pipeline connects with Midwestern Gas Transmission Company (Midwestern) and through Midwestern and its supplier, Trans-Canada Pipelines, Ltd., the company has access to important natural gas fields in western Canada. The company also receives about 75 million cubic feet of gas daily from Northern Natural Gas Company at an intersection near Janesville, Wisconsin. In addition the company has an interconnection in southwestern Michigan with its affiliate, American Louisiana Pipeline Company, from which it receives an average of approximately 100 million cubic feet of gas daily. The company at this time operates under lease from Michigan Consolidated Gas Company, an affiliate, six underground storage fields in west central Michigan with a working storage capacity of approximately 53 billion cubic feet. The distributing companies served by Michigan Wisconsin generally have high heating saturations and operate in a cold climate. Accordingly the company must be prepared to meet very large variations in its load.

One of the methods developed by the company to meet its obligation to supply large volumes of gas to its distributors during peak periods is to acquire and operate substantial storage facilities. This it has done in the past and it seeks to continue this practice in this case. By the practice of developing increased storage facilities Michigan Wisconsin has increased its ability to meet the very large demands made upon its system in cold weather. Absent this method of operation the applicant would, in order to meet high demands in very cold weather, have to increase its pipeline facilities very substantially and make contracts with producers for larger overall takes of natural gas on a year-wide basis. This, in turn, would involve substantially greater outlays of capital and greater costs of operation than the course followed by the company in the past and sought to be followed here. By following its present method of operation the company has been enabled to lower its overall costs of service. The company seeks to continue to follow this method in this proceeding.

As the Company pointed out in its 1962 Annual Report to its stockholders "As an indication of the volume of the storage fields, on a recent peak day in January 1963, the company delivered 1.5 billion cubic feet to its customers of which 650 million cubic feet or 43 percent came from storage. During the summer months when the requirements of the distributing companies are greatly reduced, the company stores large volumes of gas for use in meeting the great winter heating demand. The fields thus permit the company to operate at a high load factor throughout the year with resulting economies."

As will be observed while a high percentage of Michigan Wisconsin's gas comes from its storage facilities, a still larger percentage comes from the other sources to which we have referred hereinabove.

---

[2] See in this connection the Company's Annual Report to Stockholders for 1962 of which the Examiner takes official notice, and the Company's tariff filing (Item B by reference).

The gas which Michigan Wisconsin buys from its suppliers is purchased throughout the year. All of these sales of natural gas to Michigan Wisconsin are made subject to Commission authorization. All Michigan Wisconsin's sales involved in this proceeding, both of storage gas and the balance of the gas which it receives from its suppliers, are now being made subject to Commission authorization. No change in gas supply or authorization to sell additional gas is being sought. No additional gas supplies are to be received by the Company and no supply of additional gas beyond the total now at hand is to be sold to the distributors. Essentially what is sought is to allocate a comparatively small percentage of Michigan Wisconsin's total gas supply which is now subject to sale as "overrun" gas to storage gas so that its distributors can be assured of increased supplies of gas during peak periods and in order that such distributors may plan their overall operations on some reasonably sound business basis. In general, such proposed allocation of Michigan Wisconsin's presently authorized and existing gas supply contemplates the transferral of gas which is essentially of an interruptible character to one which is essentially of a firm character.

Applicant's major purpose in leasing and operating the Hamilton Storage Field and in constructing and operating the other facilities which have been generally described herein, is to utilize natural gas now available as "overrun" gas, including the gas not yet allocated, for the purpose of affording contractual assurance in accordance with Michigan Wisconsin's tariff, to meet certain of its customers concededly increased space heating and base load requirements on peak days.

There is nothing in Michigan Wisconsin's application and nothing in any notice put out by the Commission which reasonably could have alerted any customer or any other possible intervener to the possibility that any general change or modification of any important tariff provisions was within the purview of this proceeding. Nevertheless, the "Coal Interests" have sought the imposition in any Commission order to be issued herein of important conditions which would change the character of the applicant's OS–1 Rate Schedule.

In view of the fact that modification of Michigan Wisconsin's tariff was not within the ambit of the issues in this proceeding and since no Commission notice of hearing or order gave any indication that such an issue was even contemplated to be heard in this proceeding most of Michigan Wisconsin's customers, including Michigan Consolidated, which is by far the largest customer, have not even intervened and are not parties to this proceeding.

In view of the "Coal Interests" claims, however, the provisions of Michigan Wisconsin's tariff pertinent to a discussion of the issues will be summarized and discussed briefly herein.

Prior to the effectiveness of Michigan Wisconsin's present two-part rate the company had a straight-line commodity form of tariff covering the sale of all of its gas. It now has a two-part rate which came into existence over the strenuous objection of the Coal Interests and others following an order issued by the Commission on September 30, 1959, in Docket No. G–17512. The two-part rate became effective as of March 1, 1960.[4]

For the purposes of this proceeding Michigan Wisconsin's rates at this time may be summarized as consisting principally of the demand commodity ACQ–1 rate, the MDQ provisions, the OS–1 rate and the SGS–1 (small general service) rate.

---

[4] 22 FPC 603, 607, 1155, 1166. See also brief of the "Coal Interests" filed in Docket No. G–17512 on July 20, 1959.

The tariff filing provides that Michigan Wisconsin's contract year is the 12-months beginning each September first. For service under the ACQ-schedule, the company and each customer agree on a Maximum Daily Quantity (MDQ) for each year, which fixes the maximum volume of gas Michigan Wisconsin is obligated to deliver to the customer on any single day. These deliveries are subject to a schedule of monthly Contract Demands. During the four cold months, November through February, the buyer is entitled to demand 100 percent of his Maximum Daily Quantity but only 85 percent from March 1–March 15, and 75 percent for the other months of the year. The total volume of gas the customer is entitled to purchase during the contract year, called the Annual Contract Quantity (ACQ), may be stated in terms of the permitted number of days use of the Maximum Daily Quantity. For example, at this time each customer is entitled to a total of 190 days' use of his Maximum Daily Quantity. A customer's purchases in excess of his MDQ on a particular day (daily overrun), or in excess of his ACQ in a particular year (annual overrun), if authorized by Michigan Wisconsin, are billed as overrun gas under the OS–1 schedule. If not authorized, a penalty is charged.

Specifically, Michigan Wisconsin's Overrun (OS–1) Rate Schedule contains the following provision covering interruptible service: [5]

2. APPLICABILITY AND CHARACTER OF SERVICE:

> Gas delivered to Buyer hereunder shall be subject to curtailment or interruption on 24 hours' notice when, in the sole judgment of Seller, such gas is not available for sale and delivery hereunder. Seller shall authorize deliveries hereunder to the extent that, in Seller's judgment, surplus gas is available on Seller's system and the delivery capacity of its system will permit such delivery without jeopardizing the ability of Seller to meet its delivery obligations to other Buyers.
>
> If Seller shall receive requests for deliveries under this rate schedule in excess of the surplus gas available, Seller shall authorize deliveries hereunder on the basis of the ratio of each such Buyer's Maximum Daily Quantity to the total Maximum Daily Quantity of all such Buyers.

Furthermore, as Michigan Wisconsin has pointed out in its reply brief, ". . . Section 5 of the ACQ–1 Rate Schedule; Section 5.2 of the SGS–1 Rate Schedule; and Section 5 of the OS–1 Rate Schedule early contemplate that surplus or overrun gas may be delivered 'during any one day and during any contract year' as authorized by Seller and agreed to by Buyer and that such deliveries may be made in 'each month' of the Contract Year which commences on September 1st."

In this case Michigan Wisconsin and nine of its distributors customers offered evidence, namely (1) Michigan Gas and Electric Company (M.G. & E.); (2) Michigan Gas Utilities Company (Michigan Gas); (3) Milwaukee Gas Light Company (Milwaukee Gas); (4) Wisconsin Natural Gas Company (Wisconsin Natural); (5) Madison Gas and Electric Company (Madison Gas); (6) Wisconsin Power and Light Company (Wisconsin Power); (7) Wisconsin Public Service Corporation (Public Service); (8) Wisconsin Michigan Power Company (WMPCO); and (9) Wisconsin Fuel and Light Company (Wisconsin Fuel). The major part of this evidence including the testimony and exhibits were prepared and served prior to the hearing. In response to inquiries made by the Coal Interests additional exhibits were prepared by some of the interveners. Some further evidence was adduced by the Coal Interests and the Staff in the cross-examination of the witnesses.

---

[5] See Item B, Michigan Wisconsin Tariff.

No evidence was offered to rebut the evidence presented by the applicant and the distributor witnesses and such evidence is uncontradicted. In addition to the customers seeking additional MDQ's the Commission authorized intervention by Iowa Southern Utilities Company and Keokuk Gas Service Company, two additional customers of Michigan Wisconsin. The latter companies offered no evidence and filed no brief. In addition, the Commission authorized intervention by Fuels Research Council, National Coal Association, United Mine Workers of America, Mid-West Coal Producers Institute, Inc., and Upper Lake Docks Coal Bureau, Inc., herein jointly called the "Coal Interests." Michigan Public Service Commission and Public Service Commission of Wisconsin filed notices of intervention.

Public Hearings began on July 25, 1963, and were concluded on July 31, 1963. The presiding examiner on July 31, 1963, directed that *oral argument be held* on August 1, 1963, concerning the *merits of Michigan Wisconsin's application.* On that day all parties made argument regarding their position in this case except the staff counsel who refused to state any position with regard to the merits of Michigan Wisconsin's application whatever, although Michigan Wisconsin's application had been on file with the Commission for well over five months and the Commission had acted with expedition in granting Michigan Wisconsin's urgent request for a prompt hearing. While staff counsel made no argument directed to the merits of the application during the oral argument which had been set down on August 1, 1963, for such purpose, and while staff counsel had offered no evidence in this proceeding, and had indicated no position in the matter, he devoted his time on August 1, 1963, to an argument to the effect that he needed extensive briefing time. No specific explanation for the necessity of having extended briefing time was made by staff counsel other than he had to read this record and all the exhibits before he could make up his mind as to his position. In this connection, it should be kept in mind that the application had been on file for over five months and that the prepared testimony and the greater part of the exhibits had been prepared and served in advance of the hearing. Furthermore, the Commission had granted applicant's request for a prompt hearing. There would be no sense in granting a prompt hearing or a hearing advanced ahead of the time when it would normally be heard unless the Commission intended to see that the matter was concluded and decided promptly by the presiding examiner.

In the presiding examiner's judgment Section 1.29(a) of the Commission's Rules of Practice and Procedure was pertinent to a determination of the length of time which should be afforded for purposes of filing a brief. This section of the Commission's Rules of Practice and Procedure provides that the presiding officer shall fix the time for the filing and service of briefs, giving due regard to the nature of the proceeding, the magnitude of the record, and the complexity or importance of the issues involved.

This, in the presiding examiner's judgment, is not a complex case. Counsel for all parties, other than the staff and the Coal Interests, requested that initial briefs be filed not later than August 12, 1963. In actuality counsel for the applicants stated on the record that his oral argument was in substance his brief in this case, but that he hoped to file a brief expressing himself perhaps more elegantly than he had during the oral argument but he added that he would not state applicant's position differently than he had expressed orally. This he did. Both counsel for the Coal Interests and staff counsel sought extended briefing time although neither had offered any evidence in contradiction to the evidence offered by the parties nor expressed any position during the hearings. In the presiding examiner's judgment, particularly in view of the fact

that the application had been on file for over five months, prepared testimony and exhibits had been served in advance and since there was an urgent need for these storage facilities for the coming winter, there was no good basis for granting extended briefing time. Furthermore, the Commission had by granting applicant's request for a prompt hearing indicated that it expected a prompt disposition of the matter. Accordingly, initial briefs were directed to be filed not later than August 12, 1963, and a reply brief by applicant not later than August 16, 1963.

Simultaneous initial briefs were filed August 12, 1963, by Michigan Wisconsin Pipe Line Company, Wisconsin Fuel and Light Company, Wisconsin Power and Light Company, Madison Gas and Electric Company, Michigan Gas Utilities Company, Wisconsin Public Service Corporation, Milwaukee Gas Light Company, and by the "Coal Interests" jointly, namely, Fuels Research Council, Inc., National Coal Association, United Mine Workers of America, Mid-West Coal Producers Institute, Inc., and Upper Lake Docks Coal Bureau, Inc. Michigan Wisconsin filed its reply brief in the short time it had requested, namely, on August 16, 1963.

Michigan Gas and Electric Company filed no written brief. Its counsel stated that the filing of a written brief was ". . . an expense which is wholly unwarranted when we have presented evidence which isn't controverted, when we are told that the coal people have no objection except that they want a condition dealing with something else that has no reference to the need for Hamilton storage and the MDQ. Under those circumstances, I don't feel justified in spending the client's money to that extent and I would ask you to consider that what we have said orally on the record be considered our brief."

The Michigan Public Service Commission and the Public Service Commission of Wisconsin filed no briefs but filed statements strongly supporting the granting of Michigan Wisconsin's application and these Commissions do not support the "Coal Interests" position.

The Staff had offered no evidence and at this writing has filed no brief with the presiding examiner; accordingly, there is no basis at this time to assume that the Staff opposes Michigan Wisconsin's application or that it considers the conditions sought by the "Coal Interests" should be made a part of any order issued in this proceeding.

The nine distributing companies offering evidence in phase one will receive some 98 percent of the increased maximum daily quantities involved in this hearing.[6] The evidence offered by these distributors may be summarized as follows:

Michigan Gas & Electric Company (M.G. & E.) distributes natural gas which it purchases from Michigan Wisconsin in 14 communities in southwestern Michigan, including Niles, Buchanan, Holland, Zeeland, Dowagiac, and Three Rivers. Last winter M.G. & E., on January 23, 1963, curtailed all of its interruptible loads, employed its peak shaving facilities to their fullest capacity and it still had to take unauthorized overruns to meet its firm load requirements incurring a penalty of $10 per Mcf. It concededly has space heating and base load requirements for the coming winter greater than its requirements for last winter. It seeks an increase of 2,600 Mcf in its MDQ to meet its space heating and base load requirements. No party has offered any evidence to contradict the claims of M.G. & E. and its direct evidence supports its claim in full.

---

[6] In *Northern Natural Gas Company, et al.*, Docket No. G–20570 *et al.*, the Commission held that ". . . we believe that the requisite marketability has been shown when the customers who desire 98 percent of the gas proposed to be allocated present evidence to substantiate their need for the gas." 25 FPC 1234, 1244.

In connection with the necessity for prompt disposition of this application, the witness for M.G. & E., among other things, pointed out that ". . . until we are assured of getting the additional gas for the next heating season, we cannot connect the new customers who want it. The prospective gas users get provoked. The building tradesmen who install the heating equipment do not have available enough work force to bunch a year's heating equipment installations into a few months. Our construction of extensions of mains and facilities to serve new customers are likewise bunched into too short a period of time. Gas requirements proceedings need to be disposed of early in the year. It is already so late in the year that immediate disposition of this certificate application is essential."

As counsel for M.G. & E. pointed out, the witness for the distributor ". . . was there referring to operational problems that a distribution company faces which are often overlooked by one that may not have had experience in operating the distribution company. He testified with respect to that under oath. He was offered for cross-examination. That testimony is unchallenged and uncontroverted as is his testimony in support of the 2600 Mcf that Michigan Gas and Electric seeks."

The comments of counsel for M.G. & E. were well taken and apply to all the distributors in this proceeding, all of whom have space and base heating loads for the coming year which are substantially greater than their past requirements, and need prompt Commission action if such needs are to be satisfied in the approaching winter.

Michigan Wisconsin sells natural gas to Michigan Gas Utilities Company (Michigan Gas) which serves 24 communities in southern and western Michigan, including Benton Harbor, St. Joseph, South Haven, Grand Haven, Allegan, Plainwell and Ostego. During the last winter with all of its interruptible customers off the line it had unauthorized overrun in a single day of 1702 Mcf for which it had to pay a penalty charge of $10 an Mcf. It is undisputed that it will have a larger space heating and base load this coming winter than it had last winter. It requests an increase of 4798 Mcf in its MDQ. Its need for the additional MDQ has not been contradicted or even disputed.

Milwaukee Gas sells natural gas to approximately 293,000 customers in more than 65 cities and communities in eastern and central Wisconsin. It obtains all of its natural-gas requirements from its affiliate, Michigan Wisconsin.

Milwaukee Gas' present service agreement provides for a maximum daily quantity for the contract year commencing September 1, 1962 of 374,302 Mcf. It seeks an increase in MDQ of 20,698 Mcf. The uncontradicted evidence is that Milwaukee Gas' present attachment of firm load has increased by 11,000 Mcf since January 1963 and will increase another 11,000 Mcf by the maximum day of 1963–64 heating season. The difference between the maximum daily quantity of 374,302 Mcf and 395,000 Mcf sought here, or 20,698 Mcf, is the increased amount of gas over its 1962–63 maximum day requirements that the evidence shows Milwaukee Gas must receive to supply its 1963–64 maximum day firm load. Of this figure of 20,698 Mcf, 19,657 Mcf represents residential and commercial space heating load.

Milwaukee's witness testified that the greatest demand for gas for its firm customers during the 1962–63 heating season was on January 23, 1963, when it had a total sendout of 378,700 Mcf of which 376,200 Mcf was firm load. The latter figure exceeded its maximum daily contract by 1898 Mcf. Since there is good ground to believe that Milwaukee will require at least an additional 20,698 Mcf to meet its increased maximum day firm requirements and since there is no evidence whatever to the contrary it seems clear that Milwaukee Gas' MDQ should be increased by at least the amount which it is seeking here.

Wisconsin Natural distributes natural gas in 66 communities in southeastern Wisconsin including Racine and Kenosha. This distributor seeks an increase in its MDQ from 143,000 Mcf to 154,000 Mcf, *i.e.*, 11,000 Mcf. Its testimony shows an estimated increase in its peak day requirements of 14,313 Mcf. The company has a capacity to produce 533 Mcf of propane air gas on the peak day. There is no dispute regarding the validity or correctness of Wisconsin Natural's estimate and there is no reason to be found in this record why it should not have the 11,000 Mcf increase proposed.

For the contract year now expiring, 1962-63, Madison Gas nominated MDQ of 38,000 Mcf. Madison Gas seeks an increase in its MDQ from 38,000 Mcf to 45,000 Mcf, *i.e.*, an increase of 7,000 Mcf. The testimony of Madison Gas is to the effect that the company is now engaged in hooking up many new customers from the peripheral communities which surround Madison, Wisconsin and which have recently been certified for initial utility gas service by the Wisconsin Public Service Commission. The testimony is to the effect that the actual maximum day requirements of metered firm customers on February 21 and 22, 1963, with a −4° mean, was 39,601 Mcf and on February 20 and 21, with a −2° was 39,477 Mcf. The company was able to compute accurately what its firm requirements were on those days because it was metering its dual fuel customers. As the testimony indicates, the firm requirements were in excess of its 38,000 Mcf nominated MDQ. The additional gas was manufactured by Madison at a cost of $1.25 per Mcf. The company has limited peak shaving equipment and the $1.25 cost per Mcf of interchangeable gas produced with propane is about average for the industry although it is much higher than the cost of natural gas.

The company's requirements for base load and space heating service for the coming year are substantially in excess of its requirements for last year. Approximately 5,500 Mcf is required for space heating service.

The selection of its MDQ is based upon meeting estimated firm and dual fuel requirements on a zero degree day. Where temperatures are less than zero degrees it is the company's practice to manufacture gas so that the total maximum day requirements are substantially in excess of the nominated MDQ's.

While the company has used substantial quantities of gas in its electric generating station this application will not serve to increase future availability of overrun gas which has been used for boiler fuel, but instead more of Michigan Wisconsin's gas will be put in storage and less will then be available for overrun. The position of Madison Gas is that while the reduction in overrun availability will effect the economics of operating its generating station it is of much more importance to the company that additional firm gas be made available so that firm requirements of its customers can be satisfied.

There is nothing in Michigan Wisconsin's instant application which would tend to injure the opportunities of the "Coal Interests" to sell coal. In fact the contrary is the case.

There has been no contradiction of Madison's claims in this proceeding and, in fact, neither the Coal Interests nor anyone else makes any claim that Madison should not receive the additional MDQ's it requires and seeks in this proceeding.

Wisconsin Power distributes natural gas in 29 communities in Wisconsin and requests an increase in its MDQ from 65,000 to 70,000 Mcf *i.e.*, an increase of 5,000 Mcf. By the end of December 1962 Wisconsin Power had attached 800 space heating customers in excess of the number it had estimated would be attached by that time. As of June 1, 1963 it had attached 1,527 space heating customers in excess of the number estimated to be attached on the maximum day of the 1963–64 heating season.

It is undisputed that Wisconsin Power does not now have enough natural gas to take care of its presently attached space heating customers on the maximum day of the 1963–64 heating season. Its testimony is to the effect that if it does not receive the amount which it seeks here in increased MDQ it will not only have to apply to the Public Service Commission of Wisconsin for an emergency order stopping the attachment of space heating customers but will find it necessary to curtail the use of natural gas by its space heating customers during the coming heating season. No party disputes Wisconsin Power's needs for additional MDQ in the amount requested of 5,000 Mcf per day.

Public Service distributes natural gas in the cities and surrounding suburban areas of Green Bay, Sheboygan, Oshkosh, Stevens Point, Marinette, Two Rivers, De Pere and Merrill, Wisconsin and Menominee, Michigan, and has been authorized to serve in Tomahawk, Rhinelander and Junction City, Wisconsin. It also serves 15 smaller cities and villages scattered throughout its service area. The company's established natural-gas territory has a total estimated population based on the 1960 U.S. Census of 310,000 and as of June 30, 1963, approximately 80,000 customers were receiving natural-gas service. This company has a steam plant in which it uses overrun gas when the latter is available. On January 23, 1963, with all interruptible customers curtailed, it was necessary for Public Service to manufacture 6,130 Mcf. Public Service seeks an 11,000 Mcf increase in its MDQ from 107,000 Mcf to 118,000 Mcf. Its evidence with regard to increased space heating and base load on a maximum day shows that it requires the additional amount sought in its MDQ and its evidence has not been controverted in any respect. There is no good reason why this company should not have the additional MDQ which it is seeking, and conversely the company has established the absolute necessity for the increased MDQ it is seeking. There is no evidence to the contrary of that offered by applicant and Public Service.

Wisconsin Michigan Power Company distributes natural gas in Appleton, Neenah and Menesha, Wisconsin, and suburban areas in adjoining townships. The area served has a population of approximately 90,000 and as at the end of June 1963, it had 12,284 gas customers in all classifications. It seeks a 5,000 Mcf increase of its MDQ from 23,000 to 28,000 Mcf. Its sole supplier is the applicant. This company had 9 days of full curtailment of its interruptible sales in its 1962–1963 heating season. All such curtailments took place in February. The company in presenting its estimates in this case projected no additional interruptible customers beyond the contract year. The company operates without any peak shaving equipment in territory "where extremely low temperatures are quite probable. For that reason [the company has] to make an MDQ nomination which will assure us that on an extremely cold day when overrun probably is not available, we will have an MDQ that will cover the requirements of all firm customers." (Tr. 531) The testimony in support of Wisconsin Michigan Power Company's MDQ requirements for the coming winter of 28,000 Mcf have not been contradicted and are fully credited.

Wisconsin Fuel distributes natural gas in Manitowoc and Waussau, Wisconsin and a number of other communities in their vicinity. Wisconsin Fuel requests a 3,800 Mcf increase in its MDQ from 26,400 Mcf to 30,200 Mcf to meet its estimated requirements. One of Wisconsin Fuel's exhibits (Ex. 15) showed its estimated purchases for the 1962–1963 contract year at 6,070,293 Mcf compared with estimated purchases of only 5,738,000 Mcf for the year 1963–64. No overrun was included in the 1963–64 figure. Its requirements will increase from 6,070,293 Mcf in 1962–1963 to 6,316,907 Mcf for 1963–1964. It needs the additional MDQ to meet growing space heating and firm load requirements. In fact, the indication is that Wisconsin Fuel will be seriously short of gas to meet its firm load requirements during the 1963–1964 heating

season unless it secures the additional firm gas proposed to be made available in this proceeding.

Wisconsin Fuel's original estimated requirements (Exhibit 15) were based upon actual experience through October 1962 and estimated thereafter. The company submitted another exhibit (Exhibit 53) which shows that it had presented estimates which were substantially low. Exhibit 53 compares the estimates incorporated in Exhibit 15 for the period November 1962 to June 1963 inclusive with the actual experience of the company during the 8 month period. It was pointed out that the most significant change was an increase in new space heating customers attached. The company had estimated that they would attach 604 but instead it actually attached 907 or approximately 65 percent more than it had estimated. On a one-year basis the increase would be approximately 600 new space heating customers. In its brief, the company set forth that

> Based on the original estimates, page 2 of Exhibit 15 shows a maximum day requirement of 37,974 Mcf for 1963 with a curtailment of 7,774 Mcf, assuming that Wisconsin Fuel's maximum day allocation would be increased from 26,400 Mcf to 30,200 Mcf as proposed in this proceeding. The following figures show how disastrous it would be for Wisconsin Fuel if its MDQ were not so increased:
>
> | | |
> |---|---|
> | Max. day requirement, 1963–64 as originally estimated (p. 2 of Ex. 15) | 37,974 Mcf |
> | Add peak day requirements of 600 additional space heating customers (600×.02×75 DDD) | 900 Mcf |
> | Total firm max. day requirement | 38,874 Mcf |
> | Present peak day allocation | 26,400 Mcf |
> | Shortage on peak day | 12,474 Mcf |

The company's standby facilities are negligible *i.e.*, standby plant 800 Mcf per day and storage 500 Mcf. Failure to approve this application would result in curtailments of space heating loads by this company. The company's figures have not been contradicted or impeached and are accepted by the examiner as factually correct. It is clear that Wisconsin Fuel has established the necessity for its requested increase in MDQ.

Attached hereto as Appendix A is Exhibit 39 sponsored by a witness for Michigan Wisconsin which is a "Comparison of Requested Increase in MDQ with Increase in Firm Base Load and Heating Load on 1963–64 Maximum Day over 1962–63 Maximum Day."

The increases sought in MDQ have been amply justified.

During the oral argument held on August 1, 1963 and during the hearings held prior thereto, the Coal Interests declined to state their position fully but asked for 30 days in which to state their position in a brief. Despite the fact that this matter had been specifically set down on August 1, 1963 to afford argument *on the merits*, staff counsel declined to discuss the merits in any respect whatever but confined himself solely to a discussion of the extended length of time he considered he needed to prepare and file his brief. The oral argument set down for August 1, 1963, was not set down merely to discuss when briefs should be filed. There would, of course, have been no point whatever in setting a special period down merely for such a limited purpose. The presiding examiner pointed out, however, during the course of the oral argument had on August 1, 1963 that under Section 1.29(a) of the Commission's Rules of Practice and Procedure that in determining the amount of time which should be fixed for the

filing and service of briefs, it was incumbent upon the presiding examiner to give "due regard to the nature of the proceeding, the magnitude of the record, and the complexity or importance of the issues involved;" that the issues did not appear complex, that the applicant had urged prompt action on its application[7] and the presiding examiner further indicated that he considered that all parties, including the Staff, and the "Coal Interests" should make a frank and candid statement of their position. While the case did not appear a complex one, a frank expression of position would reflect the problems, if any, which concerned counsel and, of course, would be of assistance in determining whether or not extended briefing time should be afforded.

Counsel for the Coal Interests then finally stated that he did not oppose Michigan Wisconsin's application for the leasing and operation of the North Hamilton storage field and the appurtenant facilities sought to be constructed by the company, but that what he was really seeking was the attachment of conditions to any certificate which might be issued. When requested to state the facts with regard to the conditions which he wished to have imposed, he expressed his reluctance to do so, and never, in fact, stated specifically the conditions which he believed should be inserted in any certificate which might issue. However, at one point he made the following statement:

> Mr. Examiner, I think it is quite obvious that any conditions that we will seek will pertain to the manner in which Michigan Wisconsin should operate its storage field.

Later, in the course of his oral argument, counsel for the Coal Interests stated that:

> The facts of our position are, sir, that we are going to suggest most vehemently to this Commission that strong conditions be placed upon this certificate with respect to the operations of Michigan Wisconsin's storage field in the 1963–64 heating season, that monthly reports be made so that this Commission can keep an eye on Michigan Wisconsin's operations with respect to how they are selling their gas and are suddenly confronted with an extremely cold winter.

Finally, when the Coal Interests filed their brief in this matter they stated therein that they strongly urged ". . . that the following conditions be attached to any certificate which may be issued herein:"

> 1. THE APPLICANT SHALL CEASE ITS PRACTICE OF ALLOCATING OVERRUN GAS TO ITS DISTRIBUTOR CUSTOMERS IN THE FALL OF ANY CONTRACT YEAR.
>
> 2. THE APPLICANT SHALL NOT ALLOCATE OVERRUN GAS ON AN ANNUAL BASIS UNTIL AFTER THE HEATING SEASON IS OVER AND IN NO EVENT ANY EARLIER THAN MARCH FIRST OF THE CONTRACT YEAR.
>
> 3. PRIOR TO MARCH FIRST OF ANY CONTRACT YEAR SALES OF GAS UNDER THE OS–1 RATE SCHEDULE ON A DAILY BASIS SHALL BE MADE ONLY TO SERVE THE FIRM LOADS OF THE DISTRIBUTORS.
>
> In addition to these conditions it is respectfully submitted that the Commission should, on its own motion, institute a Section 5 investigation of Michigan Wisconsin's operations under its existing tariff to determine whether further safeguards should be incorporated into the tariff so that firm customers on the system will be assured an adequate supply of gas to meet their needs 365 days of the year. In this respect the Commission,

[7] The Commission earlier had granted applicant's application for a prompt hearing and this was the prompt hearing which the Commission held that applicant was entitled to have. The purpose of asking for prompt hearing was to enable the applicant to operate the North Hamilton Storage field so that it could inject gas therein to be used this coming winter.

after investigation, may deem it appropriate to make provisions in the tariff which would require as an example the boiler fuel sales of gas in excess of 500 Mcf per day or 10,000 Mcf per month be curtailed on days that gas is being withdrawn from underground storage.[6]

The latter suggestion stems from provisions in Michigan Wisconsin's original tariff which the company claimed in the hearing in Docket No. G–17512 were onerous and from which they sought and obtained relief in the Commission order which was issued in that case (22 FPC 603). The Coal Interests seek to have a provision which the Commission deleted, when it approved the presently existing tariff, reinstated in this proceeding which was not set down for any such purpose.

It is clear that the conditions that the Coal Interests seek to have attached are all conditions involving a change or modification in applicant's OS–1 rate schedule, and that these conditions have no relationship to the matters described in the Commission's notice of hearing or to the relief sought by Michigan Wisconsin in this proceeding, which is to improve the MDQ position of 9 of its distributors so that they could be assured of some additional firm gas to meet space heating and base load requirements for the coming winter period. In substance, the Coal Interests would retry the Commission's determination in Docket No. G–17512 (22 FPC 603) in this proceeding. In this connection it may be observed that the major effect of denying this application will be to have available gas supplies retained on the system for sale on an interruptible or overrun basis rather than on a firm basis. How this result would serve the public is not explained, and it is doubtful that it is explicable.

It is apparent from the entire cross-examination conducted by the Coal Interests that they are concerned with certain volumes of industrial gas which the 9 customers involved in this proceeding are selling on an interruptible basis, the substantial bulk of which are sold during off-peak periods. These sales are permitted under the OS–1 Rate Schedule but such sales, however, are not at issue in this proceeding.

Any change or modification in the OS–1 Rate Schedule would involve the rights of the balance of Michigan Wisconsin's customers as well as the customers who appeared in this proceeding. The Commission never issued any notice in this proceeding which could have indicated to any distributor or any other interested person that it was setting this matter down for the purpose of reconsidering the OS–1 Rate Schedule or any other general provision of the company's tariff. As a matter of fact, most of Michigan Wisconsin's customers are not parties to this proceeding which would hardly be the case had they received notice that a change in the OS–1 Rate Schedule would be an issue.

The OS–1 Rate Schedule is an integral part of the demand-commodity form of tariff which was approved by the Commission in its order of September 30, 1959 in Docket No. G–17512 after a lengthy hearing in which the Coal Interests opposed the application of Michigan Wisconsin to change from a straight commodity tariff to a two-part tariff containing provisions including the OS–1 Rate Schedule which was approved in such docket by the Commission.

In the Commission's decision in Docket No. G–17512, in which the general principles establishing this tariff were articulated and the provisions thereof specifically set down, the Commission pointed out among other things that:

> . . . The examiner found that the existing Michigan Wisconsin tariff is inadequate and unreasonable in certain respects which may be briefly summarized as follows. The tariff contains no specific limits of the daily and annual delivery obligations of the pipeline. The existing restrictions on

[6] See brief of "Coal Interests," pp. 3 and 4.

space-heating service and large volume industrial loads are no longer an adequate or appropriate means of limiting customer demand, have complicated proceeding before the Commission, and have involved the pipeline and the Commission in determinations of patterns of service which would now be more appropriate to leave to the individual distributor and the state commissions. The present flat rate for all gas delivered unduly restricts the distributors' opportunities to make off-peak and interruptible sales. * * *

Under the basic provisions of the new tariff proposed by Michigan Wisconsin the customer is required to nominate in advance a Maximum Daily Quantity on which a monthly demand charge is levied, and the pipeline's annual delivery obligations is limited to 160 times the maximum daily quantity. The commodity rate is charged for every Mcf of gas actually taken, including authorized overrun.

The examiner concluded that, with the addition of a small general service schedule, an overrun service schedule, and certain minor changes the tariff as proposed is a necessary and appropriate means of remedying the defects in Michigan Wisconsin's existing tariff. We are of the opinion that the evidence of record in this proceeding establishes the existence of the unreasonable conditions complained of and warrants the conclusion that the relief effected by means of the proposed tariff is just, reasonable, and in the public interest. [22 FPC 603, 604.]

In substance the Coal Interests are seeking material modifications of Michigan Wisconsin's tariff in a comparatively minor certificate proceeding without the issuance of any notice that such an issue would be heard. The giving of notice would be necessary to protect the interests of many interested parties who are not here represented. In this connection the Coal Interests have pointed out that within the last two years quantities of interruptible gas were made available to distributors in accordance with Michigan Wisconsin's Rate Schedule. Apparently the Coal Interests consider this fact to be a basis for seeking changes in Michigan Wisconsin's demand-commodity form of tariff particularly the OS–1 Rate Schedule.

The Commission has for years been well aware of the fact that the distributor companies of the applicant sell interruptible gas, and sometimes such interruptible gas is sold for boiler fuel. This is likewise true of every major pipeline in this country. For example, in *Michigan Wisconsin Pipe Line Company*, Docket No. G–13246 *et al.*, (22 FPC 1155) the Commission issued an order authorizing the sale of additional quantities of natural gas to Winnebago Natural Gas Co., a distributor company of Michigan Wisconsin. This allocation was made over the strong protests of the Coal Interests. The Commission pointed out that

> The only exception by any party in these proceedings to the above allocation was made by the coal interests. The coal interests herein protest the quantity allocated to Winnebago Natural Gas Company according to the above schedule. At issue is the Combined Locks Paper Company load, which service was initiated by Winnebago during December 1958. The evidence discloses that (1) this load had already been lost by the coal industry, (2) the retention of this load is important to Winnebago, both operationally and financially, (3) the availability of gas to Combined Locks is important to the financial stability of that company in that it has enabled Combined Locks to increase its production capacity without the expenditure of considerable sums of money for the reconstruction of its old and inefficient boiler plant. The evidence indicates that the plant is now geared to increased production on the assumption of availability of

gas. This is no less important in the future than in the past. [22 FPC 1156.]

The plant of Michigan Wisconsin Pipe Line Company is constructed to meet peak day requirements. However, this does not mean that the company should not make any off-peak or interruptible sales. As in the case of other pipeline companies, such off-peak and interruptible sales make a material contribution to the cost of service of the pipeline company and the cost of service of the distributors over and above the incremental costs of the gas purchased. It should be kept in mind that the major part of the plant of the pipeline is already installed and it would be a most uneconomic procedure not to make use of the capacity of such plant to the extent appropriate. This does not mean that every interruptible customer of every distributor should be served at all times. It means that interruptible customers should be served during off-peak periods and at other times when gas which the Commission has authorized the pipeline to sell them is available. The contribution in revenues received from interruptible customers is available as an offset to the pipeline and to the distributor against the cost of serving space heating customers who otherwise would have to assume full responsibility for all costs in providing service to them. The loss of such off-peak and interruptible sales by the same token would increase the cost of providing service to space heating customers and such costs could be recouped only by an increase in space heating rates. It is patently in the public interest for a distribution company when it can appropriately do so to make off-peak and interruptible sales since the rates to space heating customers would otherwise have to be increased.

It should be observed, however, that this whole problem of how much interruptible gas sales a pipeline should be permitted to sell distributor companies, is a large and important problem normally considered at a time when a company obtains additional or new gas supplies, and in such circumstances a review is made, in appropriate circumstances, of the uses to which such gas supply is to be put. This is not such a case. There is no new gas supply involved. What is sought is authority for additional storage facilities to meet additional space heating and base load requirements, which are not even controverted.

It should be observed that more than half of the gas which this company obtains is not put in storage. Gas is a fungible commodity. It is not possible, on the basis of this record, to determine whether gas sold to distributors for interruptible purposes, is gas which has been received by the distributor from storage or whether it was gas received through the other facilities of Michigan Wisconsin which bring it gas from various sources. Moreover, this whole problem cannot be considered in the context of the limited application which has been filed in this proceeding. It is a large and important economic matter totally outside the confines of the issues which were set down to be heard in this proceeding.

It should also be pointed out that the Commission in its opinion in Docket No. G–17512 further stated that the company's

> . . . new tariff will afford a vehicle for disposing of volumes of gas temporarily available as a result of warm weather, reduced business activity, storage limitations, or delays in the attachment of additional firm loads following an expansion program. The new tariff is designed to enable disposition of such gas by Michigan Wisconsin and the distributor at a rate level competitive with other fuels as contrasted with the straight line commodity level of 37.5¢ which makes competition with other fuels more difficult and in certain situations impossible to meet.

In this connection, it should be observed, however, that the past history of operations of the pipieline indicates that only about 2,000,000 Mcf per year of overrun gas would be available. However, this volume is substantial enough to be of material economic benefit to the distributors and the consuming public and to have a material economic impact on the pipeline's business.

In the cross-examination of the applicant's and the distributor's witnesses the Coal Interests developed evidence as to overrun gas being disposed of by distributors for the last two contract years (1961–62, 1962–63), and based largely on such evidence the Coal interests sought the imposition of the conditions described above.

Michigan Wisconsin pointed out in its reply brief that

> . . . the volumes of overrun gas which were available during the last two contract years reflect the fact the Michigan Wisconsin had available for sale *only on an overrun basis* 37,200 Mcf per day of MDQ which the Commission had reserved for possible service to the Upper Peninsula of Michigan in its Opinion No. 331 of October 31, 1959 in Docket No. G–18313, *et al.* (22 FPC 775). Moreover, in Opinion No. 331 the Commission allocated 61,182 Mcf of MDQ to meet the estimated third year requirements of new markets and the unneeded portion of that volume pending the development of those markets was, of course, available for sale only on an overrun basis.[5]
>
> Michigan Wisconsin was thus able to assure its customers of the volumes of annual overrun gas that would be available to them (Lincoln, T. 244–248). In utilizing their ACQ the few distributors who had a market for and were allocated overrun gas, were well aware of the facts and in no way jeopardized service to their firm customers (Lewis, T. 528–531; O'Leary, T. 559–561; Wrench, T. 334–338, 343–344; Miller, T. 631–632).

It is clear enough that the attempt to impose conditions to be attached to the certificate to be issued here is no more than a collateral attack upon Michigan Wisconsin's tariff and is wholly unrelated to the issues raised by Michigan Wisconsin's application for increased storage facilities to enable delivery of increased MDQ's for purposes of meeting peak day requirements.

Certainly if it were the Commission's intention to reconsider in this proceeding major provisions of Michigan Wisconsin's tariff it would have notified all interested persons to such effect in its notice of hearing so that persons, including Michigan Wisconsin's customers, and the public service commissions who might be affected could intervene to protect their rights. This the Commission did not do because what is involved here is a minor application seeking to protect the distributor's requirements for natural gas on peak days. No more than this is involved in this proceeding.

It may also be observed that Michigan Wisconsin's tariff was the subject of recent consideration by the Commission in Opinion No. 387, *American Louisiana Pipeline Company*, Docket No. G–18419, *Michigan Wisconsin Pipe Line Company*, Docket No. G–12292 *et al.*, 29 FPC 932. Here, also, the Coal Interests sought modifications of Michigan Wisconsin's tariff, without success.

It is hardly probable that the Commission ever intended to enlarge the issues created by the filing of Michigan Wisconsin's application in this proceeding to include an overall survey of Michigan Wisconsin's tariff. The position of the

---

[5] The availability of these additional volumes disposes of the attempt of the Coal Interests in their brief (p. 5, footnote 4) to deprecate the Presiding Examiner's statement in his decision in Docket No. G–17512 that some 2,000,000 Mcf of overrun gas would be available (22 FPC at 615).

Coal Interests in this proceeding is without merit and their requests for the attachment of their proposed conditions to the order to be issued here is denied.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the presiding examiner finds and concludes, in addition to the findings and conclusions hereinbefore stated that

(1) Michigan Wisconsin Pipe Line Company ("Michigan Wisconsin") is engaged in the transportation and sale of natural gas for resale in interstate commerce and is a "natural gas company" within the meaning of the Natural Gas Act.

(2) The existing customers of Michigan Wisconsin have nominated and have executed service agreements under its F.P.C. Gas Tariff to purchase an additional 73,000 Mcf of Maximum Daily Quantities ("MDQ's") to meet the increased space heating and base load requirements of their present markets for the forthcoming contract year, commencing on September 1, 1963.

(3) In order to provide 45,000 Mcf of the additional MDQ's needed by the present markets, Michigan Wisconsin proposes to operate under lease from Michigan Consolidated Gas Company ("Michigan Consolidated") the North Hamilton storage field in Clare County, Michigan, as well as a 15.2 mile 20 inch pipeline connection to be built by Michigan Consolidated between that field and the Lincoln-Freeman field. Michigan Wisconsin also proposes to utilize 37,200 Mcf per day of its pipeline capacity which was reserved for possible service to the Upper Peninsula of Michigan (22 FPC 775) but is now available for allocation to Michigan Wisconsin's present markets (27 FPC 180).

(4) In order to make the increased peak day deliveries to the present markets Michigan Wisconsin proposes to construct and operate 13.3 miles of 6 inch partial loops of its Keokuk, Iowa lateral; a 10.9 mile 6 inch loop of its Allegan, Michigan lateral; and an additional 1,550 horsepower of compression at its Wisconsin "A" Station, with an estimated cost of $1,186,000.

(5) Michigan Wisconsin's operation of the facilities it proposed to lease from Michigan Consolidated and Michigan Wisconsin's construction and operation of its proposed facilities are subject to the requirements of the Natural Gas Act.

(6) The facilities for which a certificate is sought are adequate to render the service proposed.

(7) The estimated cost of the proposed facilities is adequate and reasonable and Michigan Wisconsin is able to finance such cost.

(8) The service which Michigan Wisconsin proposes to render to its existing markets is economically feasible and is required by the public convenience and necessity.

(9) Michigan Wisconsin is a qualified applicant and is able and willing properly to do the acts and to perfom the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(10) A certificate of public convenience and necessity should be issued authorizing the construction and operation of the facilities and the rendering of the proposed service for which Michigan Wisconsin seeks authorization in this proceeding.

ORDER

WHEREFORE, *it is ordered*, subject to review by the Commission:

(A) A certificate of public convenience and necessity be. and the same is hereby issued, authorizing Michigan Wisconsin Pipe Line Company to lease

and operate the North Hamilton Storage Field and appurtenant facilities, and to construct and operate 13.3 miles of 6 inch partial loops of its Keokuk, Iowa lateral; a 10.9 mile 6 inch loop of its Allegan, Michigan lateral; and an additional 1,550 horsepower of compression at its Wisconsin "A" Station, all as set forth in Phase one of its application in Docket No. CP63–230, as supplemented, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of section 157.20 of such Regulations.

(C) The construction of the facilities and the operations authorized by paragraph (A) above shall be completed and shall be actually undertaken and regularly performed, respectively, by Applicant within six months from the date on which this order issues.

SAMUEL BINDER,
Presiding Examiner.

OPINION NO. 410

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP63-159

OPINION AND ORDER ADOPTING IN PART AND MODIFYING IN PART THE INITIAL DECISION OF THE PRESIDING EXAMINER

(Issued November 12, 1963)*

Syllabus

1. Transportation of "shrinkage" volumes of gas is subject to Commission jurisdiction—fact that helium and hydrocarbon components are part of mainsteam prior to delivery is immaterial. P. 1263.
2. *Northern* did not hold that Commission has no jurisdiction over transportation of "shrinkage" volumes of gas. P. 1264.
3. Contention that Helium Act restricts Commission jurisdiction over transportation of "helium-bearing gas" *rejected*. PP. 1264–1265.
4. Citing *Panhandle* and *Northern*, Commission *holds* that mere movement of residual gas within extraction plant is not transportation of natural gas requiring certification. PP. 1266–1267.
5. Determination here (*supra* 4) will not affect question of crediting extraction plant revenues against Panhandle's costs in any future rate case. P. 1267.
6. Under Section 7 of the Natural Gas Act, Commission issues certificate of public convenience and necessity, conditioned on Panhandle's filing application for authority to transport natural gas for extraction purposes. P. 1268.

G. R. Redding and *Raymond N. Shibley* for Panhandle Eastern Pipe Line Company.

William I. Harkaway for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

WOODWARD, *Commissioner:*

This case is before us on exceptions filed by the Commission Staff, the only exceptions, to the Presiding Examiner's Initial Decision issued on July 24, 1963. That decision would grant a certificate of public convenience and necessity under Section 7(c) of the Natural Gas Act to Panhandle Eastern Pipe Line Company (Panhandle) authorizing the transportation of natural gas for sale to the National Helium Corporation (National Helium) for use as fuel[1] in a helium-hydrocarbon extraction plant which National Helium is constructing at Liberal, Kansas. National Helium's plant is designed to process up to 850,000 Mcf of gas per day. Panhandle estimates the average fuel need of National Helium to be 1,000 Mcf per day, and the maximum fuel need at 2,000 Mcf per day.

Panhandle filed its application on December 7, 1962, and the proceeding came on for hearing on May 6, 7, and 9, 1963. There were no protests or interventions by any of Panhandle's customers nor by any other party. At the close of the hearing, Panhandle made a motion to omit the intermediate decision procedure. The Commission denied this motion on May 28, 1963.

The facts, more fully described in the Examiner's Decision reveal that Panhandle is engaged in the production, transportation and sale of natural gas both to utility companies for resale and to industrial customers for direct consumption. The company's sources of supply are located in Texas, Oklahoma, and

*Initial decision appears on p. 1269. Rehearing denied December 20, 1963, 30 FPC 1567. Petition to Review pending in CA8. No. 17872, *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*

[1] Panhandle's application did not include a request for authority to transport and deliver gas for processing, *i.e.*, the extraction of helium and other hydrocarbons, which would result in shrinkage in volume and Btu content of the gas.

Kansas and its transportation system extends from Liberal, Kansas, through Missouri, Illinois, Indiana, Ohio, to Detroit, Michigan, and the Canadian border. Panhandle's average daily mainline input at Liberal is approximately 870,000 Mcf of gas which contains helium,[2] liquefiable hydrocarbons and other components and, during the winter, the input may approximate as much as 967,000 Mcf per day. Panhandle presently owns a hydrocarbon processing plant at Liberal, Kansas. This plant is capable of processing a portion of the gas stream at that location and is not equipped to remove helium gas. The existing plant, which processes approximately 240,000 Mcf per day, probably will be retired from service when National Helium's plant achieves operational status.

Panhandle's tariff, applicable to all sales for resale to its sixty-four utility customers, provides that Panhandle "may extract or permit the extraction" of helium and hydrocarbons.[3] Characterizing helium as a "mineral resource pertaining to the national defense," the Helium Act Amendment of 1960 (50 U.S.C. 167, *et seq.*) authorizes the Secretary of the Interior to acquire helium and helium gas mixtures for use by "the Department of Defense, the Atomic Energy Commission, and other agencies of the Federal Government."

National Helium is a subsidiary of Panhandle formed to construct and operate the helium extraction plant. Fifty per cent of its stock is owned by Panhandle and the remaining fifty per cent is owned by the National Distillers and Chemical Corporation. Under designed conditions, National Helium will utilize 1,000 Mcf as fuel and the equivalent of 17,000 Mcf per day of components from Panhandle's gas stream. Plant construction commenced in 1962 and operations are scheduled to begin at an early date.

On October 2, 1961, Panhandle entered into a 20-year contract with National Helium providing for Panhandle's delivery of gas at a later date to National Helium for the purpose of removal of helium gas and certain hydrocarbons from its gas stream. On October 13, 1961, National Helium executed a contract with the United States for the sale to the United States of the helium gas to be extracted.

The primary purpose of National Helium's plant will be to remove helium. This process entails the temporary removal of virtually all of the other components of the gas stream leaving a residue mixture containing the helium and other inerts, principally nitrogen. In general, the gas is refrigerated in several steps to a temperature of minus 270 degrees Fahrenheit, thereby liquefying certain of its components. When these steps are completed, National will retain the helium gas mixture and a portion of the liquefied hydrocarbons. The balance will be restored to the gas stream, which, less the shrinkage volume, will be returned to Panhandle for transmission and sale.

Panhandle is not required to install any facilities at Liberal since all new equipment needed will be constructed by National Helium. National Helium is required to return the residual gas to Panhandle at the pressure no less than that which existed upon delivery. As stated above, the plant will remove 17,000 Mcf daily which, together with the 1,000 Mcf used as fuel, will constitute a shrinkage of 18,000 Mcf per day.

At the hearing, staff counsel agreed to stipulate that the extraction of helium as planned by Panhandle and National Helium is in the public interest, and that there is no issue as to gas supply. Further, no issue exists as to the ele-

---

[2] The helium content is approximately 0.4%.

[3] "2.1 *Extraction of Hydrocarbons.* The gas delivered by Seller to Buyer shall be natural gas; provided, however, that Seller may extract or permit the extraction of moisture, helium, natural gasoline, butane, propane, other hydrocarbons or inerts (except methane) from said natural gas."

ments of financing and facilities since Panhandle is not required to finance or install any facilities. The market for this gas is established by the 20-year contract between Panhandle and National Helium and since the sale of the fuel gas is for direct consumption and not for resale, the question of price is not an issue except to the extent indicated below that it enters into the question of whether authorization of any transmission facilities are in the public interest. The issue of economic feasibility is not present in the conventional manner since it will not be necessary for Panhandle to construct or finance any facilities.

The Presiding Examiner issued his initial decision finding that:

(1) The helium project will not adversely affect Panhandle's existing service, but, on the contrary, it will be economically feasible and in the public interest.

(2) There is no need to require Panhandle to secure a certificate for the transportation of so-called "shrinkage" volumes of natural gas expended in the extraction process.

(3) Under previous decisions of the Commission, National Helium is not engaged in transportation of natural gas and need not secure a certificate.

As set forth below, we are granting the application with modifications.

The examiner found that Panhandle's evidence satisfied the conventional elements of public convenience and necessity, that Panhandle is able and willing to perform the service proposed and that a certificate accordingly should be issued.

In a recent proceeding involving helium extraction, the Commission designated the elements properly to be considered in granting a certificate of public convenience and necessity.[4]

Considering the facts of record, we find that the basic elements properly to be considered in determining public convenience and necessity, as contained in the Natural Gas Act and as applied in the Commission and judicial decisions, have been amply satisfied. Staff's exceptions do not reveal any material error in the examiner's decision in this regard.

The principal issues presented in this proceeding may be briefly summarized as follows:

(1) Does the proposal to transport "shrinkage" volumes of gas—representing the difference in the amounts of natural gas exclusive of fuel gas, entering and leaving National's plant—require Panhandle to obtain a certificate of public convenience and necessity covering such transportaion?

(2) Does the movement of natural gas through the National Helium plant during the extraction operation constitute the transportation of natural gas in interstate commerce within the meaning of the Naural Gas Act, requiring Commission authorization therefor?

The issues will be discussed seriatim.

---

[4] Under Section 7(e) of the Act, we must grant Northern's requested authorization if we find, *inter alia*, that it "is or will be required by the present or future public convenience and necessity." In the usual case, "public convenience and necessity" embrace the conventional elements of gas supply, financing, facilities, markets, economic feasibility, and rates, although in a certificate proceeding we need not determine the "just and reasonable" rate for the service. The particular facts of a case may justify considering other elements. Judgment is reached on weighing all relevant considerations for and against the authorization; as the Supreme Court has said, "the term 'public convenience and necessity' connotes a flexible balancing process, in the course of which all the factors are weighed prior to final determination." And to be sure the standards of the statute and Commission policy are met, we may attach to a certificate such reasonable conditions as the public convenience and necessity require. *Northern Natural Gas Company*, Docket No. CP61-132, Opinion No. 374, issued December 28, 1962, 28 FPC 1155 (footnotes omitted).

Staff takes exception to the examiner's finding that the transportation of "shrinkage volumes" by Panhandle does not require certification. They argue that the transportation in interstate commerce of natural gas, including those gaseous elements contained therein which may be liquefiable by treatment[6] is subject to Commission jurisdiction and therefore a certificate of public convenience and necessity is necessary.

The examiner found that under the plan of operation approximately 850,000 Mcf per day will be available to National Helium for processing. Further, it is only after the large stream of gas is processed through the hydrocarbon-helium plant that there is a depletion or shrinkage amounting to 18,000 Mcf per day having a 2,000 Btu content. This is the result of the processing and extraction operation. Prior to the extraction process and so long as the shrinkage volumes of gas are part of the mainstream, the examiner states it is the mainstream of gas which Panhandle is delivering and it is unrealistic to speak of Panhandle's transportation of shrinkage volumes of gas.

Continuing, the examiner held that even if it is assumed *arguendo* that the shrinkage volumes may be identified as gas having a 20,000 Btu content, the shrinkage includes the helium as well as the hydrocarbons which must first be removed in order to extract the helium, and it has been held that the Commission has no juridiction over the transportation of hydrocarbons to be extracted as liquids from the gas stream.[6] Morevoer, if shrinkage volumes are understood as containing the helium, nitrogen, and liquids, particularly after the extraction, then it follows that the Commission's jurisdiction is open to serious question by reason of the restrictions contained in Section 11 of the Helium Act.[7] Accordingly, the examiner concluded that the "shrinkage" is not natural gas as generally understood and that there is no justification for requiring Panhandle to secure a certificate for its transportation.

For reasons hereinafter stated, we conclude that the examiner erred by failing to assert jurisdiction over the transportation of "shrinkage" volumes of gas.

The mere fact that prior to the delivery by Panhandle of natural gas to National Helium, the helium and hydrocarbon components are part of the mainstream of gas is immaterial. On a similar basis any "transportation" of gas for sale to a direct industrial customer (as distinguished from a sale thereof) would be non-jurisdictional for, prior to the utilization of that gas by the direct industrial customers. it is transported as a part of the mainstream. The Commission has jurisdiction over the "transportation" of gas in interstate commerce even where the "sale" of the gas may not be jurisdictional.[8] In *F.P.C.* v. *East Ohio Gas Co.*, 338 U.S. 464, the Supreme Court found that "transportation" and "sale" of natural gas, as used in the Natural Gas Act were separate subjects of regulation. 338 U.S. at 468. It held that "the word 'transportation' like the phrase 'interstate commerce' aptly describes the movements of gas in East Ohio's high pressure lines." 338 U.S. at 469. In the instant proceeding. "transportation" by Panhandle of gas to National Helium's facilities, like "interstate commerce," aptly describes the movements of gas in Panhandle's lines.

---

[6] "Natural gas" was defined in *Deep South Oil Company* v. *F.P.C.*, 247 F. 2d 882, 888, as a mixture of gaseous hydrocarbons found in nature in many places connected with deposits of petroleum to which the gaseous compounds are closely related.

[6] *Northern Natural Gas Co., supra.*

[7] Section 11 of the Helium Act Amendment of 1960 (Helium Act) provides that: "The provisions of the Natural Gas Act of June 21, 1938 . . . , as amended, shall not be applicable to the sale, extraction, processing, transportation, or storage of helium either prior to or subsequent to the separation of such helium from the natural gas with which it is commingled . . ."

[8] See Natural Gas Act, Section 1(b); 15 U.S.C. § 717(b).

Assuredly, the Commission has jurisdiction over the transportation of natural gas in interstate commerce for the purpose of making direct industrial sales.[9] The transportation of the "shrinkage" volumes is no less than the transportation of volumes for direct industrial consumption. The fiction of the gas merely being part of the mainstream cannot attach to relieve Panhandle of a commitment required by the Natural Gas Act.

The *Northern* case (Docket No. CP61–132) cited by the examiner in support of his finding that the Commission has no power to entertain jurisdiction over volumes delivered for "shrinkage", did not hold that the Commission has no jurisdiction over the transportation of "shrinkage" volumes. In that proceeding Northern specifically applied for a certificate of public convenience and necessity seeking "authority to construct and operate certain mainline facilities at its Bushton Compressor Station and at various points south of the station to enable it to deliver natural gas to Northern Gas Products Company, a wholly owned subsidiary, for use as fuel and *shrinkage* in the latter's hydrocarbon products extraction plant near the Applicant's Bushton Compressor Station." Northern specifically requested authorization to construct facilities to transport shrinkage volumes and that authorization was granted. Panhandle is in the same position as Northern; Panhandle must also obtain Commission authorization for the transportation of shrinkage volumes.

In answer to the examiner's contention that there is a "serious question" concerning jurisdiction of the Commission over "shrinkage" volumes by reason of the restrictions contained in Section 11 of the Helium Act, we point out that the legislative history of the Amendment makes it abundantly clear that our jurisdiction was not thereby erased. In Senate Report No. 1814, accompanying H.R. 10548 of the 86th Congress, reported at 86th Congress 1960, 2 U.S. Code Cong. & Ad. News 3599, the following statement is made:

> Section 11 covers the jurisdiction of the Federal Power Commission in this area. The section makes it clear that the Federal Power Commission retains its jurisdiction over natural gas containing helium but has no jurisdiction over helium itself.

In discussing the measure, Senator Carroll stated: "I wish the Record to be crystal clear, so that any court which reads this Record will know what is the specific legislative intent, namely, that we are not exempting helium-bearing gas from jurisdiction by the Federal Power Commission under the Natural Gas Act. There can now be no question about that." [1960 Congressional Record 18603.]

The examiner's position, carried to the extreme, would mean that the Commission has no jurisdiction over the transportation of "shrinkage" volumes, which contain helium destined to be extracted, from the time the gas is first produced until the helium is extracted; that Commission jurisdiction would not attach until the tailgate of the extraction plant. This is obvious error. Senator Carroll and the Senate Report were careful to note that Commission jurisdiction still attaches to the "helium-bearing gas."

By asserting jurisdiction over the transportation of "shrinkage" volumes the Commission does not apply the provisions of the Natural Gas Act to the "sale, extraction, processing, transportation or storage of helium either prior to or subsequent to the separation of such helium from the natural gas with which it is commingled . . ." (Section 11, Helium Act Amendments of 1960; 75 Stat. 922), as interpreted in light of the legislative history to the effect that the

---

[9] See *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 232 F. 2d 467, certiorari denied, 352 U.S. 891.

"Commission retains its jurisdiction over natural gas containing helium but has no jurisdiction over helium itself."

We conclude that we have jurisdiction over the transportation of "shrinkage" volumes and that Panhandle must be required to obtain certificate authorization from the Commission in order to transport, for consumption by National Helium, the 17,000 Mcf per day of natural gas which Panhandle will be delivering to National Helium and our order herein will so provide.

We note that with the completion of the helium plant, liquid hydrocarbons will be extracted from 850,000 Mcf instead of 240,000 Mcf per day. Thus, the net effect of the new operation will be a lowering in the Btu content of gas delivered to Panhandle's customers. If the removal were limited to the 6,670 Mcf of inert substance per day, the Btu content of Panhandle's gas would rise but the removal also of heavier hydrocarbons will, in fact, result in a net reduction of Panhandle's ability to deliver energy to its customers,[10] Panhandle's witness, who made studies of the content of its gas, testified that the composite average heat content of the gas delivered to its jurisdictional customers as a group for the five years 1958 to 1962 inclusive was 982 Btu per cubic foot. Further, he testified that as a result of the expansion of Panhandle's system recently approved in Docket No. CP60–60,[11] which became operative by the end of 1962, and the introduction of high Btu content gas from the Elk City extension of its line certificated in Docket No. CP60–103, which became operative in May 1962, the Btu content of the gas delivered by Panhandle has been substantially higher than in previous years. The weighted average Btu content of the gas estimated to be delivered to these customers as a group in 1964, after the helium extraction plant is in full operation, will be 983 Btu, and after the plant is operated to full design capacity, there will be no significant change in the overall Btu content.

The substantial increase in the total volumes of gas to be processed at the new plant will unquestionably affect the heating value of the gas to be delivered from the various parts of Panhandle's transmission system. Although as shown, the system-wide weighted average will be affected by the operation of the National Helium plant, the record does not disclose how individual customers may be affected.

It may well be that the recent addition of high Btu content gas to the Panhandle system and its expansion activities will offset as whole or part the increased extraction activities at Liberal. This, however, does not mean that the heating value of the gas to be delivered to the various parts of Panhandle's transmission system will be unaffected by the substantial increase in the total volumes of gas to be processed at the new plant. While the present record indicates that in some instances this impact may be substantial, it does not disclose exactly how individual customers may be affected; this, however, is the result of the fact that in the absence of any application to transmit the shrinkage volume the matter was not fully developed at the hearing.

Nor is it necessarily controlling that any reduction in heating value to any of Panhandle's customers may still be within the existing 975–1025 Btu rate bracket established by Panhandle's existing tariff.[12] Exactly the same situation

[10] Panhandle's tariff provides that gas delivered to its customers "shall not have a total heating value above one thousand fifty (1050) or below nine hundred fifty (950) British Thermal units per cubic foot" and no adjustment in price is provided for except that "in the event the arithmetic average total heating value of the gas delivered—in any month is less than 975 or more than 1025 Btu per cubic foot" then the total charge for such month shall be decreased in proportion to the increase above 1025 Btu per cubic foot.

[11] 28 FPC 211.

[12] While this is not the place to examine into the continuing validity or appropriateness of the bracket Btu tariff provision, it is clear that it was based upon the value of gas at the 1000 Btu midpoint rather than at the relatively stable 980–985 Btu content gas which Panhandle has apparently succeeded in achieving.

prevailed in the recent *Northern* case, Opinion 374, *supra*. (See 28 FPC 1155, 1184–1185 (Examiner's Decision).) We there recognized that if as a result of the shrinkage (or the loss of available pipeline expandibility—a matter also not fully developed in this record) Northern's existing resale customers would suffer as a result of the proposed extraction operation, the public interest required them to be compensated therefor.

We accordingly conditioned the part of the authority to transmit gas for *both* fuel and shrinkage purposes upon the agreement to a higher payment by the extraction company to Northern than had been originally proposed and consequent rate reductions to the existing Northern customers. Whether any such condition would be necessary or appropriate here, will of course have to await consideration of a more complete record on this point made in hearing upon any application to transport the shrinkage volumes which Panhandle may choose to file.[13]

This brings us to the consideration of staff's argument that the residual gas is in interstate commerce when moving through National Helium's facilities, that National Helium is engaged in interstate commerce, and that its facilities are therefore jurisdictional. Staff argues that National Helium must be required to prosecute an application for a certificate of public convenience and necessity.

The evidence of record compels the examiner's finding that the primary purpose and end result of National Helium's plant is to extract helium and hydrocarbons rather than to transport natural gas. The mere movement of the residual gas within the National Helium plant is not to be equated with interstate commerce. The movement of the gas stream through the helium plant is simply incidental to the helium extraction process and is a necessary step in the method of extraction.

Commission precedent supports this finding, as in *Panhandle Eastern Pipe Line Company*, 12 FPC 686, where the Commission considered similar issues with respect to the extraction and retention of hydrocarbons from Panhandle's gas stream by National Petrochemicals Corporation. The Commission found that National Petrochemical's facilities and operations were not subject to the Act nor to the jurisdiction of the Commission; that the flow of the gas stream through the extraction plant was for the purpose of permitting the extraction of hydrocarbons and did not constitute the transportation of natural gas in interstate commerce.

Moreover, the Commission has issued 4 orders from June 23, 1961 to March 12, 1963 which support the view expressed in *Panhandle*, *supra*, concerning Northern Natural Gas Company's project. On June 23, 1961,[14] the Commission held:

> The construction and operation of the proposed hydrocarbon extraction plant at Bushton, Kansas, is not essential to the transportation of natural gas in interstate commerce or to the sale in interestate commerce for re-sale, and is, therefore, not subject to the jurisdiction of this Commission.

By order of August 23, 1961, denying rehearing with respect to the Northern Natural matter, the Commission stated:[15]

---

[13] The examiner thought that these questions could and should be left to a subsequent Panhandle rate case. We disagree. As indicated in Northern where the immediate effect of Commission action certificating a new sale may be to harm existing jurisdictional customers our responsibilities under the public convenience and necessity standard of Section 7 justify prompt remedial action. *Cf. Atlantic Refining Co.* v. *Public Service Commission* (*CATCO*), 360 U.S. 378.

[14] Order of June 23, 1961, 25 FPC 1205.

[15] 26 FPC 418.

This issue of jurisdiction was before the Commission in the case of *In re Panhandle Eastern Pipe Line Company*, 12 FPC 686, 697, affirmed by the Commission on October 23, 1953 and reported at 12 FPC 706. The Commission in that case made a specific finding that the proposed extraction plant to be constructed and owned by National Petro-Chemicals Corps. but operated by Panhandle at the entire expense of Petro-Chemicals, and through which a continuous stream of natural gas would flow, as well as the facilities incidental to said extraction plant were not facilities for the transportation or the sale for resale of natural gas in interstate commerce. Instead, the Commission said that the primary function of the extraction plant and the facilities incidental thereto *was extraction of hydrocarbons, not transportation.*

On December 28, 1962, reaffirming its views that the facilities and operations associated with the plant are not subject to the Commission's jurisdiction:[16]

These matters raised by Mid-American are beyond the scope of the Commission's inquiry in certificating the jurisdictional facilities proposed by Northern. They pertain to the Products company operation which, although directly related to the Northern proposal, *is non-jurisdictional* and therefore not subject to the same scrutiny of Section 7 as to public need, etc. as are jurisdictional facilities. Rather in the case of such a non-jurisdictional operation which is integrated with a jurisdictional proposal, we must merely determine if it entails any violation of public policy or abuse of a jurisdictional proposal which would compel rejection of the jurisdictional proposal.

On application for rehearing, the Commission issued an order on March 12, 1963, affirming its prior determination.[17]

We conclude, following previous decision of the Commission, that National Helium is not engaged in the transportation of natural gas and need not secure a certificate of public convenience and necessity.

We wish to make clear that this holding that National Helium is not itself engaged in the transportation of natural gas does not mean that its extraction operations are unrelated to the transportation of natural gas by Panhandle. On the contrary it has been determined that the existing Liberal extraction plant (which extracts less hydrocarbons than the new plant will) does perform a significant function in aid of Panhandle's transportation of natural gas, as does the extraction plant owned by Phillips Petroleum Co. at Sneed, Texas, which also had no certificate to transport gas. *Panhandle Eastern Pipe Line Co.* Opinion 344, 25 FPC 787, approved on this point but remanded for reconsideration of the extent of crediting, *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 305 F. 2d 763, see *City of Detroit* v. *F.P.C.*, 230 F. 2d 810, certiorari denied, 352 U.S. 829. Our determination here will thus not affect the question of crediting possible revenues of National Helium against Panhandle's costs in any future rate case involving the latter.

The Commission further finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware Corporation, having its principal offices in New York, New York, and Kansas City, Missouri, is engaged in the transportation of natural gas in interstate commerce and in the sale of natural gas in interstate commerce for resale for ultimate public consumption and is a "natural gas company" within the meaning of the Natural Gas Act, as amended. (4 FPC 1081.)

---

[16] Opinion No. 374, 28 FPC 1155, 1161.

[17] Order of March 12, 1963, Docket No. CP61-132, 29 FPC 450.

(2) The service proposed to be rendered by Panhandle, *i.e.* the transportation of up to 2,000 Mcf of gas for use as fuel by National Helium Corporation is required by the public convenience and necessity only upon the conditions hereinafter set forth.

(3) The National Helium Corporation is a Delaware corporation and is presently constructing a helium extraction plant in the vicinity of Liberal, Kansas.

(4) The transportation of volumes of natural gas to National Helium Corporation by Panhandle for the purpose of extraction of liquid hydrocarbons and inerts is transportation of natural gas in interstate commerce and is subject to the jurisdiction of the Commission.

(5) Panhandle will have an adequate supply of natural gas in excess of its contract commitments from which to supply the fuel and shrinkage volumes of gas to National Helium Corporation.

(6) Panhandle is able and willing to perform the service called for in its application and to conform to the provisions of the Natural Gas Act and the Commission's regulations thereunder.

(7) National Helium Corporation's proposed extraction plant is not engaged in the transportation of natural gas and therefore is not subject to the jurisdiction of the Commission.

(8) Panhandle has failed to file an application for the transportation of natural gas for the purpose of extraction of liquid hydrocarbons and the proposal in this docket is dependent upon such extraction.

(9) Unless a certificate of public convenience and necessity is applied for and issued for the purpose set forth in Finding (8) above, it would not be in the public interest to authorize the transportation of natural gas as herein proposed.

(10) The public convenience and necessity require the attachment to the certificate issued Panhandle, and to the exercise of the rights granted thereunder, the further conditions hereinafter ordered, which are found to be reasonable and necessary.

(11) All material exceptions, arguments and objections not discussed or granted herein have been considered but are without substantial support in the record or a reasonable basis in law or are immaterial to the proper disposition of this case and are denied. The Presiding Examiner's initial decision issued herein on July 24, 1963, is, to the extent consistent with this opinion, adopted by the Commission as of the date of issuance of this order, to constitute with this opinion its decision in this proceeding.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the applicant, Panhandle Eastern Pipe Line Company, for the transportation in interstate commerce of an average of 1,000 Mcf of natural gas per day and up to 2,000 Mcf of natural gas per day to the National Helium Corporation plant located near Liberal, Kansas, to be used as fuel, space heating, and other miscellaneous purposes, subject to the following conditions:

(1) That within 45 days from the date of this order, Panhandle submit an application for a certificate of public convenience and necessity for the operation of the Panhandle interstate pipeline system to transport natural gas for the purpose of extracting therefrom liquefiable hydrocarbons, in the National Helium Corporation plant located near Liberal, Kansas.

(2) The certificate issued herein shall become ineffective unless Panhandle shall file its application within 45 days as required by condition (1) above.

(3) As a further condition attached to the certificate issued Panhandle, Panhandle shall transport from its gas stream to National Helium for processing not more than 850,000 Mcf of natural gas per day.

(4) As a further condition, Panhandle shall cause to be returned to the gas transmission system the natural gas permitted by Paragraph 2 above to be delivered to National Helium up to 850,000 Mcf per day, less shrinkage, subject to the terms and conditions of this order.

(5) As a further such condition, until changed by further order of the Commission, for purposes of future proceedings, Panhandle shall file with the Commission, in writing, an original and four conformed copies of a report of the initiation of deliveries of natural gas to National Helium, such report to be filed within 30 days of the initial deliveries; and a quarterly report showing by month or any portion thereof (a) the total volume of gas delivered to National Helium for processing and the total Btu content before and after processing, and (b) the total volumes of gas delivered or used for fuel purposes, and (c) the volumes of gas redelivered to Panhandle, such quarterly report to be filed not later than 30 days following each quarter.

(6) The general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the issuance of the certificate granted herein, and to the exercise of the rights thereunder.

(7) The initial decision of the Presiding Examiner issued herein on July 24, 1963, is, to the extent consistent with this opinion hereby adopted by the Commission as of the date of issuance of this opinion, to constitute with this opinion the Commission's decision in this proceeding.

(8) The exceptions filed to the Presiding Examiner's decision are, except to the extent herein granted, denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATION FOR CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY PURSUANT TO SECTION 7(C) OF THE NATURAL GAS ACT

(Issued July 24, 1963)

SHRIVER, *Presiding Examiner:* This proceeding results from an application filed by the Panhandle Eastern Pipe Line Company pursuant to Section 7(c) of the Natural Gas Act. Panhandle seeks a certificate of public convenience and necessity authorizing the transportation of natural gas for sale to the National Helium Corporation for use as fuel in an extraction plant which National Helium is constructing at Liberal, Kansas. National Helium's plant, as will be shown hereafter, is designed to process up to 850,000 Mcf of natural gas per day. Panhandle estimates the average fuel need of National Helium at 1000 Mcf per day and the maximum fuel need at 2000 Mcf.

Panhandle filed its application on December 7, 1962 and the proceeding came on for hearing before this examiner on May 6, 7, and 9, 1963. There were no interveners. Evidence and testimony were adduced by the applicant. Staff counsel cross-examined applicant's witnesses and produced one witness who briefly testified for the Commission. At the close of the hearing the applicant made a motion to omit the intermediate decision procedure. The Commission denied this motion on May 28, 1963.

Panhandle is a natural-gas company within the meaning of the Natural Gas Act. It is engaged in the production, and in the transportation and sale of natural gas both to utility companies for resale and to industrial customers for direct consumption. Its sources of supply are extensive, and are located in Texas, Oklahoma and Kansas. Its transportation system extends from Liberal

Kansas, through Missouri, Illinois, Indiana, Ohio, and to Detroit, Michigan. Its customers east of Liberal, Kansas, number some 64 cities, towns, and utility companies. Panhandle's average daily main line input at Liberal is approximately 870,000 Mcf of gas per day and during the winters it is as much as 967,000 Mcf.

On October 2, 1961, Panhandle entered into a contract with National Helium providing for Panhandle's delivery of natural gas at a later date to National Helium for the purpose of removal of helium-gas and certain hydrocarbons from its gas stream. Shortly afterwards on October 13, 1961, and pursuant to the Helium Act as amended (50 U.S.C. 167 *et seq.*), National Helium executed a contract with United States for the sale to the United States of the helium gas to be extracted. This contract is one of several entered into by United States acting through the Director, Bureau of Mines, Department of Interior under the Helium Act for the gathering and conservation of helium gas.

National Helium is a subsidiary of Panhandle. It was formed to construct the extraction plant and to participate in the government program for the conservation of helium. Fifty percent of its stock is owned by Panhandle and another fifty percent is owned by National Distillers and Chemical Corporation. Work was begun on construction of the extraction plant in 1962; operations are to commence at an early date.

As already intimated, the main portion of the gas transported through Panhandle's system is obtained from the Texas-Panhandle, western Oklahoma, and southwestern Kansas. But Panhandle also gets large deliveries of gas east of Liberal both from its Elk City source, and from its subsidiary the Trunkline Gas Company near Tuscola, Illinois. The peak day supply from Elk City is about 150,000 Mcf and from Trunkline about 470,000 Mcf. The blended stream is transported eastward from Liberal through three large pipe lines. Hydrocarbon processing plants presently exist at Sneed, Texas, Liberal, Kansas, and Tuscola, Illinois. The Tuscola plant is owned by the National Distillers and Chemical Corporation, the Sneed plant is owned by the Phillips Petroleum Company, and the Liberal plant is owned and operated by Panhandle. The existing plant at Liberal removed a total of 36,633,943 gallons of gasoline, butane, and propane for the 12-month period ending September 30, 1959. During the calendar year 1961 the company extracted 38,419,915 gallons of liquid products and in 1962 the hydrocarbon mixture extracted totalled 35,581,037 gallons. The existing plant at Liberal is capable of processing only a portion of the gas stream at that location and is not equipped to remove helium gas. Panhandle here processes about 240,000 Mcf per day. The new plant being constructed adjacent to the existing one will extract not only helium but other hydrocarbons. When the new plant is put in operation the existing plant will go out of use.

The function of the new Liberal plant is primarily to remove the helium. In performing this function, however, the process will entail the temporary removal of virtually all of the other components of the gas stream leaving a residue mixture containing the helium and other inerts, principally nitrogen. The process involves refrigeration of the gas to an extremely low temperature, about 270 degrees minus fahrenheit, thereby liquefying certain of its components. After performing this step National Helium will retain the helium gas mixture and a portion of the liquefied hydrocarbons. The balance will be combined so that the gas stream, less the shrinkage volume, will be returned to Panhandle for transmission and sale.

Panhandle is not required to install any facilities at Liberal. All new equipment needed will be constructed by National Helium. National Helium is required to return the residual gas to Panhandle at a pressure no less than that which existed upon the delivery.

As already indicated Panhandle's average main line input at Liberal is about 870,000 Mcf of gas per day. National Helium's plant is designed to process approximately 850,000 Mcf per day when in full operation and when so operated it will remove 17,000 Mcf which together with the 1000 Mcf used as fuel will constitute a shrinkage of 18,000 Mcf per day. Panhandle says that the helium content of its combined gas stream at Liberal is approximately .4 percent.

At the hearing, Staff counsel agreed to stipulate that the extraction of helium as planned by Panhandle and National Helium was in the public interest, and that there was no issue in the proceeding as to gas supply.

The primary issue in the proceeding is whether public convenience and necessity will be served by Panhandle's delivery of the proposed fuel to National Helium. In another case involving helium extraction the Commission recently stated what elements might appropriately be considered in granting a certificate.

> Under Section 7(e) of the Act we must grant Northern's requested authorization if we find, *inter alia*, that it is or will be required by the present or future "public convenience and necessity." In the usual case, "public convenience and necessity" embrace the conventional elements of gas supply, financing, facilities, markets, economic feasibility, and rates although in a certificate proceeding we need not determine the "just and reasonable" rate of the service. The particular facts of a case only justify considering other elements. Judgment is reached on weighing all relevant considerations for and against the authorization . . . . [*Northern Natural Gas Company*, Docket No. CP61–132, Opinion No. 374, issued December 28, 1962, 28 FPC 1155.]

As to the gas supply Panhandle and the Staff have stipulated that this is adequate. Since Panhandle will provide no new facilities or installations there is no issue in regard to facilities or financing. The market for the gas is established by the twenty-two year contract between Panhandle and National Helium. As this contract is dependent, at least in part, upon National Helium's contract with the Department of the Interior the sale is highly desirable and the deliveries will serve a necessary and useful purpose.

Since Panhandle will not construct or finance any installations the question of economic feasibility is not presented in the conventional manner. Also, since the sale of the fuel gas is for direct consumption and not for resale the question of price is not an issue under section 1(b) of the Natural Gas Act. Under the contract between Panhandle and National Helium, Panhandle is to be paid 35 cents per Mcf at 14.65 psia or 34.58 cents per Mcf at 14.73 psia for the gas used as fuel or for shrinkage. Panhandle says that its main line deliveries to utility customers will produce average revenues of 33.07 cents per Mcf so that the unit revenues from its sale to National Helium will be in excess thereof and therefore will be compensatory.

As helium is an inert its extraction from Panhandle's gas stream at Liberal admittedly is desirable, unless such extraction would have a materially adverse effect upon Panhandle's ability otherwise to serve its jurisdictional customers. The latter is not established by the testimony. Accordingly, in view of the foregoing, and the evidence of record it is concluded that the helium project will not adversely affect Panhandle's existing service but on the contrary it will be economically feasible and in the public interest.

Staff counsel, however, raises two major issues in the proceeding, first, that Panhandle failed to apply for a certificate of public convenience and necessity covering the transportation of the so-called shrinkage volumes of gas, and second, that no request was made for a certificate by National Helium for the transportation in interstate commerce of natural gas through its plant.

Staff's position is that Panhandle must have a certificate for the transportation of those volumes of gas to be used in the operation of National Helium's plant, as a result of the removal of hydrocarbons and other matter, and that in transporting the gas through the plant National Helium is engaged in interstate commerce. Staff suggests that any certificate that may be issued to Panhandle should be conditioned upon the successful prosecution of applications for the issuance of other certificates which Staff feels must be obtained.

Reverting to the question of interstate commerce, the Staff says that when operative virtually the entire stream of Panhandle's gas will move through the National Helium facilities, that the gas will move physically in a continuous flow from Panhandle's interstate lines through National Helium's processing facilities and back into the Panhandle system's jurisdictional facilities at the Liberal compressor station, and that National Helium's plant is essential to the transportation of the gas from its main source of supply. The Staff claims that this residual gas is in interstate commerce when moving through National Helium's facilities, that National Helium is engaged in interstate commerce, and that its facilities are therefore jurisdictional. Staff argues that the Natural Gas Act does not dictate that the provisions of the Act apply only when the facilities are designed and the function performed is primarily "transportation", and further that the provisions of the Act apply specifically to the transportation of natural gas in interstate commerce.

Panhandle on the other hand denies that the extraction is essential to the transportation of its gas in interstate commerce, but says that on a peak day 167,000 Mcf will bypass the National Helium plant, that approximately 620,000 Mcf received into Panhandle's stream east to the plant and from Trunkline and from the Elk City line will also bypass the extraction plant daily, and that in an emergency the extraction plant may be bypassed entirely.

It should not be overlooked in this connection that by the terms of the contract between Panhandle and National Helium, title to the residual gas redelivered to Panhandle and not a part of the "shrinkage" remains in Panhandle. National Helium cannot dispose of this gas to anyone else nor does it transport the gas after it leaves its plant. The movement of the gas stream through the helium plant is simply incidental to the helium extraction process and is a necessary step in the method of extraction.

In support of its contentions the Staff cites: *Saturn Oil & Gas Company*, 250 F. 2d 61, 69; *Phillips Petroleum Co.*, v. *Wisconsin*, 347 U.S. 672, 681; *Missouri* v. *Kansas Natural Gas Co.*, 265 U.S. 298, 309; and *Panhandle Eastern Pipe Line Co.* v. *Federal Power Commission*, 232 F. 2d 467. These cases, however, are not dispositive of the present issue. In the *Saturn* case the court found that facilities necessary to effect a sale of gas in interstate commerce are facilities used in interstate commerce and are within the jurisdiction of the Commission. Staff suggests that facilities necessary to effect transportation of gas in interstate commerce should also be jurisdictional. The answer is that in the *Saturn* case the petitioner was engaged in the *sale* in interstate commerce of natural gas for resale not the transportation of gas simply through its Christmas tree facilities. Based on the *Phillips* case, it is said that the transportation of natural gas is accomplished by National Helium; that "the gas is in interstate commerce"; hence the transportation is jurisdictional. But National Helium is not engaged in the sale of natural gas for resale in interstate commerce nor in the business of transporting gas. *Missouri* v. *Kansas* has no application here. There the business of the respondent was wholly interstate; it was engaged in the transportation of gas from one state to another for sale to resale customers. In the *Panhandle* case the court was concerned with the effect of extraction revenues and the cost of service.

The extraction process of the helium plant has been described as follows: the gas moves through a series of increasingly colder processes in the course of which the progressive liquefaction of the components of the stream is effected; when the remaining stream reaches the final cold box, the helium-gas mixture is removed as a vapor and the remainder of the stream leaves the bottom of the cold box as a liquid; the revaporization of the liquids following their liquefaction during the various stages of the process, is effected in heat exchanges which assist in maintaining the necessary refrigeration of the incoming gas stream; and following such revaporization, the residual gas stream is returned to the Liberal compressor station where it is compressed and put into the lines comprizing Panhandle's main line system, for movement of the gas to Panhandle's markets. It will be seen from this that the primary purpose and end result of National Helium's plant is to extract helium and hydrocarbons rather than to transport natural gas.

Thus the mere movement of the residual gas within the National Helium plant is not to be equated with interstate commerce. The manner, the purpose of movement, and the activity of the person responsible for it is determinative.

It could hardly be said that if someone else's gas were passed through a single valve or perhaps through a water separator that this constitutes interstate commerce or that the owner or operator of such equipment was so engaged. It therefore decided following previous actions of the Commission that National Helium is not engaged in interstate commerce and need not secure a certificate of convenience and necessity, *Panhandle Eastern Pipe Line Co., et al.*, 12 FPC 686, 697; *Northern Natural Gas Company*, 25 FPC 1205, 1207; *ibid*, 26 FPC 418, 419; *ibid*, Opinion No. 374, 28 FPC 1155, 1161; *ibid*, Docket No. CP61-132, order issued March 12, 1963, 29 FPC 450.

This conclusion also finds support in the Helium Act (Act of September 13, 1960, 50 U.S.C. 167 i). Section 11 of that Act provides that:

> The provision of the Natural Gas Act of June 21, 1938, as amended, shall not be applicable to the sale, extraction, processing, transportation, or storage of helium either prior to or subsequent to the separation of such helium from the natural gas with which it is commingled, whether or not the provisions of such act apply to such natural gas, and in determining the rates of a natural gas company under Section 717c and 717d of Title 13, whenever helium is extracted from helium-bearing natural gas, there shall be excluded (1) all income received from the sale of helium; (2) all direct costs incurred in the extraction, processing, compression, transportation or storage of helium; and (3) that portion of joint costs of exploration, production, gathering, extraction, processing, compression, transportation or storage divided and allocated to helium on a volumetric basis.

Panhandle says that every operation of National Helium from the time it takes possession of the stream of gas from Panhandle's supply lines at its Liberal compressor station, until it returns the stream of gas to those lines, has as its one end purpose the extraction and preservation of the helium product, so that there is no part of the process to which the Commission's jurisdiction could apply and thus no reason for National Helium obtaining a certificate.

In opposition to this, however, it is said that the legislative history of the amendment to the Helium Act makes it clear that Section 11 did not erase the Commission's jurisdiction over natural gas. The Senate Report accompanying the Amendment reads in part:

> Section 11 covers the jurisdiction of the Federal Power Commission in this area. The section makes it clear that the Federal Power Commission retains its jurisdiction over natural gas containing helium but has no

jurisdiction over helium itself. [Senate Report No. 1814 on H.R. 10548, 86th Cong.]

Senator Carroll made this statement in explanation of the bill:

> I wish the Record to be crystal clear, so that any court which reads this Record will know what is the specific legislative intent, namely, that we are not exempting helium-bearing gas from jurisdiction by the Federal Power Commission under the Natural Gas Act. There can now be no question about that. [1960 Cong. Record 18603.]

On the first reading it would seem as if the explanatory statements as to the meaning of Section 11 and the language of the section itself were irreconcilable. Senator Carroll's statement means that Congress intended that the Commission should retain its jurisdiction over the sale and transportation in interstate commerce of natural gas containing helium or helium-bearing gas. The statement from the Senate Report though clear enough does not reach the precise issue here. But as the Helium Amendment was enacted subsequent to the Natural Gas Act and the Commission was familiar with the draft bill, it may be concluded that Congress had full knowledge of the bill. The plausible meaning of Section 11 is that Congress intended that the Commission retain its authority over natural gas as provided by the language of the Natural Gas Act, including natural gas containing helium, but that it exercise no jurisdiction over helium itself, nor interfere with or exercise authority over the program of conservation of helium, its sale, transportation, storage, and processing, and that because of the manner in which helium is obtained that this be so in so far as practicable in respect to its extraction both immediately prior to and subsequent to its separation from natural gas. The Helium Act accordingly limits the Commission's jurisdiction over the activities of National Helium and under the view here taken there is no ground for requiring National Helium to obtain a certificate.

Reference is now made to the question of whether Panhandle is required to secure a certificate of public convenience and necessity for the transportation of "shrinkage" or so-called shrinkage volumes of gas. Staff says that the gas stream going into the National Helium plant will have a higher Btu content than that leaving the plant, after the helium and other products are extracted, so that the net effect is that 18,000 Mcf of 2000 Btu gas, the "shrinkage", is delivered by Panhandle to National Helium. Staff's position is "that the transportation of natural gas, including those gaseous elements contained therein which may be liquefiable by treatment, in interstate commerce is subject to Commission jurisdiction for which a certificate of public convenience and necessity is necessary".

But under the plan of operations approximately 850,000 Mcf of natural gas per day will be available to National Helium and be utilized for processing. It is only after the large stream of gas is processed through the hydrocarbon-helium plant that there is a depletion or shrinkage amounting to 18,000 Mcf per day having a 2000 Btu content. This is the resultant of the processing and extraction operations. The breakdown or components of the shrinkage will consist of approximately 5840 Mcf of helium, 1000 Mcf of fuel gas, 830 Mcf of purge stream principally nitrogen, and 10,330 Mcf representing higher hydrocarbons.

Prior to the extraction process and so long as the shrinkage volumes of natural gas are a part of the main stream it is the main stream of natural gas which Panhandle is delivering and it is unrealistic to speak of Panhandle's transportation of shrinkage volumes of gas. However, it is assumed *arguendo* that the shrinkage volumes of gas (18,000 Mcf exclusive of 1000 Mcf of fuel) may be identified as natural gas having a 2000 Btu content, this shrinkage includes the

helium as well as the hydrocarbons which must first be removed in order to extract the helium and it has been held that the Commission has no jurisdiction over the transportation of hydrocarbons to be extracted, as liquids from the gas stream. *Northern Natural Gas Co.*, Docket No. CP61–132 issued December 28, 1962. Moreover, if the shrinkage volumes of gas is understood as containing the helium, nitrogen, and liquids, particularly after the extraction, then it follows from what has been already said as to the application of the Helium Act, that the Commission's jurisdiction is open to serious question by reason of the restrictions contained in Section 11 of that Act. 50 USC 1671. From the circumstances it is plain that the "shrinkage" is not natural gas as generally understood, and it is accordingly concluded that there is no justification for requiring Panhandle to secure a certificate of public convenience and necessity for its transportation.

Staff argues that the Btu content of Panhandle's gas hereafter to be supplied its jurisdictional customers will be reduced. Under its existing tariff and agreements with its customers Panhandle is permitted to extract helium, natural gasoline, butane, propane, and other hydrocarbons or inerts, except methane, from its natural gas but it is specifically agreed that the gas delivered to such customers "shall not have a total heating value above one thousand fifty (1,050) or below nine hundred fifty (950) British Thermal units per cubic foot" and no adjustment in price is provided for except that "in the event the arithmetic average total heating value of the gas delivered—in any month is less than 975 or more than 1,025 Btu per cubic foot" then the total charge for such month shall be decreased in proportion to the decrease below 975 or increased in proportion to the increase above 1,025 Btu per cubic foot.

Panhandle says that under its contract with National Helium the latter is required to redeliver the residual gas with a Btu content of at least 975, and Panhandle says its deliveries to its customers will exceed this level and be substantially identical with that which Panhandle has been distributing during the past several years.

Panhandle has about sixty-four utility customers east of Liberal in Kansas, Missouri, Illinois, Indiana, Ohio and Michigan which purchase gas from its main line for resale. Panhandle's witness who made studies of the content of its gas, testified at the hearing that the composite average heat content of the gas delivered to its jurisdictional customers as a group for the five years 1958 to 1962 inclusive was 982 Btu per cubic foot, that the weighted average Btu content of the gas estimated to be delivered to these customers as a group in 1964, after the helium extraction plant is in full operation will be 983 Btu, and that even when the helium plant is operated to full design capacity there will be no significant change in the overall Btu content of the gas deliveries to its jurisdictional customers as compared with the past several years. The witness testified that although the historical system-wide annual average Btu content of Panhandle's gas deliveries remained rather steady at or near 982 Btu per cubic foot, there had been significant variations as between customers and as to given customers from month to month in a given year, that the disparity as between customers was as much as 10 to 12 Btu in the same month or year, and there was a variation of up to 20 Btu as to a given customer from month to month or in a single year. He said this was normal in Panhandle's system, and concluded that the helium plant when under full design operation will have a considerably lesser impact on the Btu content of gas delivered to Panhandle's jurisdictional customers than the normal variations among its customers in the past.

But it is complained, that with the completion of the helium plant liquid hydrocarbons will be extracted from 850,000 Mcf instead of 240,000 Mcf per day

and that the net effect of the operations will be a lowering in the Btu content of the gas delivered to Panhandle's customers; that with the removal of only 6,670 Mcf of inert substance per day the Btu Content of Panhandle's gas should rise but the removal of the heavier hydrocarbons will in fact result in a reduction of Panhandle's ability to deliver energy to its customers. It is urged that the Commission should have control over the Btu content of the gas to be delivered to Panhandle's customers.

At present Panhandle processes about 240,000 Mcf of gas per day at its Liberal plant and extracts or uses about 4,000 Mcf of hydrocarbons. In 1962 it extracted 35,381,037 gallons of liquid hydrocarbons. The helium plant is designed to process 850,000 Mcf of gas per day, 18,000 of which will represent shrinkage. As already stated the shrinkage will be made up of the following: approximately 5,840 Mcf will represent the helium product, 1,000 Mcf fuel and miscellaneous streams, 830 Mcf purge stream principally nitrogen, and 10,330 will represent higher hydrocarbons. It is estimated that after the helium plant is placed in operation approximately 122,165,500 gallons of liquid hydrocarbons will be extracted from the gas stream which will be processed.

The volume of liquid hydrocarbons extracted per Mcf of gas processed therefore will be substantially the same after the operation of the helium plant as in the past.

But this alone will not determine the heat value of the gas to be delivered to Panhandle's future customers. The substantial increase in the total volumes of gas to be processed at the new plant will unquestionably affect the heating value of the gas to be delivered from the various parts of Panhandle's Transmission system. Even though the system-wide weighted average may be virtually unaffected, the evidence shows that the composite average heating value of the gas deliveries to Panhandle's jurisdictional customers located between Liberal and Tuscola will decrease from 993 Btu to about 983 Btu and for those customers east of Tuscola will rise from about 980 Btu to 983 Btu per cubic foot. The record does not disclose how individual customers may be affected.

The foregoing would indicate that Panhandle intends to more nearly equalize the heat content of the gas deliveries to its customers in the two sections of its system. Since no rate adjustment is required by its tariffs for variations of heat content within the range of 975 Btu to 1025 Btu, the contemplated equalization would seem to be in the public interest. However, the volume of gas to be processed at the new plant and the amount of liquid hydrocarbons to be returned by National Helium to Panhandle will have an important bearing on Panhandle's ability to effect and maintain the heat content indicated in support of its application. For this reason it is considered appropriate to condition the issuance of the certificate which Panhandle seeks in this proceeding so as to limit the volume of gas to be delivered for processing and to insure the maintenance of the composite heating value of the gas to be delivered to Panhandle's jurisdictional customers consistent with indicated operations.

One additional item deserves attention. The Staff contends that, to the extent additional liquid hydrocarbons are extracted at the Helium plant, Panhandle's jurisdictional customers and their ratepayers lose heat energy and the additional revenues or profits derived from the sale of the liquid hydrocarbons beyond costs should be reflected in Panhandle's cost of service or in an adjustment of rates. Whatever may be said for or against this contention on principle, the evidence in the proceeding is inadequate to support a proper determination. This issue it would also appear can more appropriately be resolved in a rate case rather than in this proceeding.

FINDINGS AND CONCLUSIONS

Upon consideration of the record and the briefs and arguments of counsel, it is found and concluded, in addition to the findings and conclusions heretofore stated, that:

(1) The Panhandle Eastern Pipe Line Company, a Delaware Corporation, having its principal offices in New York, New York and in Kansas City, Missouri, is engaged in the transportation of natural gas in interstate commerce and in the sale of natural gas in interstate commerce for resale for ultimate public consumption and is a "natural-gas company" within the meaning of the Natural Gas Act, as amended. (4 FPC 1081.)

(2) The National Helium Corporation is a Delaware corporation and is presently constructing a helium extraction plant in the vicinity of Liberal, Kansas.

(3) Pursant to a contract executed between Panhandle and National Helium dated October 2, 1961, Panhandle will make available its natural gas stream (west end) for the purpose of enabling National Helium to extract helium, nitrogen and certain liquefiable hydrocarbons. It is estimated and intended that National Helium will process not more than 850,000 Mcf of natural gas per day of which an average of 1000 Mcf per day will be used for fuel and 17,000 Mcf for extraction and loss or a total of 18,000 Mcf per day of shrinkage.

(4) Panhandle will have an adequate supply of natural gas in excess of its contract commitments from which to supply the fuel and shrinkage volume of gas to National Helium.

(5) The removal of the helium and hydrocarbons from Panhandle's gas stream by National Helium will not prevent Panhandle from complying with its customer obligations as contained in its tariff rate schedules and in sales contracts on file with the Commission.

(6) Panhandle is ready and willing to perform the service called for in its application and to conform to the provisions of the Natural Gas Act and the Commission's regulations thereunder.

(7) National Helium's proposed extraction plant is not engaged in the transportation of natural gas in interstate commerce and as such is not subject to the Commission's jurisdiction.

(8) The proposed transportation by Panhandle to National Helium of an average of 1000 Mcf and up to 2000 Mcf of natural gas per day for use as fuel is in the public interest and is required by public convenience and necessity, and a certificate therefor should be issued.

ORDER

WHEREFORE, *it is ordered*, subject to review by the Commission on appeal, or review on its own motion, as provided in its Rules of Practice, that:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the applicant, Panhandle Eastern Pipe Line Company, for the transportation in interstate commerce of an average of 1000 Mcf of natural gas per day and up to 2000 Mcf per day to the National Helium Corporation plant located near Liberal, Kansas, to be used as fuel, space heating, and other miscellaneous purposes, subject to the following conditions:

(1) That Panhandle deliver from its gas stream to National Helium for processing not more than 850,000 Mcf of natural gas per day.

(2) That the weighted average annual heating value of all gas delivered by Panhandle (a) to its jurisdictional customers west of Tuscola shall be not less than 982 Btu per cubic foot, and (b) to its jurisdictional customers east of

Tuscola shall be not less than 982 Btu per cubic foot. Panhandle, in a manner satisfactory to the Commission, shall file evidence of its compliance with these requirements.

(3) Panhandle shall file with the Commission, in writing and under oath, an original and four conformed copies of a report of the initiation of deliveries of natural gas to National Helium, such report to be filed within 30-days of the initial deliveries; and an annual report showing by month or any portion thereof (a) the total volumes of gas delivered to National Helium for processing, (b) the volumes of gas delivered or used for fuel purposes, and (c) the volumes of gas redelivered to Panhandle, such annual report to be filed not later than February 1st of each year.

(4) That the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the issuance of the certificate granted herein, and to the exercise of the rights thereunder.

HARRY C. SHRIVER,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NO. G–17625; CONTINENTAL OIL COMPANY, DOCKET NO. G–17649; NEWMONT OIL COMPANY, DOCKET NO. G–17765; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. RP64–4

ORDER UPON REHEARING AND RECONSIDERATION AMENDING ORDER CONDITIONALLY APPROVING PROPOSED SETTLEMENT, CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND IMPOSING REPORTING REQUIREMENTS

(Issued November 12, 1963)

On September 5, 1963, Tennessee Gas Transmission Company (Tennessee) filed an application for rehearing of our order of August 7, 1963, conditionally approving proposed settlement, conditionally issuing certificates of public convenience and necessity and imposing reporting requirements in the above-captioned proceedings.

The amended settlement proposal and the Commission's order provide in part that the price to be paid to producers Socony Mobil Oil Company (Socony), Continental Oil Company and Newmont Oil Company (collectively as MCN) is 19¢ per Mcf at 15.025 psia; and in addition, Tennessee shall pay 1.5¢ per Mcf to an escrow agent as tax reimbursement to provide for the contingency of the producing acreage being finally adjudicated as lying within the taxing jurisdiction of the State of Louisiana. The order further requires Tennessee to make special reports to the Commission in Docket No. RP64–4, concerning the status of the escrow account.

Tennessee stated in its application for rehearing that recent investigation by Tennessee disclosed that the Block 62 Field which contains the acreage covered by the certificate applications in these proceedings is not within the area which is the subject of dispute between the State of Louisiana and the United States and further, that this acreage is approximately 22 miles from the shoreline of the State of Louisiana and is unquestionably all Federally owned lands.

Tennessee therefore requested that the Commission:

(1) Eliminate the requirement by Tennessee to place 1.5¢ per Mcf in an escrow account.

(2) Amend said order to provide that the 1.5¢ per Mcf collected by MCN on the 160 acre tract to be paid to Tennessee from initial delivery to date of said order be refunded to Tennessee without any requirement that it be placed in an escrow account.

(3) Amend ordering Paragraph (I) to eliminate the requirement by Tennessee of filing an escrow agreement and special report of Block 62 Field, East Cameron Area, offshore Louisiana.

By order issued October 4, 1963, in the above-captioned proceedings the Commission granted rehearing for the purpose of reconsideration of our order of August 7, 1963.

On October 25, 1963, Socony filed a letter agreement with the Commission signed by Tennessee and the MCN producers. The letter agreement provides that the producers have no objection to the Commission's granting Tennessee's request, provided that the MCN producers shall have the right to file prospectively during the moratorium period for the 1.5¢ per Mcf reimbursement of State taxes if the acreage covered by these applications is judicially determined to be within the taxing jurisdiction of the State of Louisiana.

Under the terms of the amended settlement proposal of June 19, 1963, and the above-mentioned letter agreement, MCN will refund to Tennessee all amounts collected as reimbursement for State taxes and Tennessee, in turn, will refund such monies to its customers in accordance with its rate settlement conditionally approved by the Commission by order of December 21, 1962.[1]

The immediate reduction in the payment of higher prices for gas is of greater benefit to the rate-paying consumer than would be the potential refunds represented by the monies to be held in escrow. *F.P.C.* v. *Tennessee Gas Transmission Co.*, 371 U.S. 145, 154. Accordingly, we shall amend our order of August 7, 1963 in these proceedings as requested by Tennessee in its application for rehearing. In addition, since several months have passed since the date of issuance of our order of August 7, 1963, we shall extend the period for compliance with the terms of that order.

The Commission finds:

It is appropriate in carrying out the provisions of the Natural Gas Act that the order of the Commission conditionally approving proposed settlement, conditionally issuing certificates of public convenience and necessity and imposing reporting requirements, issued in the above-captioned matters on August 7, 1963, be amended as ordered below.

The Commission orders:

(A) Ordering paragraph (C) of the order conditionally approving proposed settlement, conditionally issuing certificates of public convenience and necessity and imposing reporting requirements issued in the above-captioned matters on August 7, 1963, is hereby amended to read as follows:

(C) The certificates issued by paragraph (B) above, are granted upon the express condition that MCN comply fully with the terms of this order, and the amended settlement agreement filed in this matter on June 19, 1963, as further amended by the letter agreement filed by MCN in this matter on October 25, 1963, and upon the further express condition that interest be paid on all amounts to be refunded to Tennessee. Such interest shall accrue through the last day of the month in which the amended settlement agreement was filed, June 30, 1963, and such interest shall be computed at a rate of 6 percent per annum on amounts attributable to deliveries made prior to March 1, 1960 and

[1] *Tennessee Gas Transmission Company*, 28 FPC 1100, amended 29 FPC 65.

at a rate of 7 percent per annum on amounts attributable to deliveries made thereafter. The refunds and interest required to be paid by the terms of the amended settlement agreement as further amended and the terms of this order shall be paid to Tennessee on or before January 31, 1964.

(B) Ordering paragraph (I) of said order is hereby amended to read as follows:

(I) On or before December 31, 1963, Tennessee shall file with the Commission conformed copies of the escrow agreement entered into pursuant to the Commission's orders of December 21, 1962, and January 2, 1963, *supra*, and special reports of the amounts paid into escrow thereunder. Each year thereafter and until the escrow agreements terminate, Tennessee shall file contemporaneously with its Form 2 Annual Report a report of the amounts in the escrow accounts as of the last day of the reporting year. In addition, whenever the escrow agent pays out monies from the escrow accounts, Tennessee shall file a special report of the principal and interest so paid out, the reason for such payments, and the manner of distribution and basis therefor. Whenever the escrow agent pays out monies, Tennessee shall serve a copy of its special report on each interested state commission. All filings and reports required by this paragraph shall be made by a responsible corporate official in Docket No. RP64-4 and shall include a statement of the amounts attributable to each rate schedule and field.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; MISSISSIPPI RIVER FUEL CORPORATION, DOCKET NO. CP61-141; HOPE NATURAL GAS COMPANY, DOCKET NO. CP61-152; OCEAN DRILLING & EXPLORATION COMPANY, DOCKET NO. CI61-1162; AMERICAN NATURAL GAS PRODUCING COMPANY (OPERATOR), ET AL., DOCKET NO. CI61-1246; TEX-STAR OIL & GAS CORPORATION, ET AL., DOCKET NO. CI61-1524

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT PROPOSALS AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 12, 1963)

Motions for severance, for approval of settlement proposals and for issuance of certificates of public convenience and necessity in their respective dockets were filed in the above-captioned proceedings on August 7, 1963, by Hope Natural Gas Company (Hope); August 19, 1963, by Mississippi River Fuel Corporation (Mississippi) and Ocean Drilling & Exploration Company (Odeco); September 4, 1963, by Tex-Star Oil & Gas Corporation, et al. (Tex-Star); and September 11, 1963, by American Natural Gas Production Company (Operator), *et al.* (American).

The settlement proposals are similar to those previously approved by the Commission[1] and provide for the issuance of permanent certificates at initial rates of 20.625¢ per Mcf[2] five year moratoria on rate increase filings (subject to the usual exceptions) extension of take-or-pay make-up periods to 4 years

---

[1] See *e.g.*, orders issued August 7, 1963, and October 9, 1963, in *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*, 30 FPC 456 and 979, respectively.

[2] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

in all contracts which provide lesser make-up periods, and refunds of amounts above the settlement rates collected since the dates of initial deliveries.[3]

A temporary authorization containing a refund condition has been issued to each of the Applicants in each of the dockets proposed to be settled herein. Each Applicant proposes to make refunds of all amounts above the settlement rates collected since the dates of initial deliveries with interest at 7 percent per annum to accrue through June 30, 1963, in the case of Hope, August 31, 1963, in the cases of Odeco and Mississippi and September 30, 1963, in the case of American. Tex-Star's offer contains no cut-off date for the accrual of interest.

These proposals, generally are in the public interest and we shall approve them subject to the following reservations and conditions.

In the context of the proposals, we interpret the term "delivered" as used in paragraph 1 of each proposal to include gas required to be taken during the moratorium periods but paid for and not taken. Our approval of these settlements is conditioned upon such interpretation.

In keeping with our present policy, we shall require that interest on all amounts to be refunded accrue through the last day of the month in which the respective settlement proposals were filed, August 31, 1963, in the cases of Mississippi, Hope and Odeco and September 30, 1963, in the cases of American and Tex-Star.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

The pipeline purchasers which will receive refunds and whose gas purchase costs will be affected by these settlements are Texas Gas Transmission Corporation (Texas Gas), Tennessee Gas Transmission Company (Tennessee) and Transcontinental Gas Pipe Line Corporation (Transco). Texas Gas and Tennessee will flow through the refunds and adjust their rates in accordance with the Commission's orders approving their latest rate settlements.[4]

Transco the purchaser in Docket Nos. CI61–1162 and CI61–1524 contended, in the recent Socony and Gulf settlements[5] that the flow through provisions in its settlement in Docket No. RP61–13[6] do not apply to producer rate schedules not specifically listed in its settlement agreement. Since Odeco's Rate Schedule No. 4 and Tex-Star's Rate Schedule No. 27 are not specifically referred to therein and in order to avoid a situation in which a pipeline obtains and keeps the benefits of refunds and a reduction in gas purchase costs even though it may be, in the absence of such refunds and reductions in gas purchase costs, earning a reasonable rate of return on invested capital, we shall require Transco to report to the Commission the amounts of refund and interest which it receives as a

[3] See Appendix for further details.

[4] *Texas Gas Transmission Corporation*, 26 FPC 924 (1961) and *Tennessee Gas Transmission Company*, 28 FPC 1100 (1962), amended 29 FPC 65 (1963).

[5] See our order of October 9, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 979.

[6] *Transcontinental Gas Pipe Line Corporation*, 27 FPC 187.

result of these settlements, the estimated annual reductions in purchased gas costs, the proposed disposition of the refunds and the proposed rate adjustments, if any, to reflect the reduction in gas purchase costs. We shall require Transco to hold the refunds and amounts equal to the reductions in purchased gas costs which will accrue as a result of this settlement in a special account subject to further orders of the Commission.

In accordance with the above we shall sever these individual dockets from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, omit the intermediate decision in regard to these dockets [7] and issue certificates of public convenience and necessity in accordance with the applications, settlement proposals and conditions of this order.

The Commission finds:

(1) Each of the applicants herein is a "natural-gas" company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the contribution and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Each of the applicants herein is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) No party has opposed the waiver of the intermediate decisions in these proceedings.

(7) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that Transco be required to submit the reports and to account for the refunds, interest and purchased gas cost reductions as ordered below.

The Commission orders:

(A) The motions for waiver of the intermediate decision are granted.

(B) The matters in Docket Nos. CP61–141, CP61–152, CI61–1162, CI61–1246 and CI61–1524 are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued upon the conditions set forth herein to the applicants for the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposals and this order, and for the construction and operation of any facil-

[7] The hearings in the Union Texas Petroleum, *et al.*, consolidated proceeding concluded July 25, 1963.

ities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications and settlement proposals herein.

(D) The certificates issued by paragraph (C) above, are granted upon the express condition that the applicants comply fully with the terms of this order and the settlement proposals which settlement proposals are expressly approved as modified by this order. The certificates issued to Hope and Tex-Star are granted upon the further condition that the interest to be paid by each accrue through the last day of the month in which the respective proposals were filed, August 31, 1963, in the case of Hope and September 30, 1963, in the case of Tex-Star.

(E) The refunds required by the settlement proposals and this order shall be made within 90 days from the date of issuance of this order.

(F) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposals the applicants shall report to the Commission, in triplicate, the amount of the refunds made to each pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with releases from the purchasers showing receipt of the refunds in conformity with the settlements and the conditions of this order.

(G) Upon full compliance of the applicants with all the terms of this order and of the settlement proposals as modified, the applicants shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(H) The certificates herein issued are not transferable and shall be effective only so long as the applicants continue the acts and operations hereby authorized in accordance with the provisions of the National Gas Act and the applicable rules, regulations and orders of the Commission.

(I) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rates as required by this order and the settlement proposals.

(J) The grant of certificates herein and approval of the settlement proposals is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, applicants, the Commission staff, or any affected party herein in any other proceeding.

(K) Within 15 days from the date of receipt of refunds and interest required by this order, Transco shall submit a report to the Commission and serve a copy on its jurisdictional customers, and the various state utility commissions wherein it does business, setting forth the amount of refund and interest received, and the estimated annual reduction in purchased gas costs due to the rate reductions herein, and the proposed disposition of such refunds and interest and the proposed rate adjustments to reflect the reductions in gas purchase costs. Pending Commission action and further orders respecting such proposed dispositions and adjustments, Transco shall hold such refunds, interest and amounts equal to the reduction in purchased gas costs which accrue as a result of these settlements in a special account (without interest obligation).

FRED BAHOVEC, PROJECT NO. 1185

ORDER ISSUING NEW LICENSE (MINOR)

(Issued November 13, 1963)

Application was filed on April 8, 1963 by Fred Bahovec (Applicant) of Sitka, Alaska, for a new license under the Federal Power Act (Act) for constructed minor Project No. 1185, located on Baranof River at Warm Springs Bay, Baranof Island, Alaska, and affecting lands of the United States.

The fourth and last license for the project was issued to Applicant without charge, for a period of 10 years, effective as of August 23, 1952, and expired on August 22, 1962.

The Department of the Interior has advised that the project does not adversely affect the interests of the Department.

The Department of Health, Education, and Welfare has advised that it has no objection to the issuance of a new license.

The Department of Fish and Game, State of Alaska, has advised that the project does not adversely affect fishery resources.

The Commission finds:

(1) Applicant is a citizen of the United States and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a new license for the project.

(2) No conflicting application is before the Commission.

(3) The project does not affect any Government dam, nor will the issuance of a new license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) The issuance of a new license for the project as hereinafter provided will not interfere or be inconsistent with any reservation of withdrawal of public lands.

(5) The installed capacity of the project is four horsepower and the power generated thereby is used mostly for domestic purposes.

(6) The exhibits described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the new license for the project.

(7) It will be in the public interest to waive the terms and conditions contained in the following sections of Part I of the Act:

Sections 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance

and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(a), 10(c), insofar as it relates to depreciation reserves; 10(d), 10(f); 11; 12; 14; except insofar as the power of condemnation is reserved; 15; 18; except insofar as it relates to fishways; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This new license is hereby issued to Fred Bahovec, of Sitka, Alaska, under Section 4(e) of the Federal Power Act, for a period of 10 years, effective as of August 23, 1962, for the operation and maintenance of minor Project No. 1185, located on lands of the United States on Baranof Island, Alaska, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is hereby incorporated by reference as a part of this new license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) The project consists of:

(i) All lands constituting the project area and enclosed by the project boundary.

(ii) Project structures comprising a small diversion dam, a wood flume about 80 feet long, a wooden overshot water wheel, a generator of three kilowatts capacity (four horsepower), and about 200 feet of power line extending to the Licensee's residence and mink pens.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, and all rights and interests, the possession of which is necessary or appropriate in the maintenance and operation of the project:

the lands and project works being more specifically shown and described by the certain exhibits forming part by reference of the application for new license and which are hereby redesignated and described as follows:

Exhibit E (FPC No. 1185–1), redesignated as Exhibit K (FPC No. 1185–1) Map in one sheet entitled "Bahovec Power Project, Warm Springs Bay, Alaska, Tongass National Forest" signed on November 10, 1931, by Fred Bahovec, and approved by the Commission on December 16, 1952; and

Exhibit D, redesignated as Exhibit M, specifications in one typewritten sheet entitled "General Description of Project Works and Power Equipment," signed on November 10, 1931, by Fred Bahovec, and approved by the Commission on December 16, 1952.

(C) The terms and conditions of the Act, which it has been found above to be in the public interest to waive, are hereby excluded from this license.

(D) This new license is also subject to the terms and conditions set forth in Form L–7, December 15, 1953, entitled "Terms and Conditions of License for Minor Project Affecting Lands of the United States" (17 FPC 486), which terms and conditions are attached hereto and made a part hereof and also subject to the following special condition:

Article 15. The amount of water to be diverted from the Baranof River for this project shall not exceed seven cubic feet per second, the approximate hydraulic capacity of the existing project works. In the event that the Commission shall issue another license comprehending a more complete development of the power and water resources of said river which other license may create a conflict of rights, privileges or interests between the licensee herein and the new licensee, then and in that event the applicant for the larger project may elect whether to supply electric power to the licensee of this project (No. 1185) until the expiration date hereof, or he will otherwise compensate the licensee for the interference with Project No. 1185 for the remaining term of this license.

737–370—66——84

(E) The exhibits described in paragraph (B) above are hereby approved as part of this new license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this new license. In acknowledgement of the acceptance of this new license, it shall be signed by the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

INDIANA & MICHIGAN ELECTRIC COMPANY, DOCKET NO. E-7089

ORDER DENYING AND REJECTING APPEALS

(Issued November 13, 1963)

On October 18, 1963, Indiana & Michigan Electric Company (Indiana-Michigan) filed an appeal to the Commission from the presiding examiner's ruling of October 8, 1963 in the above captioned docket. The order appealed from denied Indiana-Michigan's motion for the production of data underlying the Commission's issuance of the order to show cause initiating this proceeding, as well as for other allegedly related data, and denied its motion that the presiding examiner certify the above ruling to the Commission for determination. Indiana-Michigan's appeal alleges: that the data requested is relevant; that the presiding examiner denied the motion on the erroneous grounds that he has no authority to grant it, notwithstanding the order of October 4, 1963, in this proceeding clarifying the scope of the examiner's authority respecting such matters arising in the course of a hearing; that by virtue of the Commission's acceptance of the staff's appeal resulting in the order of October 4, 1963, precedent has been established for recognizing the Company's motion for the production of documents as involving an extraordinary circumstance requiring prompt decision of this Commission under Rule 1.28 of the Rules of Practice and Procedure; and, that the examiner had refused to accord the Company treatment equal to that afforded the staff with respect to the production of documentary evidence.

On October 28, 1963 Indiana-Michigan filed an appeal to the Commission from the presiding examiner's rulings of October 19, 1963 in the above captioned docket: fixing the schedule for presentation of the parties' cases in writing and denying Indiana-Michigan's application for the subpoena requiring the Secretary or records officer to produce certain data. A request to certify this latter ruling was refused.

Indiana-Michigan's motions of October 8th and October 14th, requesting the examiner to order the production of data, seek no material essentially different from that earlier rejected by this Commission nor are any significant new grounds advanced for seeking material. Further, the material requested by Indiana-Michigan in these motions is not at all comparable to the factual information as to its operations previously secured by the staff but instead consists of the intra-agency working papers of the Commission leading to the institution of this proceeding along with other material of even more questionable relevance. It is doubtful whether such material could ever properly be

subject to examination by Indiana-Michigan. *A fortiori*, it can hardly be said that its inspection was necessary prior to the filing by staff of its direct case, which was accomplished on November 4, 1963. Thus, were this material properly before us we would not be predisposed to reverse the examiner. This is equally true with respect to the scheduling of the dates for the parties to file their direct cases—a matter which the examiner obviously is in a far better position to evaluate than we are.

However, we do not reject the merits of these motions. We recognize that in a few recent situations we have accepted and considered interlocutory appeals in cases pending in hearing despite the fact that the examiner had refused to certify that extraordinary circumstances existed necessitating prompt decision by the Commission to prevent detriment to the public interest. But in those cases the pleadings submitted to us demonstrated a real need for early Commission intervention as well as probable cause for modifying the action taken below. Here there is no such showing: certainly the strong presumption against interlocutory appeals is not met by the mere allegation of extraordinary circumstances nor by a score card tally of the number of motions granted to other parties. Indiana-Michigan's appeals should, therefore, be rejected.

The Commission orders:

(A) The appeals of Indiana-Michigan of October 18 and 28, 1963 for production of data in Docket No. E–7089 are rejected.

(B) The appeal of Indiana-Michigan seeking to set aside the presiding examiner's ruling fixing a hearing schedule in E–7089 is rejected.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NOS. G–16842, CP60–94; TENNESSEE NATURAL GAS LINES, INC., DOCKET NO. CP61–27; MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. CP62–116; ALABAMA-TENNESSEE NATURAL GAS COMPANY, DOCKET NO. CP62–133; CITY OF MARSHALL, ILLINOIS, DOCKET NO. CP62–187; CITY OF CASEY, ILLINOIS, DOCKET NO. ORDER DENYING APPLICATION FOR REHEARING AND DENYING MOTION TO STRIKE APPLICATION FOR REHEARING

(Issued November 13, 1963)

On October 18, 1963, Central Illinois Public Service Company (CIPSCO) filed an application for rehearing of our opinion and order herein issued on September 19, 1963, 30 FPC 759 (Op. 403). On October 21, 1963, the Cities of Marshall, Casey and Martinsville, Illinois filed a motion to strike CIPSCO's application on the ground that CIPSCO was no longer a party to the above-styled proceedings, as contemplated by Section 19 of the Act, as a result of the Commission's order of April 24, 1963, severing that company's application in Docket No. CP62–168 from the case.

Our order of severance served only to dispose of CIPSCO's application with reference to this proceeding. It did not preclude CIPSCO from being con-

sidered as a party regarding those issues remaining in the case with respect to which it has shown an adequate interest.[1]

The issues raised by CIPSCO in its application are repetitive of arguments fully considered in our opinion herein. Accordingly, its application will be denied.

The Commission orders:

(A) The application for rehearing filed by the Central Illinois Public Service Company be and hereby is denied.

(B) The motion to strike the application for rehearing filed by the Cities of Marshall, Casey, and Martinsville be and hereby is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL.; SOHIO PETROLEUM COMPANY, DOCKET NOS. G–14247, G–14569, CI60–489, CI61–638, AND CI62–337

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT PROPOSAL, CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND AMENDING ORDERS ISSUING CERTIFICATES

(Issued November 13, 1963)

On September 10, 1963, Sohio Petroleum Company (Sohio) filed a motion for severance of the above-entitled Sohio proceedings from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.* (hereinafter referred to as the Union Texas Proceeding), for approval of the attached settlement proposal and for the prompt issuance of certificates of public convenience and necessity and amendment of certificates heretofore issued in accordance with the applications and the settlement proposal.

No answers to Sohio's motion and offer have been filed.

The terms of the Sohio proposal conform, generally, to the other settlements emanating from the Union Texas Proceeding which have been approved by the Commission[1] and provide for maximum initial rates of 20.625¢ per Mcf[2] for sales from south Louisiana, effective April 1, 1963; a five-year moratorium on rate increase filings (subject to the usual exceptions); and, with the exceptions noted below, extension of the make-up periods to four years in the rate schedules or suplements which provide for lesser make-up periods.[3]

The matters in Docket Nos. G–14247 (Rate Schedule No. 42, Supplement No. 6) and G–14569 (Rate Schedule No. 43, Supplement No. 3) concern applications to amend certificates heretofore issued to Sohio, by adding acreage; the matters in the remaining three dockets concern initial applications for certificates.

The temporary authorization heretofore issued to Sohio in Docket No. CI61–638 contains an express refund condition and Sohio proposes to make refunds of

---

[1] CIPSCO adequately showed its entitlement to such a status as to the applications of these cities. (Docket Nos. CP62–187, CP62–188 and CP62–189. Tr. 2169–2176.)

[1] See orders issued August 7, 1963 (Humble Oil & Refining Company) and October 9, 1963 (Gulf Oil Corporation and Socony Mobile Oil Company, Inc.), in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979, respectively.

[2] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[3] See appendix for further details.

amounts collected above that which would have been collected at the settlement rate from the date of initial delivery. Sohio proposes to pay interest at a rate of 7 percent per annum on the amounts to be refunded, such interest to accrue through March 31, 1963.

Sohio proposes to refund amounts collected above the settlement rates for gas delivered since April 1, 1963, without interest, except for amounts collected under Rate Schedule No. 42, Supplement No. 6.[4]

Although Rate Schedules Nos. 42 (G–14247) and 43 (G–14569) contain take-or-pay-make-up periods of less than four years, Sohio does not propose to extend these periods under Supplement No. 6 to Rate Schedule No. 42 or Supplement No. 3 to Rate Schedule No. 43, the add-acreage applications here under consideration. Sohio proposes, in the interest of uniform administration of these contracts, that the provisions of the settlement proposal filed July 8, 1963, in Docket No. G–8488, *et al.*, covering all other volumes delivered under these rate schedules apply to Supplement No. 6 to Rate Schedule No. 42 and Supplement No. 3 to Rate Schedule No. 43 with respect to this matter.

We find this proposal, generally, to be in the public interest and shall approve it subject to the following reservations and conditions.

In the context of the proposal, we interpret the term "delivered" as used in paragraph 1. of the proposal to include gas required to be taken during the moratorium period but paid for and not taken and our approval is conditioned upon such interpretation.

We are not persuaded that the four-year make-up period should not apply to gas required to be taken from the acreage dedicated under Supplement No. 6 to Rate Schedule No. 42 and Supplement No. 3 to Rate Schedule No. 43. Prior settlements in the Union Texas Proceeding have uniformly applied the four-year make-up period extension to all acreage under consideration in the respective proceedings settled.

In keeping with our present policy, we shall require that Sohio pay interest on all amounts to be refunded at a rate of 7 percent per annum, such interest to accrue through the last day of the month in which the settlement proposal was filed, September 30, 1963.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

The pipeline purchasers which will receive substantial refunds and whose purchase costs will be substantially affected by this settlement are Texas Gas

---

[4] The present rate in effect, subject to refund in Docket No. RI62–320, under Rate Schedule No. 42 is 22.24¢ per Mcf. Sohio proposes to reduce this rate insofar as it applies to the acreage added under Supplement No. 6, to the initial contract price of 20.25¢ per Mcf. Any refunds will be made in the Section 4(e) proceeding in Docket No. RI62–320. Sohio notes that it proposes to make full refunds of all amounts in excess of the contract initial rate in its company-wide settlement proposal filed July 8, 1963, Docket No. G–8488, *et al.*

Transmission Corporation (Texas Gas), Transcontinental Gas Pipe Line Corporation (Transco) and United Gas Pipe Line Company (United).[5]

Texas Gas will flow through the refunds and adjust its rates in accordance with the provisions of our order approving its latest rate settlement.[6] United's rate case in Docket No. RP63–1 is presently pending before the Commission. Any adjustments in United's rates necessary to reflect the Sohio settlement will be made in that proceeding.

Transcontinental Gas Pipe Line Corporation (Transco) the purchaser in Docket No. CI62–337 contended, in the recent Socony and Gulf settlements[7] that the flow through provisions in its settlement in Docket No. RP61–13 do not apply to producer rate schedules not specifically included in its settlement agreement. Since Sohio's Rate Schedule No. 60 (CI62–337) is not specifically referred to therein and in order to avoid a situation in which a pipeline obtains and keeps the benefits of refunds and a reduction in gas purchase costs even though it may be, in the absence of such refunds and reductions in gas purchase costs, earning a reasonable rate of return on invested capital, we shall require Transco to report to the Commission the amount of refund and interest which it receives as a result of this settlement, the estimated annual reductions in purchased gas costs, the proposed disposition of the refunds and the proposed rate adjustments, if any, to reflect the reduction in gas purchase costs. We shall require Transco to hold the refunds and amounts equal to the reductions in purchased gas costs which will accrue as a result of this settlement in a special account subject to further orders of the Commission.

In accordance with the above we shall sever these Sohio dockets from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, omit the intermediate decision in regard to these dockets[8] and issue certificates of public convenience and necessity and amend the orders issuing the certificates in accordance with the applications, settlement proposal and conditions of this order.

The Commission finds:

(1) Sohio Petroleum Company is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Sohio is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public

---

[5] The effects of the settlement on Southern Natural Gas Company, the remaining purchaser, will be *de minimis*.

[6] *Texas Gas Transmission Corporation*, 26 FPC 924.

[7] See our order of October 9, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 979.

[8] The hearings in the *Union Texas Petroleum, et al.*, consolidated proceeding concluded July 25, 1963.

interest upon the conditions set forth below, and certificates should be issued and amendments granted as ordered below.

(5) The conditions attached to the certificates herein issued and the amendments herein granted are required by the public convenience and necessity.

(6) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that Transco be required to submit the reports and account for the refunds, interest and purchase gas cost reductions as ordered below.

(7) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motion for waiver of the intermediate decisions is granted.

(B) The matters in the Sohio dockets listed in the caption to this order are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued to Sohio Petroleum Company in Docket Nos. CI60–489, CI61–638 and CI62–337, and the order granting the certificate in Docket No. G–14247, issued September 28, 1959 and the order granting the certificate in Docket No. G–14569, issued August 5, 1958 are hereby amended, upon the conditions set forth herein authorizing the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in Sohio's applications and settlement proposal herein.

(D) The certificates and the amendments granted by paragraph (C) above, are granted upon the express condition that Sohio comply fully with the terms of this order and the settlement proposal, as modified, which settlement is expressly approved, under the conditions of this order.

(E) Within 90 days from the date of issuance of this order, Sohio shall refund to the respective pipeline purchasers the difference between the amounts collected for gas delivered subsequent to March 31, 1963, and the amounts that would have been collected under the settlement rates for gas delivered since that time except under Rate Schedule No. 42 together with interest computed at a rate of 7 percent per annum, such interest to accrue through the last day of the month in which the settlement proposal was filed, September 30, 1963.

(F) The certificates issued and the amendments granted by paragraph (C) above are granted upon the express condition that the make-up period in the take-or-pay provisions related to the acreage added by Supplement No. 6 to Rate Schedule No. 42 and Supplement No. 3 to Rate Schedule No. 43 be changed to a minimum of four years.

(G) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal as modified, Sohio shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchasers, showing separately the amount of principal and interest so paid and the bases used for such determination, together with releases from the purchasers showing receipt of the refunds in conformity with the settlement as approved.

(H) Upon full compliance of Sohio with all the terms of this order and of the settlement proposal, Sohio shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(I) The certificates herein issued are not transferable and shall be effective only so long as Sohio continues the acts and operations hereby authorized in

accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(J) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however,* that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(K) The grant of certificates herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Sohio, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, Applicant, the Commission staff, or any affected party herein in any other proceeding.

(L) Within 15 days from the date of receipt of refunds and interest required by this order, Transco shall submit a report to the Commission and serve a copy on its jurisdictional customers and the various state utility commissions wherein it does business, setting forth the amount of refund and interest received, the estimated annual reduction in purchased gas costs due to Sohio's rate reduction, its proposed disposition of such refunds and its proposed rate adjustments to reflect the reduction in gas purchase costs. Pending Commission action and further orders respecting such proposed disposition and adjustments, Transco shall hold such refunds, interest and amounts equal to the reductions in purchased gas costs which accrue as a result of this settlement in a special account (without interest obligation).

GENERAL AMERICAN OIL COMPANY OF TEXAS, DOCKET NO. RI62-213

ORDER PARTIALLY TERMINATING PROCEEDING, PERMITTING WITHDRAWAL OF RATE SCHEDULE, AND TRANSFERRING REFUND OBLIGATION

(Issued November 14, 1963)

On May 28, 1962, General American Oil Company of Texas (General American) filed a motion requesting that the Commission (1) permit General American to withdraw its FPC Gas Rate Schedule No. 15; (2) have J. M. Huber Corporation (Operator), *et al.*, FPC Gas Rate Schedule No. 9 cover General American's interest in the sale of natural gas to Panhandle Eastern Pipe Line Company

from the Light "B" Unit, Light Field, Beaver County, Oklahoma;[1] and (3) terminate that part of the proceeding in Docket No. RI62–213 which relates to General American's FPC Gas Rate Schedule No. 15.

In support of its motion, General American states that because J. M. Huber Corporation, operator of the gas properties, originally believed it could not make filings for non-operators, General American made its own certificate and rate filings and was issued a certificate covering its interest in the subject sale in Docket No. G–3895, and had accepted for filing its related FPC Gas Rate Schedule No. 15. For the sale of the same gas to the same buyer under the same contract, Huber made rate schedule and certificate filings and was issued a certificate in Docket No. G–6287, and had accepted for filing its related J. M. Huber Corporation (Operator), *et al.*, FPC Gas Rate Schedule No. 9.

On October 9, 1961, Huber filed under its FPC Gas Rate Schedule No. 9 a proposed increase in rate from 12.2828¢ to 13.1761¢ per Mcf, which was suspended in Docket No. RI62–167 and subsequently placed in effect, subject to refund under an agreement and undertaking, on April 9, 1962. On November 13, 1961, General American filed an identical increase in rate under its FPC Gas Rate Schedule No. 15, which was suspended in Docket No. RI62–213 and subsequently placed in effect, subject to refund under an agreement and undertaking, on May 21, 1962.

Pursuant to General American's May 28, 1962 motion, on November 30, 1962, Huber filed a motion stating that it would consider its certificate and rate schedule filings to cover General American's interests and would assume under its agreement and undertaking filed in Docket No. RI62–167 the obligation to make any refunds ordered by the Commission regarding General American's interests in the subject sale. In its motion, Huber requested that General American agree to indemnify Huber for payment of any such refunds, plus interest. On July 22, 1963, General American filed an indemnity agreement complying with Huber's request.

Since Section 154.91(b) of the Commission's Regulations under the Natural Gas Act permits an operator to make the certificate and rate schedule filings for other co-owners, and since Huber has agreed in Docket No. RI62–167 to assume General American's refund obligation in Docket No. RI62–213, it appears to be in the public interest to grant General American's motion.

The Commission finds:

It is necessary and appropriate in the public interest and to aid in the enforcement of the Natural Gas Act that General American be permitted to withdraw, effective as of May 21, 1962, its FPC Gas Rate Schedule No. 15, that Huber be permitted to assume General American's refund obligation incurred in Docket No. RI62–213 with respect to its FPC Gas Rate Schedule No. 15 under Huber's agreement and undertaking filed in Docket No. RI62–167, that General American's interest in the subject sale be covered by J. M. Huber Corporation (Operator), *et al.*, FPC Gas Rate Shedule No. 9, effective as of May 21, 1962, and that the proceeding in Docket No. RI62–213 be terminated with respect to General American's FPC Gas Rate Schedule No. 15.

The Commission orders:

(A) General American Oil Company of Texas is hereby permitted to withdraw its FPC Gas Rate Schedule No. 15, effective as of May 21, 1962.

(B) General American Oil Company of Texas is hereby relieved of its refund obligation in Docket No. RI62–213, insofar as it relates to sales under its FPC

[1] Such sale relates to the contract between J. M. Huber Corporation and Panhandle Eastern Pipe Line Company dated June 29, 1951.

Gas Rate Schedule No. 15, and J. M. Huber Corporation (Operator), *et al.*, is hereby permitted to assume, effective as of May 21, 1962, such obligation under its agreement and undertaking filed in Docket No. RI62–167.

(C) General American's interest in the sale of gas to Panhandle Eastern Pipe Line Company from Light "B" Unit, Light Field, Beaver County, Oklahoma is hereby covered by J. M. Huber Corporation (Operator), *et al.*, FPC Gas Rate Schedule No. 9, effective as of May 21, 1962.

(D) The proceeding in Docket No. RI62–213 is hereby terminated with respect to General American Oil Company of Texas FPC Gas Rate Schedule No. 15.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP63–219

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 14, 1963)

On August 20, 1963, Northern Natural Gas Company (Applicant) filed in Docket No. CP63–219 a petition to amend the Commission's order issued August 6, 1963, in said docket by increasing the contract demand of Coon Rapids, Iowa, from 830 Mcf of natural gas per day to 850 Mcf per day, an increase of 20 Mcf per day, all as more fully set forth in the subject motion.

On August 6, 1963, the Commission issued its order in the above docket authorizing the construction and operation of certain facilities, and the transportation and sale of increased contract demands to Applicant's existing customers for the 1963–64 heating season. Included in this amount was an increase for the Municipal Utilities of Coon Rapids, Iowa, of 30 Mcf per day increasing this contract demand from 800 to 830 Mcf per day. The Municipal Utilities of Coon Rapids, Iowa, advised Applicant that since reviewing the town's gas loads, an additional 20 Mcf per day of firm gas will be required to satisfy the anticipated demand for the coming heating season.

No additional facilities will be required to deliver these increased volumes.

Due notice of the filing of the petition to amend and opportunity for hearing thereon has been given by publication in the Federal Register on October 3, 1963 (28 F.R. 10695). No protest, petition to intervene or request for hearing has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued August 6, 1963, in Docket No. CP63–219 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued August 6, 1963, in Docket No. CP63–219 be and the same is hereby amended by authorizing Northern Natural Gas Company to transport and deliver a total of 850 Mcf of natural gas per day for the Municipal Utilities of Coon Rapids, Iowa, commencing with the heating season of 1963–64, an increase of 20 Mcf per day over the volumes of gas authorized by said order, all as heretofore described and as set forth in the subject petition.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, and David S. Black.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7128

SUPPLEMENTAL ORDER AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued November 14, 1963)

By order issued October 30, 1963, in the above-entitled matter, the Commission authorized Pacific Power & Light Company (Applicant) to issue and sell up to 732,854 shares of its common stock par value $3.25 per share, through an underwritten subscription offering, subject, among others to the provision set forth in Paragraph (B) of that order as follows:

> (B) The proposed issuance and sale of Common Stock at competitive bidding shall not be consummated until:
>
> (i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.
>
> (ii) The Commission, by further order, shall have approved the subscription price per share to be received by Applicant for the Common Stock and the compensation to be paid to underwriters under the proposed arrangement as described above.

Applicant, on November 13, 1963 filed an amendment, pursuant to the requirements of the aforementioned Commission order, in which it states that it has fixed $23.75 per share as a subscription price to be received by Applicant for 718,354 shares of Common Stock and that it proposes to accept, as representing the lowest aggregate amount of compensation to be paid by the Applicant to the underwriters, the bid of Blyth & Co., Inc., Merrill Lynch, Pierce, Fenner & Smith Incorporated, and Paribus Corp. to purchase all of the unsubscribed shares of the proposed issuance of Common Stock at the subscription price for an aggregate compensation of $135,900.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements of Paragraph (B) of the Commission's order issued October 30, 1963, in the above-entitled docket, and the subscription price to be received by the Applicant for the Common Stock and the compensation to be paid to the underwriters under the bid referred to above are reasonable.

(2) The proposed issuance of Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The subscription price to be received by the Applicant for the Common Stock and the compensation to be paid to the underwriters under the bid referred to above are approved as reasonable.

(B) The proposed issuance and sale of Common Stock referred to above, upon the terms and conditions, and for the purposes specified in the application,

and as supplemented by the amendment referred to above, are hereby authorized, subject only to the provisions of Paragraphs (A), (C), (D), and (E) of the Commission's order issued October 30, 1963, in the above docket.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black

THE GAS BOARD OF THE TOWN OF DORA, ALABAMA, DOCKET NO. CP63–269

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE AND DELIVERY OF NATURAL GAS

(Issued November 15, 1963)

The Gas Board of the Town of Dora, Alabama (Applicant), filed on April 3, 1963, as supplemented on September 4, 1963, an application pursuant to Section 7(a) of the Natural Gas Act, for an order directing Southern Natural Gas Company (Southern Natural) to establish physical connection of its transmission facilities with those which Applicant proposes to construct and to sell and deliver to Applicant volumes of natural gas for distribution and resale in the Town of Dora and its environs located in the State of Alabama, as more fully described in the application, as supplemented, herein.

Applicant proposes to construct and operate approximately 3 miles of 4½-inch transmission pipeline with appurtenant measuring facilities together with a complete distribution system.

The estimated cost of construction of the facilities proposed by Applicant is $410,000 which will be financed by the sale of revenue bonds.

Applicant estimates its natural gas requirements by the third year of operations to be 938 Mcf at 14.73 psia on peak days and 128,445 Mcf at 14.73 psia on an annual basis.

Southern Natural filed on September 25, 1963, its consent to the rendition of service to Applicant as herein requested.

Due notice of the filing of the application and opportunity for hearing thereon have been given by publication in the Federal Register on October 18, 1963 (28 F.R. 11205). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Southern Natural Gas Company, a Delaware corporation having its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 6, 1942, in Docket No. G–296 (3 FPC 822).

(2) Applicant, The Gas Board of the Town of Dora, Alabama, is a municipal corporation, duly organized under the laws of the State of Alabama and is legally authorized to sell and distribute natural gas therein.

(3) It is necessary and desirable in the public interest that Southern Natural Gas Company be directed to establish physical connection of its natural gas transmission system with the facilities proposed by Applicant and to render natural gas service to Applicant as set forth in the application, as supplemented, in this proceeding and as hereinafter ordered and conditioned.

(4) This order should be conditioned upon Applicant being prepared to take gas from Southern Natural, as proposed, within one year from the date on which this order issues.

(5) The requirement that Southern Natural serve Applicant as proposed, will not place any undue burden upon Southern Natural nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Southern Natural Gas Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to render natural gas service to Applicant, all as hereinbefore described and as more fully set forth in the application, as supplemented, herein.

(B) Applicant shall be prepared to receive natural gas from Southern Natural within one year from the date of issuance of this order.

(C) Southern Natural shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

COLUMBIA GULF TRANSMISSION COMPANY, DOCKET NO. CP64–1; HUMBLE OIL & REFINING COMPANY, DOCKET NO. CI64–5; ISAAC ARNOLD, ET AL., DOCKET NO. CI64–6

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 15, 1963)

On July 1, 1963, as supplemented on July 12, 1963, Columbia Gulf Transmission Company (Columbia Gulf), Humble Oil & Refining Company (Humble) and Isaac Arnold, *et al.* (Arnold), each filed an application for a certificate of public convenience and necessity.

Humble and Arnold seek a certificate of public convenience and necessity pursuant to Section 7 of the Natural Gas Act authorizing the sale of natural gas to United Fuel Gas Company (United Fuel), an affiliate of Columbia Gulf, under the terms of contracts entered into on June 28, 1963, and a settlement offer submitted on October 15, 1963. Columbia Gulf proposes to construct and operate additional facilities which would enable it to receive these additional quantities of gas and to transport additional volumes for United Fuel, its sole customer. Notice of each application was issued by the Commission and published in the Federal Register.[1] Petitions to intervene and notices of intervention in the several dockets were submitted by:

United Fuel Gas Company
Commonwealth Natural Gas Corporation
The United Gas Improvement Company
The Dayton Power and Light Company
Washington Gas Light Company

---

[1] Notice of the application in Docket No. CP64–1 was issued on September 12, 1963 (28 F.R. 10281); Notice in Docket Nos. CI64–5 and CI64–6 was issued on July 9, 1963 (28 F.R. 7200).

Public Service Commission of the State of New York
Pennsylvania Public Utilities Commission

No party has indicated opposition to the issuance of certificates of public convenience and necessity as proposed in the applications and supplemented by the offer of settlement.

The Humble and Arnold Sales

Humble and Arnold filed applications in Docket Nos. CI64–5 and CI64–6 seeking certificates to sell in excess of 6.1 trillion cubic feet of natural gas to United Fuel from reserves underlying various fields in southern Louisiana.[2] All but one of the fields are located within the taxing jurisdiction of the State of Louisiana. A portion of the West Delta Block 27 Field lies within an area as to which the Federal Government and the State of Louisiana have not yet determined upon the demarcation of the seaward boundary of the State of Louisiana.

Under the contracts and settlement offer submitted on October 15, 1963, by Humble and adopted and joined in by Arnold and United Fuel, gas from the West Delta Block 27 Field will be delivered at the outlet of the Venice Dome Processing Plant, Plaquemines Parish, Louisiana; gas from the Lake Sand and Garden City Fields will be delivered at the outlet of Humble's Garden City Gas Plant; gas from the Lirette Field and the Pecan Island Fields (and from such other fields from which gas may be sold and delivered under the contracts) will be delivered at a central point in the field to be mutually agreed upon.

The volumes of gas which United Fuel is obligated to take are subject to a gradual buildup.

Under the terms of the Humble contract, the following daily contract quantities will be available to United Fuel:

From date of first delivery to 11/1/65	235,000 Mcf/d
11/1/65 to 11/1/66	320,000 Mcf/d
11/1/66 to 11/1/67	390,000 Mcf/d
11/1/67 to 11/1/68	500,000 Mcf/d
11/1/68 to 11/1/69	600,000 Mcf/d
11/1/69 and thereafter	765,000 Mcf/d

Under the terms of the Arnold Contract the following daily contract quantities will be available to United Fuel:

From date of first delivery to 11/1/65	39,000 Mcf/d
11/1/65 to 11/1/66	43,000 Mcf/d
11/1/66 to 11/1/67	59,000 Mcf/d
11/1/67 to 11/1/69	62,000 Mcf/d

11/1/69 and thereafter, a daily contract quantity equal to 1,000 Mcf for each each 8,000,000 Mcf of Arnold's net recoverable gas reserves, subject to certain reservations.

Should United Fuel fail to take 90 percent of the cumulative annual contract obligation,[3] it will be obligated to pay for that volume, subject, however, to the

---

[2] Humble's sale of 6.1 trillion cubic feet of gas covers reserves underlying five fields: Garden City, Lake Sand, Pecan Island, Lirette and West Delta Block 27. The estimated first month delivery from these fields is 7,050,000 Mcf of Gas.

Arnold's sale covers reserves underlying the Garden City Field. Estimated first month delivery from this field for this sale is 1,170,000 Mcf.

[3] The Annual Contract Quantity is that quantity of gas equal to the sum of the products obtained by multiplying each Daily Contract Quantity in effect during the contract year by the number of days for which it was in effect.

right to make-up those quantities over the life of the contract and subject further to any credit which should be applicable as a result of earlier excess takes by United Fuel.

The contracts as proposed to be amended by the settlement offer provide for a fixed price of 20.625 cents per Mcf for the first 23 years, subject to a limited price redetermination at that time, except that gas produced from that portion of the West Delta Block 27 Field which lies outside the taxing jurisdiction of the State of Louisiana will be conditioned to a price of 19.0¢ per Mcf, subject to the payment by United Fuel into escrow of the difference between 20.625¢ and 19.0¢ per Mcf, which would be distributed to United Fuel, together with interest earned thereon, less the fees and expenses of the escrow agent, should it be finally determined that the gas delivered was not subject to the taxing jurisdiction of the State of Louisiana, or to Humble should it be determined that the gas delivered was subject to the taxing jurisdiction of the State. However, in the latter instance interest earned in excess of fees and expenses of the escrow agent would be paid to United Fuel unless Humble should be required to pay interest on the applicable taxes to the State. In addition, Humble would be reimbursed by United Fuel for three-fourths of any new or additional taxes levied after March 28, 1963.

The contracts also provide for life of the contract make-up periods under the take-or-pay provisions, which provisions further provide for a crediting of earlier contract takes in excess of a specified amount, a swing in the daily contract quantities from not less than 65 percent to not more than 135 percent and delivery of pipeline quality gas with a downward Btu price adjustment applicable below 1,000 Btu and no upward Btu adjustment.

We find the proposed sales, as reflected in the contracts and offer of settlement to be in the public interest. The price approved herein for the sales pursuant to the settlement offer is the same as has been previously approved pursuant to other settlement proposals for sales in the southern Louisiana area.[4] The guarantee of such a substantial quantity of gas at a price which is not the subject of escalation over a 23 year period is in the public interest, as are the provisions allowing for the make-up of any take-or-pay quantities over the life of the contract and the wide daily swing in takes of gas by United Fuel and the graduated schedule of daily contract quantities. Accordingly, we shall issue certificates of public convenience and necessity to Humble and Arnold in accordance with the applications and settlement offer.

Docket No. CP64–1

Columbia Gulf has sought a certificate authorizing the construction and operation of 69.2 miles of 30-inch pipeline loops on its main line and engine-compressor additions totaling 91,500 horsepower at nine of its main line compressor stations, together with 24.0 miles of 30-inch pipeline loop on its East Lateral and a lateral to its Lirette-West Delta area comprising 61.6 miles of 30-inch pipeline and 72.8 miles of 24-inch pipeline. These facilities would increase Columbia Gulf's capacity by about 114,500 Mcf per day. The estimated cost of the facilities is about $49,046,500.

Columbia Gulf is engaged in the transportation of natural gas purchased by United Fuel, its sole customer. Both Columbia Gulf and United Fuel are wholly owned subsidiaries of the Columbia Gas System, a registered holding company under the Public Utility Holding Company Act of 1935. Columbia Gulf has

[4] See orders issued August 7, 1963 (Humble Oil & Refining Company) and October 9, 1963 (Gulf Oil Corporation and Socony Mobile Oil Company, Inc.) in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979, respectively.

stated that the construction and operation of the facilities proposed herein are necessary in order that it be able to transport the substantial volumes of gas needed to meet the estimated increased requirements of United Fuel. Columbia Gulf stated and the evidence indicates that in January, February and March of 1965 United Fuel must receive approximately 972,500 Mcf of gas per day from its system, which is in excess of Columbia Gulf's presently authorized daily design capacity of 858,000 Mcf.

Columbia Gulf further stated that while these facilities would enable it to receive and deliver the additional quantities of gas made available under the Humble and Arnold contracts, it is contemplated that Columbia Gulf will be required to construct additional facilities during the period 1965 through 1969. However, no application for the construction of such facilities has been presented and the question whether or not they would be justified is not now before us. United Fuel has indicated that it will be able to take the additional volumes of gas from Humble and Arnold without incurring take-or-pay obligations among its other suppliers or otherwise incurring higher gas costs or difficulties with its suppliers.

The Commission finds that the proposed project is in the public interest. The proposed construction will make available to United Fuel substantial supplies of gas at long-term firm prices which, under the settlement offer, are consistent with the public interest. Accordingly we shall herein grant a certificate of public convenience and necessity to Columbia Gulf to construct and operate the proposed facilities.

The several parties who have petitioned to intervene and have noticed interventions have supported the project as amended pursuant to the conditions of the settlement offer submitted by Humble. Although no party has noted objections, we shall, nonetheless, grant interventions to each party who has sought to intervene in the proceeding.

At a hearing held on November 14, 1963, the Commission, on its own motion, received and made a part of the record in these proceedings all evidence, including the applications, supplement, exhibits thereto, and the settlement offer submitted in support of the respective authorizations sought herein, and upon consideration of the record,

The Commission finds:

(1) Humble Oil & Refining Company, Isaac Arnold, *et al.*, and Columbia Gulf Transmission Company are "natural-gas" companies within the meaning of the Natural Gas Act, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas by Humble and Arnold are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Humble and Arnold are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales proposed by Humble and Arnold, together with the construction and operation of any facilities, subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The facilities described above and more fully described in the application of Columbia Gulf in Docket No. CP64–1 will be used for the transportation of

natural gas in interstate commerce as integral parts of the pipeline system of Columbia Gulf and their construction and operation are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(6) Columbia Gulf is able and willing to do the acts and perform the services proposed and to conform to the provisions of the Natural Gas Act and the rules and regulations thereunder.

(7) The proposed construction and operation of facilities and transportation proposed by Columbia Gulf are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued to Columbia Gulf to construct and operate the facilities described above and more fully described in the application in Docket No. CP64–1 to transport up to 972,500 Mcf (14.73 psia) of natural gas for United Fuel Gas Company, subject to the jurisdiction of the Commission upon the terms and conditions of this order.

(B) Certificates of public convenience and necessity are hereby issued to Humble and Arnold for the sales of natural gas in interstate commerce for resale proposed in their applications as modified by the "settlement offer" (which we shall treat as an amendment to such applications) and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in Humble's and Arnold's applications and the settlement offer submitted herein. The certificates issued by this paragraph are not transferable and shall be effective only so long as Humble and Arnold continue the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission, and shall be accepted in writing and under oath within thirty days after the issuance of this order.

(C) The general terms and conditions set forth in paragraphs (a), (b), (c), and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, shall attach to the issuance of the certificate granted in paragraph (A) hereof and to the exercise of the rights granted thereunder.

(D) The time within which the facilities hereby authorized in paragraph (A) shall be construed and placed in actual operation as provided in paragraph (b) of Section 157.20 of the Commission's regulations is hereby fixed at 12 months from the date on which this order issues.

(E) The certificate issued by paragraph (A) to Columbia Gulf is conditioned upon Humble and Arnold accepting the certificates issued to them within thirty days after the date of this order as provided in paragraph (B) herein.

(F) The certificates issued by paragraph (B) above are granted upon the express condition that Humble and Arnold modify their contracts with Columbia Gulf and/or United Fuel and take such other action as may be necessary to comply fully with the terms of the settlement offer, which they filed herein.

(G) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Commission's Rules and Regulations thereunder, requiring the filing of rate schedules for the services herein authorized, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the respective Applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objection relating to the operation of any price or related provisions in the gas purchase contracts herein involved.

737–370—66——85

(H) The petitions to intervene submitted by Commonwealth Natural Gas Corporation, The United Gas Improvement Company, The Dayton Power and Light Company, United Fuel Gas Company and Washington Gas Light Company are granted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP63-188 (PHASE 1),* DOCKET NO. CP64-42

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued November 18, 1963)

On December 31, 1962, as amended and supplemented on January 7, January 28, February 12, July 3 and July 15, 1963, Cities Service Gas Company (Applicant) filed in Docket No. CP63-188 (Phase I) an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities on Applicant's transmission system in Kansas, Oklahoma and Missouri and for permission and approval to abandon certain transmission facilities to be replaced and reclaimed, all as more fully set forth in the application, as amended and supplemented.

Specifically, in Phase I, Applicant proposes the following:

Kansas-Hugoton Field

(1) To install 4000 additional horsepower at the Ulysses Compressor Station, Grant County, Kansas;

(2) To loop approximately 7 miles of the Hugoton Station 30-inch intake pipeline with 26-inch pipeline, Grant County, Kansas; and

To add 340 horsepower at the United Compressor Station, Grant County, Kansas, by turbocharging the 1100 horsepower unit presently installed at said station.

Hutchinson-Superior System

(3) To loop approximately 4 miles of the present Lyons-Ellsworth segment of the Superior 8-inch pipeline with 12-inch pipeline, Lincoln County, Kansas;

(4) To loop approximately 4 miles of the present Ellsworth-Beloit segment of the Superior 8-inch pipeline with 12-inch pipeline, Lincoln County, Kansas;

(5) To replace approximately 3-miles of the existing Minneapolis 3-inch lateral with 6-inch pipeline, Ottawa County, Kansas;

(6) To replace approximately 3 miles of the existing Osborne 4-inch lateral with 6-inch pipeline, Mitchell County, Kansas; and

(7) To replace approximately 5.38 miles of the existing Smith Center 4-inch lateral with 6-inch pipeline, Jewell County, Kansas.

Ottawa-Topeka-Tonganoxie System

(8) To replace approximately 5.75 miles of the existing Lawrence-Tonganoxie 18-inch and 20-inch pipeline and a 10-inch multiple river crossing under the Kansas River, with approximately 7.26 miles of 26-inch pipeline, all in Douglas

*The application in Docket No. CP63-188 is divided into two Phases. This order pertains exclusively to Phase I of said application.

County, Kansas. Applicant will reclaim the 5.75 miles of line and the multiple river crossing;

(9) To construct and operate approximately 4.5 miles of 3-inch pipeline and a town border meter and appurtenant regulator equipment to serve the town of Perry, Jefferson County, Kansas; and

To reclaim 2.06 miles of 2-inch pipeline beginning at the LeCompton, Kansas, town border and extending across a highway bridge over the Kansas River and thence to the present Perry, Kansas, town border meter.

Vinita Lateral

(10) To replace approximately 3.77 miles of the existing Vinita 6-inch pipeline with approximately 3.8 miles of 8-inch pipeline, Craig County, Oklahoma.

Monett Lateral

(11) To replace 3.5 miles of the existing Monett, Missouri, 3-inch and 4-inch lateral with 6-inch lateral, Lawrence County, Missouri.

Applicant states that the proposed Phase I facilities are necessary either to, (1) meet the estimated peak day demands of its existing customers, (2) replace, with larger facilities, pipelines which have become physically deteriorated to the extent that replacement is required, or (3) offset declining wellhead working pressures in the Kansas-Hugoton Field.

The total estimated cost of the subject facilities in Phase I is $2,848,800, which cost will be financed from treasury cash. Said cost reflects the cost of removal and salvage credit for facilities to be abandoned.

Applicant was issued a temporary certificate, dated May 23, 1963, as amended on August 22, 1963, authorizing the construction and operation of Phase I facilities.

On August 15, 1963, Applicant filed in Docket No. CP64–42 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of natural gas to The Gas Service Company (Gas Service) for resale and distribution in and about the communities of Clever, Purdy, Cassville, Butterfield and Wood Heights, Missouri, and Leon, Kansas, and to domestic consumers and customers of Gas Service residing adjacent to the 4-inch Leon pipeline, all as more fully set forth in the application.

Specifically, Applicant proposes the following:

(a) To construct and operate meter and regulator facilities on, and tap, its Springfield, Monett and Augusta laterals, and to sell natural gas to Gas Service for resale in Clever, Purdy, Cassville, Butterfield and Leon and for resale to customers along Gas Service's Leon lateral;

(b) To sell natural gas to Gas Service by means of existing facilities for resale in and about Wood Heights; and

(c) To replace approximately 1.8 miles of its Old Soldiers 6-inch lateral with 8-inch pipe and to replace approximately 0.88 mile of its Girard 4-inch line with 6-inch line. It appears that these facilities are required because the existing ones are unservicable due to corrosion and leakage.

The total estimated third year peak day and annual natural gas requirements for all the communities proposed to be served in Docket No. CP64–42 are 2,021 Mcf and 189,269 Mcf, respectively.

The total estimated cost of all the proposed facilities in Docket No. CP64–42 is $56,700, which cost will be financed by treasury cash. Said estimated cost includes a net loss of $2,800 on salvage of the lines to be replaced.

It appears that Gas Service has received the appropriate authorizations from the communities to be served and from the Missouri Public Service Commission and the Kansas Corporation Commission.

Pursuant to due notice, a public hearing was held in Washington, D.C., on November 7, 1963, respecting the matters involved in and the issues presented by the application, as amended and supplemented, in Docket. No. CP63-188 (Phase I), and the application in Docket No. CP64–42. No petition to intervene or protest to the granting of the applications has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision in Docket No. CP63–188 (Phase I) and in Docket No. CP64–42 pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application, as amended and supplemented, in Docket No. CP63–188 (Phase I), and the application in Docket No. CP64–42, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant and the transportation and sale of natural gas proposed by Applicant in Docket No. CP64–42 are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by Applicant in Docket Nos. CP63–188 (Phase I) and CP64–42 and the proposed transportation and sale of natural gas by Applicant in Docket No. CP 64–42 are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) The facilities to be abandoned in Docket No. CP63–188 (Phase I), as hereinbefore described, are subject to the jurisdiction of the Commission, and the abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(5) Such abandonment by Applicant in Docket No. CP63–188 (Phase I), as hereinbefore described, is permitted by the public convenience and necessity, and should be approved as hereinafter ordered.

(6) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter in Docket No. CP63–188 (Phase I) and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(4) and (e) of Section 157.20 of such Regulations.

(8) Public convenience and necessity require that the certificate issued hereinafter in Docket No. CP64–42 and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(9) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Applicant, Cities Service Gas Company, to construct, operate and replace the proposed facilities in Docket No. CP63–188 (Phase I), and to construct, operate and replace the proposed facilities in Docket No. CP64–42 and to transport and sell natural gas as proposed in Docket No. CP64–42, all as hereinbefore described, and as more fully described in the application, as amended and supplemented, in Docket No. CP63–188 (Phase I) and in the application in Docket No. CP64–42.

(B) The certificate issued by paragraph (A) above in Docket No. CP63–188 (Phase I) and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued by paragraph (A) above in Docket No. CP64–42 and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(D) The facilities authorized in Docket No. CP63–188 (Phase I) shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(E) The facilities authorized in Docket No. CP64–42 shall be constructed and placed in actual operation and the transportation and sale of natural gas shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(F) Permission for and approval of the abandonment by Applicant of the facilities in Docket No. CP63–188 (Phase I) hereinbefore described, all as more fully described in the application, as amended and supplemented, in Docket No. CP63–188 (Phase I), be and the same is hereby granted.

(G) Applicant shall advise the Commission of the date of the aforesaid abandonment within 30 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ST. MICHAELS UTILITIES COMMISSION, AND COMMISSIONERS OF ST. MICHAELS, MARYLAND v. THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, DOCKET NO. E–7114; STOCKTON LIGHT AND POWER COMPANY (OF MARYLAND) AND STOCKTON LIGHT AND POWER COMPANY (OF VIRGINIA) v. THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND, DOCKET NO. E–7117; DELAWARE POWER AND LIGHT COMPANY, THE EASTERN SHORE PUBLIC SERVICE COMPANY OF MARYLAND AND THE EASTERN SHORE PUBLIC SERVICE COMPANY OF VIRGINIA, DOCKET NO. E–7137

ORDER INSTITUTING INVESTIGATION, CONSOLIDATING PROCEEDINGS, AMENDING ORDER GRANTING MOTION FOR SEVERANCE OF ISSUES AND PROVIDING FOR HEARING

(Issued November 18, 1963)

On July 12, 1963, a complaint was filed with the Commission by St. Michaels Utilities Commission and Commissioners of St. Michaels, Maryland (St. Michaels), against the Eastern Shore Public Service Company of Maryland (Maryland Eastern Shore), alleging, *inter alia*, illegal overcharges to St. Michaels by Maryland Eastern Shore on and after May 1, 1963, and unlawful discrimination against St. Michaels and in favor of Choptank Electric Cooperative, Inc. (Choptank) and stating that St. Michaels has been and continues to be injured and damaged by the alleged illegal overcharges and discrimination.

On July 25, 1963, a complaint was filed with the Commission by Stockton Light and Power Company (of Maryland) and Stockton Light and Power Company (of Virginia) (Stockton) against Maryland Eastern Shore, alleging, *inter alia*, illegal overcharges to Stockton by Maryland Eastern Shore on and after May 1, 1963, and unlawful discrimination against Stockton and in favor of Choptank and Accomac-Northampton Electric Cooperative (Accomac), and stating that Stockton has been and continues to be injured and damaged by the alleged overcharges and discrimination. On October 7, 1963, Maryland Eastern Shore filed an answer to the Stockton complaint.

On September 17, 1963, St. Michaels filed with the Commission a motion to sever the unlawful discrimination issue and proceed immediately with hearing and decision of the illegal overcharge issue. On October 11, 1963, Maryland Eastern Shore filed an answer to St. Michaels' complaint and an answer to the motion for severance of issues, in which it stated that it had no objection to a prompt hearing and decision with respect to the illegal overcharge issue.

On October 25, 1963 the Commission issued an order in Docket No. E–7114 granting St. Michaels' motion for severance of issues and providing for hearing on the issue of alleged illegal overcharges to St. Michaels to be held November 18, 1963. The effect of granting the motion for severance of issues is only that the issue of alleged illegal overcharges be heard and decided first. The alleged discrimination issue is not separated from the proceeding, but will be heard at a later date.

Inasmuch as the complaints against Maryland Eastern Shore filed by St. Michaels and Stockton involve similar issues of fact and law, it is appropriate for purposes of the Federal Power Act that the two proceedings be consolidated for purposes of a public hearing. However, in accordance with the Commission's Order issued October 25, 1963 in Docket No. E–7114, the hearing on the issue of illegal overcharges to St. Michaels by Maryland Eastern Shore will be held first, on November 18, 1963.

Maryland Eastern Shore and the Eastern Shore Public Service Company of Virginia (Virginia Eastern Shore) are subsidiaries of Delaware Power and Light Company (Delaware Power). In an order issued March 15, 1963 allowing rate schedules of Delaware Power (for service to Delaware Electric Cooperative, Inc.), Maryland Eastern Shore (for service to Choptank) and Virginia Eastern Shore (for service to Accomac) to take effect, the Commission stated that the Commission's staff was conducting an investigation of the rates and charges of those three affiliated companies for wholesale electric service. In the light of the facts alleged in the complaints of St. Michaels and Stockton, it is appropriate that this investigation be continued. Wholesale electric rate schedules of these three companies on file with the Federal Power Commission are as follows:

Delaware Power & Light Company

The Commission further finds:

(1) It is appropriate for purposes of the Federal Power Act, particularly Sections 205 and 206 thereof, that a general investigation and hearing be

ordered concerning the lawfulness of all wholesale electric rates and charges of the Delaware Power, Maryland Eastern Shore and Virginia Eastern Shore required to be on file with the Commission, including: Delaware Power Rate Schedule FPC Nos. 2, 8, 12, 17, 19, 22, 24, 28, 29, 31 and FPC Electric Tariff Resale Service Schedule No. 1; Maryland Eastern Shore Rate Schedule FPC Nos. 2, 4, 7, 8 and FPC Electric Tariff Resale Service Schedule No. 1; and Virginia Eastern Shore Rate Schedule FPC Nos. 2 and 4.

(2) It is appropriate for purposes of the Federal Power Act that the complaint against Maryland Eastern Shore by St. Michaels, Docket No. E–7114, and the complaint against Maryland Eastern Shore by Stockton, Docket No. E–7117, be consolidated for purposes of holding a public hearing.

(3) It is appropriate for purposes of the Federal Power Act that a prehearing conference be held before the Presiding Examiner, following the hearing on the alleged illegal overcharge to St. Michaels, for the purpose of framing the factual presentation of the issues remaining to be heard, prescribing procedure and fixing a date of hearing.

(4) It is necessary and appropriate for purposes of the Federal Power Act that Paragraph (B) of the Commission's order issued October 25, 1963, in Docket No. E–7114 be amended to provide that the date of hearing on issues other than alleged illegal overcharges be as fixed by the Presiding Examiner.

The Commission orders:

(A) A public hearing shall be held concerning the lawfulness of all wholesale electric rate schedules and contracts of Delaware Power, Maryland Eastern Shore and Virginia Eastern Shore required to be on file with this Commission, including: Delaware Power Rate Schedule FPC Nos. 2, 8, 12, 17, 19, 22, 24, 28, 29, 31, and FPC Electric Tariff Resale Service Schedule No. 1; Maryland Eastern Shore Rate Schedule FPC Nos. 2, 4, 7, 8, and FPC Electric Tariff Resale Service Schedule No. 1; and Virginia Eastern Shore Rate Schedule FPC Nos. 2 and 4, as provided in paragraph (C) below.

(B) The complaint against Maryland Eastern Shore by St. Michaels,, Docket No. E–7114, and the complaint against Maryland Eastern Shore by Stockton, Docket No. E–7117, are hereby consolidated for the purposes of holding a public hearing.

(C) A public hearing shall be held concerning the issues raised in the complaints and answers filed in Docket Nos. E–7114 and E–7117 (with the exception of the illegal overcharge alleged by St. Michaels in Docket No. E–7114), and issues raised as a result of the general investigation of the wholesale electric rates of Delaware Power, Maryland Eastern Shore and Virginia Eastern Shore subject to the jurisdiction of this Commission, at a time and place to be specified by the Presiding Examiner.

(D) A prehearing conference shall be held before the Presiding Examiner on January 15, 1964 at 10:00 a.m. (EST), in Washington, D.C., for the purpose of framing the factual presentation of the issues to be heard, prescribing procedure and fixing a date of hearing.

(E) Paragraph (B) of the Commission's order issued October 25, 1963, in Docket No. E–7114 is hereby amended so that the last sentence shall read as follows:

The hearing on all other issues raised in the complaint and answer shall be as fixed by the Presiding Examiner.

(F) Notices of intervention or petitions to intervene in this proceeding may be filed with the Federal Power Commission, Washington, D.C. 20426, on or before December 20, 1963, and in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL.; THE BRITISH-AMERICAN OIL PRODUCING COMPANY (OPERATOR), ET AL., DOCKET NO. G–14515; THE BRITISH-AMERICAN OIL PRODUCING COMPANY, DOCKET NOS. G–18445, G–18963, CI60–322, CI61–649 AND CI62–1016

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT PROPOSAL, CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND AMENDING ORDER ISSUING CERTIFICATE

(Issued November 18, 1963)

On September 16, 1963, The British-American Oil Producing Company (British-American) filed a motion for severance of the above-entitled British-American and British American (Operator), et al., dockets from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.* (hereinafter referred to as the Union Texas Proceeding), for approval of the attached settlement proposal and for the prompt issuance of certificates of public convenience and necessity and amendment of a certificate heretofore issued in accordance with the applications and the settlement proposal.

No answers to British-American's motion have been filed.

The terms of the British-American proposal conform, generally, to the other settlements emanating from the Union Texas Proceeding which have been approved by the Commission [1] and provide for maximum initial rates of 20.625¢ per [2] for sales from south Louisiana (19.0¢ per Mcf for production within the Federal domain, not subject to State taxes) effective April 1, 1963; a five year moratorium on rate increase filings (subject to the usual exceptions); and extension of the make-up periods to four years in all rate schedules or supplements here under consideration which provide a lesser make-up period.[3]

The matters in Docket No. G–14515 (Rate Schedule No. 31 Supplement No. 3) concern an application to amend a certificate heretofore issued to British-American (Operator), *et al.*, to add acreage; [4] the matters in the other dockets concern initial applications for certificates.

The temporary authorization heretofore issued to British-American in Docket No. CI61–649 (R.S.–49) contains an express refund condition and British-American proposes to make refunds of amounts collected above that which would have been collected at the settlement rate since the date of initial delivery.

In each of the above-listed dockets, British-American proposes to refund all amounts collected above the settlement rate for gas delivered since April 1, 1963, the effective date of the rate reductions. Interest computed at 7 percent per annum will be paid on all amounts to be refunded, such interest to accrue

[1] See orders issued (August 7, 1963 (Humble Oil & Refining Company) and October 9, 1963 (Gulf Oil Corporation and Socony Mobil Oil Company, Inc.), in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979, respectively.

[2] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[3] See Appendix for further details p. 1311 *infra*.

[4] British-American's certificate, application for amendment and settlement proposal includes the interest of Harold P. Farrington, a signatory co-owner who has elected not to make his own filings. The other signatory co-owners, Southwest Gas Producing Company, Inc. and Sohio Petroleum Company have their own certificate and rate schedule filings. Sohio has filed a settlement proposal for its application to amend in Docket No. G–14569.

through the last day of the month in which the settlement proposal was filed, September 30, 1963.

The proposal, generally, is in the public interest and we shall approve it subject to the following reservations and conditions.

In the context of the proposal, we interpret the term "delivered" as used in paragraph 1 of the proposal to include gas required to be taken during the moratorium period but paid for and not taken. Our approval of this settlement is conditioned upon such interpretation.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2.

*(B) The matters in the British-American and British-American (Operator), *et al.*, dockets listed in the caption to this order are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued to The British-American Oil Producing Company in Docket Nos. G–18445, G–18963, CI60–322, CI61–649 and CI62–1016 and the order granting the certificate to The British-American Oil Producing Company (Operator), *et al.*, in Docket No. G–14515, issued August 5, 1958 is hereby amended, upon the conditions set forth herein authorizing the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in British-American's applications and settlement proposal herein.

(D) The certificates and the amendment granted by paragraph (C) above, are granted upon the express condition that British-American comply fully with the terms of this order and the settlement proposal, as modified, which settlement is expressly approved, under the conditions of this order.

(E) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal as modified, British-American shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchasers, showing separately the amount of principal and interest so paid and the bases used for such determination, together with releases from the purchasers showing receipt of the refunds in conformity with the settlement as approved.

(F) Upon full compliance of British-American with all the terms of this order and of the settlement proposal, British-American shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(G) The certificates herein issued are not transferable and shall be effective only so long as British-American continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(H) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f)

*See *infra*, p. 1310 for portion of order inadvertently omitted.

are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(I) The grant of certificates herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against British-American, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to any claims or contentions which may be made by the Commission, Applicant, the Commission staff, or any affected party herein in any other proceeding.

APPENDIX

Rate schedule No.	Docket No.	Purchaser	Present rate (¢/Mcf)[1]	Proposed settlement rate (¢/Mcf)[1]
31, Supp. No. 3	G-14515	Texas Gas Transmission Corp.	[2]	20.625
38	G-18445	Florida Gas Transmission Co.	21.25	20.625

EMMITSBURG GAS COMPANY, DOCKET NO. CP64-24

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND DIRECTING PHYSICAL CONNECTION OF FACILITIES

(Issued November 19, 1963)

On July 23, 1963, as supplemented on August 26 and September 3, 1963, Emmitsburg Gas Company (Applicant) filed in Docket No. CP64-24 an application pursuant to Subsections (a) and (c) of Section 7 of the Natural Gas Act for an order:

1. directing Manufacturers Light & Heat Company (Manufacturers) to establish physical connection of its natural gas transmission facilities with Applicant's facilities hereinafter described, and directing Manufacturers to sell to Applicant a peak-day volume of 626 Mcf of natural gas per day; and

2. granting a certificate of public convenience and necessity authorizing Applicant to construct and operate a 6" lateral pipeline extending from a point of connection with Manufacturers transmission facilities in Adams County, Pennsylvania, 5.7 miles south to Emmitsburg, Maryland.

The estimated cost of the facilities to be constructed by Applicant is $213,300, to be financed by a cash advance of $141,300 from Applicant's parent, Penn Fuel Gas, Inc., and a cash advance of $72,000 from a customer, the Sisters of Charity of St. Joseph's Central House (St. Joseph's) an educational institution. The $72,000 will be repaid by a credit of 3¢ per Mcf of gas taken by said customer. St. Joseph's has estimated its initial maximum requirement at 500 Mcf

per day, and has agreed to purchase its fuel requirements from Applicant for 20 years to the extent that Applicant can economically fill them.

Applicant has received a certificate of public convenience and necessity from the Maryland Public Service Commission authorizing it to distribute natural gas in Emmitsburg and environs, an area which presently does not have such service. Applicant has also received the requisite franchise from the City of Emmitsburg.

Manufacturers has advised the Commission that it has no objection to rendering the proposed service to Applicant provided that it shall not be required to deliver gas to Applicant at a pressure in excess of 75 psig. Applicant's lateral line is of such design that this delivery pressure will be adequate to render the service to Emmitsburg environs.

Pursuant to due notice, a public hearing was held in Washington, D.C., on November 5, 1963, respecting the matters involved in and the issues presented by the application herein. No protest or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Manufacturers Light & Heat Company, a Pennsylvania Corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within meaning of the Natural Gas Act as heretofore found by the Commission.

(2) Applicant, Emmitsburg Gas Company, a Maryland Corporation having its principal place of business in Oxford, Pennsylvania, is authorized to engage in, and will engage in the distribution of natural gas in the City of Emmitsburg, Maryland, upon the completion and operation of the facilities proposed to be constructed as hereinbefore described.

(3) The facilities proposed to be constructed by Applicant as hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interestate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(7) It is necessary and desirable in the public interest to direct Manufacturers Light & Heat Company to establish physical connection of its transmission facilities with those proposed to be constructed and operated by Applicant, and to sell and deliver natural gas to Applicant under Manufacturer's appropriate rate schedules on file with the Commission, for resale as described in the application in this proceeding.

(8) Manufacturers should be required to sell and deliver to Applicant a peak-day volume of 626 Mcf of natural gas per day. Such requirement will not place any undue burden on Manufacturer nor impair its ability to render adequate service to its existing customers.

(9) This order should be conditioned upon Applicant being prepared to receive natural gas from Manufacturers, as proposed, within one year from the date on which this order issues, and upon the execution of a service agreement between Applicant and Manufacturers in accordance with the Commission's Regulations under the Natural Gas Act.

(10) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Emmitsburg Gas Company to construct and operate facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission Regulations within one year from the date on which this order issues.

(D) Manufacturers Light & Heat Company be and it is hereby directed to establish physical connection of its transmission facilities with the proposed facilities of Applicant and to sell and deliver up to 626 Mcf of natural gas per day to Applicant, all as hereinbefore described and as set forth in the application in this proceeding.

(E) This order is conditioned upon Applicant being prepared to receive natural gas from Manufacturers, as proposed, within one year from the date on which this order issues, and upon the execution of a service agreement between Applicant and Manufacturers in accordance with the Commission's Regulations under the Natural Gas Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. G-16841

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 19, 1963)

On October 27, 1961, Midwestern Gas Transmission Company (Midwestern) filed a motion to amend the Commission's order issued May 12, 1959, accompanying Opinion No. 320 in Docket No. G-16841, *et al.*, 21 FPC 653, by conforming the certificate authorization therein to the actual installation of facilities pursuant to said authorization.

It appears that following the original authorization Midwestern, in negotiating for its planned compressor facilities, found that substantial economies would result from a relatively small deviation from its original specifications. Following correspondence with the Commission staff explaining the circumstances, Midwestern filed the subject motion to amend requesting the adjustment of the original authorization as follows:

	Authorized 1,100 HP units	Actually installed
Portland, Tenn., compressor station	7,700 HP	9,000 HP (three 2,000 HP and one 3,000 HP units).
Petersburg, Ind., compressor station	6,000 HP	8,100 HP (three 2,000 HP units, each supercharged to 2,700 HP).
Total	13,300 HP	17,100 HP

The actual installations are shown to have cost a total of $4,896,003, as compared to the estimate of $6,206,000 for the units as originally applied for, a saving of $1,309,997, with an additional 2,800 horsepower.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued May 12, 1959, accompanying Opinion No. 320 in Docket No. G–16841, *et al.* be amended to conform the certificate authorization therein granted with the actual installation of facilities thereunder, as hereinafter ordered.

The Commission orders:

(A) The order of the Commission issued May 12, 1959, accompanying Opinion No. 320 in Docket No. G–16841, *et al.* be and the same is hereby amended by authorizing Midwestern Gas Transmission Company to install a total of 9,000 horsepower of compressor facilities at its Portland, Tennessee, Compressor Station and a total of 8,100 horsepower of compressor facilities at its Petersburg, Indiana, Compressor Station in lieu of the 7,700 horsepower and 6,000 horsepower, respectively, originally authorized.

(B) In all other respects, the aforesaid order issued May 12, 1959, in Docket No. G–16841, *et al.* shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SINCLAIR OIL & GAS COMPANY, DOCKET NOS. G–9291 AND G–9292, ET AL.

ORDER REQUIRING ESTABLISHMENT OF ESCROW FUND TO ASSURE REFUNDS UNDER SETTLEMENT ORDER

(Issued November 19, 1963)

By order issued herein on August 23, 1963, we granted rehearing of the order issued July 1, 1963, conditionally approving a settlement agreement tendered by Sinclair Oil & Gas Company (Sinclair). Sinclair accepted the settlement as approved by the Commission but rehearing was granted for the purpose of

considering the objections of certain intervenors to the distribution of refunds required by the order of July 1, 1963. No party objected to the level of rates or the total amount of refunds required by that order.

On August 27, 1963, Sinclair filed a motion requesting that it be permitted to place the total settlement refund in escrow and that its obligation to pay interest on the refund amount be terminated as of August 1, 1963. Sinclair states that it put into effect as of July 1, 1963, the reduced rates required by our order and has been ready to make refunds since August 1, 1963. No objections have been filed to Sinclair's motion.

As heretofore noted, no objection has been made to Sinclair's future rates or its total refund obligation as set forth in our order of July 1, 1963; and it appears that the parties are agreeable to that portion of the order irrespective of future actions concerning the distribution of refunds. Accordingly, we shall grant Sinclair's motion, upon the understanding that the only remaining issue relates to distribution of refunds and that no party to these proceedings or the settlement negotiations may hereafter question the level of rates or total refund obligation imposed on Sinclair by our order of July 1, 1963.

Certain interveners insist that "Proposal A" constitutes the only appropriate method of distributing the agreed upon total amount of refunds in this case. Under their method full refunds would be made from 23.55¢ down to 20¢ under those rate schedules covering sales to Transcontinental Gas Pipe Line Corporation (Transco) which involve a triggering question (Sinclair's FPC Gas Rate Schedule Nos. 58 and 78), and, thereafter, the remaining refund dollars would be distributed to all purchasers on a Mcf basis. Their proposal is based on the claimed invalidity of favored-nation increased rates of 23.55¢ filed by Sinclair, which were allegedly triggered by Pan American Petroleum Corporation's (Pan American) sales to Transco under its FPC Gas Rate Schedule No. 242 at 23.55¢ pursuant to temporary authorization. The interveners also contend that there are certain equitable considerations involved in "Proposal A", apart from the legal question, due to the manner in which the alleged triggering occurred. Under the method adopted by us in the July 1 settlement order, refunds would be made simply by returning to the purchasers all amounts collected in excess of the settlement rates after January 1, 1962 (where refund obligations had been imposed).

Determination of the appropriate method of requiring refunds here is dependent at least in part on the validity of our order issued November 19, 1963, in Docket Nos. AR61–2, G–17613, *et al.*, involving the same triggering question raised here though Sinclair is not directly involved in that case. In the November 19 order we determined there was contractual authorization under the favored-nation clauses for the producers' 23.55¢ filings at least for the period prior to April 1, 1963, when Pan American's 23.55¢ rate was in effect. It is clear that we cannot decide the refund question until such time as the November 19 order becomes final either by the lapse of time or upon court review. We therefore must defer action on this matter at the present time, but at the appropriate time we will decide not only the legal question, but also any equitable considerations that may be involved here.

We shall provide for the filing of objections to this procedure within thirty days after the issuance of this order. If no objections are filed, Sinclair shall place the funds in escrow as required by this order.

The Commission finds:

It is necessary and proper in the public interest to require Sinclair to place in escrow the amount of refunds required by our order of July 1, 1963, herein, and to comply with the terms and conditions hereinafter prescribed.

The Commission orders:

(A) Sinclair's motion, filed August 27, 1963, to place settlement refund in escrow is granted, as hereinafter provided.

(B) Within 45 days from the date of issuance of this order, Sinclair shall execute and tender for filing with the Secretary of the Commission a trust agreement in the amount and conditioned as set out in Paragraph (C) hereof, accompanied by a certificate showing service of a copy thereof upon the parties to these proceedings. Unless notified to the contrary by the Secretary of the Commission within 30 days from the date of filing, such trust agreement shall be deemed to be satisfactory and to have been accepted for filing.

(C) Said trust agreement shall be entered into between Sinclair and any bank or trust company used as a depository for funds of the United States Government and deposit shall be made by Sinclair of the total refund obligation imposed on Sinclair by our order of July 1, 1963, herein, with interest until August 1, 1963, and said trust agreement shall be conditioned as follows:

(1) Sinclair, the bank or trust company and the successors and assigns of each, shall be held firmly bound to the Federal Power Commission for the use and benefit of those entitled thereto, with respect to the amount deposited and such bank or trust company shall be bound to pay to such parties and in such manner as may be required by the Commission in this proceeding.

(2) Such bank or trust company shall invest and reinvest such deposit, in its discretion, in any form of indebtedness of the United States or any agency thereof and in any form of obligation guaranteed by the United States with maturity of not more than three years from the date of purchase thereof by such bank or trust company.

(3) No interest on such deposit shall be charged or collected from such bank or trust company or from Sinclair, but there shall be added to such deposit the interest earned on the deposit.

(4) Any costs or charges made by the bank or trust company in connection with the trust agreement shall be paid by Sinclair.

(5) Such bank or trust company shall report to the Secretary quarterly certifying the amount deposited and the interest earned thereon.

(D) When refunds are made as required by further orders of the Commission in this proceeding, the trust agreement shall be discharged, otherwise it shall remain in full force and effect.

(E) Any party to these proceedings or the settlement negotiations having objections to the terms of this order shall, within thirty days from the date of issuance of this order, set forth such objections to the Commission and shall serve copies of such objections on all other parties.

(F) If no objections are filed pursuant to paragraph (E) of this order, the future rates and the total refund obligation established by order of July 1, 1963, herein shall be final, with distribution of such refunds being subject to further order of the Commission in these proceedings.

ORDER DENYING APPLICATIONS FOR REHEARING IN PART, DENYING MOTIONS IN PART, SEVERING PROCEEDINGS FOR LIMITED PURPOSE, INITIATING PROCEEDINGS, CONSOLIDATING PROCEEDINGS, AND PROVIDING FOR HEARING

(Issued November 19, 1963)**

By order issued September 5, 1963, in Docket Nos. AR61–2, G–17613, *et al.*,[1] rehearing was granted for purposes of reconsideration of the order issued July 24, 1963, 30 FPC 402, denying UGI's motions to reject, cancel and dismiss certain favored-nation rate increases allegedly triggered by sales from Pan American Petroleum Corporation (Pan American) to Transcontinental Gas Pipe Line Corporation (Transco) under its FPC Gas Rate Schedule No. 242, among others, in the light of Pan American's settlement proposal in Docket No. G–16946. Subsequently, Pan American's proposal was approved by order issued November 19, 1963 in Docket Nos. G–13221, G–16946, *et al.* As a result thereof, a 20.625¢ per Mcf settlement rate for Pan American's instant sale was approved as of April 1, 1963, and no refunds were required for the period prior thereto.[2]

We held in the July 24, 1963, order that the producers had the right under the favored-nation provisions in their contracts to file for increased rates of 23.55¢ per Mcf based on the 23.55¢ per Mcf initial rate of Pan American at least during the period that Pan American's temporary authorization was in effect. It was also indicated that the producers' triggering rights under their contracts are not necessarily dependent solely upon the sales by Pan American and Oil Participations Inc. (Oil Participations)[3] mentioned in Transco's letter, since

*Lead docket in order of September 5, 1963, 30 FPC 647.

**Reconsideration denied, 31 FPC 400. Petition to Review pending in CADC, No. 18339, *United Gas Improvement Co.* v. *F.P.C.*

[1] As indicated elsewhere, not all of the above-entitled proceedings were included in the July 24 and September 5 orders.

[2] Under the decision in *Skelly*, Opinion No. 362, 28 FPC 401, no refunds may be ordered in a certificate proceeding involving the sale of gas under an unconditional temporary authorization even though the price is reduced for the future in a Section 7 proceeding. Pan American, therefore, in the absence of a settlement, could collect and retain the 23.55¢ rate until the Commission's decision in the certificate proceedings in *Union Texas*, Docket No. G–13221, *et al.* which involved the Pan American sale until it was severed by the settlement order of November 19, 1963. While the question of whether we could and should order refunds on the conditioned temporaries involved in *Skelly* is presently on appeal (*P.S.C. of New York* v. *F.P.C.*, Case No. 17582, C.A.D.C., argued October 25, 1963, [remanded January 23, 1964, 329 F. 2d 242]) that question would not be raised here even if we were reversed on this point on appeal since the settlement, which is controlling as accepted, does not provide for such refunds.

[3] Now Austral Oil Company, Inc.

there were other sales being made at 23.55¢ to Transco under Hassie Hunt Trust Estate FPC Gas Rate Schedule No. 3 and Wm. Herbert Hunt Trust Estate FPC Gas Rate Schedule No. 5 and under renegotiated rates involved in Docket Nos. G–17726, G–17727, G–17740 and G–17936, among others.

Long Island Lighting Company, The United Gas Improvement Company and Philadelphia Electric Company (petitioners) in their applications for rehearing argue that the Pan American sale did not trigger the producer contracts involved here claiming, *inter alia*, (1) favored-nation clauses cannot be activated by sales made under temporary authorization, (2) under the doctrine of "like suspect prices" used in certificate proceedings, *U.G.I.* v. *F.P.C.* 283 F. 2d 817, 824–825, *Placid Oil Co.*, Opinion No. 398, 30 FPC 283, there should be no triggering, (3) the Pan American rate was presumptively invalid because it would cause the very triggering condemned in *Atlantic Refining Company* v. *P.S.C.* 360 U.S. 378, and (4) favored nation clauses are illegal and contrary to public policy, citing the dissent in *Wisconsin* v. *F.P.C.*, 373 U.S. 294 at 330–331.

While it may be argued in retrospect that termporary authorization should not have been granted for the Pan American sale to Transco or if granted should earlier have been withdrawn, this situation does not deregate from the fact that Pan American has been lawfully collecting the 23.55¢ rate without refund obligation since 1958. Under the favored-nation clauses the producers had the right to file for rate increases up to 23.55¢ because Transco was lawfully paying that rate to Pan American and it makes no difference that the rate was being charged pursuant to temporary rather than permanent authorization. The important point is that the 23.55¢ rate was the legally effective rate under Pan American's rate schedule. Moreover, the doctrine of "like suspect prices", although applicable to determining what are "in-line prices" in Section 7 proceeding, has no applicability to a question of contractual authorization for a filing.

In the *Pure Oil* case, Opinion No. 341, 25 FPC 383, affirmed (7 Cir. 1962; 299 F. 2d 370, we rejected the contention that favored-nation clauses should be striken from rate schedules on file with the Commission.[4] The Supreme Court in *Wisconsin* v. *F.P.C.*, 373 U.S. 294, rejected a similar argument by California with respect to spiral escalations. The Court stated (373 U.S. at 304).

> Further, we see no merit in California's contention. It is true that the Commission has announced *prospectively* that it would not accept for filing contracts containing such clauses,[19] but it would have been quite a different matter for the Commission to have declared that past rate increases were ineffective simply because they were based on spiral provisions. The effect of a contract clause of this type, of course, is only to permit the producer to resort to the filing provisions of § 4(d) of the Act. If the increase is challenged, the producer must still establish its lawfulness wholly apart from the terms of the contract. Thus we have sustained the right of a seller to file an increase under a contract which, in effect, authorized him to do so at any time. *United Gas Pipe Line Co.* v. *Memphis Light, Gas and Water Division*, 358 U.S. 103. The spiral clauses here are far more limited in scope, depending as they do on the occurrence of external events. [Footnote omitted.]

In view of the foregoing, we hold that the producers did have the contractual right to file for increased rates of 23.55¢ at least during the period prior to April 1, 1963, when Pan American's rate of 23.55¢ was in effect.[5] For the same reasons

---

[4] *Cf.* Opinion No. 382 issued March 15, 1963, 29 FPC 498, *Shell Oil Company, et al.*

[5] Should approval of the Pan American settlement be rescinded for any reason, the effect thereof would be to permit Pan American to continue collection of the 23.55¢ initial rate, thus increasing the length of time that the triggered rates may remain in effect subject to refund under the producers' contracts.

mentioned above, we also hold that Sun Oil Company in Docket No. G–17923 and Socony Mobil Oil Company in Docket No. G–17526 had the contractual right to file the favored-nation increased rates of 23.55¢ involved therein at least during the period prior to April 1, 1963. We shall therefore deny UGI's motions filed on August 30 and September 3, 1963, respectively (which were not involved in the July 24 and September 5 orders) to reject, cancel, and dismiss the favored-nation increases in Docket Nos. G–17923 and G–17526 insofar as such motions relate to the period prior to April 1, 1963. The question arises, however, whether or not the producers' rates should be reduced as of April 1, 1963 to 20.625¢ or less[6] inasmuch as the triggering clauses expressly provide that the triggered rates will remain in effect only as long as the purchaser pays the higher rate to another producer in the area. As indicated in the July 24 order there are certain Hunt sales and renegotiated rates at 23.55¢ per Mcf which also might provide a triggering basis.

Petitioners claim that under certain of the contracts[7] triggering could not occur as a result of the Hunt rates or the renegotiated rates because the favored-nation provisions in such contracts are applicable only if Transco "purchases from producers new gas from new sources of supply in the state of Louisiana". They aver that the triggering price must be in a "new" contract for "new" gas.

Petitioners also argue with respect to the Hunt rates and the renegotiated rates that such rates could not cause triggering in any of the producer contracts because *inter alia*, (1) they were not included as a contractual basis for the producer filings here, and (2) there is no basis for inferring that Transco would deem these sales as affording a contractual basis for such filings. In connection with (2) above, petitioners also claim that a hearing is necessary to determine if the sales under the Hunt and renegotiated rates are comparable to the producers' sales, *i.e.* if the gas involved was of a higher quality, usefulness or if other contractual provisions differentiated the sales.

We believe in the light of petitioners' arguments with respect to the Hunt sales and the renegotiated rates that these maters should be set for hearing, thus giving all parties an opportunity to present evidence relating to the contractual matters involved here. The hearing will involve a determination of the proper contractual rates for the period subsequent to April 1, 1963, of the producers involved in the July 24 and September 5 orders, except as indicated in the footnote below.[8] The proceedings in Docket Nos. G–17526 and G–17923[9] were not included in the July 24 and September 5 orders. These

---

[6] Petitioners argue on a comparable basis the proper contractual rates should be below the Pan American settlement rate because of the fringe benefits related to the settlement rate, such as a five-year moratorium and a four-year take or pay provision.

[7] Austral Oil Co. Inc. (Operator), *et al.*, Docket No. G–17797; Ted Weiner (Operator), *et al.*, Docket No. G–17993; Trice Production Co., Docket No. G–18516; Willard E. Walker, Docket No. G–18099; and Southwest Gas Producing Co., Docket No. G–18100. The rate schedule involved in Maracaibo Oil Exploration Corp., Docket No. RI60–138, and Phillips' Rate Schedule No. 220 involved in Docket No. G–17740 do not contain, as petitioners claim, the type of favored-nation clause discussed in this part. Phillips' Rate Schedule No. 149, also involved in Docket No. G–17740, at one time contained a favored-nation provision, but no longer contains such a provision due to the filing of a superseding contract which was accepted as of April 7, 1960, without prejudice to the suspension proceeding in Docket No. G–17740. UGI in its motions in Docket Nos. G–17923 (Sun's Rate Schedule No. 44 only) and G–17526 (Socony's Rate Schedule No. 16) claims that these rate schedules also involve the "new gas from new sources of supply" favored-nation provisions. With respect to these rate schedules, UGI's claim is incorrect.

[8] The proceedings in Docket Nos. G–17726, G–17727, G–17936, and G–17740 (to the extent it relates to Phillips' Rate Schedule No. 149) will not be set for hearing, because the 23.55¢ rates involved in these proceedings are renegotiated rates not involving the contractual problems discussed here for the period subsequent to April 1, 1963.

[9] Docket No. G–17923 is presently consolidated with Docket No. G–8288, *et al.*

proceedings, however, involve essentially the same contractual issues as those mentioned above. We therefore consider it appropriate to consolidate these proceedings for the limited hearing purpose mentioned above. The justness and reasonableness of all the rates involved here will be determined in AR61–2, or in Docket No. G–8288, *et al.* if or to the extent that such rates are determined to be contractually authorized.

The Hunt 23.55¢ rates mentioned above were triggered by the Pan American rate of 23.55¢, which, as indicated above, is no longer in effect. Due to administrative error in 1959[10] the Hunt rates rather than being suspended within the period allowed under Section 4(e) of the Act were erroneously rejected. We therefore consider it necessary and proper in the public interest to aid in the enforcement of the provisions of the Natural Gas Act that the Commission enter upon hearings as hereinafter provided for the limited purpose of determining the contractual basis, if any, for Hunt's 23.55¢ rates for the period subsequent to April 1, 1963. In the event it is determined that the Hunt rates are no longer contractually authorized, it should also be determined what is the proper contractual rate and as of what date the 23.55¢ rates ceased to be effective.

We shall consolidate for the purpose of hearing all of the proceedings set for hearing herein. It is not clear to what extent there is disagreement as to the material facts here. We shall therefore provide for a prehearing conference at which the substantive matters to be resolved by formal hearing will be set forth, and all matters that can be resolved without formal hearing will be stipulated. Thereafter the Presiding Examiner shall give notice of hearing and shall prescribe such other procedures as he deems appropriate in the disposition of these matters.

The Commission orders:

(A) For the reasons heretofore set forth, the motions filed by UGI *et al.*, in Docket Nos. AR61–2, G–17613, *et al.*, are hereby denied insofar as such motions are applicable to the period prior to April 1, 1963, and to this extent the applications for rehearing filed by Petitioners are also denied.

(B) For the reasons heretofore set forth, the motions filed by UGI on August 30 and September 3, 1963, in Docket Nos. G–17923 and G–17526, respectively, are hereby denied insofar as such motions are applicable to the period prior to April 1, 1963.

(C) Pursuant to the authority of the Natural Gas Act, particularly Sections 4, 5, 14, 15, and 16 thereof, the Commission's Rules of Practice and Procedure and the Regulations under the Natural Gas Act [18 CFR, Chapter I], proceedings in Docket Nos. RI64–296 and RI64–297 are hereby initiated concerning the contractual basis for the 23.55¢ per Mcf rates in effect under Hassie Hunt Trust Estate FPC Gas Rate Schedule No. 3 and Wm. Herbert Hunt Trust Estate FPC Gas Rate Schedule No. 5, respectively, for the period subsequent to April 1, 1963; the remaining above entitled proceedings except as indicated in the footnote below[11] are set for hearing herein and are hereby severed from the area rate proceeding in Docket No. AR61–2 or Docket No. G–8288, *et al.*, as the case may be, only for the limited purpose set forth herein but shall remain in Docket No. AR61–2 and Docket No. G–8288, *et al.*, respectively, for the purpose of determining the justness and reasonableness of the increased rates; the above-entitled proceedings except to the extent otherwise indicated, including the

[10] *Hassie Hunt Trust, et al.*, Docket No. G–17431, *et al.*, 21 FPC 639.

[11] The proceedings in Docket Nos. G–17726, G–17727 and G–17936 are not set for hearing. The proceeding in Docket No. G–17740 is set for hearing only insofar as it relates to Phillips' Rate Schedule No. 220.

proceedings initiated above in Docket Nos. RI64–296 and RI64–297 with respect to the Hunt sales, are hereby consolidated for the limited purpose set forth herein; and public hearings shall be held in these proceedings pursuant to the procedures prescribed herein concerning the contractual basis for the rates involved in these consolidated proceedings for the period subsequent to April 1, 1963.

(D) Any officer or officers of the Commission designated by the Chief Hearing Examiner for that purpose, shall preside at the prehearing conference and the hearing in the above-designated proceedings, pursuant to the Commission's Rules of Practice and Procedure, and as further provided by this order.

(E) Pursuant to the provisions of Section 1.18 of the Commission's Rules of Practice and Procedure, a pre-hearing conference before the Presiding Examiner to be designated shall commence at 10:00 a.m. (EST) on January 28, 1964, in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., for the purpose of effectuating the intent of the Commission, as hereinabove set out in the body of this order.

(F) After the pre-hearing conference, the Presiding Examiner shall give notice of the date of hearing and shall prescribe such other procedures as he deems appropriate in the disposition of these matters.

(G) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington 25, D.C., in accordance with the Rules of Practice and Procedure [18 CFR 1.8 and 1.37(f)] on or before December 31, 1963.

Commissioner Ross *dissenting, joined* by Commissioner Black.

Ross, Commissioner, *dissenting:*

In both the initial order of July 24, 1963 and in the instant order, the majority takes the position that an unconditioned temporary certificate constitutes a valid triggering rate (at least until a just and reasonable determination of the rate, which in the case of an initial rate, could be applicable only prospectively). This view is based—I think unnecessarily and incorrectly—upon their policy of not normally ordering refunds during the term of an unconditioned temporary. This thinking, I believe, confuses the determination of an appropriate, public interest price at which to certificate initial sales with the question of refunds. In a Section 7 proceeding, we decide the public interest price for a *new* sale of gas. As such, our price finding relates specifically to the time that gas under the contract was initially dedicated to interstate commerce. For this reason, we determine the price issue (the only real issue in such cases) as of the time the contract was executed, as a number of opinions indicate. In contrast, failure to go back to the time of initial sale would, in effect, excuse producers from the requirements of Section 7 for the period covered by the temporaries. Thus, the Commission stated:

> The first question is as to the date of the "in lineness". This question should be determined as of a past date; otherwise CATCO would be enriched because of precedural delays. [*Continental Oil Company, et al.*, 27, FPC 96, 100.]

The question of refunds is quite a different matter. While the Commission has excused the payment of refunds regarding certain unconditioned temporaries, as in *Skelly*[1] for example, this decision was based exclusively on equitable considerations. The Commission Stated:

---

[1] *Skelly Oil Company, et al.*, 28 FPC 401, and Opinion on Rehearing, 28 FPC 1065, Opinion No. 362–A issued December 18, 1962.

> Since in the present proceeding there is no such [express refund] provision in the temporary certificates, to proceed now and order the producers to make refunds would not be equitable regardless of any ultimate right we may have to order such refunds. [Op. 362–A, page 1069.]

This decision was totally unrelated to the Commission's finding of the legal price ceiling applicable to the time the contracts there at issue were executed. If the Commission's 15¢ in-line finding did not relate back to the time covered by the temporaries in that case, it is difficult to determine just what significance to attach to the finding, since the price of contracts executed after September 28, 1960 was left open, and the price applicable to contracts executed after the decision was 16¢. It seems clear to me that the triggering effect of a temporary certificate with or without refund conditions, issued on an *ad hoc* emergency basis and expressly contingent upon the Commission's subsequent consideration of the contract, must be rescinded once the contract is permanently certificated at a lower level. This seemed to be the majority's position in *Shell Oil:*[1]

> Any producer filing for an increase under a favored-nation clause of necessity has two hurdles to overcome in ultimately justifying the rate increase. First, his increase is dependent upon the validity of the rate which triggered his favored-nation clause. If the triggering rate is later found to be invalid or unreasonable in whole or in part, then any rate filing based on such triggering rate is without contractual justification to the extent the triggering rate is reduced.

It certainly is regrettable that the majority is retreating from this minimum standard, as they have done in this matter.

Commissioner Black has authorized me to state that he joins in this statement.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and Davis S. Black.

TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP62–290

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 19, 1963)

On June 6, 1962, as supplemented on July 9 and October 29, 1962, Transwestern Pipeline Company (Applicant) filed in Docket No. CP62–290 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing:

1. the construction and operation of a metering station at a point on Applicant's existing 10-inch McLean lateral in Gray County, Texas, at a cost of $7,064;

2. the sale of natural gas by Applicant to Gray County Gas Company for resale in the City of LeFors, Texas, pursuant to a 20-year agreement between the parties dated September 15, 1961,

all as more fully set forth in the application.

---

[1] *Shell Oil Company*, Docket No. RI61–515, Opinion 382 issued March 15, 1963, 29 FPC 498, 504.

The contract provides for sale of a maximum of 1000 Mcf per day, at a rate of 35¢ per Mcf, which sale will be made pursuant to Transwestern's presently effective FPC Gas Tariff, Rate Schedule SG–1.

Gray County Gas Company's estimates of peak day and annual requirements for each of the first 3 years (at 14.73 psia) are:

Peak day	500 Mcf
Annual	50,000 Mcf

Pursuant to due notice, a public hearing was held on November 5, 1963, respecting the matters involved in and the issues presented by the application herein. No protest or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transwestern Pipeline Company, a Delaware Corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c) (4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transwestern Pipeline Company, to construct and operate facilities and to sell natural gas in interstate commerce for resale as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c) (4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

RP63–3

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING PROPOSED SETTLEMENT, CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND AMENDING ORDER ISSUING CERTIFICATE

(Issued November 19, 1963)*

On July 30, 1963, Pan American Petroleum Corporation (Pan American) filed a motion for severance of the above-captioned Pan American dockets from the proceedings in Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.* (hereinafter referred to as the Union Texas Proceeding), for approval of its settlement proposal and for the prompt issuance of certificates of public convenience and necessity, and for an order amending an order issuing a certificate of public convenience and necessity.

A joint response in support of Pan American's proposal was filed on August 16, 1963, by the Eastern Seaboard Interveners.[1]

Pan American's settlement proposal is similar to the settlement approved for Humble Oil & Refining Company [2] and provides the following.[3]

(1) In respect to the rate schedules listed in paragraphs (2), (3), (4), (5) and the supplement referred to in (4) below, a moratorium on rate increase filings from July 1, 1963, through June 30, 1968; except that such filings may be made (1) prior to July 1, 1968, to the extent that the maximum statutory suspension period under Section 4(e) of the Natural Gas Act may be extended beyond 5 months or the Commission may hereafter be authorized to lengthen such period, and (2) at any time for reimbursement for one-half the amount of increased State or Federal taxes or payments in lieu of such taxes, provided that such rate increase does not exceed the reimbursement to which Pan American is entitled by contract.

(2) The issuance of certificates of public convenience and necessity at settlement initial rates [4] of 20.625¢ per Mcf [5] authorizing the sales proposed in Docket Nos. G–16946 (R.S. 242), G–19223 (R.S. 257), G–20049 (R.S. 267), CI60–133 (R.S. 284), CI60–777 (R.S. 278), CI61–143 (R.S. 282), CI61–808 (R.S. 293),

---

*Reversed, in part by order issued February 3, 1964, 31 FPC 236.

[1] Long Island Lighting Company, Philadelphia Gas Works Division of The United Gas Improvement Company, The United Gas Improvement Company, the New England Distributors Group (41 distributor companies), The East Ohio Gas Company, Hope Natural Gas Company, Lake Shore Pipe Line Co., New York State Natural Gas Corp., The Peoples Natural Gas Company and The River Gas Company.

[2] See order issued August 7, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456.

[3] See Appendix for further details.

[4] The rate provisions refer to gas "delivered". As we have stated in other orders conditionally approving settlements in this proceeding, in the context of the settlement proposals, we interpret the term to include gas required to be taken during the moratorium period but paid for and not taken. Our approval of this proposal is conditioned upon such interpretation.

[5] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

CI62–724 (R.S. 325), CI62–782 (R.S. 326), G–17977 (R.S. 354) and CI61–127 (R.S. 304).

(3) The issuance of a certificate of public convenience and necessity at the contractual initial rate of 20.25¢ per Mcf authorizing the sale proposed in Docket No. CI61–974 (R.S. 297) and amendment of the order issuing the certificate in Docket No. G–10022 to include the additional acreage covered by Supplement No. 12 to R.S. No. 190 at the contractual initial rate of 20.3¢ per Mcf.

(4) The issuance of a certificate of public convenience and necessity at the settlement initial rate of 19.0¢ per Mcf authorizing the sale in Docket No. CI62–1341 (R.S. 333).

(5) The issuance of a certificate of public convenience and necessity authorizing the sale in Docket No. CI61–355 (R.S. 288) at the settlement initial rate of 19.0¢ per Mcf plus 1.625¢ per Mcf to be placed in an escrow account to provide for the contingency of the producing acreage's being finally adjudicated as lying within the taxing jurisdiction of the State of Louisiana. The purchaser also will place in the escrow account an amount equal to 2.05¢ per Mcf times the volumes delivered from April 17, 1961, through June 30, 1963.

(6) Continued collection of the rates now in effect subject to refund in Docket Nos. RI62–220[6] and RI63–44,[7] subject to further orders of the Commission in those dockets.

(7) Extension of the make-up periods of 4 years under all rate schedules and supplements subject to this settlement which provide for a lesser make-up period.

(8) Prospective upward or downward adjustment of rates according to any area rate or rates determined in Area Rate Proceeding, Docket No. AR61–2.

As noted above, the proposal provides that the rate reductions will take effect and that the moratorium will begin as of July 1, 1963. If we were to allow Pan American to use this effective date we would be giving Pan American an advantage over those numerous applicants which have settled their cases in the Union Texas Proceeding with effective dates of April 1, 1963.

On August 20, 1963, Pan American, filed a telegram with the Secretary[8] stating that its effective date should not be moved back to April 1, 1963, because Pan American has already paid April, May and June royalties based on rates higher than the settlement rates and that the public interest will not be affected adversely by the later effective date because Pan American's moratorium period has been correspondently extended by three months.

We do not feel that we should depart from our announced policy merely for the convenience of Pan American in dealing with its royalty owners. Doubtless, Pan American may resort to its legal remedies to make itself whole. Nor do we agree with the contention that by extending the moratorium period through June 30, 1968, Pan American's proposal is put on a par with those having moratoria from April 1, 1963, through May 31, 1968. Since the Area Rate Proceeding, Docket No. AR61–2 will certainly be completed prior to May 31, 1968, the extension of the moratorium period has little or no value. Accordingly, our approval of this proposal will be subject to the conditions that the rate reductions go into effect on April 1, 1963, and the 5 year moratorium begins on that date. Pan American will be required to refund the monies above the settlement rates collected for deliveries made subsequent to March 31,

[6] Related to Supplement No. 1 to Pan America's R.S. No. 297 (CI61–974).

[7] Related to Supplement No. 13 to Pan American's R.S. No. 190 (G–10022).

[8] Pan American's telegram was in reply to a telegram of the Brooklyn Union Gas Company filed with the Secretary August 16, 1963, urging that the effective date of all settlements in the Union Texas Proceeding be April 1, 1963.

1963. Similarly, the 2.05¢ per Mcf escrow referred to in Paragraph (5) above will apply from April 17, 1961, through March 31, 1963.

In keeping with our present policy, we shall require that Pan American pay interest on the amounts to be refunded at a rate of 7 percent per annum, such interest to accrue through the last day of the month in which the motion and offer of settlement was filed.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order. However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

We find the settlement proposal as modified to be in the public interest. Accordingly, we shall sever the above-captioned Pan American dockets from the consolidated proceedings in Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, omit the intermediate decisions in regard to these dockets[9] and conditionally issue certificates of public convenience and necessity.

As we have done in other settlements which provided for escrow arrangements,[10] we shall require that Transcontinental Gas Pipe Line Corporation (Transco), the purchaser under Rate Schedule No. 288 (Docket No. CI61–355), file a copy of the escrow agreement and make special reports concerning the escrow account. These filings will be made in Docket No. RP63–3.

With the exceptions noted below, the pipeline purchasers (shown in the Appendix) which will receive refunds and whose overall purchased gas costs will be affected substantially by this settlement will pass on the refunds and adjust their rates in accordance with the Commission's latest rate orders concerning the respective pipelines. United Gas Pipe Line Company, the purchaser under Rate Schedules Nos. 282 (CI61–143) and 297 (CI61–974) has a rate case, in Docket No. RP63–1, presently pending before the Commission. Any adjustments necessary to reflect Pan American's reduced rates will be effected in that proceeding.

The flow through provisions in Transco's settlement in Docket No. RP61–13[11] specifically apply to Docket Nos. G–16946, G–17977, G–19223, CI61–355 and CI61–808. Transco, in the recent Socony Mobil Oil Company and Gulf Oil Corporation settlements[12] contended that the flow through provisions in the settlement agreement in Docket No. RP61–13 do not apply to producer rate schedules not specifically referred to therein. Since Pan American's Rate Schedules Nos. 326 (CI62–782) and 333 (CI62–1341) are not specifically referred to in the settlement agreement in Docket No. RP61–13, and in order to avoid a situation in which a pipeline obtains and keeps the benefits of refunds and reductions in gas purchase costs even though it may be, in the absence of such refunds and reductions, earning a reasonable rate of return on invested capital,

---

[9] The hearings in the Union Texas Petroleum, *et al.*, consolidated proceeding concluded July 25, 1963.

[10] See *Socony Mobil Oil Company, Inc.*, 28 FPC 357, 362.

[11] *Transcontinental Gas Pipe Line Corporation*, 27 FPC 187.

[12] See our order of October 9, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 979.

we shall require Transco to report to the Commission the amount of refund and interest received as a result of the settlement in Docket Nos. CI62–782 and CI62–1341, the estimated annual reduction in purchased gas costs, the proposed disposition of the refunds and the proposed rate adjustments, if any, to reflect the reduction in gas purchase costs. We shall require Transco to hold the refunds and amounts equal to the reductions in purchased gas costs which will accrue as a result of the settlement in these two dockets in a special account subject to further orders of the Commission.

One further matter requires discussion. We note that certain of the intervenors who urge approval of this settlement proposal are presently contesting the validity of certain increased rate filings of other producers which rely on the 23.55¢ per Mcf rate under Pan American's Rate Schedule No. 242 (G–16946).[13] While the question of the validity of such filings is not before us in the instant settlement proposal, we deem it proper to observe that consummation of this proposal would confirm the legality of Pan American's collecting the 23.55¢ rate during the period from the date of initial delivery through March 31, 1963.[14] This is so because under the settlement proposal no refunds will be paid for amounts collected during this period above the settlement rate of 20.625¢ per Mcf. Thus, even if we are incorrect in the decision we are releasing today on rehearing of UGI's motion to cancel certain rate filings in Docket Nos. AR61–2, G–17613, *et al.* (in which we hold that the fact that Pan American's temporary certificate carries no express refund obligation means that it was a triggering sale during the period the temporary was in effect,) adoption of the settlement might validate the triggering. As we have indicated in the order on rehearing, supra, it may well be that even if the Pan American temporary is ignored there were other triggering sales during all or most of this period and it may be that the intervenors here will still wish to proceed with the proposed settlement. But, in view of the foregoing, we think it only fair to give any party involved here an opportunity to object to the terms of this order.

The Commission finds:

(1) Pan American is a "natural-gas company" within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Pan American is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission, and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and the certificates should be issued and the amendment should be granted as ordered below.

---

[13] See Order Denying Motions to Reject, Cancel, and Dismiss Rate Filings, issued July 24, 1963, and order granting rehearing of said order issued September 5, 1963, in Docket Nos. AR61–2, G–17613, *et al.*

[14] We recognize, of course, that the intervenors' position in the triggering cases that favored-nation clauses cannot be activated by sales made under temporary authorization is not affected by the legality of Pan American's rate.

(5) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that Transco be required to submit the reports and retain the refunds, interest and purchased gas cost reductions as ordered below.

(6) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(7) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motion for waiver of the intermediate decisions is granted.

(B) The matters in the above-captioned Pan American dockets are severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued upon the conditions set forth herein to Pan American for the sales of natural gas in interstate commerce for resale as proposed in each Pan American docket except Docket No. G–10022 and as modified by the settlement proposals and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications and settlement proposal herein.

(D) The order granting the certificate of public convenience and necessity of Pan American in Docket No. G–10022, issued on October 16, 1956 (16 FPC 1470) is hereby amended to authorize the sale proposed in Docket No. G–10022 herein, as modified by the settlement proposal and this order, and the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the application to amend and the settlement proposal herein.

(E) The certificates issued by paragraph (C) above, and the amendment granted by paragraph (D) above are granted upon the express condition that Pan American comply fully with the terms of the settlement proposal which settlement is expressly approved, as modified by this order.

(F) Pan American shall make the refunds required by this order within 60 days from the date of issuance thereof. Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposals, Pan American shall report to the Commission, in triplicate, the amount of the refunds made to each pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with releases from the purchasers showing receipt of the refunds in conformity with the settlement and the conditions of this order.

(G) The certificates issued by paragraph (C) above and the amendment granted by paragraph (D) above are granted upon express condition that the effective date for rate reductions proposed herein be April 1, 1963, and that Pan American refund to the respective pipeline purchasers all amounts above the settlement rates collected for gas delivered since April 1, 1963; and upon the further condition that interest at 7% be paid on all monies to be refunded, such interest to accrue through the last day of the month in which the settlement offer was filed, July 31, 1963.

(H) Upon full compliance of Pan American with all the terms of this order and of the settlement proposal as modified, Pan American shall be relieved of any further refund obligations in these certificate proceedings and such proceedings shall terminate.

(I) The certificates herein issued are not transferable and shall be effective only so long as Pan American continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(J) The grant of the certificates and amendment herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however,* that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rates as required by this order and the settlement proposals.

(K) The grant of certificates and the amendment herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Pan American particularly any proceeding under Sec. 5 of the Natural Gas Act or Section 5(c) of the Outer Continental Shelf Lands Act, and is without prejudice to claims or contentions which may be made by the Commission, applicant, the Commission staff, or any affected party herein in any other proceeding.

(L) Within 15 days from the date of receipt of refunds and interest required by this order in Docket Nos. CI62–782 and CI62–1341, Transco shall submit a report to the Commission and serve a copy on its jurisdictional customers, and the various state commissions wherein it does business, setting forth the amount of refund and interest received, the estimated annual reduction in purchased gas costs due to these particular rate reductions, its proposed disposition of such refunds and interest and its proposed rate adjustments to reflect the reductions in gas purchase costs. Pending Commission action and further orders respecting such proposed dispositions and adjustments, Transco shall hold such refunds, interest and amounts equal to the reduction in purchased gas costs which accrue as a result of the settlement of these dockets in a special account (without interest obligation).

(M) Within 30 days after it has executed an agreement with an escrow agent, pursuant to this order, Transco shall file with the Commission a conformed copy of such agreement and a special report of the amounts paid into escrow. Each year thereafter and until the escrow agreement terminates, Transco shall file contemporaneously with its Form 2 Annual Report a report of the amounts in the escrow account as of the last day of the reporting year. In addition, whenever the escrow agent pays out monies from the escrow account, Transco shall file a special report of the principal and interest so paid out, the reason for such payments, and the manner of distribution and basis therefor. Whenever the escrow agent pays out monies to Transco's customers, Transco shall serve a copy of its special report on each interested State Commission. All filings and reports required by this paragraph shall be made by a responsible corporate official, in Docket No. RP63–3.

(N) Any party to these proceedings having objections to the terms of this order shall within 30 days from the date of issuance of this order set forth such objections in writing to the Commission (original and one copy), and serve copies on the other parties. If such objections be filed as set forth above, the effectiveness of this order shall be automatically stayed, pending further order or orders of the Commission.

Commissioner Ross *dissenting, joined* by Commissioner Black.

Ross, Commissioner, *dissenting in part:*

I dissent to the acceptance of the settlement of Pan American's Rate Schedule No. 242 which is the rate responsible for the triggering of a substantial number of other producer contracts.

On December 4, 1958 Pan American was granted a temporary certificate in Docket No. G–16946, without hearing on the grounds of an alleged emergency, authorizing the sale of gas at the rate of 23.55¢ per Mcf. This certificate was granted without the imposition of refund conditions, consistent with the Commission's practice at that time. Pan American accepted the certificate and commenced deliveries at this rate continuing up to the present time. Acceptance of the instant settlement would confirm the validity of that rate, at least for the period from 1958 through March 31, 1963, in view of the majority. The validation of that rate means that it constitutes a rate which triggers the rates of several other producers in the area, at least through March 31, 1963.[1]

The majority view the settlement of this rate as appropriate because they feel a temporary rate can trigger.[2] In my opinion, this view is incorrect for the reasons stated in my dissent to the Order on Rehearing (AR61–2) issued concurrently herewith. Nevertheless, since this is the approach adopted, I would adjust (rather than settle) the price of Pan American's temporary certificate by granting a new temporary at the in-line level of 20¢ per Mcf, and require full refunds down to that level. This would be an action consistent not only with the Supreme Court's decision in *CATCO*[3] but also with our own decision in *Continental Oil Company:*

> With respect to the unconditioned temporary certificate issued to Atlantic in Docket No. G–15374, the refund provision is likewise applicable. The temporary certificate gave no unalterable right to the proposed price. Under Section 7(c) the Commission may issue a temporary certificate in case of emergency pending the determination of an application for a certificate. *This appears to contemplate a continuous course of adjustment until the time that a final order determines the conditions under which a permanent certificate shall be issued.* [Emphasis added; 27 FPC 96, 110.]

[1] See the Commission's order in Docket Nos. AR61–2, G–17613, *et al.*, *issued* July 24, 1963, 30 FPC 402.
[2] *Ibid.*
[3] *Atlantic Refining Co.* v. *P.S.C. of New York*, 360 U.S. 378.

Even in the absence of such adjustment of Pan American's temporary certificate, I still dissent to the acceptance of the settlement of this certificate and related rate schedule. The legality of refusing to provide for refunds down to the in-line level for the period covered by unconditioned temporaries is a principal issue in the *Skelly* case on appeal which was argued October 25, 1963.[4] If petitioners are successful, any lower rate determined in a litigated proceeding regarding Pan American's sale would be applicable from the date of initial delivery. Thus, Pan American's rate could not be considered a triggering rate, and the now triggered rates similarly would be reduced in accordance with the *Shell* opinion. We have previously determined in no fewer than three opinions that the in-line price for South Louisiana applicable to contracts executed in 1958 is 20.0¢ per Mcf, including tax.[5] It is unfortunate that the anticipated benefits of the *Skelly* appeal with respect to this situation are being foreclosed when there is a good possibility of success in that case.

Commissioner Black has authorized me to state that he joins in this statement.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ALFRED C. GLASSELL, JR., ET AL., DOCKET NOS. G–9278 AND RI60–130

ORDER ACCEPTING OFFER OF SETTLEMENT AND TERMINATING PROCEEDINGS

(Issued November 20, 1963)

On March 7, 1963, Alfred C. Glassell, Jr., *et al.*, submitted an amended offer of settlement in the above proceedings relating to sales under Glassell's FPC Gas Rate Schedule Nos. 1 and 2.

Docket No. G–9278 involves an investigation instituted January 27, 1956, under Section 5(a) of the Natural Gas Act of the rates and charges made by Glassell under its FPC Gas Rate Schedule Nos. 1 and 2. Docket No. RI60–130 (Rate Schedule No. 1) involves an increased rate of 14.4248¢ per Mcf in effect subject to refund for a sale to Tennessee Gas Transmission Company from Texas Railroad Commission District No. 6. Glassell's FPC Gas Rate Schedule No. 2 covers a sale to Texas Gas Transmission Corporation from Southern Louisiana at a firm rate of 21.75¢ per Mcf.

After a hearing in Docket No. G–9278 and an examiner's decision, the Commission terminated the Section 5(a) investigation as to Glassell's Rate Schedule No. 1, but determined the lawful rate under Rate Schedule No. 2 to be 15.21¢ per Mcf. Glassell filed a petition for review in the United States Court of Appeals for the Fifth Circuit as to the latter determination and obtained a court stay of the effectiveness of the Commission order with respect thereto. Subsequently, the Commission sought and obtained a remand of the proceeding for the purpose of setting aside its findings and order and for further proceedings before it.

After several settlement conferences, Glassell submitted the Amended Offer of Settlement presently before us. It proposes continuance of the 14.4248¢ per Mcf rate, deletion of the indefinite pricing clauses in its Rate Schedule No 1, and the insertion of a new schedule of one cent periodic price increases, to be

---

[4] *P.S.C. of New York* v. *F.P.C.*, et al., CADC No. 17582. [Remanded January 23, 1964, 329 F. 2d 242.]

[5] *Continental Oil Company, supra; Placid Oil Company, et al.*, Docket No. G–13183, *et al.*, Opinion No. 398 issued July 17, 1963, 30 FPC 283; *United Gas Pipe Line Company*, Docket No. CP60–36, Opinion No. 399 issued July 17, 1963, 30 FPC 329.

effective on November 1, 1964, and every five years thereafter. Since this portion of the Offer is consistent with the Second Amendment to our Statement of General Policy, it should be accepted and Glassell's refund obligation under Docket No. RI60–130 should be discharged.

With respect to its FPC Gas Rate Schedule No. 2, Glassell proposes a prospective settlement rate of 20.625¢ per Mcf, inclusive of tax reimbursement, waiver of the right to file for increased rates under favored-nation or price redetermination clauses in the contract, extension of make-up period under take-or-pay clauses to four years, and a moratorium on all increased rate filings until July 1, 1967, except for tax increases reimburseable by contract.

The Public Service Commission of the State of New York in commenting on Glassell's proposal points out that the proposed settlement rate under Rate Schedule No. 2 is substantially in excess of the rate previously determined by the Commission and that it was not aware of a reasonable basis upon which the settlement price could be found to be in the public interest.

We agree with the New York Commission that, in view of the earlier 15.21¢ finding, a settlement of this nature would not normally be in the public interest. If the record were otherwise satisfactory, we would re-examine the cost-of-service calculations and would consider adjustments thereto which might result in a different unit cost. Aside from this problem, any rates established in the proceeding would have only prospective effect and a 1957 test year was utilized in arriving at the 15.21¢ figure. We do not believe that mere lapse of time operates to make improper the use of test year data. The operations and costs of a large company or group of companies may not change substantially over time and a test year of this vintage would not, in itself, be improper without a showing of substantial change. However, Glassell has asserted that its production has declined substantially since 1957 and our records reflect average sales by Glassell since 1957 approximately 11% lower than during the test year. In these circumstances, we would be obliged to remand the proceedings for current cost and production data. Since these data would concern only single field operations they would magnify the difficulties of single company cost-of-service computations.[1] Glassell's future rate for this sale will be determined in the Southern Louisiana Area proceeding, Docket No. AR61–2, where hearings will begin shortly and it is unlikely that a remanded proceeding which would involve expenses to all parties of much more than any savings which might result, could be completed substantially before the area proceedings. In the meantime, approval of this settlement will permit an immediate reduction in rate and will give immediate effect to the moratorium provisions and deletion of indefinite pricing clauses.

Pursuant to the rate reduction under Rate Schedule No. 2 Texas Gas will adjust its rates in accordance with the provisions of the rate settlement approved by our order issued December 26, 1961, 26 FPC 924.

In the circumstances, we believe settlement of this long pending case is in the public interest and approve the same.

The Commission finds:

The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in Glassell's Amended Offer of Settlement filed on March 7, 1963, is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective.

---

[1] Socony Mobil Oil Company, Docket No. G–13780, 27 FPC 347, 348.

The Commission orders:

(A) The Amended Offer of Settlement filed by Glassell on March 7, 1963, is approved and made effective subject to the terms and conditions of this order.

(B) The settlement rate of 20.625¢ per Mcf under Glassell's FPC Gas Rate Schedule No. 2 shall be effective as of the date of issuance of this order.

(C) Within 60 days from the date of this order, Glassell shall make such filings under its rate schedules as are required to make effective the terms of its Amended Offer of Settlement, as herein approved.

(D) Upon full compliance by Glassell with the terms and conditions of this order, the proceedings in Docket Nos. G–9278 and RI60–130, and Glassell's refund obligations under Docket No. RI60–130 shall terminate.

(E) Any party of these proceedings or the settlement conferences concerned therewith having objections to the terms of this order shall, within 30 days from the date of issuance of this order, set forth such objections in writing to the Commission (original and one copy), and serve copies on the other parties. If objections are filed, the effectiveness of this order shall be automatically stayed, pending further order or orders of the Commission.

(F) This order is without prejudice to any findings or orders which have been, or may be, made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Glassell, the Commission staff, or any affected party hereto, in any proceedings now pending or hereafter instituted by or against Glassell or any other companies, persons or parties affected by this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ANNUAL CHARGES PRESCRIBED FOR LICENSEES UNDER THE FEDERAL POWER ACT, DOCKET NO. R–228

ORDER NO. 272

AMENDING SECTIONS 11.20 AND 11.31 OF REGULATIONS UNDER THE FEDERAL POWER ACT

(Issued November 20, 1963)*

We are concerned here with amendments to § 11.20 and § 11.31 of Subchapter B, Part 11 of the Commission's Regulations under the Federal Power Act (18 CFR 11.20) which were proposed in the amended notice issued herein on August 27, 1963.

Section 11.20 would be amended so as to base the assessment of annual charges for licenses heretofore or hereafter issued for projects of more than 2,000 horsepower installed capacity (other than those issued to State or municipal licensees) upon the actual costs of administering Part I of the Act, except those costs associated with administration of the Act in regard to licenses issued to State and municipal licensees, licenses for projects of not more than 2,000 horsepower installed capacity and those minor part licenses for which the charges have been waived in whole or in part under section 10(i) of the Act. The assessment of annual charges shall be in the proportion that the annual charge factor for each such license bears to the total of the annual charge factors under all

*Published in the Federal Register on December 3, 1963 (28 F.R. 12795).

outstanding licenses. The annual charge factor shall include components based upon both project capacity and energy generated.

Section 11.31 would be amended so as to extend the period for payment of all annual charges by licensees (except charges for headwater benefits) from 30 days to within 45 days of rendition of a bill therefor by the Commission.

General public notice of this proposed rulemaking was given in the Federal Register on August 31, 1963 (28 F.R. 9648).

In commenting on the proposed amended regulation, most of the licensees reporting took the position that licenses may be altered only by mutual agreement of the licensee and the Commission, unless otherwise provided in the license, and this was especially so in connection with licenses issued prior to the 1935 amendment of the Federal Water Power Act. Some stated that the proposed amended regulation provides no ceiling as to the assessment which may be imposed; that it does not describe how costs are to be determined initially; and that it does not specify the basis for the allocation of such costs as between public and private projects. It appeared to one licensee that the proposed regulation will reasonably apportion, between capacity and energy, the annual charges involved.

No comments respecting the proposed amendment to § 11.31 were made.

We have considered the comments submitted. Section 10(e) of the Act, both prior and subsequent to the 1935 clarifying amendments, provides that "the licensee shall pay to the United States resonable annual charges in an amount to be fixed by the Commission for the purpose of reimbursing the United States for the costs of administration" of Part I of the Act. The above quoted terms and conditions are expressly made part of licenses issued both prior and subsequent to 1935. The annual assessment to a given non-public licensee under the proposed amended regulation will include charges in relation to the administrative costs incurred by the Commission under Part I of the Act with respect to non-public projects, except those incurred in connection with minor projects, those which have been waived for minor part licenses under section 10(i) and those fixed by the Commission in determining headwater benefit payments under section 10(f) of the Act.

Upon consideration of the entire record in this proceeding, *the Commission finds:*

(1) The adjustment of annual administrative charges, as hereinafter provided, is necessary and appropriate in carrying out the provisions of the Federal Power Act.

(2) The extension of the period for payment of annual charges by licensees (except charges for headwater benefits), as hereinafter provided, is in the public interest.

Acting pursuant to the authority granted by the Federal Power Act, particularly sections 10(e) and 309 thereof (16 U.S.C. 803(e), 825h), *the Commission orders:*

(A) Sections 11.20 and 11.31 of the Commission's Regulations under the Federal Power Act, Subchapter B, Chapter I of Title 18 of the Code of Federal Regulations are amended as follows:

1. Delete the introductory paragraph and paragraph (a) and the three subparagraphs thereunder of § 11.20 and in lieu thereof insert the following:

§ 11.20 Costs of Administration.

Reasonable annual charges will be assessed by the Commission against each licensee to reimburse the United States for the costs of administration of Part I of the Federal Power Act as follows:

(a) For licensees, other than State or municipal, of projects of more than 2,000 horsepower of installed capacity:

(1) A determination shall be made for each fiscal year of the costs of administration of Part I of the Federal Power Act chargeable to such licensees, from which shall be deducted such administrative costs allocated by the Commission to minor part licenses for which administrative charges are waived under section 10(i) of the Act and those fixed by the Commission in determining headwater benefit payments.

(2) For each calendar year the costs of administration determined under subparagraph (1) shall be assessed against each such licensee in the proportion that the annual charge factor for each such project bears to the total of the annual charge factors under all such outstanding licenses.

(3) The annual charge factor for each such project shall be its authorized installed capacity (horsepower); plus 150 times its annual energy output in kilowatt hours divided by one million.

(4) To enable the Commission to determine such charges annually, each such licensee shall file with the Commission, on or before February 1 of each year, a statement under oath showing the gross amount of power generated (or produced by non-electrical equipment) by the project during the preceding calendar year, expressed in kilowatt hours.

2. Paragraph (c) of § 11.20 is amended to read as follows:

"(c) For licensees of projects of 2,000 horsepower or less of installed capacity the charge for costs of administration shall be 5 cents per horsepower, with a minimum charge of $5 per annum for each such license except for those licenses for which administrative charges are waived under section 10(i) of the Act."

3. Paragraph (a) of § 11.31 is hereby amended to read as follows:

"(a) *Payment of annual charges.* Annual charges shall be paid within 45 days of rendition of a bill therefor by the Commission, except that annual charges for headwater benefits shall be paid within 60 days of rendition of a bill therefor."

[Secs. 10(e) and 309 (16 U.S.C. 803(e), 825h)]

(B) The amendments prescribed herein will become effective on January 1, 1964.

(C) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP64–43; TRANSCONTINENTAL GAS PIPE LINE CORPORATION, UNITED NATURAL GAS COMPANY, NORTH PENN GAS COMPANY, DOCKET NO. CP64–44

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 20, 1963)

On August 16, 1963, Trancontinental Gas Pipe Line Corporation (Transco) filed in Docket No. CP64–43 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the rendition of additional general storage service to existing resale customers under its rate schedule GSS. Concurrently Transco, United Natural Gas Company (United), and North Penn Gas Company (North Penn) filed a joint

application in Docket No. CP64–44 pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing additional development and operation of the Wharton Storage Field in Potter and Cameron Counties, Pennsylvania. The authorizations requested are more fully described in the applications in this proceeding.

The application in Docket No. CP64–43 is a suppliment to Transco's general storage service program for the 1963–64 winter season. The supplemental service will be rendered from the Wharton Storage Field under an Intermediate Development Program, the application for which is the companion docket in this proceeding. Transco sells natural gas to its resale customers and in turn provides storage for the gas under its presently authorized general storage service. The additional storage service is proposed to the following existing customers:

The joint application states that the proposed Intermediate Development Program means the additional supply of 560,000 Mcf of cushion gas to the Wharton Field to be supplied by Transco at a cost of $181,496 thereby increasing the effective capacity of the storage field to 12,060,000 Mcf of active gas and the ability to deliver active gas from the Wharton compressor station of Transco at a rate of not less than 130,425 Mcf per day until 85% of the gas has been withdrawn.

Upon completion of the Intermediate Program, Transco will have an assigned storage capacity of 9,045,000 Mcf which is a quantity equal to 75% of the rated storage capacity, and United will have an assigned storage capacity of 3,015,000 Mcf which is a quantity equal to 25% of the rated storage capacity. United will have an assigned delivery capacity of 25,125 Mcf per day which is equal to 1/120th of its assigned storage capacity, and Transco will have an assigned delivery capacity of not less than 105,300 Mcf per day, this being the balance of the rated delivery capacity. North Penn, which is the owner of certain properties and rights in the field, will be entitled to not more than 502,500 Mcf of top storage capacity and 5,025 Mcf per day of deliverability under the Program.

Transco states that it will utilize its share of the additional top storage capacity under the proposed new Program to assist in meeting the peak-day requirements of its many wholesale customers. In this connection, it filed concurrently its application in Docket No. CP64–43 consolidated in this proceeding with the instant Docket No. CP64–44. The rendition of service requested in Docket No. CP64–43 is dependent upon the approval of the Intermediate Development Program inasmuch as all of the peak day storage deliverability to be generated by the Initial Development Program has already been contracted for by Transco's customers, with full service to be reached in the 1965 storage season. United and North Penn will use their respective shares of the additional top storage capacity to assist in meeting the winter-day requirements of their wholesale and retail customers.

No additional physical facilities are required under the proposed Intermediate Development Program. This program would be carried out immediately upon completion of the previously authorized Initial Development Program.

Temporary certificate authorization for the proposed Intermediate Development Program and the sale and delivery of natural gas as requested in the respective dockets was issued to Applicants on October 30, 1963.

Pursuant to due notice, a public hearing was held in Washington, D.C., on November 7, 1963, respecting the matters involved in and the issues presented by the applications consolidated herein. A petition for leave to intervene was timely filed on October 28, 1963, by the Elizabethtown Consolidated Gas Company indicating its support for the applications and manifesting no desire for a formal hearing. No petitions of intervention in opposition or protests to the

granting of the applications were received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicants, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas; United Natural Gas Company, a Pennsylvania corporation having its principal place of business in Oil City, Pennsylvania; and North Penn Gas Company, a Pennsylvania corporation having its principal place of business in the Borough of Port Allegany, McKean County, Pennsylvania, are "natural-gas companies" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The Intermediate Development Program for the Wharton Storage Field, and the additional sale and delivery of natural gas as hereinbefore described, as more fully described in the respective applications in this proceeding, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The additional sale and delivery of natural gas by Applicant, Transcontinental Gas Pipe Line Corporation, as proposed in Docket No. CP64–43, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) The Intermediate Development Program for the Wharton Storage Field by Applicants, Transcontinental Gas Pipe Line Corporation, United Natural Gas Company, and North Penn Gas Company, as proposed in Docket No. CP64–44, is required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation to sell and deliver natural gas as hereinbefore described, and in addition authorizing Applicants, Transcontinental Gas Pipe Line Corporation, United Natural Gas Company, and North Penn Gas Company to develop and operate the proposed Intermediate Development Program, all as more fully described in the respective applications in Docket Nos. CP64–43 and CP64–44, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon the Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

OPINION NO. 411

SOUTH CAROLINA ELECTRIC & GAS COMPANY, PROJECT NO. 2315

OPINION SUPPLEMENTING ORDER ISSUING LICENSE

(Issued November 21, 1963)

Syllabus

1. Conditions historically included in licenses *discussed*. PP. 1338–1340.
2. Commission *imposes* improved license conditions for constructed hydroelectric project (revised Form L–3) and spells out future policy in this regard. P. 1338.
3. Study of economic feasibility is not believed necessary requisite to issuance of license for constructed project. P. 1340.
4. Commission must examine economics of unconstructed project based upon all its beneficial public uses in determining whether license should be granted. P. 1340.
5. Commission is not passing on economic feasibility in licensing constructed projects—nor does such action inhibit future action for rate-making or other regulatory purposes. PP. 1340–1341.
6. Immediate licensing offers most useful vehicle by which Commission can contribute to problem of improving operations of unlicensed constructed projects and development of streams in which they exist. PP. 1340–1341.
7. Commission *issues* license for constructed project in proceeding arising under Section 4(e) of the Federal Power Act. P. 1348.

Commissioner Ross *concurring* in part; *dissenting* in part.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

We are issuing today an order *infra* page 1346 granting a license to South Carolina Electric & Gas Company for the Neal Shoals development, Project No. 2315. In view of Commissioner Ross' statement concurring in part and dissenting in part to that order and commenting on the general subject of license conditions, we deem it appropriate to state our views in an opinion supplementing our order.

The Commission in recent months has undertaken a review of hydroelectric licenses in the interest of making the most effective use of its authority to impose conditions upon licensee in the public interest. This review has focussed on the need for conditions in licenses for existing projects, such as the Neal Shoals project to insure that the future operation of the projects will make the greatest possible contribution to the conservation and use of water resources for all legitimate purposes. This review has increased our awareness of the potential contribution of the license conditions to comprehensive resource development. We have strengthened the conditions in some areas, notably as to recreational uses and fish and wildlife facilities, and, as will be noted, the review process is a continuing one with further revisions being contemplated in other areas.

To insure that the Neal Shoals project and other constructed projects will be best adapted to a comprehensive plan under foreseeable contingencies, the license contains many conditions reserving specific authority to the United States or the Commission to require the licensee to make changes in the project and its operations during the period of the license, subject of course to the statutory safeguards of the Federal Power Act and the usual due process requirements. A number of these conditions have been included in our licenses for years substantially unchanged, but we think it will be useful briefly to summarize them in the following paragraphs for ready reference.

Navigation and regulation of storage and use to protect life, health and property.

Article 6 reserves the right to the United States to use project waters for purposes of navigation; makes the operations of the licensee affecting the use, storage, and discharge from storage of water affected by the licensee subject to such rules and regulations as the Commission may prescribe for the protection of life, health and property, and in the interest of the fullest practicable conservation and utilization of such waters for power and other beneficial public purposes, including recreational purposes.

Under Article 6 the United States retains the right to require, in the future, releases of water from the project reservoir in such volumes as the Secretary of the Army may prescribe in the interest of navigation or as the Commission may prescribe for other beneficial public purposes. In the event minimum releases become desirable in the future for pollution abatement, recreation, fish and wildlife or other public purposes they may be prescribed.

Article 7 requires the licensee to convey to the United States, free of cost, such of its lands and its rights-of-way and such right of passage through its dams or other structures, and to permit such control of the reservoirs, as may be required in the event the United States desires to construct navigation facilities in connection with the project.

Article 8 requires the licensee to furnish electric power free of cost for the operation of any navigation facilities whether constructed by the licensee or by the United States in the future.

Article 9 makes operation of any navigation facilities constructed in the future as part of the project subject to such reasonable rules and regulations as may be made from time to time by the Secretary of the Army.

Additional generating capacity.

Article 13[1] provides that the licensee shall install additional generating capacity or make other changes in the project as directed by the Commission, to the extent it is economically sound and in the public interest to do so.

Coordination with other power systems.

Article 14 requires electrical and hydraulic coordination of the operations of the project with other power systems. This article contemplates that coordination will result in net benefits to be shared by all parties involved, including the licensee.

Fish facilities.

Articles 15 and 16 provide the procedures and reserve the right to the United States to require the licensee during the license period to construct, operate and maintain fish facilities at its own expense and to modify project structures and operations in the interest of fish and wildlife resources. Should the United States desire to construct in the future fish facilities in connection with the project, the licensee may be required to permit the United States to use, free of cost, such of licensee's lands and project works as may be reasonably required to construct those facilities.

Recreational plan.

Article 17 requires the licensee upon subsequent order of the Commission to construct, operate and maintain recreational facilities, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities

---

[1] Article 13 was revised by changing the word "and" to "or" thus making it clear that the "other changes in the project" that may be directed by the Commission may be changes other than those relating to the installation of additional generating capacity.

and utilities.[2] Special Article 29 requires the licensee to file for Commission approval a recreational plan developed after consultation with appropriate Federal, State and local agencies.

Public access.

Article 18 requires the licensee to allow the public free access to project waters and project lands for navigation, recreation, fishing and hunting; and requires the licensee to permit construction by others of access roads, wharves, landings and other facilities for those purposes.

Soil erosion.

Article 19[3] places the responsibility upon the licensee to minimize soil erosion and siltation resulting from operation and maintenance of the project. The Commission may require specific measures and facilities to accomplish this purpose and to revegetate exposed soil.

Control of project property.

Article 21 requires the licensee to retain possession of project property needed for project purposes and Article 20[4] requires, with minor exceptions, Commission approval prior to the leasing of any project property.

Further conditions under consideration.

In addition to these conditions that are usually included in licenses the Commission is now preparing two additional conditions which it will propose and issue for comments soon under its rulemaking procedure. One would provide procedures under which project facilities, particularly reservoirs, may be used by others jointly with the licensee on a reimbursable basis for water supply for pumped storage hydroelectric, steam-electric, irrigational, municipal, industrial or similar purposes. The other proposed rule would require the licensee to publicize the license conditions of general public interest in order to inform the public generally of the privileges and responsibilities conferred upon the licensee.

Commissioner Ross, whose suggestions have been considered fully in the improvements we have made in our license conditions, also urges the inclusion in every license of a finding that the project is economic, for both constructed and unconstructed projects. With respect to unconstructed projects, all would agree that the Commission must examine the economics of a proposed project based upon all of its beneficial public uses in determining whether a license should be granted.

We do not believe, however, that in general a study of economic feasibility is a useful or necessary prerequisite to issuing a license for a constructed project. Most of the projects we are now bringing under license are relatively small and many of them, if built at all, would undoubtedly be built much differently if they were being constructed today. It seems to us an empty gesture to delay the licensing process while we apply pre-construction standards to projects built many decades ago. In licensing these projects we are not passing on whether they are economical and neither can our action in any way inhibit us in any future action for rate-making or other regulatory purposes.

---

[2] Article 17 spells out specifically the Commission's authority to require construction, maintenance and operation of recreation facilities subsequent to issuance of a license.

[3] An article similar to Article 19 has been prescribed in a few licenses in the past but it will be a standard condition in future licenses.

[4] Article 20 supersedes Article 15 of the License Form L–3 of December 15, 1953 (17 FPC 385–389). Article 20 reserves to the Commission greater control over leases of project property by requiring approval of leases involving lands, buildings or other property used or useful for *any project purpose.*

The abdication of our licensing responsibilities will not have the effect of transforming these unlicensed projects into economically feasible facilities. On the other hand, the exercise of our jurisdiction once the projects are under license may well result in improving their operation to the extent that they may become economically feasible. We are at long last subjecting these projects to regulatory scrutiny, including periodic safety inspection, as required by the Federal Power Act. To sanction the continued failure to comply with the Act, or to reject applicants who are cooperating in our program to bring all jurisdictional projects under license, is not in our view an action which is in the public interest.

In our judgment the better approach is to bring these projects under license where they can be inspected for safety of the structure and made subject to strengthened license conditions which give the Commission a wide assortment of controls over the licensee including provisions authorizing the Commission to direct economically sound changes in the licensed projects and to require minimum water releases. Licensing these projects will also subject them to the possibility of recapture, to the requirement to establish amortization reserves from surplus earnings, to the payment of license fees and to all the other incidents of licensing. It will then be possible for the Commission's staff to work with the licensees to bring about modernizations and other improvements in the public interest. The Commission will continue to take the lead in urging all power systems to substitute new efficient capacity for all types of inefficient plants. In some cases marginal hydroelectric projects will undoubtedly be abandoned as more economical power sources become available. But that is no reason for further delay in bringing existing plants under license at once. On the contrary, we believe that immediate licensing as required by the Federal Power Act offers the most useful vehicle by which the Commission can make a contribution to the problem of improving the operations of unlicensed constructed projects and the development in the public interest of the streams in which they exist.

Commissioner Ross *concurring in part* and *dissenting in part.*

Ross, Commissioner, *concurring in part* and *dissenting in part:*

In view of the fact that the Commission refrained from issuing any licenses for some months in order to allow an opportunity for a more adequate review of our license conditions and findings, I believe it is appropriate that I should comment on the general subject of license conditions, both as to unconstructed projects and as to constructed projects.

I am pleased to say that in the license recently issued for Project No. 2328 on October 22, 1963 an economic finding for an unconstructed project was included though a similar finding as to Project No. 2305 (Sabine) issued on October 14, 1963 was not included. However, it is my understanding that the Commission henceforth will give specific consideration to the economic aspects of all applications for licenses for unconstructed projects, a practice not uniformly followed in the past.

This brings us to the question whether the Commission should inquire into economic feasibility of a constructed project, considering all multipurpose uses, or whether it is more advantageous to quickly place all these constructed projects under license, economic or not, in order to impose upon the applicant the conditions set forth hereinafter. As a corollary to this problem, if the Commission should determine that a project is not economic, what are the courses of action left to it?

With this in mind, let us address ourselves to the project at hand. As is noted in the opinion, this project was constructed in 1905 on a navigable stream. Since that time, it has operated as an unlicensed facility.[1] In 1957, Unit No. 3 turbine was damaged beyond repair and is completely inoperable. The reservoir space of the project has silted to the rest of the spillway and pondage is obtained by the use of three foot high flashboards! This situation has persisted for over 20 years. The 1942 report of the Division Engineer[2] states that the reservoir of this and other projects in the area ". . . have so silted up that they now afford no pondage, and the plants are therefore run-of-stream plants." The same report, in which the Federal Power Commission concurred, found this plant to be obsolescent. Remember, the report was issued over 20 years ago. With a project of this nature, one naturally wonders if such a project is economic. Do the ratepayers benefit from the power generated by the project, considering its cost? Do our citizens as a whole benefit from this structure in terms of recreation, water quality control, fish and wildlife and other public purposes? It is safe to characterize this as a project best adapted to a comprehensive plan for improving a waterway when the project might well be an economic burden to all affected parties? In the absence of findings as to the economic nature of constructed projects, we can assume that such projects are, in fact, uneconomic under any reasonable standards.

This poses the important question as to whether the Commission should as a matter of policy seek to encourage the disposition of projects of this nature so as to more properly contribute to the welfare of the public?[3] Such disposition could be the complete removal of the project, or it could mean, among other things, converting the project to recreation by sale to an interested agency as the Wisconsin Public Service Company has recently done. At the very least, this Commission should examine the alternatives to the continued existence of this project which the majority state is for the primary purpose of producing power. If the project is only marginal or uneconomic, this fact will be a deterrent to any modification under our conditions. Any attempt to modify the operation or require recreational or stream pollution correction measures will, beyond any question, be met with the charge "We cannot afford it", "it is not reasonably consistent with the primary purpose of the project"[4] or is "not economically sound".[5] What's more, they will probably be correct, and our otherwise effective license conditions will be for naught. We should not lose sight of our obligation to properly utilize and conserve our natural resources. The same is applicable to other interested agencies. Neither Interior, the Corps of Engineers or Health, Education, and Welfare in commenting on this project have directed their attention to the issue whether the basin would be improved without the project. For an agency, merely to say we have no objection, particularly as to a project in existence since 1905, is not the searching type of review I consider necessary or appropriate. Would recreation be increased, would stream flow regulation be improved, would stream pollution be lessened, would fish runds be restored, would fish and wildlife be benefited by either the removal of the project or conversion

---

[1] Were it not for the recent acquisition of the project by South Carolina, it is doubtful that any license application for this project would be before us.

[2] Senate Document 189, 78th Cong., 2d Sess., p. 50.

[3] Only recently, by letter of October 21, 1963, the Department of Interior suggested that the Commission defer the grant of a license for Project 2317 in view of the probable imminence of the construction of a Federal project which would inundate the existing project.

[4] The standard imposed in license conditions 15, 16, and 17.

[5] The standard imposed in license condition 13.

to non-power uses? These questions and similar ones should be asked each time an applicant for a constructed project appears before us.

As silt has farreaching consequences on the economics of hydro projects over the course of years, so too will our action in licensing an uneconomic project have farreaching consequences. Our very act of granting a license is a blessing bestowed upon the applicant which will come back and haunt not only ourselves but also the South Carolina State Commission. By this action, we are approving the inclusion of the facility into the company's rate base, which incidentally raises the question of the propriety of including in the original cost, the amounts paid for land by the predecessor, an industrial concern. It certainly is not beyond the realm of possibility that without the powers of condemnation such former owners had to pay through the nose. Even had the project been owned by South Carolina Electric & Gas Company, we certainly have an obligation both to ourselves and to the South Carolina Public Service Commission to indicate this was not useful property. Their interest and ours in proper rates to the consumer should dictate a power expert's evaluation of the usefulness of this property. So too, we must be concerned about the possibilty that the company, in a short period of time, will seek to have the project declared obsolete and charge it off to the consumers. Surely, the same reasoning that led the Chairman to chastise New England Power Company about its tea kettle steam plants would apply here.

In my opinion, the approach suggested above is not only prudent but one required by the provisions of the Federal Power Act. There is absolutely no distinction in the requirements of Section 4(e) and 10(a), for example, with respect to constructed projects as compared to unconstructed projects. This should mean that *any* license we issue is best adapted to a comprehensive plan for improving a waterway for the use or *benefit* of interstate commerce, for the *improvement* and utilization of water power development, and for other beneficial public uses, including recreational purposes. Unfortunately, many of our licenses for constructed projects will never meet this requirement.

Certainly the Act does not require the casual type of approach to constructed projects which is employed by the majority. In fact, the Act requires much more. Surely it is primarily our obligation, the Federal Power Commission, not the state commissions, to hasten a proper disposition of this type of project which presently clutter up many of our streams. If one of our main purposes under the Act is to assure an abundant supply of electric energy with the greatest possible economy and with regard to the proper utilization and conservation of our natural resources,[6] then let us hasten on with our job.

In Articles 15, 16, and 17 which deal with the problem of fish and wildlife, and recreation, and which are becoming standard articles, it is said that modifications can only be required if they are "reasonably consistent with the primary purpose of the project". By emphasizing, particularly without a proper finding, the primary purpose of the project, the implication is left that *power*, will for the duration of the license be basically protected as against any valid claims for modifications for fish and wildlife and recreation. It is true that we are operating under an Act entiled the "Federal Power Act." However, Congress in 1920 and again in 1935 recognized and spelled out in several sections our responsibility to develop our rivers and streams from a multi-purpose point of view. Section 10(a) not only charges us with the duty to improve and develop our water power but also to develop our water-

[6] Federal Power Act, Section 202(a).

ways "for other beneficial uses, including recreation". We must consider and weigh and balance carefully the following uses: (1) flood control (2) domestic and municipal water supplies (3) the improvement and safeguarding of navigation (4) the reclamation and irrigation of land, including drainage (5) possibilities of hydro-electric power (6) soil conservation and utilization (7) forest conservation and utilization (8) preservation, protection and enhancement of fish and wildlife resources (9) the development of recreation (10) salinity and sediment control (11) pollution abatement and protection of public health, life and property, and (12) other beneficial uses. Thus, the weighing and balancing of these various interests must be done specifically in order to issue the license. Otherwise, Findings (4) and (6) [1] are a cover up for a single purpose power development. An applicant may merely be seeking a license to generate power. If this be the case and these other uses are incompatible either these uses should be prohibited or they should be meshed into the power use in a public interest fashion. So too, once a license is issued, all interests for the duration, are subject to the overriding public interest and should be and are generally contemplated to be subject to reasonable modification consistent with the provisions of the Act. If this not be the case, then it becomes ever more important that, at the time of the issuance, we should clearly spell out the exact limitations and rights as to each use for fifty year or shorter period, as the case may be.

Since this license is to be issued with this modifying phrase, I inquire as to the actual legal meaning and necessity of the phrase "reasonably consistent with the primary purpose of the project". In fact, I have an unfortunate apprehension that it means there will be no changes that would affect, in the slightest, power production for the duration of the license. I hope I prove to be a poor interpreter of the law. I hope that the confidence of the majority that the public interest in the conservation and best use of our natural resources is insured under these license conditions is not misplaced.

In Appendix I of the U.S. Study Commission for the Southeast River Basin, page 4-14, which report incidentally is a milestone in resource planning, it is noted that 'The forecasting of stream flow is essential in the proper management of water resources". This important fact is recognized in Article 6 of this license:

Article 6. The United States specifically retains and safeguards the right to use water in such amount, to be determined by the Secretary of the Army, as may be necessary for the purposes of navigation on the navigable waterway affected; and the operations of the Licensee, so far as they affect the use, storage and discharge from storage of waters affected by the license, shall at all times be controlled by such reasonable rules and regulations as the Secretary of the Army may prescribe in the interest of navigation, and as the Commission may prescribe for the protection of life, health, and property, and in the interest of the fullest practicable conservation and utilization of such waters for power purposes and for other beneficial public uses, including recreational purposes; and the Licensee shall release water from the project reservoir at such rate in cubic feet per second, or such

[1] (4) The issuance of a license for the project subject to the terms and conditions herein after imposed will not effect the development of any water resources for public purposes which should be undertaken by the United States.

(6) The project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

volume in acre-feet per specified period of time, as the Secretary of the Army may prescribe in the interest of navigation, or as the Commission may prescribe for the other purposes hereinbefore mentioned.

The issue is not simply whether it is recognized and will be adequately provided for by the issuance of future rules and regulations but whether something should be done now to meet the problem described in Appendix 9, 5–5 of said report, as follows:

Looking to the future, the heavy demands upon the surface water resource by growth of many urban areas and industries along reaches of rivers, and the requirement that these rivers must carry off residual wastes and still maintain some semblance of the quality necessary for use as a source of domestic water, and for recreation, and for preservation of fish and wildlife, it becomes obvious that regulation and improvement of low flow becomes a major necessity of the future. In fact, the problems of low-flow regulation may inevitably increase in importance until it overshadows the need for high flow regulations, or flood control.

It is my belief that before issuance of a license, a forecast should be made of the need for low-flow regulation under existing conditions. This not only will put the licensee on actual notice of such a requirement, thus inhibiting future cries of pain and anguish, but it will also effectively dispose of the problem. I am exceedingly concerned that in attempting to deal with complaints as they arise, due to the inherent delays of the administrative process, we will be locking the door after the horse is stolen. Furthermore, shouldn't we have an "on the record" acceptance by the licensee of this obligation? Low-flow regulation, like recreation and stream pollution will be to future generations what flood control and power developments were to our generation. The Southeast study would certainly seem to confirm this. To grant a license with the vesting of many rights in the licenses for many years without directing our specific attention to this increasingly important problem is an abdication of our responsibility as an organization presently charged with water resource development. If our staff has neither the time nor the experience to do so, we should seek assistance from other appropriate governmental organizations, state and federal, as we already do now in the case of fish and wildlife and as we plan to do in the field of recreation and these organizations should not treat this as a perfunctory request.

Related to stream flow control is the question of water supply storage. The appropriateness of this topic is evidenced by the State Water Plan Act passed by the Kansas legislature in 1963. Under the Act, the Water Resources Board is authorized to recommend the inclusion of water supply storage in any proposed or authorized federal project. Where authorized by the state water plan, the Board may enter into agreements with the federal government for the repayment of the costs of storage. Here again, consideration of appropriate storage requirements should be recognized and prescribed before a license is issued. Otherwise, the need may not be satisfied.

Any person, State, municipality, or State Commission complaining of anything done or omitted to be done by any licensee or public utility in contravention of the provisions of this Act may apply to the Commission by petition which shall briefly state the facts, whereupon a statement of the complaint thus made shall be forwarded by the Commission to such licensee or public utility, who shall be called upon to satisfy the complaint or to answer the same in writing within a reasonable time to be specified by the Commission. If such licensee or public utility shall not satisfy the complaint within the time specified or there shall appear to be any reasonable ground for investi-

gating such complaint, it shall be the duty of the Commission to investigate the matters complained of in such manner and by such means as it shall find proper. [49 Stat. 856; 16 U.S.C. 825e.]

While it is true all persons, even laymen, are presumed to know the law, including all provisions of the Federal Power Act, it has been my experience that few people, not excluding state officials, are usually ignorant of many of their rights. Since the licenses to be issued affect more and more the lives of all of us, particularly insofar as recreation and fish and wildlife are concerned, and since it is hoped a procedure can be developed by which these licenses will be a matter of public record in those areas where the projects are located, I think it would be highly desirable that every license include in full the above cited section. Many of our regulatory laws which are designed to protect the public are based upon the philosophy that effective regulation of necessity will result in part from legitimate complaints of the public. In fact, the public, in many cases, are the very ones who spur a regulatory body into action. Therefore, at the admitted risk of possibly encouraging groundless complaints, I would make it clear to the public in the license itself that there is a means of redress available to them. This may put us on the spot more frequently than we might desire but isn't that to be expected in assuming the role of the defender of the public interest?

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SOUTH CAROLINA ELECTRIC & GAS COMPANY, PROJECT NO. 2315

ORDER ISSUING LICENSE (MAJOR)

(Issued November 21, 1963)

Application was filed on June 13, 1962 by South Carolina Electric & Gas Company (Applicant) of Columbia, South Carolina, for license under Section 4(e) of the Federal Power Act (Act) for constructed major project No. 2315, known as the Neal Shoals Project, located on the Broad River about 60 miles upstream from Columbia, in Chester and Union Counties, South Carolina, in the region of Leeds, Santuck, Carlisle and Union, South Carolina.

The Neal Shoals Project was constructed and placed in operation in 1905 by Union Manufacturing and Power Company. The installation in the powerhouse remains essentially as originally constructed. The development was acquired by United Merchants and Manufacturers, Inc. (United Merchants) in 1946. By our order issued September 4, 1962[1] we authorized and approved the acquisition and merger or consolidation of certain facilities of United Merchants, comprising the Neal Shoals Project, with those of Applicant. Our order provided that the authorization would expire unless the transaction therein approved were consummated within 60 days from the date of issuance of the order.[2]

The Secretary of the Army and the Chief of Engineers, in reporting on the application, have advised that the plans of the project structures were satisfactory insofar as the interests of navigation are concerned and the plans were approved pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, stated, among other things, that no Commission action should be taken that would make more

---

[1] Docket No. E-7039.

[2] Pursuant to requests therefor, several extensions of time to consummate the acquisition and merger transaction were granted Applicant pending the promulgation of a Commission order issuing a license to Applicant for the Neal Shoals Project. (Docket No. E-7039.)

difficult a plan of comprehensive development[8] of the Santee-Congaree-Broad River system to include development of the Blairs multiple-purpose project which would inundate the Neal Shoals Project. While recent consultation between Commission staff and the U.S. Corps of Engineers disclosed that present studies by the Corps of the Santee River Basin do not include the Broad River, provision is hereafter made in the interest of a more comprehensive plan of development of the Santee-Congaree-Broad River system.

The South Carolina Wildlife Resources Department offered no objection to issuance of a license for the project.

The Santee and Congaree Rivers have been improved for navigation to Columbia, South Carolina, and on the Broad River above Columbia improvements made prior to 1880 permitted commercial navigation for about 200 miles on this stream and its tributaries. The Broad River unites with the Saluda River at Columbia, South Carolina, to form the Congaree River, a tributary of the Santee River, and the Santee, Congaree and Broad Rivers have such width, depth, channel, banks, and flow that they have been and are now suitable for the transportation of persons or property in interstate commerce.

For the reasons set forth in Opinion No. 357 pertaining to the Public Service Company of New Hampshire's Project No. 2288 (27 FPC 830, 834), the license herein granted shall have an effective date of April 1, 1962 and a termination date of December 31, 1993.

The Commission finds:

(1) The Broad River is a navigable waterway of the United States from its mouth at Columbia, South Carolina, at least to a point in the State of North Carolina about 28 miles northerly from the North Carolina-South Carolina boundary, and about 141 miles upstream from Columbia. The Neal Shoals Project is located upon a navigable waterway of the United States.

(2) Applicant is a corporation organized under the laws of the State of South Carolina and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a license for the project.

(3) Public notice of the filing of the application has been given. No protests have been received. No conflicting application is before the Commission.

(4) The issuance of a license for the project subject to the terms and conditions hereinafter imposed will not adversely affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) The hereinafter-described double circuit 13.2 kv transmission line extending from Neal Shoals to Union Mill at Union, South Carolina, with one circuit extending to the Midway Substation and then to Buffalo Mill at Buffalo South Carolina, are parts of the project within the meaning of Section 3 (11) of the Act and should be included in the license for the project.

(6) The project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of waterpower development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

(7) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charges is 5,200 horsepower. The energy generated by the project will be integrated into Applicant's transmission system and distributed and sold for public utility purposes.

[8] Senate Document No. 189, 78th Congress, 2d Session.

(8) The amount of annual charges to be paid under the license for the project for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereafter fixed and specified.

(9) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to South Carolina Electric & Gas Company (hereinafter referred to as the Licensee) under Section 4(e) of the Act for a period effective as of April 1, 1962, and terminating December 31, 1963, for the continued operation and maintenance of the Neal Shoals Project No. 2315, located on the Broad River, a navigable water of the United States, in Chester and Union Counties, South Carolina, subject to the terms and conditions of the Act, which is incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) The project consists of:

(i) All lands constituting the project area and inclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2315–1) Map of Project Area; and

Exhibit K: (FPC No. 2315–3) Map of the Project Area

(ii) Project works consisting of: a gravity type dam 1,087 feet long, constructed of granite blocks and concrete with three-foot wooden flashboards across a 481-foot section; a reservoir extending about 10 miles upstream with an area of about 600 acres; an open flume to the powerhouse; a powerhouse containing four generating units each having a capacity of 1,300 kilowatts (one of which is inoperable); a double circuit 13.2 kv transmission line about 14 miles long extending to Union Mill at Union, South Carolina with one circuit extending about three miles to Midway Substation and then two miles to Buffalo Mill at Buffalo, South Carolina; and appurtenant facilities; the location, nature, and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: (FPC No. 2315–4) Plan of Dam, Powerhouse and Vicinity—Typical Sections through Dam;

(FPC No. 2315–5) Plan and Elevation of Power Plant Structure—Typical Section Through Unit; and

Exhibit M: Two typewritten pages, entitled "Neal Shoals Hydro-General Description of Mechanical and Electrical Equipment" filed in the Commission on June 13, 1962.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3, November 1, 1963, *infra* page 1658, entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States", which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act one (1) cent per horsepower on the authorized installed capacity (5,200 horsepower) plus two and one-half (2½) cents per 1,000 kilowatt-hours of gross energy generated during the calendar year for which the charge is made; or such other amounts as may hereafter be determined as necessary to reimburse the United States for the costs of administration.

Article 29. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

Article 30. The right, power, and authority is reserved to the United States to construct or to the Commission to issue a license authorizing the construction, operation and maintenance of a hydroelectric project which will more completely utilize the water resources of the reach of Broad River in which the project is located.

Article 31. The acceptance of this license by the Licensee shall constitute its stipulation, consent and agreement made upon its own behalf and upon the behalf of its successors and assigns for the benefit of the United States, or the person or persons hereinafter constructing, operating and maintaining such more complete hydroelectric project or his or their successors and assigns, that said Licensee, its successors or assigns, shall surrender its license at such time as the project becomes inoperative by reason of inundation by such more complete hydro-electric project; Provided, that Licensee shall be paid the net investment in Project No. 2315 upon surrender of its license; and Provided further that Licensee shall not be entitled to any compensation for severance damages sustained by reason of inundation or destruction of the project or project works of Project No. 2315, other than for such damage to telemetering and remote control equipment.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall be effective upon the date South Carolina Electric & Gas Company consummates the transaction authorized by the Commission in Docket No. E–7039 by its order issued September 4, 1962, as amended, authorizing the acquisition and merger or consolidation of facilities. The Company shall notify the Commission of the date of consummation within ten days thereafter.

(F) This order shall become final 30 days from the date upon which it becomes effective as provided in paragraph (F) above unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the effective date of this order.

AREA RATE PROCEEDING, ET AL., DOCKET NO. AR61-2, ET AL.

ORDER DENYING MOTION TO DIRECT CERTAIN RESPONDENTS TO SUBMIT AND STAFF TO COMPILE COST DATA

(Issued November 22, 1963)

On October 25, 1963, Hunt Oil Company, Hassie Hunt Trust, H. L. Hunt, W. H. Hunt, Lamar Hunt, Caroline Hunt Sands, William Herbert Hunt Trust Estate, Claude M. Langton, Trustee, Secure Trusts, Lyda Hunt-Caroline Trusts, Lyda Hunt-Bunker Trusts, Lyda Hunt-Lamar Trusts, Lyda Hunt-Herbert Trusts, Lyda Hunt-Margaret Trusts and Placid Oil Company (Hunt, *et al.*) filed a motion with respect to the Appendix A and C data filings called for by the Commission's order of December 12, 1962, in which they request the Commission to issue an order directing 36 named respondents (including one of the movants) to clarify the Appendix A data filings they have made so as to make the data suitable for compositing by the Commission's staff; and 125 named respondents (including six of the movants) who have not previously submitted Appendix A and C data to submit such data for compositing by the staff unless such submissions were not required by the Commission order.

Pursuant to the Commission's December 12, 1962, order, certain data were required to be filed on Appendix A and C questionnaire forms attached to the order. The order made filings by certain non-operator respondents optional under conditions stated therein. The staff was required to composite the data filed and distribute the composites to the parties in the proceeding. In June, 1963, the staff distributed the composites in the form of the basic data exhibits it intends to introduce into the record in the proceedings. Simultaneously, the original data filings of respondents were made available for examination in the Office of Public Information of the Commission.

The motion filed by Hunt, *et al.*, is based on the fact that the composited material distributed by the staff does not reflect data of all of the respondents in the proceeding. As to some of the material not included in the composites, the staff in distributing its composite exhibits stated that the filed data were not composited because "the data so reported did not lend itself to summarization and was therefore not included." As to others it of course may reflect failure of the respondent to avail itself of the option to make any filing. In seeking the relief requested it is apparent that the thrust of the motion of Hunt, *et al.*, is directed to the issue of the representativeness of the data included in the basic data exhibits. Presumably Hunt *et al.*, are taking the position that only if data are obtained from a greater number of respondents the composites would be representative.

These proceedings are presently pending before a hearing examiner designated by the Commission. A series of prehearing conferences have already been held. On December 3, 1963, in accordance with the Commission's order of May 16, 1963, the staff and all other parties are required to introduce their direct presentations into the record. Subsequently on dates which have been set, rebuttal presentations will be introduced and cross-examination will take place. When the hearings are concluded, among other issues, the issue of the representativeness of data included in the basic data exhibits as well as the weight to be attached to any studies based thereon will be determined initially by the presiding examiner and ultimately by the Commission. In arriving at such a determination

the presentations of the staff and all other parties and interveners will be considered and the data will be accorded the weight to which they are entitled. A Commission determination of the issue which underlies the motion of Hunt, *et al.*, in advance of the completion of the record and final submission for decision obviously would be premature. Specifically it would be inappropriate for us to attempt to make any determination at this time as to whether the data in the staff's composites are or are not representative or whether it would be necessary to obtain additional data to make the composites representative. Accordingly, Hunt, *et al.*'s motion must be denied. This action does not preclude Hunt, *et al.*, or any other parties to the proceedings from raising the issue of representativeness of the data before the presiding examiner or before the Commission at such time as the examiner's initial decision comes up for review. Nor does it foreclose Hunt, *et al.*, from seeking to secure such additional information from the nonresponding or nonresponsive producers as they desire.

The Commission orders:

The motion filed by Hunt, *et al.*, on October 25, 1963, directing certain respondents to submit data and the staff to composite such data is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

HOLYOKE WATER POWER COMPANY, DOCKET NO. E-7132

ORDER AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued November 22, 1963)

Holyoke Water Power Company (Applicant), incorporated by special charter under the laws of the Commonwealth of Massachusetts and doing business in that State with its principal place of business in Holyoke, Massachusetts, filed an application on October 21, 1963, seeking authorization pursuant to Section 204 of the Federal Power Act, for the issuance of 240,000 additional shares of Common Stock, par value $5 per share, to effect a 2-for-1 split of the outstanding Common Stock of the Applicant.

Applicant has outstanding 240,000 shares of Common Stock, par value $10 per share. Applicant proposes to issue to its existing Common Shareholders as of the close of business on December 20, 1963, one additional share of common stock par value $5 per share for each share held and to change the par value of the outstanding stock to $5 per share.

The proposed issuance of 240,000 additional shares to its existing stockholders is, under these circumstances, a stock split which will not result in a change in the equity of the existing stockholders or in the total capitalization of the Applicant.

According to the Application, the purpose of the proposed issuance of Common Stock is to increase the availability of the stock to potential investors, and thus achieve wider distribution of Applicant's capital stock. Applicant believes that this would be beneficial particularly in connection with any future financing through the issuance of securities. Applicant states that there is presently a rather thin market for Applicant's stock which is traded over the counter.

Written notice of the application has been given to the Massachusetts Department of Public Utilities and to the Governor of that State. Notice of the

application was also published in the Federal Register on October 31, 1963 (28 F.R. 11653), stating that any person desiring to be heard or to make any protest with reference to said application should on or before November 15, 1963, file with the Federal Power Commission, Washington, D.C., petitions or protests. No petitions or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued May 12, 1959 (Docket No. E-6875), *In the Matter of Holyoke Water Power Company*, 21 FPC 676.

(2) The proposed issuance of Common Stock, as described above will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance of Common Stock, as described above, is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance of Common Stock, as described above, is exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(1) thereof.

(5) The proposed issuance of Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Common Stock, as described above, upon the terms and conditions and for the purposes specified in the application, is hereby authorized, subject to the provisions of this order.

(B) This authorization shall expire unless the transaction hereby authorized is consummated within 60 days from the date of issuance of this order.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of costs, or any other matter whatsoever which is now pending or which hereafter may come before this Commission or any other regulatory body.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NOS. CP60-122, CP61-203

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 22, 1963)

On August 29, 1963, Texas Eastern Transmission Corporation (Movant) filed in Docket Nos. CP60-122 and CP61-203 a motion to amend the Commission's order issued December 17, 1962, in said dockets, to effect a reduction in the volumes of natural gas authorized to be sold and delivered to two customers, the Penn Fuel Group Companies and the Shippensburg Gas Company, and in addition, to reflect the change of names of three of the companies composing the Penn Fuel Group Companies, all as more fully set forth in the subject motion.

The subject order authorized Movant, among other things, to sell and deliver a maximum daily quantity of 3,999 Mcf[1] of natural gas to the Penn Fuel Group companies[2] consisting of Ashland Gas Light Company, Hamburg Gas and Fuel Company, Huntingdon Gas Company, Lewistown Gas Company, Mt. Carmel Citizens Gas Company, and Pottsville Gas Company, and 398 Mcf of natural gas to Shippensburg Gas Company (Shippensburg). Since issuance of the subject order, the Penn Fuel Group has experienced cutbacks by certain of their industrial customers. This, combined with an increase in the requirements of one member of the Penn Fuel Group, results in a net reduction of 2,275 Mcf of natural gas per day for the Group as a whole which makes their required volumes only 1,724 Mcf in lieu of the authorized 3,999 Mcf granted in the subject order. In addition, two communities served by Shippensburg have demonstrated a need for additional volumes of 289 Mcf per day over and above those presently authorized. The involved customers have therefore requested Movant to make the necessary adjustments. They are as follows:

Customers	Originally authorized volumes	Desired volumes Mcf/day at 14.73 psia
Penn Fuel Group companies	3,999	1,724
Shippensburg Gas Co.	398	687

In addition, Movant states that subsequent to issuance of the subject order three companies of the Penn Fuel Group have undergone name changes which are follows:

Old Name	*New Name*
Ashland Gas Light Company	Ashland Gas Company
Hamburg Gas and Fuel Company	Hamburg Gas Company
Mt. Carmel Citizens Gas Company	Mt. Carmel Gas Company

[1] All volumes are at a pressure base of 14.73 psia.

[2] Of the volumes authorized to be delivered to the Penn Fuel Group Companies, 1,785 Mcf was authorized in Docket No. CP60-122 and 2,214 Mcf was authorized in Docket No. CP61-203.

It appears that the net reduction from the volumes as originally authorized are not necessary for any of the Penn Fuel Group Companies or Shippensburg to render adequate natural gas service in the areas served by them. Amending the order of December 17, 1962, in accordance with Movant's motion will make the released volumes of gas available to others along Movant's pipeline system for distribution to the general public.

Due notice of the filing of the motion to amend and opportunity for hearing thereon has been given by publication in the Federal Register on October 9, 1963 (28 F.R. 11242). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order, issued December 17, 1962, in Docket Nos. CP60–122 and CP61–203 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued on December 17, 1962, in Docket Nos. CP60–122 and CP61–203 be and the same is hereby amended by authorizing Texas Eastern Transmission Corporation to transport and deliver 1,724 Mcf of natural gas per day to the Penn Fuel Group Companies in lieu of the 3,999 Mcf of natural gas per day heretofore authorized by said order, and to transport and deliver 687 Mcf of natural gas per day to the Shippensburg Gas Company in lieu of the 398 Mcf of natural gas per day heretofore authorized by the same order, all as hereinbefore described and as set forth in the subject motion.

(B) The Commission's above-mentioned order is further amended by changing the names of three of the Penn Fuel Group Companies as follows:

Ashland Gas Light Company to Ashland Gas Company
Hamburg Gas and Fuel Company to Hamburg Gas Company
Mt. Carmel Citizens Gas Company to Mt. Carmel Gas Company

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

AREA RATE PROCEEDING (HUGOTON-ANADARKO AREA), DOCKET NO. AR64–1, AND AREA RATE PROCEEDING (TEXAS GULF COAST AREA), DOCKET NO. AR64–2

ORDER INSTITUTING AREA RATE PROCEEDINGS

(Issued November 27, 1963)

On September 28, 1960, the Federal Power Commission issued its decision in the *Phillips Petroleum Company* rate case, 24 FPC 537, in which it concluded that individual company cost of service concepts did not constitute a meaningful method for fixing the rates of independent producers of natural gas, and that it intended to fix such rates in the future on an area basis.[1] These determinations were recently affirmed by the Supreme Court in *Wisconsin, et al.* v. *Federal Power Commission*, 373 U.S. 294.

[1] See Statement of General Policy 61–1, 24 FPC 818, 902, and 1107, 25 FPC 595, 26 FPC 661, 28 FPC 441 and 29 FPC 590 [and orders issued this day, *infra*, pp. 1370, 1374 and 1435].

The Commission has already instituted two area rate proceedings. The first of these, Docket No. AR61–1 (Permian Basin Area), will fix just and reasonable rates for the Permian Basin Area which encompasses the Permian Basin geographical area of New Mexico and Texas Railroad Commission Districts Nos. 7(c) and 8, Texas. Hearings on the rates for jurisdictional sales involved in this proceeding have recently concluded and the decisional stage has begun. Hearing procedures for the other pending proceeding, Docket No. AR61–2, involving the Southern Louisiana area were established by order of May 16, 1963. Pursuant to this order a number of hearing conferences have been held, and a schedule fixed for the introduction of evidence commencing on December 3, 1963.

As a next step in fixing just and reasonable area rates, we believe that additional area rate proceedings should now be instituted. To this end, we have promulgated a cost and operating data questionnaire to more than one-hundred principal natural gas producing companies making sales of natural gas for resale. Data received from the respondents to this questionnaire will be a prime source of information to be utilized by the parties to the proceedings, including the Commission's staff.

Our experience in the pending area rate proceedings indicates that, it is nevertheless propitious to program additional area rate proceedings in advance of the hearing date and we are therefore instituting two additional area proceedings at this time. This action is desirable so that companies with jurisdictional gas sales in given areas and pipelines, distribution companies and other interested parties dependent upon or affected by such sales will be able to plan in advance for their participation in such proceedings. Also, the advance planning that can take place in hearing conferences can be of immeasurable value in disposing of attendant procedural questions arising in connection with proceedings of this scope involving the participation of many diverse interests.

Accordingly, two additional proceedings are instituted herewith to fix just and reasonable rates in the following geographical areas:

(1) Area Rate Proceedings (Hugoton-Anadarko Area), Docket No. AR64–1—

(a) Oklahoma Panhandle Area—consisting of Cimmarron, Texas Beaver, Harper, Woodward and Ellis Counties.

(b) Oklahoma Anadarko Area—consisting of Woods, Alfalfa, Grant, Major, Garfield, Dewey, Blaine, Kingfisher, Roger Mills, Custer, Canadian, Beckham, Washita, Caddo, Grady Counties and that part of Stephens County lying within township 2 North, Range 4 and 5 West.

(c) Texas Railroad Commission District No. 10—consisting of the following counties: Armstrong, Briscoe, Carson, Castro, Childress, Callingsworth, Dallam, Deaf Smith, Donley, Gray, Hall, Hansford, Hartley, Hemphill, Hutchinson, Lipscomb, Moore, Ochiltree, Oldham, Parmer, Potter, Randall, Roberts, Sherman, Swisher, Wheeler

(d) Kansas Area—consisting of the entire State of Kansas.

(2) *Area Rate Proceeding* (Texas Gulf Coast Area), Docket No. AR64–2.

(a) Texas Railroad Commission District No. 2—consisting of the following counties: Live Oak, Kanes, DeWitt, Lavaca, Bee, Goliad, Victoria, Jackson, Refugio, Calhoun.

(b) Texas Railroad Commission District No. 3—consisting of the following counties: Lee, Burleson, Brazos, Madison, Fayette, Washington, Grimes, Walker, Trinity, Colorado, Austin, Waller, Montgomery, San Jacinto, Polk, Wharton, Ft. Bend, Harris, Liberty, Hardin, Tyler, Matagorda, Brazoria, Galveston, Chambers, Jefferson, Orange, Jasper, Newton.

(c) Texas Railroad Commission District No. 4—consisting of the following counties: Webb, Duval, Jim Hogg, Brooks, Kenedy, Starr, Hildago, Willacy, Cameron, Aransas.

The completion of these additional area rate proceedings, coupled with those in the Permian Basin and Southern Louisiana, will result in the establishment of fully effective rate regulation for approximately 75 percent of the sales of natural gas made in interstate commerce.[2] Equally important, all major consumption areas of the United States will benefit directly from the early completion of these proceedings. Permian Basin production is the prime source of gas for California on the West Coast. Most of the natural gas produced and sold from Southern Louisiana and Texas Gulf coastal regions is destined for consumers in Northeastern and Southeastern United States, while that from the Hugoton-Anadarko area is consumed largely by natural gas users in the Midwest.

In light of the dissent, we emphasize that our action herein has no bearing on any of the substantive questions involved in the pending Permian and Southern Louisiana area rate proceedings or in the two new area rate proceedings which we are initiating.

The problems discussed in the dissent are among the central issues in the pending area proceedings. We believe the Commission will be able to reach a result in these proceedings which will provide just and reasonable rates for the industry and protection to the consumers. However, we do no suggest that the problem of developing workable standards for determining just and reasonable rates for producers on an area basis is susceptible to easy solution. As the Supreme Court observed in its recent decision, authorizing us to proceed along this path, there are "unusual difficulties inherent in regulating the price of * * * natural gas." *Wisconsin* v. *F.P.C.*, 373 U.S. at 310.

The fact that our task is difficult is no reason to shy away from getting on with the job which the Supreme Court initially placed upon us in its 1954 decision in the *Phillips* case.[3] We do not believe that consistent with our statutory duties we can await determination of one area proceeding before we initiate others and we see no reason to believe that a national synthesis can be easily developed by blanketing into one mass hearing all of the different problems inherent in producer regulation in the various gas producing areas of the whole country.

If we shared Commissioner Ross' doubts as to the difficulty of developing adequate records in a series of broad area proceedings,[4] and his belief that a single nationwide proceeding is administratively feasible and substantively superior to area proceedings, we should suffer the necessary delays required in order to enable us to go forward in this manner. We do not share his appraisal of either aspect of the problem and go forward with the area approach to the solution of the producer rate problem with the conviction that it is the best available method to bring this already too-long-delayed matter to a proper conclusion with risking delays which would subvert the purpose of the proceedings.

We do not, of course, suggest that the records to be made in the cases we are initiating today should necessarily follow the pattern of the record in the *Permian* case. On the contrary, in view of the necessary time to secure the

---

[2] See Federal Power Commission Publication *Sales By Producers of Natural Gas to Natural Gas Pipeline Companies*, 1961, Table 5, page 9.

[3] *Phillips Petroleum Company* v. *Wisconsin*, 347 U.S. 672.

[4] Docket No. AR61-1—Permian includes three pricing areas. Docket No. AR61-2—Southern Louisiana includes one pricing area. Docket No. AR64-1—Hugoton-Anadarko includes four pricing areas and a portion of a fifth area. Docket No. AR64-2—Texas Gulf Coast includes three pricing areas.

1962 data for use in the cases instituted here, the record and decision in Permian will be available as a guideline for improving the record made in these proceedings. Balancing the evils of delay against the possibility of perfection is always difficult. Our judgment is that further delay in an attempt to develop *a priori* an overall system of producer pricing for the entire nation in advance of examination of the records being established in the two pending proceedings, as well as those hearings here inaugurated, would not be the path toward perfection but, on the contrary, would be a great disservice both to the consuming public, which is entitled to the protection of the Natural Gas Act, and to the producers who are entitled to know what they are being paid for the natural gas they sell in interstate commerce.

These two new proceedings, like those already pending, will result in the establishment of just and reasonable rates under Section 5(a) of the Natural Gas Act. The investigation will encompass not only issues related to the establishment of particular area rates for the future, but will also consider whether such area rates should be uniform throughout separate production areas which are being consolidated for joint hearing, or should vary from different production areas or for any other geographical area encompassed within the proceeding. The Commission will accept and consider petitions by any party to either proceeding filed within three months of this order (and served upon all other parties thereto) seeking to enlarge the areas to be considered in either proceeding.

All persons making sales of gas in interstate commerce from the production areas delimited herein are being made respondents to these proceedings. Specifically, a list of respondents to the Hugoton-Anadarko proceeding is attached hereto as Appendix A and respondents to the Texas Gulf Coast proceedings are listed in Appendix B.

The other important statutory phase of the proceedings pertains to the fixing of just and reasonable producers' rates pursuant to Section 4(e) of the Act. All proceedings involving increased rate filings suspended by the Commission, applicable to sales of natural gas from points within the geographical boundaries defined above, will be consolidated and disposed of by these two proceedings. A list of persons having such rate increases on file with the Commission for gas sales originating from the Hugoton-Anadarko area is set forth in Appendix C hereto and those from the Texas Gulf Coast Area are found in Appendix D attached hereto.

Further orders specifying future procedures in these proceedings will be issued as appropriate.

The Commission orders:

(A) Proceedings are hereby instituted, pursuant to Section 4, 5, 10, 14, 15, and 16 of the Natural Gas Act, to determine the just and reasonable rate or rates for the sales of natural gas subject to the jurisdiction of the Commission, produced in the geographical areas designated above, and public hearings shall be held in *Area Rate Proceeding* (Hugoton-Anadarko Area), Docket No. AR64–1 and in *Area Rate Proceeding* (Texas Gulf Coast Area), Docket No. AR64–2 at a time and place hereafter to be ordered by the Commission. All persons named in Appendix "A"* and Appendix "B"* hereto and all parties on whose behalf such persons have filed FPC gas rate schedules for sales in either of such areas are hereby made respondents in Docket No. AR64–1 and Docket No. AR64–2, respectively.

(B) The proceedings hereinbefore instituted shall also encompass the investigation of facts, conditions, practices, or matters relating to the sale of natural

*Omitted in printing.

gas produced in said geographical areas to aid in the enforcement of the provisions of the Act or in prescribing rules and regulations thereunder, and shall also encompass issues as to whether any rate or charge demanded, observed, charged or collected by any natural gas company in connection with such sales is unjust, unreasonable, unduly discriminatory or preferential.

(C) The procedure to be followed in these proceedings shall be prescribed by subsequent order or orders of the Commission.

(D) The Section 4 proceedings listed in Appendix B* are hereby consolidated for purposes of hearing with *Area Rate Proceeding* (Hugoton-Anadarko Area), AR64–1, and those Section 4 proceedings listed in Appendix D* are hereby consolidated for purposes of hearing with *Area Rate Proceeding* (Texas Gulf Coast Area), AR64–2.

(E) Any person, other than the respondents specifically named in Appendices "A", "B", "C",* and "D", who desires to participate as an intervener in either of the area rate hearings designated hereinabove ordered to be held shall, on or before January 2, 1964, file a notice of intervention or petition to intervene with the Secretary of the Commission setting forth therein the basis claimed for the right to intervene in such proceeding. On or before *January 31*, 1964, the Secretary of the Commission shall advise all participants in the two rate proceedings of the names of all persons who have filed notices of intervention or petitions for leave to intervene.

(F) A copy of this order shall be published in the Federal Register and served upon each of the respondents set out in Appendices "A", "B", "C", and "D"; and upon all purchasers of natural gas sold subject to the Commission's jurisdiction in the Hugoton-Anadarko and Texas Gulf Coast Areas as delimited hereinabove, and upon interested States Commissions as is provided for in Section 1.19 of the Commission's Rules of Practice and Procedure.

Commissioner Ross *dissenting.*

Ross, Commissioner *dissenting:*

Natural gas is one of the nation's most important sources of energy. It is presently being found in areas ranging from New York and Louisiana to Wyoming and California. It constitutes the source of roughly one-third of the energy consumed by this nation.

Like it or not, this Commission has been given the task of determining a fair price for this resource. To date, the Commission has gone down different roads in an attempt to find the right course. Our predecessors started out with a typical utility-type cost of service approach. As conducted, this proved unworkable. In lieu thereof, they instituted an area rate proceeding which, essentially, was an effort to avoid some of the administrative and conceptual difficulties experienced in *Phillips* while giving approximate recognition to the generally accepted identification of the various producing areas based on the similarity of geological formation and of price. At one time, the relative separateness of the producing areas might have justified such an approach. About fifteen years ago, there was a general identification between certain producing areas on the one hand, and certain pipelines on the other. In turn, the pipelines could directly be related to separate and distinct marketing areas. There were in fact, several neat little packages, much like the thirteen original colonies before the formation of the Union.

During the 1950's demand exploded, new markets craved for gas, pipelines strained to cover them, and new discoveries were engendered. There was no time to sit back and determine the most economical way to provide this commodity—pipelines bought gas where they could get it. In this they were limited

*Omitted in printing.

by the long term tie-up of existing discoveries resulting from the Commission's insistence on 20 year reserves and 12 year deliverability. By 1960, with the extension of pipelines into new producing area, and with the exchanges and sales of gas between pipelines, the industry was reaching maturity on a national scale. No longer could definable producing areas be exclusively identified with distinct market areas. Nevertheless, it was at this time that an approach was adopted which looked towards analysing the industry in an area fashion.

We now have our first area case almost completed. It has been one of the most exhaustive and thoroughly litigated cases in our history. The Examiner and most of the parties have already made extensive studies of the problem and have discovered that most of the basic, critical issues are national or industry-wide in scope and are faced with the choice of making a decision on these issues in the framework of a proceeding arbitrarily and artificially cut-off from the other producing areas, which necessarily will be affected by the result.

The question we should ask ourselves in instituting additional area proceedings is whether the area approach will permit a satisfactory conclusion. The experience in *Permian* strongly suggests that the area approach, as presently constituted, and as presently contemplated, is a far cry from being the golden key which will unlock the heretofore undiscovered secrets for successful producer regulation. Initially, the proceeding was commenced with no guidance by the Commission, and the parties floundered around considerably. Partly as a result of the insistence of the Examiner and partly as a result of the experience of the parties, their counsel and expert witnesses in dealing with this experimental approach, finally a measure of order has been achieved out of the mutual chaos. Despite the laudable efforts of the Examiner and all the parties, many serious issues have arisen under this new method. This was not unexpected in and of itself. What has turned out to be unpredictable, however, has been the change in the very nature of the beast. From a narrowly circumscribed beginning, this case has become enmeshed into most of the nationwide issues affecting the pricing of gas.

The following is a summary of a number of the problems which, at this stage of the proceeding before briefs and examiner's decision, might well suggest an entirely different approach, either a nationwide approach or a greatly modified area approach. I, frankly, would much prefer to see how the Examiner handles this unforseen development and study the comments and exceptions of the parties before freezing what was admittedly an experimental idea. In listing at this time some of the trouble areas in *Permian*, I recognize that adequate and satisfactory solutions may be discovered and in no sense am I now suggesting, from the wealth, in fact surfeit of data, that it will not be possible to arrive at a price for *Permian* gas that we can live with. As one can see, I do want to profit from the experience of this unique *Permian* proceeding before continuing my journey to the moon.

Permian started out principally as a regionalized *Phillips*-type rate base case. The problems inherent in the *Phillips* methodology are multiplied in *Permian* in that a hybrid presentation of allocated area and nationwide costs are used. All the exploration and development costs in *Permian* are on a nationwide basis. In contrast, a good part of production costs was computed on an area basis. Recognizing these problems and the fact that cost of service data is a part of, but not necessarily the whole, of the evidence needed in establishing a price, I feel that nationwide cost data, even now being sought on a national basis, will be much more useful, reliable and appropriate if used in a nationwide proceeding.

Second, *Permian* and *Southern Louisiana* both use 1960 costs. The instant areas will use 1962 costs (in two months, it will be 1964—not a good start). Subsequent area cases will presumably use later test years, or run the risk

of being obsolete before they begin. The danger here is that the costs allocated to each area would collectively total more than the industry actually incurred. There will be no way to check if *Permian* really accounts for 10% of nationwide costs, for example, without knowing what constitutes the remaining 90%. It would be nice if the nationwide questionnaire recently approved by the Bureau of the Budget would forceclose such a happenstance, but this is unlikely. The nationwide questionnaire will use a 1962 test year. *Permian* and *Southern Louisiana* use 1960. Thus no adequate basis of comparison is afforded.

Third, directionality has played a most important role in *Permian*. This issue is integrally related to the part which price plays in bringing forth needed supplies. The issue is clearly national in context and it is most doubtful that a decision can be made on this issue within the confines of an area proceeding. In fact, the Examiner in *Permian* tentatively stated:

> The Commission should institute an immediate investigation of the problem of directionality. This is a matter of which there have been differences of view, but certainly it seems to be an overwhelming issue in this case, and it is a problem which I feel represents a breakthrough in the possibility of gas regulation. This should not be handled in this case. This case should be decided on this record, but for the future in other cases I think it appropriate that the Commission investigate the subject. [Tr. 30,364.]

Fourth, historic industry practices are being recognized as having a substantial impact on price (and cost). How much does it cost pipelines to buy gas under 20 year contracts and to maintain 12 years, or slightly less, deliverability? It comes to no little sum. Yet, if a price were selected which would assure the continual flow of needed supplies of gas, the need for these requirements appears most questionable. Here again, *Permian* promises no comprehensive decision. The Examiner has tentatively recommended that the Commission institute a proceeding—obviously nationwide—to deal with this issue.

Fifth, the idea of an area proceeding presupposes the validity of boundaries. But we should not merely assume the propriety of boundaries, already rejuggled to some extent in the nationwide questionnaire on an *ad hoc* basis, and force affected parties into a preconceived or at least predetermined mold. The only appropriate—legal—manner of determining this question is by reference to all the producing areas in a proceeding where the issue of boundaries can be litigated. If there is to be a division of areas, there must be standards or criteria by means of which the division is made. What are the standards applicable to *Permian*? To the other areas? This question is of no small moment. To a producer operating in a borderline zone, the economic consequences of fixing boundary lines are tremendous. Depending on the decision, he might get rich or go broke. Producers are supposed to be gamblers at heart, but there must be limits.

Related to this question is the matter of location value. Several parties contend that gas should be priced to induce exploration closer to market and to dissuade or at least delay the search in more distant areas. How can we make a sensible decision on this issue in an area by area approach? The only way is to consider all the areas together. As it is, the prospects are that a minus value will probably be ascribed to *Permian* with no corresponding plus to the other producing areas serving markets which *Permian* also serves.

Sixth, the tedious and time-consuming approach used in *Permian* is prohibitive of effective regulation. By the time *Permian* is decided, it could be stale. The same is true, only to a greater degree, with respect to *Southern Louisiana*. At the present rate, the Commission will perpetually be involved in a continuing series of area proceedings.

Seventh, the vast bulk of evidence in *Permian* is national in scope. This is quite natural because virtually all the issues affecting the pricing of gas are national. Significantly, the Examiner in *Permian* arrived at his tentative price for new gas on the basis of national costs. A succession of area proceedings involves needless and wasteful duplication of time, effort, and expense on these issues and an unjustified delay in finding just and reasonable prices for all the areas. The prospects of stipulating such data in later area cases are not at all bright because the parties are different and some of the basic data gets stale.

The related problem is presented of necessarily making a decision on national issues in *Permian* (*e.g.* directionally, price elasticity). Despite any pretensions to the contrary, the likelihood is that determinations of these issues will be adpoted in future area proceedings.[1] Thus numerous affected sellers and buyers of gas, not parties to *Permian*, will effectively (if not legally) be precluded from a fair hearing on these fundamental issues of major concern.

In establishing a price for gas, the Commission must be sensitive to and carefully consider the interdependence of prices, as well as costs, in the various producing areas. The markets served by any one producing area are not captive markets, at least over the long run. Permian, for example, is not the sole source of supply for California. In addition, California consumes gas produced in Canada, the Panhandle field, Anadarko Basin, West Texas, the San Juan Basin, as well as from local production. To avoid disrupting industry, while at the same time satisfying the requirements of sound price regulation, the Commission must determine a price for one area which will not unduly penalize—or favor—producers in other areas. This requires a nationwide assessment.

While the majority seems to recognize the necessity for a nationwide approach as evidenced by its promulgation of the nationwide questionnaire, here again it is a question of too little too late. First, no tax or reserve data have been requested at this time. While there may be problems in obtaining such information, which is of critical necessity, putting off the problems does not serve to resolve them.

Adequate reserve data are prerequisite in determining price. Where costs are used, it is obviously necessary to know that to which the costs relate. ("Without an adequate picture of costs, it is impossible to say anything very useful about the petroleum supply." "Petroleum Statistics Study Group Report," as reported in *The Oil and Gas Journal*, October 14, 1963.) How is it possible to come up with a per Mcf price if the volume of Mcf's are not known? How it is possible to know if price is properly performing its function, namely, assuring an adequate supply of gas, if the volume of gas found in response to known prices remains a mystery? Thus, the evidence should show the inventory of the area under consideration in terms of proven reserves, shut-in reserves, and the various categories of probable, possible and ultimate reserves. The reserve data should be classified as to the year in which discovered so that current customers will not bear costs properly attributable to increasing the industry's assets. The necessity for adequate data has apparently been recognized by the Petroleum Statistics Study Group of which we are a member. We should not settle for less when it comes to the question of gas pricing with which we are more intimately concerned. Yet the nationwide questionnaire, which presumably will be used in connection with these proceedings, does not request *any* reserve information, at least at this time.

---

[1] Note, for example, the development of the *Atlantic-Seaboard* allocation methodology, which was initially adopted on a limited basis, into a regularly selected device for making similar allocations in all subsequently decided pipeline rate cases.

Consideration must also be given to the place of competitive sources of energy. In determining profit margin, i.e., the encouragement to be given to producers to search for additional supplies of gas in an area, we should be aware of the availability and cost of competing fuels, such as coal, particularly if low cost coal would be supplied from an area stricken by unemployment. Along the same lines, the Commission should be alert to probable technological advances which could materially alter the future structiure of the industry.

The foregoing suggests, at least to me, that the area proceeding, as presently consituted and as currently anticipated, represents somewhat less than the ideal in producer regulation. It is not perfect—by a long shot. If it is to be made effective, improvements must be made. One thing is certain, namely, that the various producing areas must be evaluated in a nationwide context. In view of all the shortcomings of the present area approach, the wiser course of action would be first to decide *Permian*, which promises to be accorded all reasonable expedition. With the experience gained in its consideration of that case, the Commission could then intelligently direct the course of future proceedings and obtain meaningful results much more expeditiously. As it is, the majority seems content to shoot in the dark, forcing Staff and all the industry and consumer parties to plod along in still further repetitions of the burdensome and defective area approach. I am not so inclined, and I therefore dissent to the institution of these area proceedings at this time.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. Charles R. Ross, Harold C. Woodward, and David S. Black.

CALIFORNIA ELECTRIC POWER COMPANY, DOCKET NO. E–7133

ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued November 27, 1963)

California Electric Power Company (Applicant), a corporation organized under the laws of the State of Delaware and doing business in the States of California and Nevada, with its principal business office at San Bernardino, California, filed an application on October 25, 1963 for authority, pursuant to Section 204 of the Federal Power Act, to issue unsecured Promissory Notes in the aggregate amount of $20,000,000 outstanding at any one time. The Notes will be executed and delivered under and pursuant to a Loan Agreement of September 17, 1963 between Applicant and the Bank of America National Trust and Savings Association (Bank). Under the Loan Agreement, Applicant has the right to borrow from, repay to and reborrow from the said Bank, and the Bank is obligated to lend to Applicant from time to time after October 31, 1963 and prior to October 31, 1964, sums not exceeding $20,000,000 in aggregate principal amount at any one time outstanding.

The Loan Agreement provides that each Note to be issued thereunder shall be payable not more than 12 months after the date of its issuance and in any event the final maturity date of any Note shall be prior to January 30, 1965. The Notes are subject to prepayment prior to maturity without penalty. It further provides that the Notes shall bear interest at a fluctuating rate equal to the Bank's prime rate for 90-day to 180-day prime commercial loans.

Applicant is engaged in the generation, purchase, transmission, distribution and sale of electric energy in parts of southeastern California and southwestern Nevada. By order of October 1, 1963 (Docket No. E–7106), the merger of the

Applicant into Southern California Edison was approved. In a related order (Docket No. E–7107) issued August 9, 1963, the Commission authorized Applicant to borrow $17,000,000 aggregate principal amount to provide funds for the redemption of Applicant's three callable series of Cumulative Preferred Stock prior to merger.

According to the application, the proceeds of the borrowings, pursuant to this application are to be used to refund approximately $10,250,000[1] in obligations and to provide funds for construction, completion, extension or improvement of facilities prior to the proposed merger (which Applicant expects to become effective on or about December 31, 1963). The Applicant states that if the merger with Southern California Edison Company becomes effective at any time during the life of the Loan Agreement under which the line of credit will be established, Applicant's corporate existence will thereupon terminate and the surviving corporation will assume all obligations of Applicant, including the proposed Notes.

Applicant further states in the event the proposed merger does not take place on such date, Applicant, at an early date in 1964, will undertake permanent financings, the proceeds of which will be used in part to discharge portions of the short-term notes. Later permanent financings and borrowing arrangements, as required, would provide funds for Applicant's construction and other expenditures in the event the proposed merger does not become effective.

Construction expenditures for the last four months of 1963 are estimated at approximately $6,300,000. In the absence of the proposed merger, construction expenditures for 1964 are estimated at approximately $13,800,000.

Major expenditures for 1963 and 1964 include $5,357,000 for Cool Water Steam Plant Unit #2; $831,000 for construction of 44.2 miles of 115 kv two-pole wood frame line from Cool Water Steam Plant switchyard to Kramer Substation; $245,000 for the rebuilding of 29 miles of 34.5 kv line from Inyokern Substation to Searles Switching Station; $476,000 for 115–34.5 kv Alessandro Substation near Sunnymead, California; $240,000 for purchase of 220 kv switchyard and bulk power station; and $275,000 for construction of a 115–34.5 kv regulated 10/12.5 mva substation in the Lucerne Valley area.

Written notice of the application has been given to the Public Utilities Commission of California, the Public Service Commission of Nevada and to the Governors of each of those States. Notice has also been given by publication in the Federal Register on November 7, 1963 (28 F.R. 11918), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before November 18, 1963, with the Federal Power Commission, Washington, D.C., 20426. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act subject to the jurisdiction of the Commission as heretofore determined and set forth in the Commission's order issued August 30, 1957, California Electric Power Company, Docket No. E–6770 (18 FPC 239).

(2) The proposed issuance of Promissory Notes in the aggregate principal amount of $20,000,000, all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

---

[1] The Commission, by order issued November 21, 1962 (Docket No. E–7063), authorized the Applicant to issue short-term notes in the aggregate principal amount of $20,000,000 during a period commencing October 31, 1962 and ending October 31, 1963 with maturities not to extend beyond January 31, 1964.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $20,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of the Section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes is exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(2) thereof.

(6) The proposed issuance of Promissory Notes, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(7) The period of public notice provided herein is reasonable.

The Commission orders:

(A) The proposed issuance of Applicant of Promissory Notes in the aggregate principal amount of $20,000,000, outstanding at any one time, upon the terms and conditions and for the purposes set forth in the application as amended, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the final maturity of all Notes to be issued pursuant hereto, being not later than January 30, 1965.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NOS. G–12153 AND G–15335; PERMIAN BASIN PIPELINE COMPANY, DOCKET NO. G–15336

ORDER APPROVING RATE SETTLEMENT, PRESCRIBING REFUNDS AND TERMINATING PROCEEDINGS

(Issued November 27, 1963)

The above docket Nos. G–12153 and G–15335 relate to rate proceedings arising from proposed increases in rates and charges tendered for filing by Northern Natural Gas Company (Northern) pursuant to Section 4 of the Natural Gas Act, Docket No. G–15336 relating to Permian Basin Pipeline Company was a filing for a rate increase for sales of natural gas to Northern. On December 30, 1960 Permian and Northern were merged, with Northern being the surviving corporation. The period during which the proposed increases in the dockets have been collected, subject to refund of excess charges, if any, is as follows:

Docket	Filing	Effective date of suspended rates	Periods covered
G–12153	Feb. 5, 1957	Aug. 27, 1957	Aug. 27, 1957–Nov. 27, 1958
G–15335	May 26, 1958	Nov. 27, 1958	Nov. 27, 1958–Dec. 27, 1959
G–15336	May 26, 1958	Dec. 1, 1958	Dec. 1, 1958–Jan. 1, 1960

The proceedings in the above-captioned dockets were consolidated for purposes of hearing and decision by notices issued September 2, 1960, and the hearing on these proceedings commenced on October 25, 1960, and was concluded on March 3, 1961. Briefs and reply brief were filed by Northern, the Commission staff and other interested parties; and the Examiner entered his decision on February 14, 1962. Exceptions to the Examiner's decision were filed by Northern, the Commission Staff and several of the intervenors. Oral argument was held before the Commission on April 26, 1962.

On July 2, 1962, the Commission issued its order remanding these proceedings for further evidence and directed Northern to submit evidence of the costs of Northern Natural Gas Producing Company, a wholly-owned subsidiary of Northern.

After prehearing conference, hearing on the remand proceeding commenced on May 7, 1963 and was concluded on May 21, 1963. Simultaneous briefs in this matter were filed by Northern, the Commission Staff and by intervenor Minneapolis Gas Company, and a reply brief was filed by Northern.

Upon request of Northern and some of the parties to these proceedings and pursuant to Section 1.18 of the Commission Rules of Practice and Procedure on September 24, 1963 and October 24 and 25, 1963, settlement conferences were held. As a result of the conferences all parties have agreed, subject to the Commission's approval, to a settlement and compromise of the above-dockets and all issues involved therein.

On November 4, 1963, Northern filed a document entitled "Proposed Settlement" and served copies thereof upon all interested parties. By notice issued November 6, 1963, all parties were notified by the Commission to submit any comments to the settlement proposal on or before November 18, 1963. No party has objected to the settlement proposal.

Briefly stated, the proposed settlement which is attached hereto as an exhibit provides as follows:

(1) Northern's jurisdictional cost of services for the period in Docket No. G–12153 is $122,623,571 and for the period in Docket Nos. G–15335 and G–15336 is $124,440,172.

(2) Northern's effective jurisdictional rates for the 15 month period from August 27, 1957 to November 27, 1958 will be reduced by 18.73¢ per Mcf on the demand charges, resulting in a reduction in jurisdictional revenues of $3,033,895 for the 15 month period. The refund amount of $3,033,895 for this period together with interest at 6 percent per annum shall be paid within 20 days from November 30, 1963, or within 20 days after the issuance of this order, whichever is later.

(3) Northern's effective jurisdictional rates for the 13 month period from November 27, 1958 to December 27, 1959 will be reduced by 35.3¢ per Mcf on the demand charges resulting in a reduction in jurisdictional revenues of $5,054,826 for the 13 month period. The $5,054,826 refund for the 13 month period together with interest at the rate of 6 percent per annum shall be made within 20 days from November 30, 1963, or within 20 days from the date of this order, whichever is later.

(4) Northern will pass on to its jurisdictional customers 82.15 percent of any refunds and interest received from its natural gas suppliers as a result of Commission decisions in any Section 4 proceedings applicable to the 28 month period ending December 31, 1959.

(5) The settlement will discharge and dispose of any remaining refund obligation in Docket Nos. G–13358, G–16447, and G–19065 involving ERS service.

(6) The agreement set forth in the Proposed Settlement is conditioned on acceptance by the Commission of all the terms of the proposed settlement.

The stipulation and agreement also contains reservations that no party to the proceeding is to be considered as agreeing with the cost of service determinations or allocations or with any principles underlying or supposed to underlie cost of service determination, rate making, allocation or refunds contained therein, and that no party to the proceeding shall be bound or prejudiced in any future proceeding by any part of the proposed settlement.

On October 4, 1957, September 26, 1958 and July 29, 1959, Northern filed application to render economy replacement service for the heating season following each filing. These matters were assigned Docket Nos. G–13358, G–16447 and G–19095, respectively. By letter orders of the Commission dated December 13, 1957, November 13, 1958 and October 16, 1959 the Commission granted Northern temporary authorization to render the service subject to the final determination of the contract demand rate in Docket Nos. G–12153 and G–15335. The Settlement refunds in the above captioned proceedings also settle and discharge all refund obligations in Docket Nos. G–13358, G–16447 and G–19095.

The Commission finds:

(1) The settlement of these proceedings upon the basis of the Proposed Settlement is reasonable, proper and in the public interest in carrying out the provision of the Natural Gas Act, and should be approved and made effective as hereinafter provided and ordered.

(2) The increased rates and charges contained in Northern's filings in these dockets and which were the subject of these proceedings have not been shown to be just and reasonable, or otherwise lawful under the Natural Gas Act, and should be disallowed and denied as hereinafter ordered.

The Commission orders:

(a) The settlement of these proceedings as set forth in the Proposed Settlement, is hereby approved and made effective as proposed therein and subject to terms and conditions hereinafter ordered.

(b) The increased rates and charges contained in Northern's tariff sheets referred to in paragraph (2) above are disallowed and denied.

(c) Within twenty (20) days after November 30, 1963 or within twenty (20) days after the date of this order, whichever date is later, Northern shall refund to its jurisdictional customers the principal amount of $8,008,720.09 with $2,329,487.75 in interest as provided in the Proposed Settlement.

(d) Northern shall comply with the provision of the Proposed Settlement relating to future refunds.

(e) Within twenty (20) days of making refunds in accordance with paragraphs (c) and (d) above, Northern shall report to the Commission in writing and under oath, the amount of the refund made to each customer, showing separately the amount of principal and interest so paid together with a computation showing the manner in which such refund was determined, and shall serve a copy of this report upon each customer receiving a refund.

(f) Upon compliance with the terms and conditions of this order, the proceeding in Docket Nos. G–12153, G–15335 and G–15336 are hereby terminated subject to the terms of paragraph (d).

(g) This order is without prejudice to any findings or orders which have been or may hereafter be made by the Commission, and is without prejudice to any claims or contentions which may be made by the Commission, Northern Natural Gas Company, or any affected party herein, in any proceeding now pending or hereafter initiated by or against Northern or any other company or person.

APPENDIX A

NORTHERN NATURAL GAS COMPANY

DEVELOPMENT OF REFUNDS TO JURISDICTIONAL CUSTOMERS AND ADJUSTMENT OF FILED RATES TO REFLECT SETTLEMENT AGREEMENT DOCKET NOS. G–12153, G–15335 AND G–15336

Line No.	Particulars	G–12153, 15 months ended 11–30–58	G–15335, G–15336, 13 months ended 12–31–59	Total

AREA PRICE LEVELS FOR SALES OF NATURAL GAS BY PRODUCERS, DOCKET NO. R-251

ORDER NO. 273

SEVENTH AMENDMENT TO STATEMENT OF GENERAL POLICY NO. 61-1

(Issued November 27, 1963)*

We have under consideration here amendment of the Statement of General Policy No. 61-1 issued September 28, 1960, 24 FPC 818 (18 CFR 2.56) to extend the applicable provisions of the Second Amendment to the policy statement, as amended, Order No. 264 issued March 27, 1963, in Docket No. R-234, 29 FPC 589, to other areas covered by the policy statement.

Under the Second Amendment the price level for increased rates in Texas District Nos. 2, 3, 4, and 6 is 14.6¢ per Mcf (at 14.65 psia), including present tax reimbursement, an increase of .6¢ per Mcf above the increased rate ceiling, where favored-nation and price redetermination provisions in existing filed rate schedules are eliminated, but specified periodic escalation provisions and provisions for future tax reimbursement are retained. If all price escalation clauses are eliminated except for provisions for future changes in tax reimbursement

*Published in the Federal Register on December 4, 1963 (28 F.R. 12865).

the area price level is 15.0¢ per Mcf (at 14.65 psia), an increase of 1.0¢ above the increased rate ceiling. We now believe that a similar adjustment should be made with respect to rate schedules involving sales in other areas covered by the policy statement, except the Permian Basin and Southern Louisiana areas with respect to which area rate proceedings are now in progress and excepting further Texas Districts Nos. 5 and 9 and the San Juan Basin where the area increased rate and initial rate ceilings are identical. (Dockets No. AR61–1 and AR61–2). Accordingly, the Statement of General Policy is amended as set out below.

The Commission finds:

(1) No notice or hearing is necessary under Section 4(a) of the Administrative Procedure Act.

(2) In view of the purpose, intent and effect of the amendment herein ordered, good cause exists for making it effective forthwith.

The Commission, acting pursuant to authority granted by the Natural Gas Act, as amended, particularly sections 4, 5, and 16 thereof (52 Stat. 822, 823, 830, 15 USC 717c, 717d, 717o), *orders:*

(A) Effective upon the issuance of this order, § 2.56, Part 2, Statements of General Policy and Interpretations, Chapter I of Title 18 of the Code of Federal Regulations, is amended as follows:

1. Designate as "(b)" the paragraph immediately preceding the existing paragraph (b) and renumber the existing paragraphs "(b)' 'and "(c)" as "(1)" and "(2)" respectively.

2. Add at the end of existing paragraph (c), renumbered (2), the following:

[Seventh Amendment]

(c) As a result of our continuing experience with the effects of favored-nation and price redetermination provisions upon independent producer prices, we conclude that extension of the applicable provisions of the Second Amendment to this Statement, set out in paragraph (b) hereof, to the areas set out below and to the extent there provided is desirable in the public interest, appropriate to carry out the provisions of the Natural Gas Act, and beneficial to ultimate consumers, pipeline purchasers and independent producers. To that end—

(1) For rate schedules from which all price escalations clauses are being eliminated except for provisions for future changes in tax reimbursement, the area price level for increased rates for natural gas sales by independent producers from the various areas covered herein is set forth in column B of the table below.

(2) For rate schedules from which all price escalations are being eliminated except for periodic escalation provisions as hereinafter specified and provisions for future changes in tax reimbursement, the area price level for increased rates for natural gas sales by independent producers from the various areas covered herein is set forth in column A of the table below: *Provided, however,* that such revised rate schedules may contain escalation clauses providing future separate increases in rate not in excess of one cent per Mcf (at 14.65 psia), the first such escalation not to be effective under the contract prior to November 1, 1968, and subsequent escalations to be effective under the contract at not less than five-year intervals thereafter.

3. Insert, immediately before the Note and Table which follows the existing paragraph (c), the following:

[Appendix referred to in Paragraph (a)]

4. Insert, to follow the existing table of area price levels, the following:

[Table referred to in Paragraph (c)]

Area	A (¢/Mcf) [1]	B (¢/Mcf) [1]
Oklahoma (Panhandle)	11.6	12.0
Oklahoma (other)	11.6	12.0
Kansas	11.6	12.0
Wyoming	*13.6154	*14.0256
Colorado	*13.6154	*14.0256
Northern Louisiana	*[2]16.3654	*[2] 16.7756
Texas District No. 1	14.6	15.0
Texas District No. 7-B	12.1	12.5
Texas District No. 10	11.6	12.0
West Virginia	**25.6276	**26.0461
Mississippi	*14.6154	*15.0256

*15.025 psia.
**15.325 psia.
[1] Rate includes present tax reimbursement, and unless otherwise indicated is at 14.65 psia.
[2] Although the announced increased rate ceiling of 14.0¢ does not include tax reimbursement, the rates listed here do include tax reimbursement.

[Secs. 4, 5, 16, 52 Stat. 822, 823, 830; 15 U.S.C. 717c, 717d, 717o]

(B) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NATURAL GAS COMPANIES—EMERGENCY PLANNING—INTERCONNECTIONS AND DEFENSE-RELATED EXPENDITURES, DOCKET NO. R-247

ORDER NO. 274

AMENDING THE COMMISSION'S GENERAL RULES AND REGULATIONS

(Issued November 27, 1963)*

The Commission has before it proposals to amend its regulations to provide for procedures with respect to the planning by natural gas pipeline and distribution companies related to defense emergency situations—particularly interconnections between systems and the accounting for defense-related expenditures.

On February 26, 1963, the President issued Executive Order 11095 (28 F.R. 1859, February 29, 1963) wherein he directed this Commission to cooperate with other interested governmental bodies in the preparation and implementation of national emergency plans and preparedness programs with respect to the natural gas and electric power industries.

The amendments to our rules incorporated in the notice of proposed rulemaking issued herein on September 5, 1963, and published in the Federal Register on September 11, 1963 (28 F.R. 9881) are aimed at carrying out this responsibility. They stem from discussions held as part of the continuing program of the Emergency Advisory Committee for Natural Gas established by the Department of the Interior with which the Commission has cooperated. In response to the invitation contained in the notice, comments and suggestions were received from a State public utility commission and a law firm which frequently appears in Commission proceedings. After careful consideration of the suggestions made

*Published in the Federal Register on December 4, 1963 (28 F.R. 12866).

we conclude, as more fully set out below, that the amendments should be adopted in the form proposed in the notice.

The State commission, commenting on the proposed § 2.60(b), which states that the Commission will consider "reasonable" investment in defense-related facilities to be "prudent investment" for ratemaking purposes, suggested its preference for a dollar limit on the amount a company could expend for such facilities without certificate authority. We believe any such restriction unnecessary. While we do not intend by the proposed regulation to give a blank check for inclusion in a company's rate base of unnecessary or extravagant facilities, the two questions involved in determining the appropriateness of including any particular installation—whether the facilities are defense-related and whether the expenditures therefor are reasonable—can, we believe, best be resolved in the light of the facts of a particular situation.

The other comment suggested that since we are indicating in the new § 2.60(c) that we will give consideration to requests to waive compliance with our accounting and reporting regulations by persons not otherwise subject to our jurisdiction who seek certificates to receive or deliver gas to a jurisdictional company during a *national* emergency, § 157.22 should be amended to provide specifically that no person shall be required to comply with the Commission's accounting and reporting requirements by reason of the emergency activities authorized by that section. Adoption of this suggestion would represent a complete reversal of Commission policy which has never by general rule exempted persons engaging in transportation operations subject to the Commission jurisdiction from compliance with the Commission's accounting and reporting regulations. We do not deem it in the public interest to do so now. However, there is nothing in our regulations to prevent a person who is engaging in operations pursuant to § 157.22, other than those operations during a national emergency already covered by the proposed § 2.60(c), from requesting the Commission to grant a waiver of the accounting and reporting requirements.

We are, therefore, adopting the amendments in the form proposed in the notice.

Upon consideration of the foregoing, the Commission *finds:*

The amendments herein adopted are necessary and appropriate to carry out the provisions of the Natural Gas Act and Executive Order 11095.

Acting in furtherance of the purposes of Executive Order 11095 and pursuant to the authority granted by the Natural Gas Act, as amended, particularly sections 4, 5, 7, and 16 thereof (52 Stat. 822, 823, 830; 56 Stat. 84; 76 Stat. 72; 15 U.S.C. 717c, 717d, 717f, 717o), the *Commission orders:*

(A) Part 2, General Policy and Interpretations, Chapter I of Title 18 of the Code of Federal Regulations, is amended by adding a new section to read as follows:

§ 2.60 Facilities and activities during an emergency—accounting treatment of defense-related expenditures.

The Commission, cognizant of the need of the natural gas industry for advice with respect to the applicability of the Natural Gas Act and the Commission's regulations thereunder regarding activities and operations of natural gas companies taking security measures in preparation for a possible national emergency, sets forth the following interpretation and statement of policy:

(a) *Facilities.* The definition of "auxiliary installations" in § 2.55(a) for which no certificate authority is necessary includes such defense-related facilities as (1) fallout shelters at compressor stations and other operating and maintenance camps; (2) emergency company headquarters or other similar installations; and (3) emergency communication equipment.

(b) The Commission will consider reasonable investment in defense-related facilities, such as those described in paragraph (a), to be "prudent investment" for ratemaking purposes.

(c) When a person, not otherwise subject to the jurisdiction of the Commission, files an application for a certificate of public convenience and necessity authorizing the construction of facilities to be used solely for operation in a national emergency for the delivery of gas to, or receipt of gas from, a person subject to the Commission's jurisdiction, the Commission will consider a request by such applicant for waiver of the requirement to keep and maintain its accounts in accordance with the Uniform System of Accounts for Natural Gas Companies (Parts 201, 204, and 205 of this chapter) or to file the annual reports to the Commission required by § 260.1 and 260.2 of this chapter.

(B) Paragraphs (a) and (d) of § 157.22 of the Commission's Regulations Under the Natural Gas Act, Subchapter E, Chapter I of Title 18 of the Code of Federal Regulations, are amended to read as follows:

§ 157.22 Exemptions of temporary acts and operations.

(a) Public interest does not require the issuance of a certificate for the construction and operation of facilities necessary to assure maintenance of adequate natural gas service where interruption or serious curtailment of service exists or it threatened because of failure of facilities or failure or curtailment of supply or unusual and unexpected demand on such facilities or supply, and where such acts and operations are limited to a single period of not more than sixty days or in the event a national emergency has been declared by the President, for six months or such further period as the Commission may, by order, allow.

* * * * * * *

(d) Emergency operations undertaken without certificate authorizations pursuant to paragraph (a) of this section shall be discontinued upon the expiration of the sixty-day period or in the national emergency, upon the expiration of the six months' period or any extension thereof ordered by the Commission, whichever is applicable, and all facilities installed for such temporary acts or operations shall be promptly removed and the Commission advised in writing and under oath within ten days following such discontinuance.

[Secs. 4, 5, 7, 16, 52 Stat. 822, 823, 830, as amended, 56 Stat. 84, 76 Stat. 72; 15 U.S.C. 717c, 717d, 717f, 717o]

(C) These amendments shall be effective upon the issuance of this order.

(D) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

INDEPENDENT PRODUCER PRICING AREAS—STATEMENT OF GENERAL POLICY NO. 61-1—REVISION, DOCKET NO. R-218

ORDER DEFERRING FURTHER CONSIDERATION OF PROPOSED CHANGES IN PRICING AREA BOUNDARIES FIXED UNDER STATEMENT OF GENERAL POLICY 61-1

(Issued November 27, 1963)*

On June 11, 1962, the Commission initiated a rulemaking proceeding, through the issuance of a "Notice of Proposed Revision of Boundaries", whereby it was proposed that a limited number of pricing area boundaries be changed from those now in effect under our Statement of General Policy No. 61-1.

*Published in the Federal Register on December 5, 1963 (28 F.R. 12945).

Mostly, the changes set out in the Notice were enlargements of present pricing areas to incorporate recently developed, though relatively minor, natural gas production being sold in interstate commerce. This involved production in parts of the Rocky Mountain, Appalachian, Arkansas and Alabama regions. An enlargement was proposed in the Oklahoma-Panhandle area to include specified counties. Additionally, the Texas Gulf Coast areas were to be consolidated, as were the Texas-New Mexico Permian Basin areas. The only changes which might have a significant immediate impact on current natural gas prices were those affecting the Oklahoma counties and the Texas Gulf Coast consolidation. New gas prices would have to be determined for these two consolidated production areas (as well as for the new areas) if they were established in the manner proposed by this proceeding.

Many comments have been filed with the Commission by interested parties. Our analyses of the problem, in the light of these comments has led us to the conclusion that the geographical and geological considerations on which these comments were largely based, can not and should not form the basis of any general revision of the area boundaries in the absence of additional information as to area costs and historical pricing patterns of the type we do not presently have, but are developing in pending area just and reasonable and in-line price determinations. We do not believe that pending the receipt of such information, this rulemaking proceeding should be terminated. Instead it should be held in abeyance until additional data become available with respect to individual pricing area production and exploration costs, including gasoline plant costs, which can be associated with the data already before us in this proceeding.

A substantial quantity of this type of data will be presented to the Commission (and be made available to the public) during the next twelve months, during which time more than 100 major producers of natural gas will complete and file cost and operations data requested by the Commission in the form of a general Questionnaire. These data will be particularly helpful inasmuch as they are with only a few minor exceptions being collected on the basis of the new areas as they are described in Docket No. R–218.

Accordingly, further consideration of changes will be deferred at this time. When production cost information becomes available, thereby adding a vital dimension requisite to any further refinement of area boundaries, we will reactivate this rulemaking proceeding. However, we would note the additional area proceedings being instituted concurrently, will allow for consideration and disposition of area boundary issues arising within the pricing areas consolidated for hearing in *Area Rate Proceeding* (Hugoton-Anadarko Area), Docket No. AR64–1 and *Area Rate Proceeding* (Texas Gulf Coast Area), Docket No. AR64–2.

The Commission orders:

Further consideration of Docket No. R–218 will be deferred and these proceedings will be held in abeyance pending the receipt and analysis of data filed by major producer respondents to the General Proceeding Questionnaire issued on November 1, 1963.

Commissioner O'Connor *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET. AL.; THE ATLANTIC REFINING COMPANY, DOCKET NOS. G–11904, G–17411, G–18399, G–18804, CI61–450, CI61–652, CI62–8, CI62–416, CI62–435 AND CI62–1276

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT PROPOSAL AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued November 27, 1963)*

On August 9, 1963, The Atlantic Refining Company (Atlantic) filed a motion for severance of the above-captioned Atlantic proceedings from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.* (hereinafter referred to as the Union Texas Proceeding), for approval of the attached settlement proposal and for the prompt issuance of certificates of public convenience and necessity in accordance with the applications and the settlement proposal.

The terms of the settlement proposal are similar to the terms of other settlements in the Union Texas Proceeding which have been approved by the Commission[1] and provide for maximum initial rates of 20.625¢ per Mcf[2] for sales from south Louisiana, effective August 1, 1963; a five-year moratorium on rate increase filings (subject to the usual exceptions); and extension of the make-up periods for take-or-pay gas to four years in all rate schedules which provide lesser make-up periods.[3]

In Docket Nos. G–18399 (R.S. 197) and CI61–652 (R.S. 222) the temporary authorizations heretofore issued to Atlantic contain conditions requiring that Atlantic refund amounts in excess of the prices of which the sales are certificated by the Commission. Atlantic proposes to make such refunds within ninety days after the date of issuance of the certificates herein requested. Atlantic proposes that the interest be computed at a rate of 6 percent per annum in Docket No. G–18399 and at 7 percent in Docket No. CI61–652, such interest to accrue through August 31, 1963.

Atlantic proposes that a certificate be issued in Docket No. G–11904, in accordance with the application and that the increased rate now in effect subject to refund and Commission determination in Docket Nos. G–12159, G–13440, G–16518, G–19536, RI61–131, RI62–77 and RI63–93 continue to be collected subject to the Commission's suspension orders in those proceedings and further proceedings and orders of the Commission. All of the foregoing rate proceedings relate to Rate Schedule No. 166 which underlies the application in Docket No. G–11904. Atlantic stated in its proposal, that the initial price in that docket is 17.8¢ per Mcf.

At the time Atlantic filed its certificate application in Docket No. G–11904, February 6, 1957, the sale in question was covered by the Operator's (Cities Service Production Company (Cities)) certificate issued in Docket No. G–2721

*Modification denied, 31 FPC 234.

[1] See orders issued August 7, 1963 (Humble Oil & Refining Company) and October 9, 1963 (Gulf Oil Corporation and Socony Mobil Oil Company, Inc.), in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979, respectively.

[2] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[3] See Appendix for further details.

on November 12, 1954, and Rate Schedule No. 1. The initial rate under that certificate was 17¢ per Mcf, even though the rate under Cities' Rate Schedule No. 1, in effect subject to refund in Docket Nos. G–9510 and G–11325, was 17.8¢ per Mcf. When Atlantic chose to file its separate application for a certificate of public convenience and necessity, its first rate filing, related to its application in Docket No. G–11904, was therefore treated as an increased rate, suspended and allowed to go into effect subject to refund in Docket No. 12159. There is no reason to now place Atlantic in a preferred position. Accordingly, the certificate issued in Docket No. G–11904 will be issued at an initial rate of 17¢ per Mcf and, as Atlantic proposes, the rates in effect subject to refund in the various rate proceedings enumerated above will continue to be collected subject to further orders in those dockets.

On September 10, 1963, the Philadelphia Gas Works Division of the United Gas Improvement Company (PGW) filed a letter with the Secretary of the Commission commenting on certain aspects of Atlantic's proposal. PGW noted (1) that the 17.8¢ per Mcf rate discussed above is a suspended rate in effect subject to refund; (2) that the interest rates which Atlantic proposes to pay on refunds does not conform with the Commission's policy and (3) that the proposal indicates a settlement price of 20.625¢ per Mcf for sales under Rate Schedule No. 261 despite the fact that the initial contract price is 20.3¢ per Mcf.

Atlantic filed a letter with the Secretary on September 18, 1963, in reply to the comments of PGW. As to points (1) and (3) above, there appears to be no disagreement between the parties. The comments filed by each are in accord with the treatment we shall give the settlement. Atlantic stated (as to point (1)):

> *First.* The Settlement Proposal includes no "settlement price" with respect to Rate Schedule No. 166. See Appendix A to the Settlement Proposal filed August 9, 1963. The initial delivery by Atlantic was at a price of 17.8 cents per Mcf, as reflected by the billing statement filed with the Rate Schedule No. 166. This price was suspended by the Commission in Docket No. G–12159.

and as to point (3):

> *Third.* With respect to Rate Schedule No. 261, the proposed settlement price should have been stated as 20.3 cents per Mcf, and Atlantic hereby indicates its willingness to accept 20.3 cents per Mcf.

As to point (2), Atlantic stated that its proposal is quite fair in this respect because the temporary authorization in Docket No. G–18339 permitting the sale covered by Rate Schedule No. 197 was issued on May 20, 1959, that no interest rate was specified in the refund condition, that the interest rate in effect under Section 154.102(c) of our Regulations concerning refunds under Section 4 of the Act at that time specified a rate of 6 percent per annum and that this interest rate was not changed until March 1, 1960. (23 FPC 474). Atlantic stated that the interest rate of 7 percent per annum applies only to orders issued after March 1, 1960, and that Atlantic should only be required to pay interest at the rate in effect concerning Section 4 refunds at the time it received its temporary authorization (6 percent).

The Commission's authority to require interest on amounts refunded under Section 7 of the Act is not dependent upon its authority under Section 4. The authority to require interest is inherent in our authority to issue certificates with refund conditions. The purpose of the interest requirement is to avoid unjust enrichment. *Texaco Inc.* v. *F.P.C.* 290 F. 2d 149, 157 (CA5 1961). It is fair and proper to measure this enrichment by the conditions existing at the time the deliveries were made. Although the interest rate provision under

Section 154.102(c) of the regulations concerns refunds under Section 4 of the Act, it also constitutes our best judgment of the interest to be assessed in the Union Texas Proceeding settlements as reflecting conditions existing at the time deliveries were made.

We are not persuaded that Atlantic should have a less onerous interest rate than the other producers who have submitted settlement proposals in the Union Texas Proceeding. Our orders approving these proposals have required that interest on amounts refunded attributable to deliveries made on and after March 1, 1960, be computed at a rate of 7 percent per annum and 6 percent per annum for the time prior thereto. Our approval of Atlantic's proposal will be conditioned upon Atlantic's paying interest computed in the same manner.

As noted above, Atlantic proposes that August 1, 1963, be the effective date of the rate reductions proposed herein and the date of the commencement of the five-year moratorium period. As we noted in our recent order conditionally approving other settlement proposals in this proceeding,[4] those applicants with later effective dates would stand to gain an advantage over those producers who have, in good faith filed earlier, because the Area Rate Proceeding, Docket No. AR61–2 will certainly be completed before the five-year moratorium here proposed expires. Accordingly, we shall approve this settlement upon the condition that the effective date for the rate reductions be April 1, 1963, and that the moratorium begin on that date.

In general, the proposal is in the public interest and we shall approve it subject to the following further reservations and conditions.

Since deliveries subsequent to March 31, 1963, have been made at rates above the settlement rates we shall require that the dollar amount representing such excessess be refunded with interest at the rate of 7 percent per annum. All interest required to be paid by this order shall accrue through August 31, 1963, the last day of the month in which the proposal was filed.

In the context of the proposal, we interpret the term "delivered" as used in paragraph 1. of the proposal to include gas required to be taken during the moratorium period but paid for and not taken and our approval is conditioned upon such interpretation.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settiment proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

With the exceptions noted below, the pipeline purchasers (listed in the Appendix) which will receive refunds and whose gas purchase costs will be reduced as a result of this settlement will flow the refunds through and make appropriate rate adjustments to reflect this settlement. United Gas Pipe Line Company's (United) rate case in Docket No. RP63–1 is presently pending before the Commission. Any adjustments in United's rates necessary to reflect this settlement can be made in that proceeding.

In order to avoid a situation in which a pipeline obtains and keeps the benefits of refunds and a reduction in gas purchase costs even though it may be, in the

[4] See orders issued August 23, 1963, and October 9, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 550 and 979, respectively.

absence of such refunds and reductions in gas purchase costs, earning a reasonable rate of return on invested capital, we shall require Trunkline Gas Company (Trunkline) to report to the Commission the amount of refund and interest that it receives as a result of this settlement, the estimated annual reductions in purchased gas costs, the proposed disposition of the refunds and the proposed rate adjustments, if any, to reflect the reduction in gas purchase costs. We shall require Trunkline to hold the refunds and amounts equal to the reductions in purchased gas costs which will accrue as a result of this settlement in a special account subject to further orders of the Commission.

In accordance with the above we shall sever these Atlantic dockets from the consolidated proceeding, Union Texas Petroleum, *et al.*, docket No. G–13221, *et al.*, omit the intermediate decision in regard to these dockets[5] and issue certificates of public convenience and necessity in accordance with the applications, settlement proposal and conditions of this order.

The Commission finds:

(1) The Atlantic Refining Company is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Atlantic is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that Trunkline be required to submit the reports and account for the refunds, interest and purchased gas cost reductions as ordered below.

(7) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motion for waiver of the intermediate decisions is granted.

(B) The matters in the Atlantic dockets listed in the caption to this order are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued to the Atlantic Refining Company upon the conditions set forth herein authorizing the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission neces-

[5] The hearings in the *Union Texas Petroleum, et al.*, consolidated proceeding concluded July 25, 1963.

sary therefor, as more fully described in Atlantic's applications and settlement proposal herein.

(D) The certificates issued by paragraph (C) above, are granted upon the express condition that Atlantic comply fully with the terms of this order and the settlement proposal, as modified, which settlement is expressly approved, under the conditions of this order.

(E) The certificates issued by paragraph (C) above are granted upon the express conditions that (1) the effective date of the proposed rate reductions and moratorium period commencement be April 1, 1963, (2) Atlantic, within 90 days from the date of issuance of this order, refund all amounts collected for gas delivered subsequent to March 31, 1963, in excess of that which would have been collected at the settlement rates, (3) Atlantic pay interest on all amounts refunded at a rate of 6 percent per annum on amounts attributable to deliveries made prior to March 1, 1960, and at a rate of 7 percent per annum on amounts attributable to deliveries made thereafter; such interest shall accrue through August 31, 1963 and (4) the initial rate in Docket No. G–11904 is 17¢ per Mcf.

(F) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal as modified, Atlantic shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchasers, showing separately the amount of principal and interest so paid and the bases used for such determination, together with releases from the purchasers showing receipt of the refunds in conformity with the settlement as approved.

(G) Upon full compliance of Atlantic with all the terms of this order and of the settlement proposal, Atlantic shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(H) The certificates herein issued are not transferable and shall be effective only so long as Atlantic continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(I) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(J) The grant of certificates herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Atlantic, particularly any proceedings under Sections 4 or 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, Applicant, the Commission staff, or any affected party herein in any other proceeding.

(K) Within 15 days from the date of receipt of refunds and interest required by this order, Trunkline shall submit a report to the Commission and serve a copy on its jurisdictional customers and the various state utility commissions wherein it does business, setting forth the amount of refund and interest received, the estimated annual reduction in purchased gas costs due to Atlantic's rate reduction, its proposed disposition of such refunds and its proposed rate adjustments to reflect the reduction in gas purchase costs. Pending Commission action and further orders respecting such proposed disposition and adjustments, Trunk-

line shall hold such refunds, interest and amounts equal to the reductions in purchased gas costs which accrue as a result of this settlement in a special account (without interest obligation).

APPENDIX

[1] Inclusive of tax reimbursement.
[2] The rate in effect at the time of filing this rate schedule was 17.8¢ per Mcf. This rate was suspended in Docket No. G-12159 and became effective subject to refund. The certificate herein issued provides for an initial rate of 17¢ per Mcf. All amounts above that rate are being collected and will continue to be collected subject to refund in the various rate proceedings listed in the body of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; KERR-McGEE OIL INDUSTRIES, INC., DOCKET NOS. G-16718, G-16719, G-19307 AND CI62-398; PHILLIPS PETROLEUM COMPANY, DOCKET NOS. G-16611, G-16612, G-18375, AND G-19714

ORDER GRANTING IN PART AND DENYING IN PART MOTION FOR RECONSIDERATION OF ORDER DENYING MOTION FOR SEVERANCE, FOR SHORTENED PROCEDURES, FOR APPROVAL OF SETTLEMENT PROPOSAL AND FOR ISSUANCE OF PERMANENT CERTIFICATES

(Issued November 29, 1963)

On July 5, 1963, Kerr-McGee Oil Industries, Inc. (Kerr-McGee) and Phillips Petroleum Company (Phillips) filed a motion for severance of the above-captioned Kerr-McGee and Phillips Dockets from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.* (hereinafter referred to as the Union Texas Proceeding), for shortened procedures, for approval of a settlement proposal and for issuance of permanent certificates of public convenience and necessity.

Objections to the motion insofar as it applied to Docket Nos. G-16611, G-16612, G-16718 and G-16719 were filed by the Jupiter Corporation (Jupiter) on July 12, 1963 and by Long Island Lighting Company (Long Island) on August 5, 1963. The Public Service Commission of New York (PSC) concurred in the objections of Long Island on August 5, 1963.

In view of the objections to the proposal and without determining the merits, we denied the motion for severance by order issued in these proceedings on August 23, 1963.

On September 16, 1963, Kerr-McGee and Phillips filed a motion for reconsideration of the Commission's order of August 23, requesting that we approve the settlement proposal over the objections of Jupiter, Long Island and PSC. Sub-

sequently, on October 3, Kerr-McGee and Phillips filed an amended and supplemental motion for reconsideration reiterating their request that we approve the settlement proposal over objections and in addition requesting that the settlement proposal be accepted and the motion for severance be granted insofar as they apply to Docket Nos. G–18375, G–19714, G–19307 and CI62–398, regardless of the action taken by the Commission in the dockets in which objections have been filed.

Upon consideration of this matter, we shall conditionally approve the settlement as it applies to the non-contested dockets and deny the motion for reconsideration insofar as it requests approval of the settlement proposal over the objections of parties. It would serve no purpose to sever contested proceedings from the Union Texas Proceeding only to have them contested in another proceeding.

With regard to the non-contested dockets, the terms of the settlement proposal are similar to the terms of other settlements in the Union Texas Proceeding which have been approved by the Commission [1] and to provide for maximum initial rates of 20.625¢ per Mcf [2] for sales from south Louisiana, effective April 1, 1963; a five-year moratorium on rate increase filings (subject to the usual exceptions); and extension of the make-up periods for take-or-pay gas to four years in all rate schedules which provide lesser make-up periods.[3]

As to Kerr-McGee's Rate Schedule No. 74 (CI62–398), Kerr-McGee has filed a rate increase from 20.75¢ per Mcf to 21.75¢ per Mcf. This increase was made effective June 1, 1962, subject to refund and Commission determination in Docket No. RI62–237. Kerr-McGee proposes to withdraw this rate increase filing and refund to the purchaser the difference between the amount actually collected by Kerr-McGee under Rate Schedule No. 74 and the amount that would have been collected at a rate of 20.75¢ per Mcf. Effective April 1, 1963, the rate under this schedule will be 20.625¢ per Mcf. Kerr-McGee proposes to pay interest on the amounts to be refunded under this provision at a rate of 7 percent per annum, such interest to accrue through March 31, 1963.

The temporary authorizations under which the Kerr-McGee and Phillips sales are presently being made do not contain express refund conditions and, except as noted above, Kerr-McGee and Phillips do not propose to make refunds of any amounts collected prior to April 1, 1963, the effective date of the proposed rate reductions.

In general, the proposal, insofar as it concerns the non-contested dockets, is in the public interest and we shall approve this aspect subject to the following further reservations and conditions.

Since deliveries subsequent to March 31, 1963, have been made at rates above the settlement rates we shall require that the dollar amount representing such excesses be refunded with interest at the rate of 7 percent per annum. In keeping with our present policy, we shall require that all interest required to be paid by this order and the settlement proposal shall accrue through July 31, 1963, the last day of the month in which the proposal was filed.

In the context of the proposal, we interpret the term "delivered" as used in paragraph 1 of the proposal to include gas required to be taken during the moratorium period but paid for and not taken and our approval is conditioned upon such interpretation.

---

[1] See orders issued August 7, 1963 (Humble Oil & Refining Company) and October 9, 1963 (Gulf Oil Corporation and Socony Mobil Oil Company, Inc.), in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979, respectively.

[2] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[3] See Appendix for further details.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

The Commission finds:

(1) Each of the Applicants is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales in Docket Nos. G–18375, G–19714, G–19307 and CI62–398, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefore, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) No party has opposed the waiver of the intermediate decisions in Docket Nos. G–18375, G–19714, G–19307 and CI62–398.

The Commission orders:

(A) The motion for waiver of the intermediate decisions in Docket Nos. G–18375, G–19714, G–19307 and CI62–398 is granted.

(B) The matters in docket Nos. G–18375, G–19714, G–19307 and CI62–398 are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued to Applicants upon the conditions set forth herein authorizing the sales of natural gas in interstate commerce for resale as proposed in Docket Nos. G–18375, G–19714, G–19307 and CI62–398 and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in Applicant's applications and settlement proposal herein.

(D) The certificates issued by paragraph (C) above, are granted upon the express condition that Applicants comply fully with the terms of this order and the settlement proposal, as modified, which settlement is expressly approved, insofar as it relates to the dockets set out in paragraph (C) above, under the conditions of this order.

(E) The certificates issued by paragraph (C) above are granted upon the express condition that Applicants, within 90 days from the date of issuance

of this order, refund all amounts collected for gas delivered subsequent to March 31, 1963, in excess of that which would have been collected at the settlement rates, and upon the further condition that Applicants pay interest on all amounts refunded at a rate of 7 percent per annum; such interest shall accrue through July 31, 1963.

(F) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal as modified, Applicants shall report to the Commission, in triplicate, the amount of the refunds made to the pipeline purchasers, showing separately the amounts of principal and interest so paid and the basis used for such determinations, together with releases from the purchasers showing receipt of the refunds in conformity with the settlement as approved.

(G) Upon full compliance of Applicants with all the terms of this order and of the settlement proposal, Applicants shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(H) The certificates herein issued are not transferable and shall be effective only so long as Applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(I) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(J) The grant of certificates herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Applicants, particularly any proceedings under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, Applicants, the Commission staff, or any affected party herein in any other proceeding.

(K) Upon full compliance of Kerr-McGee with the terms of this order, the proceedings in Docket No. RI62–237 shall be terminated.

(L) The motion for reconsideration filed by Kerr-McGee and Phillips on September 16, 1963, and amended and supplemented on October 3, 1963, is hereby denied except as hereinabove granted.

H. N. BURNETT, DOCKET NO. RI64–334

ORDER PROVIDING FOR HEARING ON AND SUSPENSION OF PROPOSED CHANGE IN RATE

(Issued November 22, 1963)

On October 23, 1963, H. N. Burnett (Burnett) [1] tendered for filing a proposed change in his presently effective rate schedule for sales of natural gas subject to the jurisdiction of the Commission. The proposed change, which constitutes an increased rate and charge, is contained in the following designated filing:

Description. Notice of change, date October 21, 1963.
Purchaser and producing area. Panhandle Producing Company, *et al.*[2] (West Panhandle Field, Hutchinson County, Tex.) (R. R. District No. 10).
Rate schedule designation. Supplement No. 2 to Burnett's FPC Gas Rate Schedule No. 4.
Effective date. November 23, 1963.[3]
Amount of annual increase. $5,220.
Effective rate. 10.0¢ per Mcf.[4]
Proposed rate. 11.0¢ per Mcf.[4]
Pressure base. 14.65 psia.

Burnett requests an effective date of September 17, 1963, for his proposed renegotiated price increase. Good cause has not been shown for waiving the 30-day notice requirement provided in Section 4(d) of the Natural Gas Act to permit an earlier effective date for Burnett's rate filing and such request is denied.

Burnett's proposed rate increase (from 10.0¢ to 11.0¢ per Mcf), relates to sweet gas being sold at the wellhead to a gasoline plant owned and operated by Panhandle Producing Company, *et al.*, (Panhandle) successors in interest to Frank C. Henderson Trust No. 2, and Elizabeth P. Henderson Trust No. 2. The residue gas, after processing, is resold at the plant outlet to Colorado Interstate Gas Co. in the West Panhandle Field, Hutchinson County, Tex. We consider the area ceiling to be applicable to the sales of residue gas by Panhandle after processing. Accordingly, Burnett's proposed increased rate, although not in excess of the increased ceiling for pipeline quality gas for Texas Railroad District No. 10 as set forth in the Commission's Statement of General Policy No. 61–1, as amended [18 CFR, Chapter I, Part 2, Section 2.56], should be suspended because the sale related thereto is considered to be for nonpipeline quality gas.

The increased rate and charge so proposed may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the Commission enter upon a hearing concerning the lawfulness of the proposed change, and that Supplement No. 2 to Burnett's FPC Gas Rate Schedule No. 4 be suspended and the use thereof deferred as hereinafter ordered.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure, and the

[1] Address is: c/o F. J. Corbin, First National Bank Bldg., Amarillo, Tex.
[2] Successors in interest to Frank C. Henderson Trust No. 2 and Elizabeth P. Henderson Trust No. 2.
[3] The stated effective date is the first day after expiration of the required 30 days' notice.
[4] Subject to a downward Btu adjustment.

Regulations under the Natural Gas Act [18 CFR, Chapter I], a public hearing shall be held upon a date to be fixed by notice from the Secretary concerning the lawfulness of the proposed increased rate and charge contained in Supplement No. 2 to Burnett's FPC Gas Rate Schedule No. 4.

(B) Pending such hearing and decision thereon, Supplement No. 2 to Burnett's FPC Gas Rate Schedule No. 4 is hereby suspended and the use thereof deferred until April 23, 1964, and thereafter until such further time as it is made effective in the manner prescribed by the Natural Gas Act.

(C) Neither the supplement hereby suspended, nor the rate schedule sought to be altered thereby, shall be changed until this proceeding has been disposed of or until the period of suspension has expired, unless otherwise ordered by the Commission.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington, D.C., in accordance with the Rules of Practice and Procedure [18 CFR 1.8 and 1.37(f)] on or before January 8, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

AMENDMENT TO PARTS 153 AND 157 OF SUBCHAPTER E OF THE RULES RELATING TO APPLICATIONS FOR AUTHORIZATION TO EXPORT OR IMPORT NATURAL GAS AND FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY UNDER SECTION 7 OF THE NATURAL GAS ACT AS AMENDED, DOCKET NO. R–133

ORDER TERMINATING PROPOSED RULEMAKING PROCEEDING

(Issued October 10, 1963)*

A notice in this proceeding, issued February 3, 1954 (19 F.R. 801), proposed the prescription of filing fees and other assessments in connection with applications for and authorizations granted pursuant to sections 3 and 7 of the Natural Gas Act. Views and comments of interested parties were received in response to the invitation in the notice, but the Commission has taken no further action on the proposal. The proceeding has become obsolete by the passage of time and, in any event, if the same or similar proposals are made in the future they will be initiated in a new proceeding.

The Commission finds:

Good cause exists to terminate this proceeding.

The Commission orders:

(A) Effective upon the issuance of this order, the proceeding in Docket No. R–133 is terminated.

(B) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

---

*Published in the Federal Register on October 16, 1963 (28 F.R. 11075).

[See Union Texas Petroleum, *supra*, p. 1310]

These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

In accordance with the above we shall sever these British-American and British-American (Operator), *et al.*, dockets from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, et al., omit the intermediate decision in regard to these dockets [5] and issue certificates of public convenience and necessity and amend the order issuing certificate in accordance with the applications, settlement proposal and conditions of this order.

The Commission finds:

(1) The British-American Oil Producing Company is a "natural-gas" company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) British-American is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued and the amendment granted as ordered below.

(5) The conditions attached to the certificates herein issued and the amendment herein granted are required by the public convenience and necessity.

(6) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motion for waiver of the intermediate decision is granted.

---

[5] The hearings in *Union Texas Petroleum, et al.*, consolidated proceeding concluded July 25, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP63-352

FINDINGS AND ORDER PERMITTING AND APPROVING ABANDONMENT OF FACILITIES AND ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 2, 1963)

On June 24, 1963, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP63-352 an application pursuant to Sections 7(b) and (c) of the Natural Gas Act for an order permitting and approving abandonment of certain main line natural gas facilities, and for a certificate of public convenience and necessity authorizing the construction, replacement and operation of certain main line natural gas facilities and the operation in interstate commerce of certain existing main line natural gas facilities, all as more fully set forth in the application in this proceeding.

Applicant filed on September 28, 1961, as amended on November 8, 1961, in Docket No. CP62-83, an application pursuant to Section 7(b) of the Natural Gas Act requesting permission and approval to abandon certain natural gas facilities on its Texas-Oklahoma system. That application was set for formal hearing. However, before the hearing was convened, the application in subject Docket No. CP63-352 was filed changing the proposal filed in Docket No. CP62-83 in substantial and material respects, and at the same time Applicant gave notice of its withdrawal of the application in said Docket No. CP62-83. No action having been taken with regard to this notice of withdrawal, the withdrawal became effective on July 24, 1963, by operation of Section 1.11(d) of the Commission's Rules of Practice and Procedure.

In 1960, Consolidated Gas Utilities Corporation (Consolidated) merged with Applicant[1] and Applicant thereby acquired (1) Consolidated's so-called "main line system" which begins a few miles inside Texas and traverses western Oklahoma in a northeasterly direction extending on into Kansas, and (2) Consolidated's so-called "Lawton Area System" which is a system in and around the Cities of Lawton, Duncan, and Chickasha, in southern Oklahoma. Approximately 20 percent of Applicant's total natural gas sales are from these two systems. The main line system and the Lawton Area system are not connected, and the problem of moving gas from the Lawton system to the main line system has existed for years. At the time of acquisition of the Consolidated properties, Consolidated had gas reserves attached to its main line system in the total amount of approximately 56,000 MMcf, with total annual market requirements on its main line system in the order of 22,000 MMcf. On its Lawton Area system, Consolidated had gas reserves in the total amount of approximately 220,000 MMcf, with annual market requirements of approximately 17,500 MMcf.

Although the Lawton Area system is not attached to the main line system, gas available to it in excess of the annual market requirements on that system had for some time been transported to Consolidated's main line system by Cities Service Gas Company (Cities Service) pursuant to an exchange agreement. Gas from the Lawton Area system is still being delivered to Cities Service at a point of connection in that area and returned to Applicant at re-delivery points at Blackwell, Oklahoma and Hutchinson, Kansas. Applicant's main line system continues to be vitally dependent upon this arrangement with Cities Service.

---

[1] FPC order issued July 27, 1960, in Docket No. CP60-79, 24 FPC 91.

However, the reserves attached to the Lawton Area system began to become depleted and Applicant launched a vigorous reserve acquisition program designed to build up the reserves directly attached to its main line system, resulting in the acquisition to date of 342,000 MMcf of additional proven, recoverable reserves.

Applicant contracted for sizeable amounts of gas reserves which the producers were agreeable to committing to interstate commerce. However, there were many other producers who insisted upon initial deliveries at firm intrastate prices but who indicated a willingness to commit their gas later for movement in interstate commerce. Accordingly, Applicant contracted for substantial volumes of gas to be delivered only in Oklahoma for at least two years. The two-year intrastate limitation clauses in these contracts expired in August 1963.

With its contractual limitations lifted, Applicant needs to make this gas available to its interstate system, but to do so it must have the authorization sought in the instant application.

The application reflects a planned general upgrading and reorganization of the facilities and operation of Applicant's Texas-Oklahoma-Kansas System acquired through the aforementioned merger. This program is in line with position changes of delivery points of major supply and needs for greater capacity brought about by normal system growth. In detail, Applicant seeks authorization to:

(1) Construct and operate a new 2400 HP compressor station near Enid, Oklahoma, on its Oklahoma-Kansas main line system, together with approximately 20.4 miles of new 12-inch pipeline extending in a northeasterly direction from said station to the "Hunter-Kremlin Junction" and a point of connection with the proposed 12-inch line described in (3) below;

(2) Construct and operate a new 12-inch pipeline river crossing on the Salt Fork River near Lamont, Oklahoma, as a replacement for two existing 8-inch river crossings, and construct and operate approximately 2.2 miles of 12-inch pipeline as a replacement for an equal length of old 8-inch line extending in a northerly direction from the north end of the proposed 12-inch line described in (3) below to a point of connection with Applicant's 10-inch Line A–4 near the Armour-Webb Field;

(3) Operate approximately 23 miles of existing 12-inch line extending in a northeasterly direction from the "Hunter-Kremlin Junction" to a point of connection with the proposed 2.2 miles of 12-inch line referred to in (2) above, together with connecting field laterals and gathering lines including approximately 55 miles of 4-, 6- and 8-inch supply laterals now attached to the main line system, all previously operated solely in intrastate commerce;

(4) Abandon its Twitty, Pitsch, Brick, Carpenter, Kellerville, Enid and Eagle City Compressor Stations together with Compressor Units Nos. 1 through 10 of its Hunnewell Compressor Station, all of which are either of inefficient and obsolete design or are now idle or will no longer be required when operating pressures are increased on the new facilities; and

(5) Abandon approximately 36 miles of 8-inch line extending from Enid to Deer Creek, Oklahoma, together with the 2.2-mile 8-inch portion of Line A–4, referred to in (2) above, none of which is necessary or capable of use in connection with Applicant's proposed 800-pound 12- and 10-inch pipeline facilities extending from its proposed Enid Compressor Station to its Hunnewell Station.

The estimated total cost of the proposals under the subject application is $3,315,000, to be financed by cash generated within the company and by short-term loans.

Applicant was granted temporary authorization on October 4, 1963, to construct and operate the facilities as applied for pursuant to Section 7(c) of the Natural Gas Act.

Pursuant to due notice, a public hearing was held in Washington, D.C., on November 13, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Arkansas Louisiana Gas Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the facilities as proposed by Applicant, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) The abandonment of the facilities hereinbefore described, as more fully described in the application in this proceeding, is subject to the provisions of Section 7(b) of the Natural Gas Act.

(7) The abandonment of facilities as proposed by Applicant is required by the public convenience and necessity and should be permitted and approved as hereinafter ordered.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Arkansas Louisiana Gas Company, to construct and operate natural gas facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) Permission for and approval of the abandonment by Applicant, Arkansas Louisiana Gas Company, of the facilities as hereinbefore described, all as more fully described in the application in this proceeding, be and the same are hereby granted upon the terms and conditions of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

J. B. MITCHELL, ET AL., DOCKET NO. RI60-282

ORDER DENYING OFFER OF SETTLEMENT

(Issued December 2, 1963)

On July 8, 1963, J. B. Mitchell, *et al.* (Mitchell), filed an Offer of Settlement pursuant to Section 1.18 of the Commission's Rules of Practice and Procedure. The offer relates to proposed increased rates of 17.24347¢ per Mcf,[1] designated as Supplement No. 6 to J. B. Mitchell, *et al.*, FPC Gas Rate Schedule Nos. 1 and 2, for sales of gas at 14.65 psia to Tennessee Gas Transmission Company (Tennessee) from Zim and Zim-Richaby Fields, Starr County, Texas (Railroad District No. 4). The proposed increased rates were suspended by Commission order issued April 27, 1960, and were subsequently made effective subject to refund under bond on September 28, 1960, in the above-entitled proceeding.

Under the terms of the Offer, Mitchell proposes settlement rates of 16.25¢ per Mcf less 1.25¢ per Mcf for dehydration and compression. In effect, Mitchell is requesting net settlement rates of 15.0¢ per Mcf. Mitchell also proposes to eliminate from the contracts comprising the subject rate schedules all favored-nation, price redetermination and periodic escalation clauses, and to also make all necessary refunds with interest. Mitchell claims that the proposed settlement rates apply to "pipeline quality gas", as required by the Statement of General Policy No. 61–1, asserting that the term as it is generally understood in the producing area involved herein means non-dehydrated gas of sufficient flowing pressure to enter the buyer's line at point of delivery. Thus, Mitchell's position is that any charge for dehydration and compression after the gas enters the buyer's line is a reduction in price and not a cost of making delivery.

We cannot accept Mitchell's position as to the meaning of the term "pipeline quality gas". The price levels for the area involved are considered to apply to the contractually provided price *before* any applicable deductions are taken. Any contractual deductions for dehydration or compression from the base price, such as recited above, are considered to be deductions for non-pipeline quality gas within the meaning of the Policy Statement. Accordingly, the proposed 16.25¢ per Mcf settlement rates, less 1.25¢ per Mcf for dehydration and compression, exceed the area price level set out in the Second Amendment,[2] and the Offer of Settlement should be denied.

Mitchell further requests that if the offer is denied, an early date to be set for a public hearing at which he be permitted to introduce cost-of-service data. In view of the Commission's announced intention to proceed on an area approach in producer cases, this request is denied. Of course, Mitchell will be permitted to submit its cost data in an area proceeding involving Texas District No. 4 for

---

[1] From each rate there is deducted 1.25¢ per Mcf for dehydration and compression by buyer.

[2] Issued by the Commission on December 20, 1960, 24 FPC 1107, as amended by Order No. 264 issued March 27, 1963, 29 FPC 589.

incorporation in the composite industry data of record in that proceeding. However, for the reasons indicated in our previous orders in Docket No. AR61–1, Mitchell's individual presentation would not be competent evidence in an area proceeding. We shall also re-examine in the applicable area proceeding our position, as set forth, that contractual deductions for dehydration or compression should be considered as deductions for non-pipeline quality gas.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act and the Regulations thereunder to deny Mitchell's Offer of Settlement filed with the Commission on July 8, 1963.

The Commission orders:

The Offer of Settlement filed by J. B. Mitchell, *et al.*, on July 8, 1963, in Docket No. RI60–282 is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

THE UNION WATER-POWER COMPANY, PROJECT NO. 2302

ORDER ISSUING LICENSE

(Issued December 2, 1963)

Application was filed on October 5, 1961 by The Union Water-Power Company (Applicant) of Lewiston, Maine, for a license under the Federal Power Act (Act) for constructed Project No. 2302 located on the Androscoggin River in Androscoggin County, Maine, in the towns of Lewiston and Auburn.

According to the application, in 1836, the Great Androscoggin Falls Mill Dam Locks and Canal Company was formed for the purpose of erecting and constructing dams, locks, canals, mills, etc., and undertook limited construction work of a permanent nature. In 1845 the name of the company was changed to Lewiston Water-Power Company which planned and commenced construction of the canal system, a log or timber crib dam having been constructed at the head of Lewiston Falls and which increased the total available fall to about 50 feet. The exact height of the dam and the date of its construction are not known but a dam was there in 1836 when the Great Androscoggin Falls Mill Dam Locks and Canal Company was formed. Construction work on the present canal system was started in the Spring of 1850. During 1850–51 the Main Gatehouse was constructed and 1,900 feet of the Upper Canal and all of Cross Canal #1 were excavated and walled. This system encompassed all the canal construction work undertaken by Lewiston Water-Power Company. Ownership of this property was transferred in 1857 to Franklin Company which extended the main canal to its present length, constructed the Lower Canal, Cross Canal #2 and Cross Canal #3. The wooden dam remained in service until 1862 when a section was washed out. Between 1862 and 1865, Franklin Company replaced the wooden structures with stone masonry structures. In 1956, a spillway section identified as Dam #5, was constructed replacing a previously existing bulkhead section of the dam.

The pool behind the dam has a surface area of about 200 acres at elevation 168.17 feet and extends about two and one half miles upstream from the dam. The project, as operated, provides water through a diversion canal system to several industrial users who generate electrical energy and use the water for

industrial purposes. The total installed capacity of the generating facilities in these plants is about 14,000 kilowatts. In addition, applicant has a 40-horsepower hydro-turbine at the project, and the mechanical power developed thereby is used in applicant's machine shop.

The Secretary of the Army and the U.S. Corps of Engineers have reported that the plans of the project structures affecting navigation are satisfactory insofar as the interests of navigation are concerned and the plans were approved pursuant to Section 4(e) of the Act.

The Department of the Interior recommended for inclusion in any license issued for the project certain conditions in the interest of fish life.

In its order issued July 24, 1958,[1] the Commission found that the Androscoggin River throughout its entire length is a "navigable water" as defined in Section 3(8) of the Federal Power Act and a "navigable water of the United States" within the meaning of Section 23(b) of the Act. The basis of this finding was that the Androscoggin River is presently, and for more than a century has been used for the transportation of logs and other forest products by water.

Applicant requests a 50-year license effective as of the date of its issuance. However, as we stated in our Opinion No. 357 pertaining to the Public Service Company of New Hampshire's Project No. 2288 at Gorham, New Hampshire (27 FPC 830, 834), if a company whose project has enjoyed three or more decades of unregulated operation were granted a full 50-year license term from date of issuance, it would reap a substantial benefit from its prolonged delay in filing. For the reasons set forth in Opinion No. 357, therefore, the license herein granted shall have a termination date of 1993. Since part of the dam was replaced by construction of a spillway section in 1956, we will make the license effective as of January 1, 1956.

The Commission finds:

(1) The project affects navigable waters of the United States.

(2) Applicant is a corporation organized under the laws of the State of Maine, and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a license.

(3) No conflicting application is before the Commission.

(4) The project does not affect a Government dam, nor will the issuance of a license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(5) The project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

(6) The amount of annual charges to be paid under the license for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(7) The exhibits described and designated in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of this license.

The Commission orders:

(A) This license is hereby issued to The Union Water-Power Company of Lewiston, Maine, under Section 4(e) of the Act for a period effective January 1, 1956 and terminating December 31, 1993, for the continued operation and maintenance of Project No. 2302 on the Androscoggin River, Maine, and affecting

[1] *New Hampshire Water Resources Board*, docket No. E-6807, 20 FPC 99-101.

navigable waters of the United States, subject to the terms and conditions of the Act which is incorporated herein by reference as a part of this license and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Project No. 2302 consists of:

(i) All lands constituting the project area and inclosed by the project boundary or the limits of which are otherwise defined, and/or interest in such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the licensee or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2302–1) General Map;

Exhibit K: Sheet 1 (FPC No. 2302–2) Detail Map of Reservoir; Sheet 2 (FPC No. 2302–3) Detail Map—Dams, Gatehouses, and Upper Section of Canal; Sheet 3 (FPC No. 2302–4) Detail Plan—Upper, Lower & Cross Canal; Sheet 4 (FPC No. 2302–5) Detail Plan—Upper Canal; and Sheet 5 (FPC No. 2302–6) Canal Profiles.

(ii) A dam comprised of four main sections of stone-masonry capped with concrete all equipped with removable steel pins to hold four feet of flashboards, a concrete section equipped with 16-inch flashboards, and a wasteway section built as part of one main section; a canal system comprised of an upper and lower canal connected by cross-canals; a reservoir, extending upstream about two and one half miles, having a surface area of about 200 acres at elevation 168.17 feet (USGS datum); a 40-horsepower turbine used to develop mechanical power; and appurtenant facilities; the location, nature, and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: Sheet 1 (FPC No. 2302–7) Typical Plan—Sections, Dams Nos. 1, 2, 3, 4, & 5; Sheet 2 (FPC No. 2302–8) Little Gate House—Cowan Weir; Sheet 3 (FPC No. 2302–9) Main Gate House; Sheet 4 (FPC No. 2302–10) Bates Weir—Androscoggin Weir; Sheet 5 (FPC No. 2302–11) Red Shop—Continental Weir; and

Exhibit M: Four typewritten pages, entitled "General Description and Specifications of Equipment and Appurtenances", filed in the Commission October 5, 1961.

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located upon the project area, and all rights and interests the possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3, November 1, 1963, 30 FPC 1658, entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States", which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The Licensee shall pay to the United States the sum of Fifty Dollars ($50.00) annually for the purpose of reimbursing the United States for the costs of administration of Part I of the Act; or such other amount as may hereafter be determined as necessary to reimburse the United States for the costs of administration.

Article 29. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational use

plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

(D) The exhibits described and designated in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP64-60

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 3, 1963)

On September 13, 1963, Colorado Interstate Gas Company (Applicant) filed in Docket No. CP64-60 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of measuring facilities to be used in the sale and delivery of natural gas to Plateau Natural Gas Company (Plateau), all as more fully set forth in the application.

The proposed facilities include:

1. an additional meter run on the site of Applicant's Security Sales Meter Station, El Paso County, Colorado—the gas to be resold by Plateau to the Subdivision of Widefield, El Paso County, Colorado;

2. enlargement of Applicant's Franktown metering facilities, Douglas County, Colorado—the gas to be resold by Plateau in the Towns of Elizabeth and Kiowa in Elbert County, Colorado;

3. a new meter station near Pritchett in Baca County, Colorado—the gas to be resold in the Town of Pritchett; and

4. a new meter station in Baca County, Colorado, on Applicant's main transmission line north of Morton Junction—the gas to be resold to irrigation customers in Baca County, Colorado.

Plateau proposes to purchase gas at Applicant's proposed new meter stations and sell it in the various communities listed above. With the exception of Widefield, the proposed facilities will make natural gas available for the first time to the above communities. In the case of Widefield, Plateau will be able to purchase gas at a wholesale price rather than at the retail rates it is presently paying to another supplier, the City of Colorado Springs.

The estimated cost of the proposed facilities is $19,520.00, to be financed from cash on hand.

Pursuant to due notice, a public hearing was held on November 12, 1963, respecting the matters involved in and the issues presented by the application herein. No protest or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware Corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale and delivery of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Colorado Interstate Gas Company, to construct and operate facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within thirty days from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. Charles R. Ross, Harold C. Woodward, and David S. Black.

MOUNTAIN FUEL SUPPLY COMPANY, DOCKET NO. CP63-258

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 3, 1963)

On September 23, 1963, Mountain Fuel Supply Company (Applicant) filed an application to amend the Commission's order, issued June 17, 1963, 29 FPC 1174, in Docket No. CP63-258, by authorizing Applicant to construct and operate 3.7

miles of 16-inch pipe in lieu of 3.7 miles of 24-inch pipe presently authorized by said order, all as more fully set forth in the application to amend.

The order of June 17, 1963, authorized Applicant to construct and operate, among other facilities, 3.7 miles of 24-inch pipeline in Weber Canyon, Utah, replacing and relocating a portion of a 14-inch line. Such replacement and relocation was due to the construction of Interstate Highway 80. The relocated line was to be constructed along a bench high above the canyon, and Applicant desired to install 24-inch pipe because it was understood that the bench would be too narrow to allow for the looping, at a subsequent time, of a smaller diameter pipe in the event that increased capacity would be required. It has now been determined that the bench will have sufficient room to permit looping in the future, if required.

Therefore, Applicant requests that the order of June 17, 1963, issued in the subject docket, be amended to permit the installation of 16-inch pipe.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on October 22, 1963 (28 F.R. 11288). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order, issued June 17, 1963, in Docket No. CP63-258 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued June 17, 1963, in Docket No. CP63-258 be and the same is hereby amended by authorizing Applicant to construct and operate 3.7 miles of 16-inch pipe in lieu of 3.7 miles of 24-inch pipe heretofore authorized by said order, all as hereinbefore described and as set forth in the subject application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NEVADA POWER COMPANY, DOCKET NO. E-6832

ORDER AMENDING ORDER FOR HEARING AND SUSPENSION OF RATE SCHEDULES AND INSTITUTING INVESTIGATION

(Issued December 3, 1963)

By order of July 9, 1958, the Commission suspended Supplement No. 1 to Nevada Power Company's (Nevada Power) Rate Schedules[1] FPC Nos. 1 and 2, and provided for a hearing. Since the date of the aforesaid order, Nevada Power has placed in effect a third rate schedule under its Schedule LGS providing for a sale for resale to Southern California Edison Company for a new service area in the Death Valley area designated in the Commission files as Nevada Power Company's Rate Schedule FPC No. 3.

Data currently available to this Commission indicate the need for a formal investigation concerning the lawfulness of Electric Rate Schedule Tariff "LGS",

[1] On June 1, 1961 the Company adopted its present name, prior thereto it was known as the Southern Nevada Power Company.

filed pursuant to Section 205 of the Federal Power Act by Nevada Power. The monthly demand charge is $1.65 per kw, and the energy charge, 7 mills per kwh for the first 100,000 kwh and 6 mills per kwh for all additional kwh. The rate schedule tariff contains a fuel clause based on 12,000 Btu per net kwh delivered. A discount of $.15 per kw of demand is provided for purchase at or above 33 kv.

The Commission finds:

Review and analysis of available office data indicate that the aforesaid rate schedules may result in excessive rates or charges or may be unduly discriminatory, unduly preferential, or otherwise unjust, unreasonable and unlawful within the meaning of the Federal Power Act. Additional factual data necessary for a resolution of those questions must be obtained. Accordingly, it is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206, 304, 307, 308 and 309 thereof, that the Commission enter upon an investigation concerning the lawfulness of Nevada Power's "LGS" Electric Rate Schedule Tariff which is embodied in Nevada Power's Rate Schedules FPC Nos. 1, 2 and 3 and the supplements thereto; and that Nevada Power be directed to submit cost and revenue data all in the manner as hereinafter provided.

The Commission orders:

(A) A public hearing shall be held concerning the lawfulness of Nevada Power's Rate Schedules Nos. 1, 2 and 3 and the supplements thereto at a time and place and in the manner all to be fixed by notice of the Secretary.

(B) Nevada Power shall file, on or before April 1, 1964, cost and revenue data, using 1963 as the test year, showing Nevada Power's costs of rendering service to each wholesale customer for resale under the rate schedules referred to in Paragraph (A) above, calculated in accordance with applicable Commission precedents.

(C) The foregoing showing shall not preclude or limit any additional showing by Nevada Power or others and shall be without prejudice to future action taken by the Commission or its staff, or to any future position Nevada Power or others may wish to take as to the significance of, or conclusions to be drawn from, the above factual showing.

(D) The foregoing showing shall be submitted in writing with sufficient copies to provide this Commission with six copies, to provide each State Commission affected with a like number of copies and to provide one copy each to all other parties as may be granted intervention in this proceeding.

(E) Notices of intervention or petitions to intervene in this proceeding may be filed with the Commission on or before December 23, 1963 in accordance with the Commission's Rules of Practice and Procedure (18 C.F.R. 1.8 and 1.37).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-54

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 3, 1963)

On September 3, 1963, Northern Natural Gas Company (Applicant) filed in Docket No. CP64-54 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the

construction during the calendar year 1964 and the operation of compression and pipeline facilities on existing gathering systems to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities proposed hereunder will not exceed a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Pursuant to due notice, a public hearing was held in Washington, D.C., on November 12, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization granted hereinafter, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects constructed pursuant to the authorization hereinafter granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate authorizations.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1964 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct during the calendar year 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate authorizations.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

BROWN COMPANY, PROJECT NO. 2311

ORDER ISSUING LICENSE (MAJOR)

(Issued December 4, 1963)

Application was filed on April 6, 1962 by Brown Company (Applicant) of Berlin, New Hampshire, for a license under Section 4(e) of the Federal Power Act (Act) for its constructed Project No. 2311, known as Gorham Hydroelectric Development, located on the Androscoggin River in the Town of Gorham in Coos County, New Hampshire.

According to the application, construction of the original dam and powerhouse was commenced in 1903 and completed in 1904 by Berlin Mills Company, which was the former name of Applicant. In 1921, the powerhouse was rebuilt by

replacing the original three generating units with the presently existing four 1,400-horsepower horizontal turbines, reconstruction of the penstocks and other minor additions. There have been no major changes in the project works since 1921.

The Gorham Hydroelectric Development, which is one of several being operated by Applicant on the Androscoggin River, has a total installed capacity of 6,400 horsepower. The energy generated by the project is used by Applicant in its mills located in the towns of Berlin and Gorham, New Hampshire.

In its order issued July 24, 1958,[1] the Commission found that the Androscoggin River throughout its entire length is a "navigable water" as defined in Section 3(8) of the Federal Power Act and a "navigable water of the United States" within the meaning of Section 23(b) of the Act. The basis for this finding was that the Androscoggin is presently, and for more than a century has been used for the transportation of logs and other forest products by water.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, advised that the project structures affecting navigation were considered satisfactory; that special terms and conditions in the interest of navigation were not considered necessary; and that the plans of the project structures affecting navigation had been approved pursuant to Section 4(e) of the Act.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license issued for the project a special condition in the interest of fishlife.

Applicant requests a 50-year license, effective as of the date of its issuance. However, as we stated in our Opinion 357 pertaining to Public Service Company of New Hampshire's Project No. 2288 at Gorham, New Hampshire (27 FPC 830, 833), if a company whose project has been operated for three or more decades without a license under the Federal Power Act were to be granted a full 50-year license term from date of issuance, it would reap a substantial benefit from its prolonged delay in filing. For the reasons set forth in Opinion No. 357, therefore, the license herein granted shall have a termination date of 1993. Since there was no project construction after 1935, we will make the effective date of the license July 1, 1958, the first day of the month in which we determined the Androscoggin River to be a navigable water, as set forth above.

The Commission finds:

(1) Applicant is a corporation organized under the laws of the State of Maine and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effectuate the purpose of a license for the project.

(2) No conflicting application is before the Commission. Public notice of the filing of the application has been given as required by the Act. No protests have been received.

(3) The issuance of a license as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(4) The project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

---

[1] *New Hampshire Water Resources Board*, docket No. E-6807, 20 FPC 99-101.

(5) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 6,400 horsepower.

(6) The energy generated by the constructed project is used by Applicant in its mills located in Berlin and Gorham, New Hampshire.

(7) The exhibits hereinafter designated and described in ordering paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Brown Company of Berlin, New Hampshire, under Section 4(e) of the Federal Power Act for a period effective as of July 1, 1958, and terminating December 31, 1993, for the continued operation and maintenance of the Gorham Development, Project No. 2311, located on the Androscoggin River, a navigable water of the United States, in Coos County, New Hampshire, subject to the terms and conditions of the Act, which is incorporated herein by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed under the provisions of the Act.

(B) Constructed Project No. 2311 consists of:

(a) All lands constituting the project area and inclosed by the project boundary or the limits of which are otherwise defined, and/or interest in, such lands necessary or appropriate for the purposes of the project, whether such lands or interest therein are owned or held by the licensee or by the United States; such project area and project boundary being more specifically shown and described by a certain exhibit which formed part of the application for license and which is designated and described as follows:

Exhibit J: (FPC No. 2311–1) General Map showing Plan View of Project Area.

(b) A timber-crib rock-fill dam surmounted with five foot flashboards, concrete wing walls and earth abutment sections; a gatehouse structure located adjacent to the timber dam at the head of the canal; a canal about 3,350 feet long with walls and bottom of riprap construction; a gatehouse and powerhouse located at the lower end of the canal with the powerhouse containing four 1,400-horsepower horizontal turbines each connected to a 1,200-kilowatt generator; a tailrace; step-up transformers, and appurtenant electrical and mechanical facilities; the location, nature and character of which are more specifically shown and described by the exhibit hereinbefore cited and by certain other exhibits which also formed a part of the application for license and which are designated and described as follows:

Exhibit L: General Design Drawings of Gorham Hydroelectric Development.

Exhibit M: Eleven typewritten pages, "General Description of Mechanical and Electrical Equipment", filed in the Commission April 6, 1962.

(c) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, in-

THE ARMY LIBRARY
Washington, D.C.

cluding such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3, November 1, 1963, 30 FPC 1658, entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States", which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof; and subject to the following special conditions set forth herein as additional articles:

Article 28. The Licensee shall pay to the United States the following annual charge:

For the purpose of reimbursing the United States for the cost of administration of Part I of the Act one (1) cent per horsepower on the authorized installed capacity (6,400 horsepower) plus two and one-half (2½) cents per 1,000 kilowatthours of gross energy generated during the calendar year for which the charge is made; or such other amounts as may hereafter be determined as necessary to reimburse the United States for the costs of administration.

Article 29. The Commission reserves the right to determine at a later date what additional transmission facilities, if any, should be included in the license as part of the project works.

Article 30. The Licensee shall within one year from the date of issuance of the license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G–4769, G–12948, G–17929 AND RP60–3

ORDER APPROVING RATE SETTLEMENT PRESCRIBING REFUNDS AND TERMINATING PROCEEDINGS

(Issued December 4, 1963)

The above dockets relate to rate proceedings arising from proposed increases in rates and charges tendered for filing by El Paso Natural Gas Company (El Paso) pursuant to Section 4 of the Natural Gas Act. The periods during which

the proposed increases in the respective dockets have been collected by El Paso, subject to refund of excess charges, are as follows:

Docket No.	Filing date	Period covered by suspended rate
G–4769	Oct. 14, 1954	Apr. 15, 1955–Dec. 31, 1957
G–12948	June 28, 1957	Jan. 1, 1958–July 31, 1959
G–17929	Jan. 28, 1959	Aug. 1, 1959–Aug. 24, 1960
RP60–3	Feb. 23, 1960	Aug. 25, 1960–

In the proceeding in Docket No. G–4769, hearings were held and the Commission issued its opinion and order on August 10, 1959.[1] On petitions for review the case went to the Fifth Circuit Court of Appeals and on August 2, 1960, the Court remanded the case to the Commission (281 F. 2d 567) for consideration of the limited issue of a fair return on El Paso's wellmouth rate base.

The Commission, by order issued June 20, 1961, consolidated the above-captioned four dockets for purposes of hearing and decision. Hearings commenced on July 24, 1961, and were concluded on June 5, 1962. Initial and reply briefs were filed.

During the hearing staff counsel on November 16, 1961 orally moved for application of the interim order procedure and waiver of the intermediate decision with respect to the issue of rate of return in the four dockets. The Commission, by order issued December 27, 1961, adopted the interim order procedure, omitted the intermediate decision and fixed dates for filing of briefs. On October 19, 1962, the Commission issued its opinion and order[2] finding the fair, just and reasonable rate of return to be allowed El Paso in these proceedings. This order directed an immediate payment of refunds in Docket No. G–4769 (in which the only remaining issue was rate of return) and an immediate interim reduction in rates for the future of 1.76¢ per Mcf, the amount calculated to reflect the effect of the rate of return determination.

Petitions seeking review of the Commission's determination on the issue of rate of return were filed in the United States Court of Appeals for the Fifth Circuit (Nos. 20180, 20203, 20336 and 20543). El Paso also filed a request for stay of the Commission's order. Such stay having been denied, El Paso filed revised tariff sheets reflecting the reduced rates (as to rate of return) to become effective as to deliveries of natural gas from and after December 1, 1962. On May 17, 1963, El Paso made refunds in Docket No. G–4769 in the total amount of $40,086,567.

The opinion and order issued October 19, 1962 specifically noted that rates and refunds there prescribed were subject to such further adjustments as might be required after further hearing on the other issues in the proceedings. Such issues were thereafter heard and briefed before the Presiding Examiner. No decision thereon was rendered during the pendency of settlement negotiations.

Conferences between the representatives of El Paso, the Commission staff and parties to the proceeding have been held from time to time to discuss settlement of the issues herein. Upon request of El Paso and after direct notice to all of El Paso's customers and the parties to the proceedings, further settlement conference was held on November 20, 1963. As a result of this conference all parties present have agreed, subject to the Commission's approval, to a settlement of the above dockets and all issues involved therein and all matters on appeal from said dockets.

---

[1] FPC Opinion No. 326, 22 FPC 260.
[2] FPC Opinion No. 366, 28 FPC 688.

On November 20, 1963, El Paso filed a document entitled "Stipulation and Agreement" with the Commission and served copies thereof upon all interested parties to the proceeding. Briefly summarized, the proposed stipulation and agreement which is attached hereto as an exhibit, provides in part, as follows:

(1) El Paso will tender for filing with the Commission within 10 days of the order approving the stipulation and agreement, revised tariff sheets acceptable to the Commission which will reflect for El Paso's Southern Division, effective as of November 1, 1963, a further reduction in rates of 1.54¢ per Mcf for all jurisdictional customers other than California and for California's customers a reduction in the demand rate of 46.8¢ for each Mcf of billing demand.[3]

(2) Within 30 days after the Commission order is issued approving the stipulation and agreement, El Paso will refund to its Southern Division customers the sum of one hundred fifty-five million dollars ($155,000,000.00), which includes $8,781,219 to El Paso's so-called "keyed non-jurisdictional" customers. This amount includes refunds received by El Paso from producers for gas purchased for the Southern Division prior to November 1, 1963 ($2,995,171.00) and includes refunds in the amount of $40,086,567 previously made on May 17, 1963 in Docket No. G-4769 and is to cover all claims with respect to principal and interest accumulated to November 1, 1963. El Paso will also refund the amounts collected since November 1, 1963 in excess of amounts which would have been collected under the aforementioned settlement rates. In addition, El Paso will refund as to all principal amounts such interest as may have accrued, at the rate applicable to the respective dockets, from November 1, 1963 to date of refund.

(3) El Paso agrees to refund to its Southern Division jurisdictional customers the jurisdictional portion of any refunds received from its gas suppliers or from the State of Texas if the Texas Dedicated Reserve tax is finally declared unconstitutional, whenever such monies are received by El Paso, to the extent that such refunds are applicable to gas volumes purchased for El Paso's Southern Division during the period commencing April 15, 1955, and ending on the first date on which a rate increase sought by El Paso's Southern Division becomes effective after the expiration of the moratorium period. However, this particular refund provision does not apply to any refunds from gas purchase increases becoming effective after November 1, 1963, unless El Paso files therefor, nor does it apply to any refunds from sources of supply connected to El Paso's system subsequent hereto. The agreement further provides that this proviso clause is not intended to limit any authority this Commission may exercise, nor any position which any interested party may take, in respect to the latter mentioned refunds.

(4) El Paso will file appropriate reductions in its rates to reflect any reductions in present rates for gas supplied to the Southern Division ordered by the Commission during the period commencing November 1, 1963 and ending with the first date on which a rate increase sought by El Paso becomes effective after November 1, 1965. However, El Paso may offset against such reductions any increase in cost of gas supplied for its Southern Division which may become effective during such period by order of the Commission.

(5) El Paso will make no rate increase filings for its Southern Division which will become effective before November 1, 1965; however, El Paso may apply for rate increases, limited to offset of net gas supplier rate increases

[3] These reductions are in addition to the 1.76¢ per Mcf reduction placed in effect on December 1, 1962, pursuant to Opinion No. 366.

to its Southern Division, aggregating more than $1,000,000, to become effective no sooner than January 1, 1965.

(6) El Paso pursuant to Commission order will reverse the depreciation accruals on its Southern Division and common-system properties during the period from January 1, 1958 through October 31, 1963, to reflect a 4.04% depreciation rate on production and gathering, products extraction and underground storage properties and a depreciation rate of 3.14% on transmission properties. The resulting amount (approximately $21,000,000) is to be excluded in computing the rate base of the Southern Division in any rate proceeding initiated by El Paso in which the rate may become effective prior to November 1, 1966. Commencing November 1, 1963, El Paso, pursuant to Commission order, will use a 3.92% depreciation rate on its entire gas production and gathering, extracted products and underground storage plant and a 3.05% depreciation rate on its entire gas transmission plant, and existing depreciation rates on all other depreciable gas plant.

Upon approval by the Commission without modification of the stipulation and agreement and payment by El Paso of the refunds, the appeals cases Nos. 20180, 20203, 20336 and 20543, now pending in the United States Court of Appeals for the Fifth Circuit will be withdrawn by the petitioners in these cases.

The stipulation and agreement also contains certain general provisions including, *inter alia*, a request by the parties that the Commission waive compliance with its Rules and Regulations to the extent necessary to effectuate all the provisions of the agreement; reservations that no party to the proceeding shall be bound or prejudiced by any part of the stipulation and agreement, unless it is approved without modification; and a reservation that none of the parties, nor any other affected person, is to be deemed to have approved, accepted, agreed or consented to any rate-making principle, or any method of cost of service determination, or any allocation underlying or supposed to underlie any of the rates or any of the refunds provided for in the settlement agreement.

The stipulation and agreement further provides that the provisions thereof shall not apply to any customer of El Paso who opposes the Commission's approval thereof, and that El Paso is not obligated to reduce it rates or make refunds, as provided in the stipulation and agreement to any such customer. The parties to the stipulation and agreement waive such rights as they might have to additional refunds and rate reduction and El Paso waives any rights it might have to the recovery of any part of the refunds and to rate increases, which might accrue should the Commission approval be reversed, remanded or otherwise set aside.

No objections to the proposed stipulation and agreement have been submitted.

The Commission finds:

(1) The proposed settlement of these rate proceedings upon the basis set forth in the stipulation and agreement attached hereto as an exhibit is appropriate and in the public interest in carrying out the provisions of the Natural Gas Act and should be approved and made effective subject to the terms and conditions hereinafter provided and ordered.

(2) The increased rates and charges contained in El Paso's filing in these dockets and which were the subject of these proceedings have not been shown to be just and reasonable, or otherwise lawful under the Natural Gas Act and should be disallowed and denied, as hereinafter provided and ordered.

(3) Good cause exists for the Commission to waive its applicable rules and regulations under the Natural Gas Act, in order that the tariff sheets to be filed under the stipulation and agreement may become effective November 1, 1963, as hereinafter ordered.

The Commission orders:

(A) The proposed increased rates and charges contained in El Paso's filings in these dockets are hereinabove first set out be and the same are disallowed and denied.

(B) The settlement of these proceedings upon the bases set forth in the stipulation and agreement (hereto attached and made a part hereof) is approved and made effective as proposed therein, subject to the terms and conditions hereinafter ordered.

(C) El Paso, within the time set forth in the aforesaid stipulation and agreement, shall refund to its customers the amount shown opposite such customer's name in Appendix A to the stipulation and agreement, plus such refunds as provided for in Article II, 2, and Article III, 2.

(D) El Paso shall comply with each of the provisions of the stipulation and agreement.

(E) Within 20 days of making refunds in accordance with the stipulation and agreement, El Paso shall report to the Commission in writing and under oath, the amount of the refund to each customer, showing separately the amount of principal and interest so paid together with a computation showing the manner in which such refund was determined and shall serve a copy of this report upon each customer, and shall submit to the Commission a copy of the release signed by such customer acknowledging receipt of the amount refunded.

(F) The 30-day notice provision of Section 154.22 of the Commission's Regulations under the Natural Gas Act is hereby waived and within 10 days of the issuance date of this order, El Paso shall tender with the Commission for filing revised tariff sheets, acceptable to the Commission, reflecting the reductions in rates for El Paso's Southern Division to be effective as of November 1, 1963, as provided for in the stipulation and agreement.

(G) Upon compliance with the terms and conditions of this order, the proceedings in Docket Nos. G–4769, G–12948, G–17929 and RP60–3 are hereby terminated subject to the terms of the stipulation and agreement as to all parties.

(H) El Paso shall reverse the depreciation accruals in its depreciation accounts during the period January 1, 1958 through October 31, 1963 under the conditions set forth in Article VII, 1, of the stipulation and agreement.

(I) El Paso shall, commencing November 1, 1963, use a 3.92 percent depreciation rate on its entire gas production and gathering, extracted products and underground storage plant, a 3.05 percent depreciation rate on its entire gas transmission plant, and existing depreciation rates on all other depreciable gas plant.

(J) Upon payment of El Paso of the refunds described in paragraph (C) above and as provided by the stipulation and agreement, the appeals in case Nos. 20180, 20203, 20336 and 20543, now pending in the United States Court of Appeals for the Fifth Circuit shall be withdrawn by the Petitioners in those cases.

(K) This order is without prejudice to any findings or orders which have been or may hereafter be made by the Commission and is without prejudice to any claims or contentions which may be made by the Commission, El Paso, the Commission staff, or any other party affected by this order, in any proceeding now pending or hereafter instituted by or against El Paso Natural Gas Company or any other persons or parties affected by this order.

SUNRAY DX OIL COMPANY, ET AL., DOCKET NO. G-4281, ET AL.

ORDER DENYING PETITION FOR AN ORDER STAYING PROCEEDINGS

(Issued December 4, 1963)

On October 14, 1963, Pan American Petroleum Corporation (Pan American) filed a petition requesting that the Commission issue an order staying the above-styled proceedings.[1] Pan American specifically requested that the Commission stay these proceedings pending the conclusion of *F.P.C.* v. *H. L. Hunt, et al.*, Case No. 273, and *F.P.C.* v. *Texaco Inc.* and *Pan American Petroleum Corp.*, Case No. 386, October Term, 1963, Supreme Court of the United States [decided March 30, 1964, 376 U.S. 515 and April 20, 1964, 377 U.S. 33, respectively]. In addition to staying these proceedings pending the final judicial determination of the above-noted cases by the Supreme Court of the United States, Pan American further requested that the stay be continued until such time as the Commission issues a notice specifying "the substantive issues on which evidence should be introduced herein with particularity sufficient to show the factual matters upon which Commission experience indicates evidence ought to be introduced."

We think that no useful purpose can be served by staying the above-styled proceedings pending the final judicial determination of those cases noted above that are presently before the Supreme Court of the United States. The issues presented in those cases are not similar to those presented here.

In *H. L. Hunt, et al.* v. *Federal Power Commission*, 306 F. 2d 334 at page 335 the Court recognized that the issue therein was whether the Federal Power Commission in granting a temporary certificate for the sale of natural gas at a designated initial price could lawfully impose a condition prohibiting the increase of such a price without the express approval of the Commission. The instant proceedings relate to the issuance of permanent certificates to numerous independent producers who seek permission to make sales of natural gas in interstate commerce for resale The Commission by it order of May 28, 1963, required that formal hearings be conducted with respect to the above-styled proceedings; hence, the parties to these proceedings will be afforded the opportunity to show whether or not any provisions in their gas-purchase contracts that might be challenged are required by the public convenience and necessity.

In *Texaco Inc., et al.* v. *F.P.C.*, 317 F. 2d 796, also pending review by the Supreme Court of the United States, as indicated above, the United States Court of Appeals for the Tenth Circuit at page 798 defined the issue in that case as "* * * the right of the Commission to reject summarily and without a hearing a gas-purchase contract between a producer and a pipeline company on the ground that the contract contains indefinite price-changing clauses forbidden by Commission regulations". The instant proceedings make provision for a hearing

[1] These proceedings were initiated by an order of the Commission issued on May 28, 1963. At a pre-hearing conference held on October 1, 1963, the Presiding Examiner fixed the following schedule in order to enable the parties to make preparations for the hearings contemplated by the Commission's Order of May 28, 1963:

December 6, 1963, as the date on which to mail all direct testimony;
December 20, 1963, as the date on which to mail rebuttal testimony;
December 27, 1963, as the date on which to mail motions to strike;
January 7, 1964, as the date on which to mail answers to motions to strike;
January 14, 1964, commencement of the formal hearing. (Tr. 118.)

on those issues involved therein and cannot be considered as summary action on the part of the Commission.

Pan American also requests that a stay be granted in these proceedings until the Commission issues a notice specifying the substantive issues on which evidence should be introduced herein with particularity sufficient to show factual matters upon which Commission experience indicates evidence ought to be introduced. We think the order of May 28, 1963, sufficiently specified the substantive issues.

Appendix A to the order of May 28, 1963, specified certain evidence that we thought would be helpful in arriving at an appropriate resolution to those issues raised by this order. The Commission also noted therein that this evidence was not intended to restrict the scope of any additional presentation that the parties may desire to make and that "* * * all of the parties will be given an opportunity to present evidence in order to show whether the Commission should allow Btu provisions to become fully effective, only partially effective or whether it should reject them completely." If Pan American feels that its interests in the resolution of these proceedings will best be served by presenting relevant evidence in addition to that specified by the Commission, it certainly is free to act accordingly.

Lastly, Pan American alleges that the Commission's May 28, 1963, Order is ambiguous with respect to the Docket No. R–200 involvement in these proceedings. Pan American points out that the parties do not have a basis to determine what additional evidence, if any, should be presented in these proceedings because of the Commission's comments with respect to Docket No. R–200 in its order of May 28, 1963.[2]

Our primary purpose in instituting these proceedings is to dispose of independent producer applications presenting a common issue with respect to provisions calling for upward Btu adjustment in producer contracts. It is our belief that this type of a provision has been generally confined to an area which includes the State of Oklahoma and some of the territory adjacent thereto. On May 22, 1961, the Commission issued its Notice of Proposed Rule-Making in Docket No. R–200 which covered the issue of upward adjustments in Btu provisions in producer contracts. Pursuant to the aforementioned Notice, the Commission has received many comments and views concerning the amendments proposed in the proceeding Docket No. R–200.

In light of the fact that the instant proceedings are focused solely on the necessity for and the propriety of these Btu provisions, we expect to obtain information in these formal proceedings that might be of benefit in resolving the gas energy level question raised in the Rule-Making proceeding in Docket No. R–200.

We have enlarged the scope of the instant proceedings to insure that different parties with varied points of view on the question of Btu adjustments would be afforded a full opportunity to present evidence and develop on the record their respective contention with respect to this issue.[3] It seems manifest that the evidence presented would differ materially depending upon the contention of the parties.

---

[2] The Commission's comments with respect to Docket No. R–200 in its order of May 28, 1963, were naturally restricted to amendments in that Rule-Making Order relating to the heating value of natural gas.

[3] The order of May 28, 1963, also makes these proceedings investigatory in nature as they were instituted pursuant to Sections 7, 14 and 16 of the Natural Gas Act.

The Commission finds:

The reasons and allegations relied upon by Pan American Petroleum Corporation in its Petition are not sufficient to warrant the stay requested by it.

The Commission orders:

That the Petition for a Stay of the above-styled proceedings filed by the Pan American Petroleum Corporation be and is hereby denied in all respects.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black

CITY OF TACOMA, WASHINGTON, PROJECT NO. 2016

ORDER EXTENDING TIME FOR COMPLETION OF PROJECT CONSTRUCTION

(Issued December 4, 1963)

The City of Tacoma, Washington, Licensee for Project No. 2016 on the Cowlitz River in Lewis County, Washington, filed an application on July 22, 1963, for amendment of its license to extend the time for completion of construction of the project to December 31, 1968.

The License as originally issued on November 28, 1951, provided for completion of this development by December 31, 1956. Due to litigation and general construction delays the completion date has been extended to April 1, 1965. The Licensee states that the additional time requested is necessary to provide time to design and prepare construction specifications, revise and update construction costs, economic and financial studies; relocation of highways; construction of access roads and preparation of construction sites; acquisition of reservoir lands; obtaining bid proposals and awarding of construction contracts for Mossyrock. In its request for extension the Licensee has also provided the following schedule for completion of the entire project:

Complete engineering studies, etc. on Mossyrock—April 1, 1964
Award general construction contract for Mossyrock—August 1, 1964
Close Mossyrock Diversion Tunnel—November 1, 1967
Complete Construction of Project No. 2016—December 31, 1968

The Licensee has also provided a "Schedule for Property Acquisition and Reservoir Clearing—Mossyrock Project" dated June 17, 1963 showing acquisition of the remaining 10,108 acres of the necessary 13,000 acres for the project site and reservoir area in five blocks, in five consecutive periods of seven months each, beginning in January of 1964.

The Commission finds:

In the circumstances recited above, it will not be incompatible with the public interest to grant a further extension as hereinafter provided.

The Commission orders:

(A) Article 28 of the license for Project No. 2016 is hereby modified to extend the time specified for completion of construction of the project works to December 31, 1968.

(B) The following additional article is hereby included in the license for Project No. 2016.

Article 36. The Licensee shall acquire the remaining lands necessary in accordance with the schedule dated June 17, 1963, entitled "Schedule for Property

Acquisition and Reservoir Clearing—Mossyrock Project," as prepared by Major Projects Division, Department of Public Utilities, City of Tacoma, which schedule is hereby approved and made a part of this license by reference.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed by the Licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

LONE STAR GAS COMPANY, DOCKET NO. CP64-72

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 5, 1963)

On September 23, 1963, Lone Star Gas Company (Applicant) filed in Docket No. CP64-72 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1964 and the operation of various lateral pipelines and related facilities to enable Applicant to take into its certificated main pipeline system natural gas which it will purchase from producers in the general area of its existing transmission system, at a total cost not to exceed $1,700,000, with the total cost of any single project limited to $425,000, all as more fully set forth in the application herein.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its existing pipeline system new supplies of gas in producing areas generally co-extensive with said system.

Pursuant to due notice, a public hearing was held in Washington, D.C., on November 19, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Lone Star Gas Company, a Texas corporation having its principal place of business in Dallas, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 11, 1944, in Docket No. G-442 (4 FPC 565).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, with 60 days after the expiration of the authorization granted hereinafter, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects constructed pursuant to the authorization hereinafter granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate authorizations.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1964 and the total expenditures for facilities to be constructed thereunder should be limied to a maximum of $1,700,000, with no single project to exceed a cost of $425,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Lone Star Gas Company, to construct during the calendar year 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producers certificate authorizations.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $1,700,000, with no single project to exceed a cost of $425,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

MAINE PUBLIC SERVICE COMPANY, DOCKET NO. E-6751

ORDER AUTHORIZING TRANSMISSION OF ELECTRIC ENERGY TO CANADA AND SUPERSEDING PREVIOUS AUTHORIZATION

(Issued December 5, 1963)

Maine Public Service Company (Applicant), incorporated under the laws of the State of Maine and doing business in that State, with its principal place of business at Presque Isle, Maine, filed an application on August 19, 1963, as supplemented September 3, 1963 for a supplemental order, pursuant to Section 202(e) of the Federal Power Act, authorizing a modification in the amount and rate of transmission of electric energy which Applicant is presently authorized to transmit from the United States to Canada.

Applicant is presently authorized, pursuant to Commission's order issued October 17, 1957 in this docket (18 FPC 504) to transmit electric energy from United States to Canada (1) in an amount not to exceed 30,000,000 kwh per year at a maximum rate of transmission of 20,000 kw for delivery to the New Brunswick Electric Power Commission (New Brunswick Commission) an instrumentality of the Province of New Brunswick, Canada, with its principal place of business in Fredricton, New Brunswick, over a 69 kv transmission line extending from Applicant's Flo's Inn switching station near Presque Isle to a point on the international border between the United States and Canada;[1] and (2) in an amount not to exceed 30,000,000 kwh per year without limitation as to the rate of transmission except insofar as such transmission is limited by the carrying capacity of the facilities used, for delivery to Applicant's wholly-owned subsidiary, Maine and New Brunswick Electrical Power Company, Limited (Canadian Subsidiary) over facilities located adjacent to Fort Fairfield, Maine and at other points on the international border between United States and Canada by means of Applicant's facilities located in the United States.[2] The amount of energy authorized to be exported by Applicant to its Canadian Subsidiary includes 26,000,000 kwh per year of energy generated in Canada by its Canadian Subsidiary and imported into the United States by Applicant for redelivery to its Canadian Subsidiary.

On December 31, 1962, according to the Application, the New Brunswick Commission expropriated all of the distribution facilities and most of the transmission facilities of the Canadian Subsidiary located in New Brunswick. The Canadian Subsidiary retained the ownership of its 10,040 kw hydroelectric and 1,000 kw diesel-electric generating plants both located at Tinker Dam, New Brunswick and now has only one customer, Andover and Perth Electric Light Commission, to whom it sells electric energy at wholesale for resale. All other areas previously served by the Canadian Subsidiary, except Clair and St. Hillaire, are now being served directly by New Brunswick Commission. Applicant continues to supply the requirements of Clair and St. Hillaire. It is anticipated that the New Brunswick Commission will serve the St. Hillaire load directly, beginning

[1] Facilities covered by Presidential Permit issued in Docket No. E-6752.
[2] Facilities covered by Presidential Permit issued in Docket No. IT-6027.

sometime in December, 1963, but that the Applicant will continue to supply the requirement of Clair for an indefinite period.

Applicant states that 5,100,000 kwh per year at a maximum rate of delivery of 1200 kw will be sufficient to serve the load of St. Hillaire and Clair until 1968. However, this energy will be supplied pursuant to a contract which provides (1) that Applicant will deliver to New Brunswick Commission, its power and energy requirements for these two areas, and (2) that the New Brunswick Commission will deliver to Applicant an equivalent amount of power and energy over the existing interconnection covered by the Permit in Docket No. E–6752.

Applicant will continue to transmit energy to its Canadian Subsidiary to serve the load of the Andover and Perth Electric Light Commission. The maximum electric energy requirements for this load until 1968 will be 8,200,000 kwh per year at a maximum rate of delivery of 8,200 kw. However, the Canadian Subsidiary will continue to transmit to Applicant 26,000,000 kwh per year of electric energy generated in its Tinker generating station. Part of this energy will be retransmitted to Canada to serve the Andover and Perth Electric Light Commission load and the balance will be utilized in Applicant's system. It is anticipated that the Tinker generating plant will eventually be operated primarily as a peaking plant and will be shut down during off-peak hours during which time the Canadian Subsidiary will be supplied by the Applicant from its own and/or New Brunswick Commission generation. Whenever the Canadian Subsidiary is unable to supply its full requirements because of extreme low water conditions, breakdown or other unavoidable outage of the Tinker generating plant, Applicant will use its best efforts to supply all or part of the Canadian Subsidiary requirements, but is not obliged to do so if it would impair service to Applicant's customers in Maine.

Applicant states that no change is necessary or requested regarding its present authorization to export a maximum of 30,000,000 kwh of electric energy per year at a maximum rate of transmission of not to exceed 20,000 kw to the New Brunswick Commission over facilities covered by the Permit issued in Docket No. E–6752. In this regard, Applicant reports that it has supplemented its interconnection agreement with the New Brunswick Commission with a surplus capacity agreement dated October 11, 1960, under which they will maintain 10% reserves in each system, buy surplus capacity, not to exceed 20,000 kw from one another to make up reserve deficiency, and plan the installation of additional generating capacity on a more economical basis as to timing, location, and size of units.

As a result of the proposed changes in operations, most of Applicant's connections at the border with the Canadian Subsidiary will be removed, others will be modified and some new facilities will be constructed. These changes and modifications are covered by an Amended Presidential Permit, Docket No. IT–6027, issued concurrently with this order.

Applicant requests that its authorization to export electric energy to Canada be modified in accordance with changes in operations outlined above and specified in its application.

Written notice of the application has been given to the Public Utilities Commission of Maine, and to the Governor of the State. Notice of the filing of the application has also been given by publication in the Federal Register on September 5, 1963 (28 F.R. 9708), stating that any person desiring to be heard or to make any protest with reference to the application, should on or before September 20, 1963, file with the Federal Power Commission, Washington, D.C., 20426, a petition or protest in accordance with the Commission's Rules of Practice and Procedure. No protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

The transmission of electric energy from the United States to Canada as limited herein and as hereinafter authorized, will not impair the sufficiency of electric supply with the United States and will not impede or tend to impede the coordination in the public interest of facilities subject to the jurisdiction of this Commission.

The Commission orders:

(A) Applicant is authorized to transmit electric energy from the United States to Canada, in accordance with the terms and conditions set forth in the application, and subject to the provisions of this order.

(B) The electric energy which Applicant is hereby authorized to transmit from the United States to Canada shall be:

(1) an amount not to exceed 5,100,000 kwh per year at a rate of 1,200 kw for delivery to the New Brunswick Commission at Clair and St. Hillaire, New Brunswick;

(2) an amount not to exceed 8,200,000 kwh per year at a maximum rate of 2,200 kw for delivery to Canadian Subsidiary, and

(3) an amount not to exceed 30,000,000 kwh per year at a maximum rate 20,000 kw for delivery to the New Brunswick Commission over facilities covered by the Presidential Permit issued in Docket No. E–6752.

(C) The electric energy authorized for delivery to the New Brunswick Commission at Clair and St. Hillaire is upon the condition that the New Brunswick Commission will return an equal amount of energy to the Applicant plus certain costs for transmission facilities and losses. Energy transmitted to the New Brunswick Commission or to Canadian Subsidiary for emergency purposes shall be limited to the amount of energy Applicant can make available at the time without impairing service to its customers in the United States.

(D) The transmission of electric energy to Canada authorized herein shall be over facilities specified in the Presidential Permit heretofore issued in Docket No. E–6752 and the Amended Presidential Permit issued concurrently with this order in Docket No. IT–6027.

(E) The authorization herein granted may be modified from time to time or terminated by further order of the Commission, but in no event shall such authorization extend beyond the dates of termination or expiration of the Permits referred to in Paragraph (D) above.

(F) Applicant shall conduct all operations, pursuant to the authorization herein granted in accordance with the provisions of the Federal Power Act and pertinent rules and regulations or orders issued by the Commission.

(G) Applicant shall install and maintain adequate metering equipment to measure the flow of all electric energy transmitted from, the United States to Canada, pursuant to the authority herein granted; shall make, keep and preserve full and complete records with respect to the movement of such energy; and shall furnish, in triplicate, a report annually, on or before February 15, showing for each month of the preceding calendar year (1) the quantity of electric energy transmitted to and received from New Brunswick Commission, together with the maximum rate of transmission and the consideration received therefor, and (2) the quantity of electric energy received from Canadian Subsidiary and the quantity delivered thereto together with the consideration received therefor.

(H) The authorization to transmit electric energy from the United States to Canada shall not be transferrable or assignable, but in the event of the involuntary transfer of facilities used for such transmission by operation of law (including such transfers to receivers, trustees or purchasers under foreclosure or

judicial sale), shall continue in effect temporarily for a reasonable time thereafter, pending the making of an application for permanent authorization and decision thereon, provided notice is given in writing to the Commission, accompanied by a statement that the physical facts relating to sufficiency of supply, rates, and nature of use remain substantially the same as before the transfer.

(I) This authorization shall be without prejudice to the authority of any State or State regulatory commission for the exercise of any lawful authority vested in the State or State regulatory commission over Applicant.

(J) This authorization is without prejudice to the authority of this Commission, or any other regulatory body, with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(K) Concurrently with the issuance of this order, the Amended Permit signed by the Chairman of the Federal Power Commission (Docket No. IT-6027), referred to in Paragraph (D) above, shall be issued and transmitted by the Secretary to the Applicant.

(L) The authorization herein granted shall supersede the authorization heretofore granted by Commission order issued October 17, 1957 (Docket No. E-6751, *et al.*).

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

MOUNTAIN FUEL SUPPLY COMPANY, DOCKET NO. CP64-55

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 5, 1963)

On September 4, 1963, Mountain Fuel Supply Company (Applicant), filed in Docket No. CP64-55 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 22 miles of 8⅝-inch pipeline extending from a central gathering point in Nitchie Gulch Field to a point of interconnection with Applicant's existing 8-inch pipeline in North Baxter Field, Sweetwater County, Wyoming.

Applicant has contracted with American Metal Climax, Incorporated, with Amax Petroleum Corporation and with Sohio Petroleum Company to purchase gas supplies totaling a minimum volume of 3,246 Mcf per day at a price of 15¢ per Mcf (at 15.025 psia). This gas is to be transported by means of the facilities herein proposed and will be used to offset declining deliverability from other producing areas committed to and presently supplying Applicant.

The total estimated cost of the proposed facilities is $441,000, which will be financed from internal sources and short term bank loans.

Pursuant to due notice, a public hearing was held in Washington, D.C., on November 21, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Mountain Fuel Supply Company, a Utah corporation having its principal place of business in Salt Lake City, Utah, is a "natural-gas com-

pany" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of March 9, 1943, in Docket No. G–313 (3 FPC 938).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Mountain Fuel Supply Company, to construct and operate the proposed facilities and to transport natural gas as hereinbefore described, all as more full described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The construction authorized in paragraph (A) above shall be completed and the facilities placed in actual operation, as provided by Section 157.20(b) of the Commission's Regulations under the Natural Gas Act, within 4 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SUNRAY DX OIL COMPANY, DOCKET NO. RI63–60

ORDER DETERMINING LEGALLY EFFECTIVE RATE AND PROVIDING FOR REFUNDS

(Issued December 5, 1963)

This proceeding was initiated by an order issued August 28, 1962, requiring Sunray DX Oil Company (Sunray)[1] to show cause, if any there be, why the Commission should not find and determine:

---

[1] Formerly Sunray Mid-Continent Oil Company.

(A) That Sunray is charging and collecting rates in violation of the Natural Gas Act and the Commission's Regulations thereunder;

(B) That this action by Sunray is a willful and knowing violation of the Natural Gas Act and the Regulations thereunder;

(C) That Sunray be required to collect the legally effective rate of 16.0¢ per Mcf and to refund, with interest, any amounts collected in excess of such effective rate, if any such amounts were collected, and report such amounts and facts relative thereto, to this Commission.

The facts leading to the issuance of the show cause order are hereinafter set forth.

The subject gas is sold under the terms of a contract dated November 7, 1955, between Carter Oil Company (now Humble Oil & Refining Company) and Natural Gas Pipeline Company of America. The sales are made at or near the wellhead in Camrick Field, Texas County, Oklahoma. Sunray ratified that contract by an agreement dated January 6, 1956. On April 30, 1956, Sunray filed an application for a certificate to make the sale (Docket No. G–10325), submitting therewith the ratification, the contract, and a billing statement reflecting a rate of 16.0¢ per Mcf plus Btu adjustment, which was the initial rate under the contract. The ratification and contract are designated as Sunray's Rate Schedule No. 114 and Supplement No. 1 thereto, respectively. Sunray's lease was pooled with other acreage (including Carter's, the operator) to form a single unit by order of the Oklahoma Corporation Commission. Sunray owns 12.5 percent of such unit. Sunray never applied for temporary authorization for this sale.

On January 14, 1957, Sunray filed a periodic increase of 0.2¢, from 16.0¢ to 16.2¢ per Mcf, under the subject rate schedule. The accompanying comparative statement of volumes and revenues showed Sunray's sales as beginning on March 21, 1956. The notice of change was designated as Supplement No. 2 to Sunray's FPC Gas Rate Schedule No. 114 and the proposed increased rate contained therein was suspended in Docket No. G–11992. On April 12, 1957, Sunray filed a notice of withdrawal of the suspended rate increase contending that is was erroneously filled since the rate schedule was not effective and no gas was being delivered thereunder.[2] By order issued May 9, 1957, in Docket No. G–11992, Sunray's Rate Schedule No. 114 and Supplement No. 1 thereto (providing for a 16¢ initial rate) were allowed to become effective as of March 21, 1956, and the proposed notice of withdarwal was rejected. The Commission pointed out, among other things, that Carter did not file to cover Sunray's interest. Sunray was thus put on notice by the foregoing order that the Commission did not consider Sunray's sale to be covered by the rate schedule of Carter or its successor, Humble. While the rejection of the withdrawal of the increase filing to 16.2¢ made possible its going into effect at the end of the statutory suspension period, Sunray did not make the necessary filing under Section 4(e) of the Act to place the increased rate in effect.

By order issued December 15, 1958, Sunray was given certificate authorization for the subject sale in Docket No. G–10325. This was accepted unconditionally by Sunray, along with a number of other certificates by letter of December 1, 1960, which was filed on December 7, 1960. The reason for the delay since the December 1958, authorization was that in the meantime the certificate applications, including Docket No. G–10325, had been involved in the litigation in *Sunray Mid-Continent Oil Company* v. *F.P.C.* (CA10, No. 6142), and the petition for review therein had been only recently dismissed.

[2] Sunray claimed its gas was being delivered under the operator's rate schedule.

By letter dated December 8, 1960, which was filed on December 13, 1960, Sunray submitted a revised billing statement purporting to reflect an initial rate of 16.8¢ per Mcf. Sunray asserted in the letter that their rate schedule would become effective upon deliveries of gas thereunder in January 1, 1961, and that the billing statement was submitted to reflect the initial price payable under the rate schedule as of that date. The revised billing statement was placed in the rate schedule, but was never formally accepted or rejected.

By letter dated July 25, 1962, Sunray submitted a purported two-step periodic rate increase of 0.4¢ per Mcf, from 16.8¢ to 17.2¢ per Mcf. The notice of change in rate, designated as Supplement No. 3 to Sunray's FPC Gas Rate Schedule No. 114, was suspended by order issued August 28, 1962 in Docket No. RI63–57 and the use thereof was deferred until January 26, 1963, at which time the increased rate was made effective subject to refund in the manner prescribed by the Natural Gas Act.

The Commission's show cause order resulted from the filing by Sunray of the proposed increased rate of 17.2¢ per Mcf which was suspended in Docket No. RI63–57. Sunray in its notice of change claimed that the underlying rate was 16.8¢ per Mcf. However, as indicated above, 16¢ per Mcf was the initial rate provided for under the contract comprising Sunray's rate schedule. The Commission in its order to show cause indicated:

> * * * The only manner in which Sunray could make effective an increased rate in excess of 16.0¢ per Mcf would be by a motion making effective the 16.2¢ per Mcf rate suspended in Docket No. G–11992, or by filings of increased rates above that figure pursuant to contractual authorization. Sunray's filing of Supplement No. 3 to its FPC Gas Rate Schedule No. 114 apparently indicates it is now charging a rate of 16.8¢ per Mcf without having filed a notice of change in rate, and in reliance only on a revised billing statement. The Natural Gas Act requires that any change in a rate or charges may only be made by filing a "new schedule". A billing statement is not a notice of change within the purview of the Natural Gas Act and the Regulations thereunder, and it appears that the 16.0¢ per Mcf rate is Sunray's presently effective rate.

Sunray filed an answer to the show cause order contending, among other things, that (1) Sunray's gas produced from the unit here involved prior to January 1, 1961, was sold and delivered to the purchaser by the operator, Carter (now Humble) pursuant to certificate authorization granted to Carter and pursuant to the terms and provisions of Carter's FPC Gas Rate Schedule No. 35 (now Humble's FPC Gas Rate Schedule No. 191); (2) Sunray's rate schedule did not become effective prior to January 1, 1961, because of lack of certificate authorization; and (3) Sunray's rate schedule became effective as of January 1, 1961, at a rate of 16.8¢ per Mcf, the applicable contract rate at that time, as reflected in its billing statement filed on December 13, 1960, pursuant to the certificate authorization granted by order issued December 15, 1958, in Docket No. G–10325 and Sunray's acceptance thereof on December 1, 1960.

No reference to Sunray's interest is made in either Carter's certificate application or the rate schedule filing relating thereto. It is therefore clear that Carter did not intend to cover Sunray's interest in its filings. Sunray, moreover, by filing its own certificate application and rate schedule negated any presumption that its interest might properly be covered by the operator's rate schedule. It is also clear that Sunray commenced service from the subject properties on March 21, 1956, as indicated in the original billing statement filed by Sunray. This is at least implicit in our May 9, 1957 order, wherein we rejected Sunray's

notice of withdrawal of its rate schedule, and accepted the rate schedule as of March 21, 1956.

We need not decide here whether the effect of the May 9, 1957 order was to grant temporary certificate authorization to Sunray for the instant sales as of March 21, 1956 or whether the effect of the December 15, 1958 order was to grant retroactive permanent authorization to Sunray effective as of March 21, 1956. In either event Sunray's rate schedule became effective as of March 21, 1956 at an initial rate of 16.0¢ per Mcf.

The contract filed by Sunray as a part of its certificate application in Docket No. G–10325 provided for an initial rate of 16¢ per Mcf. Sunray did not at any time seek to amend its certificate application to request a higher initial rate. It therefore cannot be reasonably argued that the Commission authorized in its December 15, 1958 order an initial rate higher than the one sought by applicant, even assuming *arguendo* that the Commission had the power to do so if it desired. Moreover, as previously indicated, Sunray was aware at least subsequent to the issuance of the May 9, 1957 order that the Commission did not consider Sunray's interest to be covered by Carter's rate schedule and that Sunray's rate schedule was deemed to be effective as of March 21, 1956 at an initial rate of 16¢. Accordingly, Sunray had no right under the instant certificate authorization to collect an initial rate in excess of 16.0¢.

Nor can the Commission's inaction with respect to the revised billing statement tendered by Sunray on December 13, 1960, purporting to reflect a 16.8¢ initial rate in any way alter the certificate authorization granted to Sunray. The amended billing statement could not effectuate an increase in the authorized initial rate of 16.0¢, for such submittal did not constitute a notice of change in rate within the meaning of Section 4 of the Act and the appropriate Commission Rules and Regulations. *Cf. Sunray Mid-Continent Oil Company* v. *F.P.C.*, 290 F. 2d 552 (CA10, 1961). A billing statement is merely an ancillary document attached to the rate schedule purporting to show the estimated sales and price to be charged for the first month of service in sufficient detail to show how the billing amount is determined. The initial rate was therefore not changed in accordance with the provisions of Section 4(e) until January 26, 1963, the date the 17.2¢ rate became effective subject to refund in Docket No. RI63–57.

In view of the above, we must conclude that Sunray's FPC Gas Rate Schedule No. 114 became effective as of March 21, 1956, and that 16.0¢ per Mcf was the legally effective rate thereunder at that time, and that such rate was not changed in accordance with the provisions of Section 4(e) of the Act until January 26, 1963, the date the 17.2¢ per Mcf rate became effective subject to refund in Docket No. RI63–57. It appears that Sunray has charged and collected a rate higher than the legally effective rate herein determined. We shall, therefore, require Sunray to refund, with interest, any amounts collected above the legally effective rate of 16.0¢ per Mcf between March 21, 1956 and January 26, 1963.

The Commission finds:

(1) The legally effective rate under Sunray's FPC Gas Rate Schedule No. 114 is 16.0¢ per Mcf from March 21, 1956 until January 26, 1963.

(2) Sunray should be required to refund, with interest, any amounts collected in excess of 16.0¢ per Mcf from March 21, 1956, until January 26, 1963, and to report such amounts and the facts relative thereto to this Commission.

The Commission orders:

(A) Within 90 days from the date of issuance of this order, Sunray shall refund to its purchaser the difference between the amounts collected from such purchaser pursuant to Sunray's FPC Gas Rate Schedule No. 114 and the rate

of 16.0¢ per Mcf for sales of gas from March 21, 1956, until January 26, 1963, together with simple interest to the date of refund at 6 percent on the excess collected prior to March 1, 1960, and interest at 7 percent on the excess collected thereafter. Sunray shall bear all costs incidental to the making of the refund.

(B) Within 120 days from the date of issuance of this order, Sunray shall report to the Commission in writing and under oath the details of its calculations resulting in refunds ordered pursuant to paragraph (A) above, together with a copy of release from its purchaser with respect to such refunds.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP64-63

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 5, 1963)

On September 16, 1963, Texas Eastern Transmission Corporation (Applicant) filed in Docket No. CP64-63 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1964 and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally co-extensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $5,000,000 and no single project will exceed a cost of $500,000. The proposed facilities will be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on November 19, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of facilities to take natural gas purchased from producers thereof as proposed by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization hereinafter granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization hereinafter granted, (d) location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $5,000,000 with no single project to exceed a cost of $500,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Texas Eastern Transmission Corporation to construct during the calendar year 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Texas Eastern Transmission Corporation.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) Applicant shall submit pursuant to Section 2.58(c) of the Commission s General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate applications.

(D) The authorization granted by paragraph (A) above is hereby limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $5,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NO. CP64–70

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 5, 1963)

On September 19, 1963, Texas Eastern Transmission Corporation (Applicant) filed in Docket No. CP64–70 an abbreviated application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing it to sell and deliver to Indiana Gas & Water Company an additional 408 Mcf per day of natural gas on a firm basis for resale and distribution in the City of Greensburg, Indiana and environs, all as more fully set forth in the application.

The application shows that a recent increase in both industrial and residential requirements necessitates the additional volumes requested. Applicant has adequate supply and capacity to render the additional service.

The sale and delivery will be made by means of presently authorized facilities and under Applicant's presently effective Rate Schedule DCQ–C.

Pursuant to due notice, a public hearing was held in Washington, D.C., on November 21, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Texas Eastern Transmission Corporation, a Delaware Corporation with its principal place of business in Houston, Texas is a natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The proposed transportation and sale of additional natural gas to Indiana Gas & Water Company by Applicant hereinbefore described, as more fully described in the application in this proceeding, will be in interstate commerce, subject to the jurisdiction of the Commission, and such proposed transportation and sale are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed transportation and sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's com-

pliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Eastern Transmission Corporation, to transport and sell natural gas as hereinbefore described all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3) and (e) of Section 157.20 of such Regulations.

(C) The sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within thirty days from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

ALABAMA-TENNESSEE NATURAL GAS COMPANY, DOCKET NO. RP63-15

ORDER ACCEPTING OFFER OF SETTLEMENT, DISMISSING PETITION FOR DECLARATORY ORDER, WAIVING REQUIREMENT, PERMITTING SUPERSEDING SERVICE AGREEMENT TO BECOME EFFECTIVE AND TERMINATING PROCEEDING

(Issued December 6, 1963)

Alabama-Tennessee Natural Gas Company (Alabama-Tennessee) filed petition for declaratory order herein on June 17, 1963, requesting resolution of issues in a dispute concerning service to one of its customers, the Gas Board of the City of Russellville, Alabama (Russellville).

The present service to Russellville was initiated by service agreements executed December 1, 1955 and February 20, 1962, providing respectively for service under Rate Schedule SG-1 and Rate Schedule I-1 as contained in Alabama-Tennessee FPC Gas Tariff. The pleadings, including Russellville's answer to the foregoing petition, raised issues, among others, as to the appropriate rate schedules for billing; as to the appropriate billing demand and whether Alabama-Tennessee could unilaterally cancel a service agreement.

The dispute and the issues raised, developed from a break in Russellville's line during the winter of 1962-1963 and from the taking by Russellville of daily volumes in excess of the 1,500 Mcf prescribed as the maximum volume in rate schedule SG-1 which pertains to small general service. Thereafter, continuing disagreements between the parties concerning their respective rights under the service agreements led to the filing of a suit by Russellville in a state court and by Alabama-Tennessee in a District Court of the United States.

On October 21, 1963, the parties filed with the Commission a proposed settlement agreement for the termination of their dispute. At the same time Alabama-

Tennessee filed notice of withdrawal of its petition for declaratory order, referring therein to the settlement agreement and to attached documents which indicate termination of litigation between the parties in the state and federal courts.

The settlement agreement provides, among other things, for termination of the service agreements for service under Rate Schedule SG–1 and Rate Schedule I–1 of Alabama-Tennessee's FPC Gas Tariff as of midnight on December 31, 1962. The foregoing schedules pertain respectively to Small General Service and to Interruptible Industrial Gas Service.

In lieu of the foregoing service which the settlement proposes to terminate, it proposes that a new service agreement for service under Rate Schedule G–1, dated January 1, 1963 and filed with the Commission on October 14, 1963, be made effective as of January 1, 1963. This rate schedule permits the taking of volumes in excess of the 1,500 Mcf peak-day limitation found in Rate Schedule SG–1.

Further, the settlement provides that Russellville's billing demand for the calendar year 1963, will be 1,800 Mcf; that billing will be at the rate prescribed under Rate Schedule G–1 and that the maximum daily obligation on January 1, 1964, and thereafter for the remaining term of the service agreement shall be 1,550 Mcf.

It appears that the settlement makes provision for a substantial reduction in the cost of purchased gas to Russellville as compared with its expenditures had a billing demand of 1,947 Mcf under Rate Schedule G–1 been employed for the calendar year 1963. At the same time the settlement conforms with the established operations of Alabama-Tennessee under its FPC Gas Tariff except for the above-identified means of adjusting the disputed charges for the period January 1, 1963, through December 31, 1963. It appears that the proposed settlement is devoid of prejudice to other persons and that the proposed settlement of the dispute is in the public interest.

Alabama-Tennessee requests that the thirty-day period of notice required by the Commission's Regulations under the Natural Gas Act be waived to permit the proposed service agreement to become effective as provided therein.

The Commission finds:

(1) The termination of this proceeding on the terms proposed and agreed upon by the parties in their settlement agreement as filed with the Commission on October 21, 1963, is in the public interest in carrying out the provisions of the Natural Gas Act. The settlement agreement should be accepted and made effective as hereinafter ordered.

(2) With respect to the effective date of the new service agreement, tendered to supersede two extant service agreements which provide for service under Rate Schedules SG–1 and I–1, the thirty-day notice period provided in Section 4(d) of the Act and in Section 154.22 (18 CFR 154.22) of our Regulations thereunder should be waived so as to permit the tendered service agreement providing for service under Rate Schedule G–1 of Alabama-Tennessee's FPC Gas Tariff to become effective as of January 1, 1963, subject to the terms of the settlement agreement; particularly those embracing adjustments of billing demand and rate of charge for the calendar year 1963.

(3) Alabama-Tennessee's petition for declaratory order should be dismissed.

The Commission orders:

(A) The termination of this proceeding on the terms set forth in the settlement agreement between Alabama-Tennessee and Russellville as filed with the Commission on October 21, 1963, is hereby approved and made effective, subject to the terms and conditions hereinafter ordered.

(B) The proposed cancellation of the service agreements entered into on December 1, 1955 and on February 20, 1962, providing respectively for service to Russellville under Rate Schedules SG–1 and I–1 of Alabama-Tennessee's FPC Gas Tariff is hereby approved and the above-identified service agreements are hereby terminated, effective as of midnight on December 31, 1962.

(C) The thirty-day period of notice provided in Section 4(d) of the Act and in Section 154.22 of our Regulations thereunder (18 CFR 154.22) is hereby waived with respect to the superseding service agreement dated January 1, 1963, providing for service under Rate Schedule G–1; the service agreement is permitted to become effective under Alabama-Tennessee's FPC Gas Tariff as of January 1, 1963, subject to the terms of the settlement agreement; particularly those embracing adjustments of billing demand and rate charge for the calendar year 1963.

(D) Alabama's petition for declaratory order is hereby dismissed and this proceeding is hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

THE CINCINNATI GAS & ELECTRIC COMPANY, DOCKET NO. E-7125

ORDER AMENDING ORDER TO SHOW CAUSE

(Issued December 6, 1963)

On November 18 and 27, 1963 Cincinnati Gas and Electric Company (Cincinnati Company) filed requests for an extension to April 15, 1964 of time within which to respond to an order to show cause issued September 4, 1963, 30 FPC 641, in the above matter and for a change in the test period of certain cost and revenue data from a split year 1963 to a calendar year 1963.

The Commission's September 4, 1963, order instituted an investigation into the lawfulness of certain rate schedules of the Cincinnati Company and required it to show cause why it should not file others, and provided for hearing. That order, Paragraph (C), directed the company to file on or before December 9, 1963, cost and revenue data showing Cincinnati Company's costs of rendering service to each wholesale for resale customer referred to in Paragraph (A) thereof, calculated in accordance with applicable Commission rulings and utilizing as the test period, the period beginning July 1, 1962 and ending June 30, 1963, showing both historical revenues and *pro forma* adjustments thereto, a prudent net investment rate base, and a fair rate of return thereon. Paragraph (B) of the same order required the company, also, on or before December 9, 1963, to respond to the show cause order in accordance with the Commission's Rules of Practice and Procedure.

The Commission finds:

It is appropriate for the purposes of the Federal Power Act, practicularly Sections 201, 205, 206, 304, 307, 308 and 309 thereof, that Paragraph (C) of the Commission's order issued September 4, 1963, in this docket be amended: (1) to change the date by which cost and revenue data must be submitted to April 15, 1964, and (2) to change the test period which shall be utilized from the 12 months' period ending June 30, 1963 to calendar year 1963; and that Paragraph (B) of the order be amended to require the Cincinnati Company to respond through Answer on or before April 15, 1964.

The Commission orders:

(1) Paragraph (B) of the Commission's order issued on September 4, 1963 in this Docket is hereby amended to read as follows:

(B) On or before April 15, 1964, Cincinnati Company shall respond to this order to show cause through Answer as provided in Section 1.9(c) of the Commission's Rules of Practice and Procedure, 18 CFR 1.9(c).

(2) Paragraph (C) of the Commission's order issued September 4, 1963 in this Docket is hereby amended to read as follows:

(C) Cincinnati Company shall file, on or before April 15, 1964, cost and revenue data showing Cincinnati Company's cost of rendering service to each wholesale for resale customer referred to in paragraph (A) above, calculated in accordance with applicable Commission rulings and utilizing, among other things, as the test period the calendar year 1963, showing both historical revenues and *pro forma* adjustments thereto, a prudent net investment rate base, and a fair rate of return thereon.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

DAIRYLAND POWER COOPERATIVE, ET AL., DOCKET NO. E-7113

ORDER DENYING MOTION FOR POSTPONEMENT

(Issued December 6, 1963)

Dairyland Power Cooperative, Minnkota Power Cooperative, Inc., South Central Rural Electric Cooperative, Inc. (Respondents), and the Intervenors in the above-entitled proceeding with the exception of the Secretary of Agriculture and the Public Service Commission of North Dakota, by joint motion filed December 2, 1963, request an indefinite continuance of the public hearing in this proceeding now scheduled to commence December 12, 1963. The motion was accompanied by the prepared written testimony and exhibits of the movants in support of their claims that this Commission is currently without jurisdiction over the Respondents as "public utilities" under Parts II and III of the Federal Power Act. This filing completed the filing of the testimony and exhibits of all parties to the proceeding.

In support of the motion are cited pending legislative proposals dealing with the question at issue in this proceeding. In addition the movants quote from the report of the Senate Committee on Appropriations which accompanied H.R. 8746 and urge that the quoted language is an "interdiction" to continuing this proceeding. The Committee's statement was as follows:

> The committee is advised that the Commission is seeking to assert jurisdiction over rural electric cooperatives. During the 27 years since passage of the REA statute, the Commission has not asserted general jurisdiction over such cooperatives.
>
> This assertion of jurisdiction has raised a number of questions concerning the responsibilities of the two Federal agencies involved, interpretations of the laws establishing them, and the intent of Congress concerning its actions on these and other related laws. It is the committee's opinion that any new assertion of Federal regulatory authority, especially as it conflicts with, or overlaps the field of another Federal agency, should be a matter for consideration by Congress.

> The committee, therefore, feels that no funds should be used by FPC to establish regulatory authority over REA cooperatives until the Congress has had an opportunity to consider appropriate legislation, such as the clarifying legislation which has been introduced in both the House and the Senate.

Considered in the light of the background of this matter, we cannot believe that the statement of the Committee on Appropriations was intended to be a direction to terminate the pending proceeding. Nor do we see how the proper discharge of our statutory responsibilities could be effected were we to suspend an administrative hearing because legislative proposals have been made which, if adopted, might abort the proceeding. Many times in the past, and in at least three other instances during the present Congress, legislation has been introduced which might affect or moot proceedings pending before this Commission. We have many other proceedings pending which the introduction of legislation might affect if we were to adopt such a policy.

As has been made clear in our previous orders, the present proceeding was instituted so that the Commission might re-evaluate previous holdings that cooperatives which owned or operated electric facilities for use in interstate commerce were public utilities within the meaning of Section 201(e) of the Federal Power Act. The earliest such holding concerning a particular cooperative was in 1947. In a recent proceeding, however, it was brought to our attention that the issue of our jurisdiction over cooperatives had never been tested in judicial proceedings. We immediately asked our General Counsel for a formal opinion on the subject. In addition we requested the opinion of the Rural Electric Administration and gave opportunity to file an opinion to counsel for a large group of cooperatives which felt they might be affected.

From the time we requested those opinions to the present date we have refrained from asserting any jurisdiction over any rural electric cooperative. It was for this reason that we did not list any cooperatives in our list of Class A public utilities subject to the Commission's jursidiction made public on July 1, 1963. Moreover, there are presently pending before the Commission several other proceedings in which if the Commission had followed past practice it would have required filings by certain interstate electric cooperative corporations.

The opinions received from the three sources mentioned above were in conflict. That of our General Counsel held that rural electric cooperatives were public utilities within the meaning of Section 201(e) of the Federal Power Act but concluded that this Commission did not have jurisdiction under the Act over the transactions by which many of the rural electric cooperatives have secured loans from the Rural Electric Administration. The other two opinions held that this Commission has no jurisdiction over any cooperative organization.

It was by reason of this conflict of opinions that the present proceeding was initiated. As we stated in our order of October 14, 1963, after citing numerous instances in which the Commission had held cooperatives to be public utilities:

> We wish to make it clear that the purpose of this hearing is to re-examine this question of jurisdiction on the basis of the record in this proceeding and that we do not consider the cited cases as necessarily controlling our decision herein.

It is true that the original order in this proceeding in terms directs the three named cooperatives to file certain information or rate schedules with the Commission in the event they are found to be subject to our jurisdiction. This was done, however, solely in order to assure that there would be a case, or controversy, which could be taken on appeal to an appropriate court in the event we concluded that one or more of the cooperatives were in fact subject to our juris-

diction. And we have made clear, and here reiterate, that pending final resolution of the jurisdictional issues here raised, we have no intention of asserting or exercising any jurisdiction over any cooperatives. We believe, for this reason and for the one set forth immediately below, that a continuation of the present hearing to re-examine the jurisdictional question is not inconsistent with the intent of the Senate Committee on Appropriations.

In the ordinary course of our proceedings, which include the hearing now scheduled for December 12, briefs thereafter to the presiding examiner, the initial decision by the presiding examiner, opportunity to file exceptions to the decision of the presiding examiner, oral argument before the Commission and the Commission's decision, there is no likelihood that our decision in this matter will be arrived at prior to September 1964. Thereafter, in the event we find that interstate cooperatives are public utilities within the meaning of the Federal Power Act, there will, of course, be opportunity for court review before our decision can become final. The continuation of the hearing should, therefore, in no way inhibit any consideration which the Congress may choose to give to the matter.

For the foregoing reasons we can find no basis on which to grant the motion for postponement. Full and extensive presentations have been filed on behalf of the Secretary of Agriculture and this Commission's staff, in addition to the case-in-chief of the cooperatives. Passage of time through an indefinite continuance of the hearing can only result in the outdating of material, possible future unavailability of witnesses and other consequences affecting the probative value of the testimony and exhibits now in the record. Indeed the motion does not request continuance on any ground other than the pending legislation, recognizing, perhaps, that we have already granted two extensions of time in which to prepare testimony and for the convenience of an intervenor's counsel in order to fully cooperate in building a sound and meaningful record upon which proper conclusions on the underlying legal issues may be reached.

The Commission orders:

The joint motion for postponement filed in the above-entitled proceeding on December 2, 1963, hereby is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NORTHERN STATES POWER COMPANY (MINNESOTA), DOCKET NO. E-7140

ORDER DIRECTING STAFF INVESTIGATION INTO WHOLESALE RATES

(Issued December 6, 1963)

Northern States Power Company (NSP-Minn.) a Minnesota corporation, with principal offices in Minneapolis, Minnesota, from time to time filed as rate schedules pursuant to Section 205 of the Federal Power Act: contracts for all requirements wholesale electric service to sixteen municipalities; contracts for supplemental wholesale service to ten municipalities receiving firm and supplemental power from the Bureau of Reclamation (Bureau); contracts for supplementary service to seven municipalities having their own generating plants; contracts providing for all requirements service to one rural electric cooperative; and contracts with 18 rural electric cooperatives providing for the delivery of

power from the Bureau over the facilities of either NSP-Minn. or others and for supplemental power; and certain other contracts. In some instances the various types of service are provided for in one rate schedule. The aforementioned services are provided for under rate schedules as designated in the files of the Commission and shown in Appendix A hereto.

Examination of the aforementioned rates schedules, particularly NSP-Minn.'s rates and charges including fuel cost adjustments and service conditions, indicates the need for further analysis thereof. Those and other matters bearing upon NSP-Minn.'s rate level and rate design make it desirable, in the interests of all consumers served by or through that Company, that the Commission staff conduct an investigation and study of NSP-Minn.'s electric utility operations, system costs, and rate and charges subject to this Commission's jurisdiction pursuant to Section 205 of the Federal Power Act affecting NSP-Minn's utility operations, including transactions with its affiliated Company, Northern States Power Company of Wisconsin, Eau Claire, Wisconsin.

It is anticipated that the Commission staff investigation as to NSP-Minn.'s rates and charges and its utility operations and system costs will require the submission by NSP-Minn. and others associated with NSP-Minn.'s services under the aforementioned rate schedules of cost, revenue, and other operating data, and such data will be requested by the staff or obtained by the staff through field studies. This Commission's rate regulatory jurisdiction over public utilities is continuous.

The Commission finds:

Review and analysis of available office data indicate that certain of NSP-Minn.'s Rate Schedules FPC Nos. 82, 89, 94, 98, 99, 100, 101, 102, 103, 104, 105, 106, 107, 108, 109, 110, 114, 115, 116, 117, 118, 119, 120, 121, 122, 123, 125, 126, 127, 133, 134, 137, 138, 140, 141, 142, 145, 146, 147, 148, 149, 150, 151, 152, 153, 155, 158, 159, 171, 172, 173, 174, 175, 176, 177, 178, 179, 180, 181, 182, 183, 184, 185, 186, 187, 188, 189, 190, 192, 193, 195, 196, 197, 198, 199, 200, 201, 202, 203, 204, 205, 206, 207, 208, 209, 210, 211, 219, 220, 221, 222, 223, 224, 225, 230, 231, 232, 233, 234, 235, 236, 237, 238, 239, 240, 241, 242, 243, 244, 245, 246, 247, 248, 249, 250, 251, 252, 253, 254, 255, 256, 257, 258, 259, 260, 261, 262, 263, 264, 265, 266, 268, 269, 275, 276, and 277 as supplemented and more fully described in Appendix A, may result in excessive rates or charges or may be unduly discriminatory, unduly preferential, or otherwise unjust, unreasonable and unlawful within the meaning of the Federal Power Act. Additional factual data necessary for a resolution of those questions must be obtained. Accordingly it is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206, 207 and 309 thereof, that the Commission staff conduct an investigation and study as set forth above and that a hearing be held as hereinafter provided.

The Commission orders:

(A) A public hearing shall be held concerning the lawfulness of NSP-Minn.'s wholesale rate schedules and supplements thereto enumerated in the aforesaid finding, at the time and place and in the manner all to be fixed by notice of the Secretary.

(B) NSP-Minn. shall file, on or before April 30, 1964, cost and revenue data, using 1963 as the test year, showing NSP-Minn.'s costs of rendering service to each wholesale customer for resale under the rate schedules enumerated in the findings above, calculated in accordance with applicable Commission precedents.

(C) The foregoing showing shall not preclude or limit any additional showing by NSP-Minn. or others and shall be without prejudice to future action taken by the Commission or its staff, or to any future position NSP-Minn. or others

may wish to take as to the significance of, or conclusions to be drawn from, the above factual showing.

(D) The foregoing showing shall be submitted in writing with sufficient copies to provide this Commission with ten copies, to provide each State Commission affected with a like number of copies and to provide one copy each to all other parties as may be granted intervention in this proceeding.

(E) Notices of intervention or petitions to intervene in this proceeding may be filed with the Commission on or before January 30, 1964, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8 and 1.37).

AREA PRICE LEVELS FOR SALES OF NATURAL GAS BY PRODUCERS, DOCKET NO. R-252

ORDER NO. 275

EIGHTH AMENDMENT TO STATEMENT OF GENERAL POLICY NO. 61-1

(Issued December 9, 1963)*

The Commission's Statement of General Policy No. 61-1 issued September 28, 1960, announced a price level of 18 cents per Mcf for initial sales in Texas District No. 2 (at 14.65 psia). The Statement of Policy specified that the price levels announced therein were to be "adjusted from time to time as such facts as may come before us compel such adjustments." The price level previously announced for District No. 4 was in fact adjusted by the Fifth Amendment to the Statement of General Policy on August 30, 1962, 28 FPC 441 (27 F.R. 8918), and

*Published in the Federal Register on December 14, 1963 (28 F.R. 13547).

the price level for District No. 3 was adjusted by the Sixth Amendment dated March 27, 1963, 29 FPC 590, (28 F.R. 3203).

The Commission in its Opinion No. 412 in the *Hunt* case issued this date, *infra*, p. 1438, has had occasion to re-examine the question of the in-line price in Texas District No. 2 immediately prior to September 28, 1960, in light of the subsequent court decisions dealing with the initial pricing question in producer certificate cases.

We have also reviewed the sales in District No. 2 subsequent to September 28, 1960. We have carefully re-examined the appropriate level of initial ceilings in this District in light of present conditions in the area giving due consideration to the applicable court decisions and the factors set forth in our original statement of policy.

Just as was the case in our revision of the ceiling prices in Texas Districts No. 3 and 4, our guiding purpose here is to arrive at a revised price which will enable the Commission to hold the line on new sales in this area at a level consistent with the public interest and, at the same time, to enable producers to obtain authorizations which provide them a reasonable basis for proceeding with their operations and furnishing needed supplies of gas. We conclude that, effective this date, the ceiling price level for initial sales in Texas District No. 2, inclusive of state taxes, shall be 16 cents per Mcf (at 14.65 psia). Accordingly,

The Commission finds:

(1) No notice or hearing is necessary under section 4(a) of the Administrative Procedure Act.

(2) In view of the purpose, intent and effect of the amendment herein ordered, good cause exists for making it effective forthwith.

The Commission, acting pursuant to authority granted by the Natural Gas Act, as amended, particularly sections 4, 5, and 16 thereof (52 Stat. 822, 823, 830, 15 U.S.C. 717c, 717d, 717o), *orders:*

(A) Effective upon the issuance of this order, the table in the note at the end of § 2.56, Part 2, Statements of General Policy and Interpretations, Chapter I of Title 18, Code of Federal Regulations, is amended by deleting the figure "18.0", the initial service rate for Texas District No. 2, and inserting "16.0" in lieu thereof.

[Secs. 4, 5, 16, 52 Stat. 822, 823, 830; 15 U.S.C. 717c, 717d, 717o.]

(B) The Secretary shall cause prompt publication of this order to be made in the Federal Register.

Commissioner Ross *concurring.*

Commissioners O'Connor and Woodward *dissenting.*

Ross, Commissioner, *concurring:*

Under normal circumstances, my decision as to a revision of the Policy Statement No. 61–1 would be based on policies enunciated in my dissents to the Fifth and Sixth Amendments to the Statement involving similar situations. In this case, since 15¢ per Mcf constitutes the in-line price found appropriate in a litigated proceeding involving Texas District No. 2, I would have amended the Policy Statement to prescribe a guide line price at the same level. However, without a concurrence in the instant order, there would be no majority and the clearly excessive rate of 18¢ per Mcf would remain in effect. Solely for this reason, I concur.

O'Connor and Woodward, Commissioners, *dissenting:*

For the same reasons expressed in *Hassie Hunt, et al.*, which led us to conclude that the in-line price for Texas Railroad District No. 2 sales prior to Septem-

ber 28, 1960, should be 16.0 cents per Mcf, we further conclude that effective upon the issuance of this order the guideline price for District No. 2 sales should be established at 17.0 cents per Mcf, as was previously established in Texas Railroad District No. 3.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CITIZENS UTILITIES COMPANY, PROJECT NO. 2306

ORDER DENYING APPLICATION FOR REHEARING

(Issued December 9, 1963)

On November 6, 1963, 30 FPC 1213, the Commission issued an order modifying and adopting the presiding examiner's initial decision granting a license to the Citizens Utilities Company, of Stamford, Connecticut (Citizens), for existing project works on the Clyde River, and a tributary, in Orleans County, Vermont. By its application, filed on November 14, 1963, Citizens requests rehearing on the same grounds advanced before the examiner and in its exceptions to the examiner's decision. After full consideration of the application for rehearing, we conclude that the arguments therein justify no change or modification in our order issued November 6, 1963, and that the applications should be denied.

The Commission further finds:

The assignments of error and grounds for rehearing set forth in the application for rehearing filed by citizens on November 14, 1963, of the Commission's order present no facts or principles of law which were not considered by the Commission when it issued its aforesaid order, or which having now been considered warrant any change or modification of the said order.

The Commission orders:

Citizens Utilities Company's application filed on November 14, 1963, for rehearing of the Commission's order issued herein on November 6, 1963, is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SALINA F. HILL, PROJECT NO. 945

ORDER ACCEPTING SURRENDER OF LICENSE (MINOR)

(Issued December 9, 1963)

Application was filed on September 24, 1963, by Salina F. Hill (Licensee) of Government Camp, Oregon, for surrender of the license for minor Project No. 945, located on Camp Creek, a headwater of the Sandy River, in Clackamas County, Oregon, and affecting lands of the United States within the Mount Hood National Forest.

According to the application, the project changed ownership and the new owner does not desire to operate the project. The Licensee's copy of the license instrument has been returned, and annual charges under the license have been paid through December 31, 1962.

The U.S. Forest Service has advised that: the power plant has not operated over three years; the facilities previously served by the project are now served by commercial power sources; the lands of the United States occupied by the project have been restored to a condition satisfactory to the Service; and the latter has no objection to our acceptance of surrender of the license.

The Commission finds:

Acceptance of surrender of the license for Project No. 945 is appropriate.

The Commission orders:

Surrender of the license for minor Project No. 945 is hereby accepted, effective as of December 31, 1962.

OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 9, 1963)*

Syllabus

1. Reaffirming *Skelly* and *Seaboard*, Commission *conditions* District No. 3 sales made under Pre-Policy Statement contracts at 16 cents; those in District 4 at 15 cents. P. 1441.
2. Evidence here does not offer basis for concluding that pre-policy levels must automatically prevail for post-policy contracts. P. 1442.
3. Citing *Skelly* Commission *severs* applications containing post-policy contracts for consolidation and further hearing with others involving like contracts. P. 1443.
4. Fact that parties chose to make a post-policy sale by ratifying pre-policy contract of different party cannot make the agreement retroactive to earlier [higher-priced] contract date. P. 1444.
5. Under instant circumstances Commission *rejects* contention that offshore production with onshore delivery entitles producer to higher price for gas—*distinguishing Socony Mobil*. P. 1445.
6. District No. 2 sales made under Pre-Policy Statement contracts conditioned at 15 cents. P. 1445.
7. Commission *issues* certificates of public convenience and necessity under Section 7 of the Natural Gas Act. P. 1447.

Commissioner Ross *concurring in part; dissenting in part.*

Commissioners O'Connor and Woodward *dissenting in part.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SWIDLER, *Chairman:*

This consolidated proceeding, arising under Section 7(c) and (e) of the Natural Gas Act, involves sixteen applications for permanent certificates of public convenience and necessity for sales of gas to Natural Gas Pipeline Company of America from five fields located in Texas Railroad Commission Districts No. 2, 3 and 4, that is to say, the Texas Gulf Coast.[1] The contracts, as initially submitted, each provide for an initial price of 20 cents per Mcf at 14.65 psia with four escalations of 2 cents per Mcf occurring at 4-year intervals. The only issue under contention throughout the proceeding has been the initial price at which the certificates should issue, all other elements having been resolved to the satisfaction of the participants.[2] The case is now before the Commission on joint exceptions filed by the producers to the presiding examiner's initial decision issued April 11, 1963, conditioning the certificates to provide for an initial price of 15 cents per Mcf for the sales in Districts No. 2 and 4, and 16 cents in District No. 3.

Certain of the sales are identifiable by the prefix letter "G" in their docket numbers while the remainder of the dockets carry a "CI" designation. The "G" dockets, which were established pursuant to applications filed July 31, 1959, for sales under contracts dated May 15, 1959, are before us for a second time. By orders issued July 1 and July 29, 1960,[3] permanent certificates were issued to those applicants on condition that the price for the District No. 3 sales be 20 cents per Mcf with a single 3-cent escalation after ten years and that the Districts No. 2 and 4 sales carry an initial price of 18 cents per Mcf with the original escalations. Acceptances of the certificates were filed by all producers and deliveries began. However, on June 15, 1961,[4] the Circuit Court for the District of Columbia ruled that the Commission had acted improperly when, on March 21, 1960, it denied intervention in the proceeding to the New York Public Service Commission (PSC).[5] Thereafter, by order issued November 2, 1961,[6] the Commission (1) set aside the orders granting permanent certificates to the "G" docket applicants, (2) issued temporary authorizations conditioned to the prices which had been approved, (3) imposed a general refund condition as to excess amounts thereafter collected, and (4) granted intervention to PSC in the reopened proceeding. The order also (5) required that the initial prices allowed in the

[1] Some of the sixteen are initial sales while others are applications to sell additional gas from the same fields. Each, however, was docketed separately and is treated independently for the purpose of this decision.

[2] Other than staff and the applicants the Public Service Commission of the State of New York was the only active party.

[3] *Peoples Gulf Coast Natural Gas Pipeline Company and Natural Gas Pipeline Company of America, et al.*, Docket No. G–19086, *et al.*, 24 FPC 1, 106.

[4] *Public Service Comm. of New York* v. *F.P.C.*, 295 F. 2d 140, cert. denied, 368 U.S. 948 (1961).

[5] Order denying application for rehearing issued May 5, 1960.

[6] 26 FPC 689, rehearing denied by order issued December 28, 1961, 26 FPC 930.

temporaries remain in effect until changed by Commission order, *i.e.*, that they not be escalated. Our order denying rehearing indicated that this was the "only action we could have taken" to protect the right of PSC to contest fully the initial prices. The applicants filed purported rejections of the temporary authorizations, contending that our order revoking their permanent certificates is invalid and that such certificates are still outstanding, and have petitioned for court review;[7] they also have attempted to break the order by filing for a price escalation. Our rejection thereof likewise has been taken to court.[8]

The hearing in the reopened proceeding began March 28, 1962, the "CI" dockets having been consolidated with the "G" dockets in the interim. Applicants' direct presentation continued through April 3, 1962, during which period they presented nine witnesses who sponsored 142 exhibits. The bulk of these exhibits consisted of company-wide cost-of-service presentations and supporting engineering material for four of the twelve applicants,[9] utilizing various test years and predicated on differing theories of cost allocation. Other exhibits involved such items as trends in exploration and developmental drilling costs, unit cost and revenue trends, costs of transporting the gas beyond the wellhead to the point of sale, and a variety of reserve information. On May 31, 1962, the examiner, ruling on motions by staff and PSC excluded all of the system-wide cost-of-service and related exhibits on the ground that they have no probative value as an evidentiary standard for the purpose of determining initial price or prices to meet the test of the public convenience and necessity for the gas involved in this proceeding. The examiner's ruling was upheld by us on appeal by order issued July 19, 1962. The exclusion of this type of evidence from proceedings under Section 7 has more recently been affirmed in the *Skelly*[10] and *Texaco Seaboard*[11] cases and particularly in the *Placid Oil Company*[12] opinion, where we held that "economic and financial evidence, whether on an individual company or on an area-wide basis and whether of the type characterized as cost-of-service studies, cash flow studies, demand-supply, cost, profit and market price trends, area cost-revenue trends, comparative well cost data and gas replacement costs, plays no part in and is irrelevant to the determination of the initial price question in independent producer certificate cases." The decisions in *Atlantic Refining Co.* v. *F.P.C.*, 316 F. 2d 677 (CADC, March 21, 1963) and *California Oil Co.* v. *F.P.C.*, 315 F. 2d 652 (CA 10, March 28, 1963) affirm our use of sales prices in the area as the basis for fixing the initial prices in certificate cases and indicate that evidence as to financial position and costs of production are not requisite

considerations. Applicants'[13] exceptions to the exclusion of its cost evidence is rejected for the reasons set out in the foregoing cases.

The initial decision by the examiner relies almost entirely upon a staff price exhibit (No. 236) recounting the various sales permanently certificated and temporarily authorized in Districts No. 2, 3 and 4 as of April 15, 1962, and the decisions in *Skelly* and *Texaco Seaboard* to find that the "in-line" prices should be the same as determined in those decisions, 15 cents in District No. 4 and 16 cents in District No. 3. Turning to the two sales in District No. 2,[14] where an "in-line" price had not yet been determined by the Commission, the examiner concluded on review of the staff exhibit that these sales should be certificated at 15 cents. Applicants except to the use of the "in-lineness" concept in determining the initial price issue, to reliance on Opinions No. 362 and 383 as having established the public convenience and necessity initial prices for the instant sales in Districts No. 3 and 4, to employing exhibit 236 in determining the price line in District No. 2, to the examiner's failure to sever out the "CI" dockets for consideration and disposition in another proceeding on the ground that the contracts were executed subsequent to our *Statement of General Policy No. 61–1*, 24 FPC 818, and to the reissuance of permanent certification and the direction of refunds with interest in the "G" dockets. Other specific exceptions are comprehended within those listed.

We agree with the examiner that the determinations herein are to be made in accordance with our decisions in *Skelly Oil Co.* and *Texaco Seaboard Inc.* In the *Skelly* opinion we found that the "in-line" price in District No. 4 was 15 cents at 14.65 psia for those contracts executed in 1958, 1959, and in 1960 prior to September 28, 1960, when the *Policy Statement* was issued. In *Texaco Seaboard*, which involved sales from both Districts No. 3 and 4, we found that comparison of the staff's pricing exhibits as to District No. 4 revealed no material difference from that presented in *Skelly* and concluded that the sales to be made in this District by Texaco also should be conditioned at 15 cents. We then proceeded to determine that pre-*Policy Statement* "in-line" price for District No. 3, deriving a price of 16 cents per Mcf. A similar comparison of the present exhibit No. 236, which includes the sales executed in the same 1958–September 1960 time period relied on in those proceedings and which, in addition, has been updated to reflect Commission action occurring subsequent to the preparation of the *Skelly* and *Texaco Seaboard* studies with regard to sales in these Districts, reveals no substantial dissimilarities or considerations sufficient to establish that the "in-line" prices were in fact higher than the levels determined by us. Accordingly, it is our conclusion that the District No. 3 sales in this proceeding made under contracts executed before the date of the *Policy Statement* should be conditioned at a price of 16 cents per Mcf at 14.65 psia and those in District No. 4 at a price of 15 cents per Mcf at 14.65 psia.

Although fully cognizant of our decision in *Skelly* to hold a separate hearing to determine the prices for the post-*Policy Statement* contracts,[15] the examiner

---

[13] As pointed out in the initial decision, appellants averred throughout the hearing that they were "respondents" insofar as the "G" dockets are concerned rather than "applicants." A reading of their initial brief confirms that the reason behind this characterization is to enforce their contention that they have no burden of proof in the instant proceeding with regard to those dockets. They have taken exception to the examiner's refusal to confirm this status. Our order of November 2, 1961, makes it obvious that the producers continue to hold the position of applicants seeking permanent certificates under Section 7 of the Natural Gas Act and that the burden of coming forward with evidence to justify either their proposed contract prices or the prices at which these sales have been temporarily authorized rests with them.

[14] Docket Nos. G–19119 and CI61–1736.

[15] 28 FPC 401, 412, 417–418, 1069.

made no distinction between those contracts in this proceeding executed before the Policy Statement and those executed after its issuance in deciding the appropriate prices for permanent certification. He stated that "The fact that not only was each one of the contracts executed at the same level without regard to date and that such level was at a higher rate than that set forth in the Commission's *Statement of General Policy* in the case of each contract points to the absence of any reliance by any party on the levels set forth in the Commission's Policy Statement and to the immateriality of the dates of execution of the contracts." [16] Our decision in *Skelly* to sever the contracts entered into after September 28, 1960, for determination in another proceeding was based on our conclusion that the record contained inadequate information for evaluating the changes which may have taken place after that date, including the effect, if any, of the Commission's enunciation of an 18-cent ceiling upon the "in-line" price in the area at the time the post-area ceiling contracts were made. In our opinion the present record is equally deficient. The examiner's efforts to overcome this lack of evidence on the ground that the parties made no attempt "to show that the difference in the dates of execution of the contracts or that the issuance of the Commission's *Policy Statement* had any relationship whatsoever to the prices which were reached in the contracts" has, essentially, a negative basis and is not equivalent to the positive determination called for by our action in *Skelly*, *i.e.*, the ability to make a firm finding that the evidence shows that the situation after the ceiling prices went into effect, including the impact of the *Policy Statement*, either made or did not make a difference in determining the initial price under contracts executed after the ceiling prices were put into effect. In so holding we state again that we do not imply that our announcement of the guideline rates, or other circumstances, necessarily had the effect of changing the "in-line" price level, but only that the evidence before us in the present proceeding does not permit us to make a valid finding as to such effect, if any.

While the impact of the policy statement is one factor to be considered in the proceeding covering the post-policy statement contracts, there are other compelling reasons for severing these contracts and consolidating them with all of the other applications contemporaneously executed. It is important to recognize that the key element in our in-line determination is the time at which the contract in issue was executed. We cannot assume that the evidence upon which we govern an in-line determination for contracts in the late 1950's can automatically be applied to contracts executed in the 1960's. On the contrary it would seem clear that the evidence must relate to a period reasonably contemporaneous with the contracts in issue. The evidence in this proceeding was focused upon the pre-policy statement period and the date of the policy statement therefore provides a convenient dividing point, without which we would be determining 1963 prices on the basis of contract prices in the previous decade.

Another reason for severing the post-ceiling dockets is the fact that there are numerous other contracts contemporaneously executed which were not consolidated in this hearing. We must hold a hearing on the other post-ceiling applications. The post-*Policy Statement* contracts herein should obviously be decided in the proceeding with their contemporaries rather than in this proceeding which primarily relates to the pre-*Policy Statement* period.

We are convinced that the evidence before us does not offer any solid basis for concluding that the pre-policy level must automatically prevail for the post-

[16] The hearing in this proceeding was concluded in June 1962, prior to the August 30, 1962, issuance of the *Skelly* opinion. Applicants' reply brief, which is dated September 15, 1962 (16 days after *Skelly*), does not attempt to show a price distinction based on the Policy Statement's promulgation. This is not necessarily surprising in view of the brevity of the time period which had then elapsed.

policy contracts. The dissent of Commissioner Ross refers to several permanent certificates issued in 1960, but it must be recognized that after the issuance of our policy statement we did not grant permanent certificates to the many applicants with contract prices in excess of our ceiling. These applicants all received temporary authority and the proper price line will be the subject of the forthcoming hearing. The only permanents that were granted were to the relatively few applicants whose contract prices were below our ceiling. To suggest that these contracts alone, although inherently non-representative, are determinative of the in-line price of this period would in our judgment be to ignore the bulk of the evidence.

As in *Skelly* we are severing from this proceeding the applications for permanent certificates containing contracts executed after the Policy Statement issued [17] and shall hold them over for a new hearing on their permanent certificates, to be conducted in conjunction with other holders of temporary authorizations similarly situated. A review of the contracts shows that those in Docket Nos. CI61–1221, CI61–1282, CI61–1283 and CI61–1736 fall within this category and are thus to be excluded from the determinations made herein.[18] The situation is the same with respect to the contracts in Docket Nos. CI61–1343, CI61–1344, CI61–1345 and CI61–1346. These dockets concern a "Ratification and Amendment of Gas Sales Contract" (Exhibit 140) entered into by the applicants involved and the pipeline purchaser on February 15, 1961, ratifying and amending an earlier contract executed May 15, 1959, which is the subject of the sale at Docket No. G–19116. From the record it appears that the factual background is as follows: In 1961 a circumstance arose wherein one of the sellers in Docket No. G–19116 could no longer perform. A group of other Hunt entities then came forward and agreed to furnish that share of the production which the original co-seller was unable to supply. Naturally, it was necessary that they amend the acreage dedication provisions of the original contract to specify acreage which the new sellers possessed. This new acreage is in the same county as the original dedication but in a different field. The "ratification" came in the adoption of the remaining provisions of the original contract without change, including the clause dealing with price. Temporary authorizations for each of these four new sales were granted by letter-orders dated April 25, 1961.

The Commission's decision in *CATCO* [19] holds that "in-lineness" is to be decided as of the time the contracts were made since "it was then the parties agreed on a price." In the four sales here under discussion it appears that on February 15, 1961, new parties agreed to sell gas from a new field under terms of an earlier contract with a different party. It would seem clear that the

[17] There is no question that all contracts in the "G" dockets were executed May 15, 1959.

[18] The original temporaries granted in each of the "CI" dockets, issued between March and July 1961 and accepted by the applicants, conditioned the initial price from 20 cents down to 18 cents per Mcf, but did not contain a refund condition. Contemporaneously with the filing of their acceptances applicants attempted to amend their contracts, specifically the pricing provisions, to provide for 18 cents during the first 30 days and 20 cents for the remainder of the initial four-year period. The Commission, rejecting the amendment, at that time modified the language of its temporary authorizations to provide that no change from the 18-cent rate could be made during their terms. It is to these temporaries that a court appeal was taken by applicants and is the subject of the decision in *H. L. Hunt, et al.* v. *F.P.C.*, 306 F. 2d 334, wherein the Fifth Circuit held that we could not prevent increased rate filings during the pendency of the temporaries. As is known, our application for rehearing was denied and the case has been petitioned to the Supreme Court for certiorari (No. 273, October Term 1963). On October 14, 1963, our petition was granted. Pending such review we do not intend to accept the decision of the circuit court as binding. See *Pan American Petroleum Corporation*," "Order Denying Application for Rehearing," issued August 16, 1963, 30 FPC 497; *Cities Service Gas Company*, Docket No. RP62–1, 26 FPC 665, 666. [On certiorari, the Fifth Circuit was reversed, 376 U.S. 515.]

[19] *Continental Oil Company, et al.*, 27 FPC 96.

"meeting of the minds" for the sale of this particular gas took place in February 1961, and the fact that the parties chose to make the sale by ratifying an earlier contract of another party cannot make the agreement retroactive to the earlier contract date or erase events which occurred between May 15, 1959, and February 15, 1961, and which may have led to the decision to use the earlier, high priced contract. For this reason we believe these dockets also should be severed from this proceeding and consolidated for further hearing with the other dockets involving applications for certificates under contracts executed after the Policy Statement was issued.

Elimination of Docket No. CI61–1736 leaves Docket No. G–19119, with an estimated first month's production of 219,000 Mcf, as the only remaining sale in this proceeding made in District No. 2 under a contract executed prior to September 1960. A tabulation of the producer contracts executed in this District in the three years [20] immediately prior to the *Policy Statement* having total initial prices of 14 cents per Mcf and higher reveals the following:

Price at 14.65 psia	Number of contracts under permanent certificates	Estimated first month volumes	Number of contracts under temporary certificates	Estimated first month volumes
14.0	14	459,380	3	36,750
14.18 [a]	11	[b] 1,070,385	[f] 2	114,785
14.5	2	130,000	0	0
14.75	[c] 1	600,000	0	0
15.0	1	90,000	[e] 1	93,000
15.192	3	170,000	3	134,000
15.33	1	45,000	[h] 5	239,500
15.5	0	0	[i] 1	15,000
17.0	[d] [g] 2	438,000	[f] 6	179,631
17.595	0	0	1	31,768
18.0	0	0	[e] 1	13,200

[a] Actual price 14.1792 cents.

[b] Includes separate monthly delivery estimates of 300,000, 234,000, 126,000 and 117,000 Mcf.

[c] Sale by Coastal States Gas Producing Company, admitted to be gathering company in applicants' Exhibit No. 234.

[d] One of these sales, omitted from the staff exhibit but of which we take official knowledge, is under a contract dated March 31, 1958, and was permanently certificated in Docket No. G–14836 as a sale by Middle States Petroleum Co. to United Gas Pipe Line Co. The estimated first month's volume was 93,000 Mcf. By virtue of a successorship, it is now being made by Tenneco Corp. under its Rate Schedule No. 96.

[e] The other sale at this price, at a monthly volume of 345,000 Mcf, is by Coastal States Gas Producing Co. which, as indicated, is a gathering company sale and thus is not comparable to sales by producers (*Skelly*, footnote 14). Another sale contained in the staff exhibit and permanently certificated in Docket No. G–11105 at 17 cents per Mcf is under a contract executed February 28, 1956, and is therefore outside the scope of our tabulation.

[f] Includes sale by Coastal States of 15,000 Mcf.

[g] Sale by Valley Gas Transmission Co., Inc. See footnote *e*.

[h] Excludes sale in Docket No. CI61–1409 where certificate application has been dismissed by order issued June 14, 1963, in *H. W. Klein, et al.*, Docket No. G–7825, *et al.*

[i] All of these sales, to Coastal Transmission Corp., were involved in P. S. C. v. F. P. C., 295 F. 2d 140 (CADC, June 15, 1961) where the court reversed the Commission for denial of intervention by PSC in its March 31, 1960 order, in *Coastal Transmission Corp., et al.*, Docket No. G–18338, *et al.* Temporary certificates have been granted for all these sales. See *Coastal Transmission Corporation*, Docket No. G–18338, *et al.*, 26 FPC 677, November 2, 1961.

Examination of the pattern of permanently certificated sales in District No. 2 appropriate to consider in determining the price line reveals few major sales, either individually or of collective volumes, having been made permanent at prices substantially in excess of 15 cents per Mcf. The only sale permanently

[20] The table includes one sale permanently certificated at 14.18 cents with an estimated volume of 300,000 Mcf per month under a contract executed September 23, 1957, and one sale temporarily authorized at 17 cents for 18,790 Mcf per month under a September 10, 1957 contract. Since these contracts are dated, respectively, only 5 days and 18 days before the 3-year period which we are herein concerned, we believe it appropriate to include these sales in our consideration. See *Texaco Seaboard, Inc.*, Opinion No. 383–A, 30 FPC 613, p. 617.

certificated at an initial price greater than 15.33 cents and appropriate to consider is at Docket No. G–14836 (footnote *d*). However, other sales at 15.5 cents and 17 cents per Mcf are still under Commission review by reason of the court's decision in *P.S.C.* v. *F.P.C.*, *supra*, and have the effect of diminishing the weight which can be attributed to this one sale.[21] Furthermore, as brought out in *CATCO* and in our March 7, 1962, order in *Texaco Seaboard*,[22] the price line does not accord with the highest price or prices permanently authorized but falls between the highest group of prices and the median price.

In excepting to the examiner's determination applicants contend that the remainder of the sales in District No. 2 are not comparable to the sale in Docket No. G–19119 of an estimated monthly production of 219,000 Mcf. It may be noted however, that in two instances sales have been permanently certificated at 14.1792 cents which have monthly volumes (300,000 and 234,000 Mcf) in excess of the instant sale. Moreover, the escalations of 2 cents each four years called for by the contract exceed the price increase provisions in all other contracts permanently certificated in this District, which provide for an increase of only one cent each five years.[23]

Applicant in this docket also contends that it is entitled to a higher price because the gas is offshore production with onshore delivery, a situation in which we have, in another proceeding,[24] allowed a 2-cent per Mcf additional charge for transportation. In that case the producer actually paid a line rental, whereas here the delivery line is owned by the applicant. The present gathering and transportation of under two miles appears to differ little from the normal gathering performed by other producers in making field deliveries[25] except insofar as it is from an offshore platform to the coast rather than wholly on land. The fact that the actual delivery point may be a short distance outside the field boundaries is likewise of little consequence.

In our opinion the "in-line" price in District No. 2 applicable to all producer contracts entered into prior to September 28, 1960, was 15 cents per Mcf, including all reimbursements and charges, and certification of prices above this rate would not be in the public interest and would not serve the public convenience and necessity. We shall, therefore, condition the certificate issued in Docket No. G–19119 to this price. As indicated in Opinion No. 383, the issuance of the permanent certificates herein will not impair the applicants' right to charge their full contract prices until such time as just and reasonable rates can be fixed for their sales. However, such increases will, of course, be subject to a full refund obligation.

The examiner's decision imposes an obligation in all "G" dockets requiring each producer to refund, with interest, all amounts collected subsequent to November 2, 1961, in excess of the amount computed at the rates determined to be required by the public convenience and necessity in the proceeding herein. This requirement is in accordance with our order issued on the date designated. All exceptions addressed thereto are denied and the refund requirement is hereby confirmed.[26]

[21] *U.G.I.* v. *F.P.C.*, 283 F. 2d 817 (CA9), cert. denied 365 U.S. 881.

[22] Docket No. G–13169, *et al.*, 27 FPC 482, 485.

[23] This feature is to some degree, although not completely, offset by the fact that many of these other contracts call for a price redetermination in approximately their ninth year, a provision which this contract lacks.

[24] Citing *Socony Mobil Oil Co., Inc.*, Docket No. G–13780, order issued February 9, 1962, 27 FPC 347.

[25] Exhibit No. 236 shows that with one exception all sales in District No. 2, whether permanently certificated or temporarily authorized, provide for field delivery.

[26] See *Placid Oil Company, et al.*, Opinion No. 398, 30 FPC 283, p. 290, *et seq.*

Although no question was raised in the course of this reopened proceeding concerning the pipeline's obligation to pay for gas not taken, our examination of the record reveals that some if not all of the contracts contain provisions of this type. In line with the general practice in our recent decisions, we shall condition the certificates issued herein, as does the initial decision, to make them subject to the results of the rule-making proceeding in Docket No. R–199.

At the time of our issuance of the opinions in *Skelly* and *Texaco Seaboard* we issued amendments to our *Statement of General Policy No. 61–1* decreasing the initial ceiling prices thenceforth to be effective. At the present time it is in the public interest, in our opinion, to issue an Eighth amendment to our *Policy Statement*, effective immediately, decreasing the ceiling price for Texas District No. 2 from 18 cents to 16 cents per Mcf. We intend, at the appropriate opportunity to institute a proceeding consolidating all existing applications in this District involving contracts executed in the period between the issuance of the Policy Statement and the present and shall establish an initial price for these sales which will be consistent with our area pricing policy and with the public convenience and necessity standard of Section 7 of the Natural Gas Act.

The Commission further finds:

(1) The following applicants:

	Docket No.
Hassie Hunt Trust, Operator, *et al*	G–19115
H. L. Hunt, Operator, *et al*	G–19116
Hunt Oil Company	G–19117
William Herbert Hunt Trust Estate, Operator	G–19118
Lamar Hunt Trust Estate	G–19119
George W. Graham, Inc., Operator, *et al*	G–19123
Placid Oil Company, Operator, *et al*	G–19124 G–19125

are engaged in the sale of natural gas in interstate commerce for ultimate public consumption and each is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sales of natural gas hereinbefore described, as more fully described in the applications, are made in interstate commerce, subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Subject to the requirements of our order herein and the conditions attached to the certificates herein issued, the applicants referred to in the above paragraph (1) are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The sales of natural gas by the independent producers referred to in the above paragraph (1), together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are and have been required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) Except as herein granted, the exceptions to the examiner's decision should be denied.

The Commission orders:

(A) Certificates of public convenience and necessity are hereby issued to the applicants named in paragraph (1) above for the sale of gas in interstate commerce for resale as proposed in their applications, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, upon the terms and conditions of this order.

(B) The certificates issued to the applicants in Docket Nos. G–19117, G–19118, G–19119, G–19123 and G–19124 are hereby conditioned to prohibit any total initial price, including all reimbursements and charges, greater than 15 cents per Mcf at 14.65 psia from the date of issuance of this order and until such prices may be lawfully changed in the manner provided for in the Natural Gas Act.

(C) The certificates issued to the applicants in Docket Nos. G–19115, G–19116, G–19125 are hereby conditioned to prohibit any total initial price, including all reimbursements and charges, greater than 16 cents per Mcf at 14.65 psia from the date of issuance of this order and until such prices may be lawfully changed in the manner provided for in the Natural Gas Act.

(D) Docket Nos. CI61–1221, CI61–1282, CI61–1283, CI61–1343, CI61–1344, CI61–1345, CI61–1346 and CI61–1736 are hereby severed from this proceeding. Pending further determination, the temporary authorizations granted in these dockets are continued without change.

(E) Within 30 days from the date of issuance of this order each of the applicants in the dockets designated in paragraphs (B) and (C) above shall file supplements to their presently filed rate schedules reflecting the conditioned price as its initial price in lieu of the initial price provided in its contract; provided that the notice provisions of Section 154.94(b) and the detailed submittal provisions of Section 154.94(f) of the Commission's Regulations Under the Natural Gas Act are waived insofar as they apply to the reductions in rates hereby ordered.

(F) Within 60 days from the date of issuance of this order each of the applicants in Docket Nos. G–19115, G–19116, G–19117, G–19118, G–19119, G–19123, G–19124 and G–19125 shall refund to Natural Gas Pipeline Company of America, with interest calculated at 7 percent per annum to continue until full refund has been made, a sum equal to the difference between the price charged to and collected from such purchaser and the respective initial price set forth in paragraphs (B) and (C) above, applied to all volumes paid for by such purchaser after November 2, 1961, and until the date on which this order shall issue.

(G) Within 10 days of the date of the refund provided in paragraph (F) above, each of the applicants involved shall file with the Commission an officially certified statement showing the amount of the refund, its manner of computation, the interest payments related thereto, and a statement from the purchaser acknowledging receipt thereof.

(H) The certificates herein issued are granted upon the further express condition that the allowance of the take-or-pay for provisions in the applicants' contracts is subject to our ultimate disposition with respect to such provisions in the rule-making proceeding in Docket No. R–199. Upon the establishment, by regulation or policy statement, of a general policy governing such provisions in producer contracts, the applicants shall within 30 days file amended rate schedules in conformity therewith, acceptable to the Commission. The producers shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities. Any changes or modifications to be made in accordance with this paragraph shall be prospective only.

(I) The certificates herein issued are not transferable and shall be effective only so long as each of the applicants continues the acts and operations hereby

authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(J) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Regulations thereunder. Such grant is without prejudice to any findings or order which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants. Further, the action in this proceeding shall not foreclose nor prejudice any further proceedings or objections by the Commission relating to the operation of any price or related provision in the gas purchase contracts here involved.

(K) Except as herein granted, the exceptions to the examiner's decisions are hereby denied.

(L) The examiner's decision, to the extent not inconsistent herewith, is hereby adopted as part of this opinion and order.

Commissioner Ross *concurring in part* and *dissenting in part.*

Commissioners O'Connor and Woodward *dissenting in part.*

Ross, Commissioner, *concurring in part* and *dissenting in part:*

I dissent to the majority's certification of sales from Texas District No. 3 at 16¢ per Mcf for the reasons set forth in my dissent in *Texaco-Seaboard.*[1] The in-line price for this area should be 15¢ per Mcf. I also dissent to the majority's nonaction on seven of the ten applications fully tried in this case which involve District No. 3 sales under contracts executed after September 28, 1960, consistent with my *Skelly* dissent.[2]

With respect to Texas District No. 2, the majority has found, and I agree, that the in-line price is 15¢ per Mcf. However, here as in *Skelly*, the majority refuses to apply this determination to a District No. 2 contract executed a couple of months after the magic date of September 28, 1960. What an ironic twist it must be to the intervenors that the *Policy Statement*, which was promulgated to keep prices down, is being used by this Commission as a possible means of escalation over the legal in-line level! The result, of course, is that consumers will continue to pay 18¢ per Mcf for gas under this contract until some day in the future when the majority will again consider this application after another hearing. And they will pay 18¢ with no hope of receiving the amount in excess of the appropriate in-line level, as eventually determined. This is because the temporary under which the gas is presently being sold contains no refund conditions.

The refusal to consider this District No. 2 sale seems particularly questionable in view of the history of the price structure of that area for the period September 28, 1960, through the end of 1960. During that time, seven permanent certificates were issued—all at the prices specified in the contracts. Three were in the 10¢ range, three were in the 14¢ range, and one soared to a height of 15.2¢.[3] Nothing can change these facts. They will be the same in any future case as they are right now. Irrespective of "reliance" on the *Policy Statement* or anything else, it is most difficult to envision an in-line price for this period in excess of 15¢, at least one which could be legally sustained. Moreover, as the Examiner has properly pointed out in his decision

[1] Docket No. CI61–118, *et al.*, Opinion Nos. 383 and 383-A, issued March 27 and August 27, 1963, 29 FPC 593 and 30 FPC 613, respectively.

[2] *Skelly Oil Co.*, 28 FPC 401, 421.

[3] Docket Nos. CI61–624, 1450, 690, 884, 905, 633, and 635 having contract dates of September 28, December 14, September 29, October 25, 7, 17 and 1, 1960 respectively.

in *Amerada Petroleum Corp.*,[4] it would be inconsistent with prior Commission decisions and legally erroneous to justify a price hike on the basis of reliance on the Policy Statement.

Significantly, the producer applicants here at no time have sought to reopen the record to submit evidence called for by *Skelly*. One can only conclude that such evidence, if it exists, would not be of decisional significance. It is also interesting to note that the Examiner in *Amerada* found an in-line price for post-September 28, 1960 contracts in a related area identical to the pre-September 28, 1960 in-line level.

The majority's reason for failing to decide this docket and the seven others being severed is that the record is deficient. The opinion implies that the only relevant evidence regarding price relates to a period ten years removed from the contract dates of those dockets being severed. Staff's exhibit 236 received in evidence in this case covers a period from 1955 to April 15, 1962 and includes both permanently and temporarily certificated contracts. What more need be said, except perhaps, to recall a unanimous order issued herein 22 months ago. That order consolidated the very same dockets that are now being severed. It stated:

> The public convenience and necessity require that the matters listed in the caption above be heard on a consolidated record and disposed of as promptly as possible . . . .[5]

For the foregoing reasons, I would certificate all the applications here conditioned to 15¢ per Mcf.

---

[4] Docket No. CI62–1544, *et al.*, Initial Decision issued July 23, 1963.

[5] *Hassie Hunt Trust, Operator, et al.*, Docket No. G–19115, *et al.*, Notice of applications, consolidation of proceedings and setting date for hearing issued February 7, 1962, page 2.

O'CONNOR and WOODWARD, Commissioners, *dissenting in part:*

We respectfully dissent from the decision of the majority that the "in line" price for gas purchased in Texas Railroad District No. 2 for the period prior to September 28, 1960, should be 15 cents per Mcf. This is the same price established as "in line" for pre-policy sales in Texas District No. 4.[1] We strongly urge that the price to be established as "in line" for these sales in District No. 2 should be 16 cents per Mcf, previously established as "in line" for similar sales in Texas Railroad District No. 3.

Historically, geographically and geologically, District No. 2 has always been considered by the petroleum industry as closely related to District No. 3, not to District No. 4. Together, these two districts make up the Upper Texas Gulf Coast, and, generally speaking, for the last forty years any gas purchasing company operating in both of these districts has paid the same price for its gas. In view of the fact that today's decision would sever this historic relationship, and would attempt to identify District No. 2 with District No. 4, it draws our strong disapproval.

Aside from being critical of the result, we are most critical of the method by which the majority arrive at the result. They totally disregard four sales of considerable magnitude which would justify a price at least one cent per Mcf higher than that they now establish.

These sales involve total monthly volumes of 482,970 Mcf at a weighted average price of 17.07 cents per Mcf at 14.65 psia. The first sale included in the majority's tabulation but insufficiently considered, involves 93,000 Mcf per month being made by Tenneco Corporation to United Gas Pipe Line Company at 17.0 cents per Mcf. The second sale involves 345,000 Mcf per month at 17.0 cents per Mcf

---

[1] *Skelly Oil Company, et al.*, 28 FPC 401 (1962), modified 28 FPC 1065 (1962).

being made by Coastal States Gas Producing Company, which is engaged in both gathering gas and producing gas for resale. The third and fourth sales involve, respectively, 13,200 Mcf per month at 18.0 cents being made by a gatherer, Valley Gas Transmission Company, and 31,768 Mcf per month at 17.595 cents being made by Western Natural Gas Company. Both sales are being made under temporary authorization. All four of these sales were either excluded from consideration or included but discounted, for one or a combination of three reasons: first, they were under temporary authorization; secondly, because they were made by companies engaged in the gathering of gas; or thirdly, because they were "tainted". In the instant proceedings, we consider all three of these reasons unpersuasive.

First, although two of these sales are being made under temporary authorization, there is little question but that had they been requested at the time, unconditioned permanent certificates would have been granted. Consequently, we do not consider the temporary authorization to necessitate giving these sales any less weight than given to those permanently certificated. Secondly, area prices for Texas Railroad District No. 2 have been interpreted by the Commission to include the cost of gathering the gas and getting it to the transmission company. We thus consider the price of gathered gas for District No. 2 to be a legitimate consideration regardless of whether this gathering is done by the producer or a separate entity. We find particularly unjustifiable the total exclusion of the 345,000 Mcf per month sale by Coastal States Gas Producing Company, part of which represents their own production. Thirdly, the so called "tainted" price doctrine which, along with the "hold the line" admonition articulated in *CATCO*, has been interpreted by the majority of this Commission to authorize a general roll back in prices. That doctrine, first enunciated in *United Gas Improvement Company* v. *F.P.C.*,[2] stood for one clear proposition; namely, that in any determination of the in-line price for a given area, rates then under Commission or court review, or rates in that area like those then under Commission or court review, *subject to the same infirmities*, should not be relied upon in establishing the "line". This doctrine, originally very narrow in scope, has been expanded beyond all justifiable limits. It has come to stand for the proposition that all contracts with rates higher than the ceiling which the majority seeks to establish can be discarded as "tainted". The obvious result of such an interpretation, as evidenced by this present proceeding, is to produce any desired result regardless of irrefutable facts.

[2] 283 F. 2d 817 (9th Cir. 1960).

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued April 11, 1963)

BINDER, *Presiding Examiner:* This is a consolidated proceeding under Section 7 (c) and (e) of the Natural Gas Act (Act) in which each of the persons named in the caption seeks a permanent certificate of public convenience and necessity, authorizing sales by him to the Natural Gas Pipeline Company of America (Natural) of natural gas for resale in interstate commerce.[1]

[1] Peoples Gulf Coast Natural Gas Pipeline Company (Peoples) was authorized to acquire all of the facilities of Texas Illinois on December 8, 1959, and was, at the same time, substituted as applicant in all of the latter's then pending applications before the Commission (22 FPC 1013). On September 29, 1960, Natural Gas Pipeline Company of America, in turn, acquired through merger all of the facilities of Peoples (24 FPC 530). The purchaser in each docket is Natural or a predecessor.

The gas involved in this proceeding is produced in various fields located in Texas Railroad Commission District Nos. 2, 3, and 4.[2]

The 16 dockets[3] involved in this proceeding may be classified on the basis of the dates of execution of the contracts involved and the Texas Railroad Commission Districts from which natural gas is being sold, as follow: Two dockets, namely Docket Nos. G–19119 and CI61–1736 deal with gas produced in Texas Railroad Commission District No. 2. The contract in the "G" docket is dated May 15, 1959, and the contract in the "CI" docket is dated December 15, 1960, *i.e.*, one contract was executed prior to the Commission's *Statement of General Policy 61–1* and the other was executed thereafter.

Ten dockets relate to contracts covering gas produced in Texas Railroad Commission District No. 3. These dockets are G–19115, G–19116, G–19125, CI61–1221, CI61–1282, CI61–1283, CI61–1343, CI61–1344, CI61–1345 and CI61–1346. The first three aforementioned dockets, *i.e.*, Docket Nos. G–19115, G–19116, and G–19125 relate to contracts dated May 15, 1959, *i.e.*, to contracts executed prior to the issuance of the Commission's *Statement of General Policy 61–1*. Three dockets, *i.e.*, Docket Nos. CI61–1221, CI61–1282 and CI61–1283 relate to contracts dated December 15, 1960, *i.e.*, to contracts which were executed subsequent to the issuance of the Commission's first *Policy Statement*.

The balance of the dockets relating to Texas Railroad Commission District No. 3, *i.e.*, Docket Nos. CI61–1343, CI61–1344, CI61–1345 and CI61–1346 concern contracts which were the subject of a "Ratification and Amendment" entered into by applicants and the pipeline on February 15, 1961. The ratification and amendment ratified and amended earlier contracts between the applicants and the pipeline which were executed on May 15, 1959. The same price terms contained in the 1959 contracts were made applicable to the sales involved in Docket Nos. CI61–1343, CI61–1344, CI61–1345 and CI61–1346. The ratification and amendment was executed subsequent to the issuance of the Commission's policy statement.[4]

---

[2] The gas involved in Texas Railroad Commission District No. 2 is produced in the Zoller Field which is in Aransas and Calhoun Counties. The gas produced in Texas Railroad Commission District No. 3 is produced in the Alta Loma, the City of Alvin, and the Chenango Fields. These fields are located in Galveston and Brazoria Counties. The gas produced in Texas Railroad Commission District No. 4 is produced from the Fulton Beach Field, which is located in Aransas County.

[3] In Peoples Gulf Coast Natural Gas Pipeline Company (Peoples Gulf Coast), 24 FPC 1, *as amended*, 24 FPC 106 (1960), certificates of public convenience and necessity, conditioned at the level of the highest previously certificated prices in Texas Railroad Commission District 2, 3 and 4, were issued in the "G" dockets. These dockets were set down for hearing in the instant proceedings because the Court of Appeals for the District of Columbia reversed a Commission order denying intervention in the "G" dockets to the Public Service Commission of the State of New York (PSC) *P.S.C.* v. *F.P.C.*, 295 F. 2d 140 (1961). Thereafter the Commission consolidated the "CI" dockets with the "G" dockets.

[4] The applicants have set forth at Footnote 19 of their initial brief that the Ratification and Amendment "appears in the record as Exhibit No. 140. Attention is directed to Exhibit Nos. 141, 142, 143 and 144, wherein the ratification instrument, dated February 15, 1961, has been designated as the rate schedule and the contract of May 15, 1959, has been designated as Supplement No. 1."

The original contract of May 15, 1959 by definition under the Regulations is in and of itself a rate schedule. For reasons not explained during the course of the hearing the Commission's records show, as applicants correctly state in their brief, that the Ratification and Amendment is not listed in the Commission's docket sheet as a Supplement to the original contract of May 15, 1959, which, in fact, it is, but instead the Ratification and Amendment appears to be listed in the Commission's records as the original rate schedule and the contract of May 15, 1959 which it ratifies was entered as Supplement No. 1 to the Ratification and Amendment dated February 15, 1961. This type of clerical

[Footnote continued on following page.]

The remaining four dockets out of the total of sixteen dockets with which we are concerned here deal with gas produced in Texas Railroad Commission District No. 4. These Docket Nos. are G–19117, G–19118, G–19123 and G–19124. The four dockets in Texas Railroad Commission District No. 4 deal with contracts dated May 15, 1959, a date which antedated the Commission's *First Policy Statement*.

All issues, including the market for the gas proposed to be sold, the economic feasibility of the pipeline purchaser's project, the ability of the producers to deliver the gas during the contract period, the volume of the reserves, the willingness and ability of the applicants to comply with the Commission's regulations and all other issues, except the "initial price" issue, were resolved and determined in earlier phases of this proceeding and are not the subject of contest in this phase of the matter.[5]

The applicants take the position that the issue is whether the proposed sales are or will be required by the public convenience and necessity. Broadly stated, the applicants' statement as to the ultimate issue to be resolved in this proceeding is correct but specifically all elements which are merged into the concept of public convenience and necessity were, with the exception of initial price, finally resolved in the earlier phases of this proceeding. No element other than the "initial price" issue remains to be decided.[6]

It is uncontradicted that the contracts were negotiated at arm's length.[7]

It should be noted that temporary authorizations have been granted in all the dockets, that the gas involved in this proceeding is flowing in interstate commerce, and that deliveries cannot lawfully be abandoned unless an application, filed under Section 7(b) of the Act, is granted.

The applicants claim that certain of the contracts dated December 15, 1960, were "not fully executed" until some time thereafter. The applicants, however, made no claim that because such contracts were executed subsequent to the issuance of the Commission's policy statement that the sellers who executed such contracts were entitled to higher rates in the later contracts than were the sellers under the contracts executed before September 28, 1960.

The major reliance for the issuance of certificates at the contract prices, *i.e.*, without any price conditions, was placed by applicants upon certain cost evidence. This evidence was excluded from this proceeding by order of the examiner issued May 31, 1962, for the reasons set forth in such order.[8]

Each contract contains the same price provisions regardless of date. The time of execution of the contracts was not claimed by applicants to be a factor affecting the price which they should receive for their natural gas.

---

aberration does not destroy or change the fact that the agreement covering the Chenango Field contracts in Texas Railroad Commission District No. 3 was merely a Ratification and Amendment of a contract dated May 15, 1959, and that the price for gas in the 1959 contract was made applicable to the new gas dedicated from the Chenango Field.

[5] See footnote 3, *supra*, as to the "G" dockets. In the "CI" dockets no issue other than the price level was raised by any party to the proceedings.

[6] The applicants have noted in their initial brief that Public Service Commission of New York (PSC) filed a Statement of Position in this proceeding. As applicants have observed "The Statement of Position clearly disclosed that PSC was opposed to the certification of the producers' initial prices and that the only issue involved in the proceedings was the initial price."

[7] However, as the Court of Appeals for the District of Columbia pointed out, in *Atlantic Refining Co.* v. *F.P.C.*, No. 17,166 316 F. 2d. 677, 679, fn 11, "To [the pipeline], the price of gas is of no great concern because whatever price it pays can be recovered from the consumer through an increase in rates".

[8] On July 19, 1962, the Commission issued its order denying on the merits applicants' appeal and request for a stay of the May 31, 1962 order.

Each one of the contracts is for a 20-year period, and the initial price per Mcf called for in each contract is 20 cents per Mcf at 14.65 psia with escalations of 2 cents per Mcf every four years until the price reaches 28 cents per Mcf. The applicants throughout these proceedings contended that they were entitled to unconditioned certificate authorizations at the levels set forth in each contract (which were the same in each contract) without relationship to the date of the execution of such contracts. In addition, it should be noted that the applicants made no claim that the prices set forth in the Commission's policy statements had any relationship to the prices which were reached in arm's length negotiations and embodied in the contracts.[6]

---

[6] It may be pointed out that at page 10 of their initial brief applicants state:

> It is the position of Respondents that the Commission's Order of November 2, 1961 is invalid and that Respondents have permanent Certificates of Public Convenience and Necessity in accordance with the Commission's Order of July 1, 1960, as amended on July 29, 1960. This is in accord with Respondents' position in the Court of Appeals for the Fifth Circuit in Cause Nos. 19499 and 19500. However, if the November 2, 1961 Order is valid insofar as it vacated the permanent certificates it will then be the position of Respondents that the contract amendments of August 9, 1960 are invalid since they were executed solely in reliance upon the permanent Certificates of Public Convenience and Necessity which were issued by the Commission. This places Respondents in the novel position of contending that if a Commission Order is valid, then they are seeking a higher price, whereas a lower price is sought if the Commission's Order in invalid.

It should be observed that the applicants use the term "Respondents" when referring to themselves in the "G" dockets. The fact is, despite contentions to the contrary by applicants, their position as applicants seeking a Section 7 certificate was never changed to that of respondents by reason of the Circuit Court's decision in *P.S.C.* v. *F.P.C.*, 295 F. 2d 140 or by reason of any Commission order issued in these proceedings. Apparently the reason that applicants refer to themselves as "Respondents" in connection with the "G" dockets is to reflect their contention that they have no burden of proof in the instant proceedings. The applicants claim that in the "G" dockets they have established their entitlement to a certificate at the prices authorized in the Commission's order of July 1, 1960, as amended on July 29, 1960, and that if these authorizations are to be modified, the burden of proof to establish that modifications should be made is on the Staff or the interveners. In addition, the applicants contend that the Commission's order of November 2, 1961, setting aside the certificate authorizations issued in July 1960 are invalid. The earlier certificate authorizations were issued to Hunt Oil Company, William Herbert Hunt Trust Estate, Lamar Hunt Trust Estate, George W. Graham, Inc., and Placid Oil Company for sales from Aransas County in Texas Railroad Commission No. 4, and Calhoun County in Texas Railroad Commission District No. 2, conditioned upon the filing of revised contracts providing for an initial price of 18 cents per Mcf. Earlier certificate authorizations were also issued to Hassie Hunt Trust, Operator, *et al.*, Hunt Oil Company, William Herbert Hunt Estate, Lamar Hunt Trust Estate, George W. Graham, Inc., and Placid Oil Company for sales from Galveston and Brazoria Counties in Texas Railroad Commission District No. 3 conditioned upon the filing of contracts providing for an initial price of 20 cents per Mcf with an escalation of 3 cents per Mcf each 10 years, rather than the 4-year period which had been in the initial contract upon which certification had been sought (24 FPC 106, 107). The applicants' contracts were filed thereafter as rate schedules, and service of natural gas was begun thereunder by each of the aforementioned producers on the basis of the acceptance of the rates conditioned as required by the July 1960 authorizations. These contracts were filed on August 9, 1960, in accordance with the Commission's orders of July 1, 1960, as amended July 29, 1960, and in reliance upon such Commission authorizations. The applicants contend that if the July 1960 authorizations are modified or amended, they should be relieved of any obligations as a result of their August 9, 1960 filing.

In its order of November 2, 1961, the Commission set aside the July 1960 permanent certificate authorizations to which we have referred in this footnote, and in their stead granted temporary authorizations providing for the continuation of the sales. In addition, the Commission conditioned the temporary authorizations issued by its November 2, 1961 order by requiring a refund to Natural Gas Pipeline Company of America of any amounts collected after the date of the issuance of this order in excess of the amount

[Footnote continued on following page.]

It should be emphasized that there is not even a scintilla of evidence in this record nor was any attempt made by any party to the contract to show that the difference in the dates of execution of the contracts or that the issuance of the Commission's policy statement had any relationship whatsoever to the prices which were reached in the contracts, or that such factors had any material relationship to "hold the line" prices for the natural gas which was the subject of contract in this proceeding. There was no evidence whatever offered by any party or the Staff which would establish or even tend to establish in any way whatsoever that the applicants were entitled to a different price for gas being sold pursuant to the contracts which were dated or executed subsequent to May 15, 1959, than they were for the gas being sold under the contracts which were entered into at subsequent dates. The effort on the part of the applicants in this proceeding was to obtain the same prices for gas sold under both the earlier contracts and the later contracts. The fact that not only was each one of the contracts executed at the same level without regard to date and that such level was at a higher rate than that set forth in the Commission's *Statement of General Policy* in the case of each contract points to the absence of any reliance by any party on the levels set forth in the Commission's policy statement and to the immateriality of the dates of execution of the contracts. Moreover, it could not be urged on any reasonable basis that the Commission intended in adopting the *Statement of General Policy* to provide a springboard to any party for the purpose of raising prices of natural gas to levels higher than those which existed prior to the date of the issuance of the policy statement.[10]

As we have noted, evidence in the form of exhibits and testimony was offered by applicants and was excluded by order of the examiner on May 31, 1962, for the reasons set forth in such order and the examiner's ruling was sustained on the merits by the Commission.[11] Such order is incorporated in this initial decision as an integral part thereof.

It may also be observed that among the major cost exhibits offered by the applicants in these proceedings to justify the issuance of a certificate at the contract prices were identical exhibits offered and relied upon by them in a Section 5(a) rate case which had been heard by another examiner of this Commission and on which he had issued an initial decision in *Hunt Oil Company, et al.*, Docket No. G–9065, *et al.* Following the issuance of the examiner's initial decision in the latter docket, the Commission on October 17, 1962 by its Opinion No. 365 and accompanying order in *Hunt Oil Company, et al.*, Docket No. G–9065, *et al.*, 28

---

computed at the rate determined to be required by the public convenience and necessity in the further proceedings which they were directing be held.

It should also be observed that the only admissible evidence in this record as to the "in line" price was evidence presented by the Staff. While the Staff does not have the burden of establishing the appropriate public convenience and initial price, the Staff voluntarily assumed the burden of going forward in this proceeding with evidence as to "in line" price for the gas being sold herein in the absence of any admissible evidence of this character presented by applicants. Apparently the Staff was acting in what it believed to be the public interest. It was the Staff's evidence which established the public convenience and necessity initial price. Accordingly, such arguments as have been advanced by applicants concerning the burden of proof and their position as respondents rather than applicants in this phase of the proceeding are wholly academic.

[10] The Commission observed in *Coastal Transmission Corp.*, 26 FPC 677, Docket No G–18338, *et al.*, Order of November 2, 1961, p. 682, that "* * * The price guides do not constitute a floor to be used to raise proposed initial prices to the highest levels abstractly permissible thereunder".

[11] See footnote 8, *supra*.

FPC 623, remanded such rate proceeding to the examiner for further proceedings, principally because the testimony and the principal exhibits employed in the latter proceeding did not satisfy statutory standards held to be appropriate in the allocation of the costs attributable to the applicants' production of natural gas. As noted, among the most important of these exhibits were the same cost exhibits as were offered in the instant case. Accordingly, it appears that applicants' cost exhibits should not have been received not only for the reasons set forth in the examiner's order of May 31, 1962, but that even if such cost exhibits had been received they would not have met appropriate standards for determining just and reasonable rates for applicants' gas even in a Section 5(a) proceeding, as pointed out in the Commission's Opinion 365 and accompanying order. Thus the applicants' direct case was not only not admissible for the reasons set forth in the examiner's order of May 31, 1962, it was inadequate and defective for the reasons expressed in Commission Opinion No. 365.[12]

Parenthetically, it may be observed that the Supreme Court's observations in *Atlantic Refining Co.* v. *Public Service Commission*, 360 U.S. 378, commonly referred to as *CATCO*, regarding the advisability of differentiating as to the types of evidence which may properly be considered by the Commission in a Section 7 case as compared with a Section 4 or 5 case have been admirably summarized by the Court of Appeals for the District of Columbia in a recent case involving the Atlantic Refining Company.[13] This case holds, among other things, that the Commission is not normally required in a Section 7 certificate case to receive cost evidence such as would ordinarily be admissible in a full-blown rate proceeding. This observation is particularly applicable in a case like the present one where there is a representative number of comparable prices in the area to which reference for "in line" comparability purposes can be made.[14]

The views expressed by the Court of Appeals in its recent Atlantic Refining Company decision (*supra*) are applicable to these proceedings.

Docket Nos. G–19117, G–19118, G–19123 and G–19124 all deal with gas produced in Texas Railroad Commission District 4 under contracts dated May 15, 1959.

The Commission issued its Opinion No. 362 in *Skelly Oil Company*, 28 FPC 401 Docket No. G–18638, *et al.*, August 30, 1962, involving contracts executed prior to September 28, 1960, relating to Texas Railroad Commission District No. 4. In its opinion in *Texaco Seaboard Inc.*, Docket No. CI61–118, *et al.*, Opinion No. 383 issued March 27, 1963, 29 FPC 593, the Commission adverted to its decision in *Skelly* and stated that:

> In District No. 4, the *Skelly* opinion found that the "in-line" price was 15 cents at 14.65 psia for those contracts executed in late 1958, in 1959 and in 1960 before September 28, 1960, when we issued our *Statement of General*

---

[12] See also Commission Op. No. 338 in *Phillips Petroleum Company*, 24 FPC 537.

[13] The *Atlantic Refining Company, Petitioner* v. *Federal Power Commission, Respondent, et al.*, United States Court of Appeals for the District of Columbia, No. 17,166 decided March 21, 1963, 316 F. 2d 677.

[14] See footnote 12, *supra*, and *United Gas Improvement Co.* v. *Federal Power Commission*, 5 Cir., 290 F. 2d 133 (1961); *United Gas Improvement Co.* v. *Federal Power Commission*, 10 Cir., 287 F. 2d 159 (1961); *Public Service Commission of New York* v. *Federal Power Commission*, 287 F. 2d 146 (1960); *United Gas Improvement Co.* v. *Federal Power Commission*, 9 Cir., 283 F. 2d 817 (1960); *California Oil Company, Western Division* v. *Federal Power Commission, Respondent*, United States Court of Appeals, Tenth Circuit, No. 7148 decided March 1963 term, 315 F. 2d 652.

Policy No. 61–1, 24 FPC 818. Our opinion was largely based on other sales in this district under contracts executed during the years 1958 through 1960. At the same time we rejected evidence introduced by Texaco, designed to show the replacement cost of the gas which Texaco sells. It presented industry-wide cost trends and also on the costs of replacing gas consumed for the United States as a whole and for the Texas Gulf Coast area, using a variety of statistical sources and employing a number of estimates based on judgment. We held that cost of service and financial requirements evidence normally is not relevant in producer certificate cases and that the initial price in such proceedings will be determined by the "in-line" price in the area at the time the producer contract in issue was executed. With respect to the sales under contracts executed after September 28, 1960, we severed the applications and consolidated them with other producer applications so that the applicants will have opportunity to show the effect of the *Policy Statement* and the Amendment issued August 30, 1962.

Since, as found by the examiner, Texaco's cost and trend evidence in this case is substantially identical with that offered in *Skelly*, it does not serve any useful purpose to discuss this evidence further, nor the arguments in opposition made by UGI, Consolidated Edison, PSC, City of Chicago and our staff. Furthermore, there is no material difference in the staff's exhibit or presentation in this case (Exh. 48) from that offered in *Skelly*, so that the examiner felt bound by the Commission's opinion in *Skelly* and on the basis of the same facts and reasoning concluded that the appropriate in-line price for Texaco in District No. 4 was 15 cents per Mcf at 14.65 psia. Since the contract was dated July 1, 1960, before the issuance of the *Policy Statement*, he would condition the certificate at a price of 15 cents per Mcf.

We agree with the examiner that the record supports the conclusions as to the "in-line" price reached in *Skelly* and that there is no reason here to depart from them. The staff's exhibit is very similar and covers the same 1958–1960 period which is as applicable here as it was in *Skelly*. Therefore, we conclude that Texaco's sales in District 4 should be conditioned at a price of 15 cents per Mcf (14.65 psia).

The only evidence of a material character remaining after the undersigned excluded applicants' cost evidence was Staff Price Exhibit No. 236 received in these proceedings, and the Staff testimony in support of such exhibit. Among other things this evidence showed that many of the contracts in each railroad district involved herein and referred to in this exhibit were reasonably comparable with the contracts under consideration here as to volumes, prices, quality of the gas, and all other material features.

Cross-examination of the Staff witness regarding this exhibit did not impair the strength of his direct testimony nor the force of the exhibit as a document reflecting comparable prices. His testimony was sophisticated, knowledgeable, and highly persuasive. Such evidence was substantially similar to that received in *Skelly* and in *Texaco Seaboard*, and this evidence supports the conclusion that the "in-line" price for these contracts is 15 cents per Mcf at 14.65 psia for the four contracts relating to Texas Railroad Commission District No. 4. On the basis of such evidence and the reasoning advanced by the Commission in *Skelly* and *Texaco Seaboard*, the examiner concludes that the applicants' sales in District 4 should be conditioned at a price of 15 cents per Mcf (14.65 psia).

As we have noted some of the contracts in Texas Railroad Commission District No. 3 were executed prior to September 28, 1960, and some were executed thereafter.

As we have pointed out, there is no evidence in the record of this proceeding to support a different price for the natural gas being sold under contracts made after September 28, 1960, than for the gas being sold under contracts made prior thereto.

Staff price Exhibit 236 received in evidence in the instant proceeding covers a period from 1955 to April 15, 1962. In the hearing in this proceeding attention was focused for comparison purposes principally on prices for the period from 1958 through 1961.[15]

The Commission's decision in *Texaco Seaboard, et al.*, Op. No. 383 issued on March 27, 1963, determining the "in line" price for contracts in Texas Railroad Commission Districts Nos. 3 and 4 was based in major part upon a Staff price exhibit and supporting testimony covering such districts. The Commission determined that the "in line" price for the contracts there involved was 16 cents per Mcf psia. The evidence presented by the Staff in the instant case is similar in all material respects to their evidence presented in *Texaco Seaboard*. In these circumstances the examiner considers that the holding in *Texaco Seaboard*, based as it was on substantially the same evidence as that presented here, is binding precedent in this proceeding.[16] Accordingly, the examiner will issue an order in this proceeding covering all contracts for gas produced in Texas Railroad Commission District No. 3 conditioning the initial price of such natural gas to 16 cents per Mcf at 14.65 psia.

There is attached to this decision and made an integral part thereof on Appendix marked "Appendix A" covering sales made by the producers selling natural gas in Texas Railroad Commission District No. 2 as reflected by Staff Exhibit 236. This Appendix excludes certain contracts because they are considered by the examiner to be in "the suspect" class and therefore these prices should not be used as standards for purposes of comparison.[17]

The prices in Texas Railroad Commission District No. 2 excluded for comparison purposes are those in Docket Nos. G–16838, G–11105, and CI61–1360 at prices of 17 cents per Mcf for the first two dockets and 17.5 cents for the third docket. In this connection see also *Public Service Commission of the State of New York* v. *Federal Power Commission*, 295 F. 2d 140, and *United Gas Improvement Co.* v. *F.P.C.*, 283 F. 2d 817 (9th Cir.) cert denied 365 U.S. 881 (1960).

Appendix A shows that the weighted average price for all sales included in Texas Railroad Commission District No. 2 is 14.43 cents per Mcf.

---

[15] Exhibit 236 consists of four schedules and three bargraphs. Schedule No. 1 is a list of the proposed sales in these proceedings and sets out the pertinent provisions under the gas purchase contracts. Schedule No. 1–A is a list of the existing certificated sales, both permanent and temporary, in District 2 and shows the salient terms and provisions under 1955 and later gas purchase contracts, starting at 14 cents per Mcf and above. Schedules Nos. 2 and 3 contain the same information concerning Districts 3 and 4, respectively. The three bargraphs represent the number and distribution of the contracts which are suspect and not a reliable basis upon which to predicate the "line". The cut-off date for the study was April 15, 1962. The contracts marked "Litigation" are involved in cases that have been remanded by the courts and those actually under Commission review.

[16] See particularly the discussion of prices in Texas Railroad Commission District No. 3 as expressed in the majority opinion beginning with the last paragraph on page 596 of Opinion No. 383 in *Texaco Seaboard, et al.*, CI61–118, *et al.*

[17] See also, for example, *United Gas Improvement Co.* v. *Federal Power Commission*, 5 Cir., 290 F. 2d 133 (1961); *United Gas Improvement Co.* v. *Federal Power Commission*, 10 Cir., 287 F. 2d 159 (1961); *Public Serv. Com'n. of New York* v. *Federal Power Commission*, 109 U.S. App. D.C. 292, 287 F. 2d 146 (1960); *United Gas Improvement Co.* v. *Federal Power Com'n.*, 9 Cir., 283 F. 2d 817 (1960).

The five largest contracts in Texas Railroad Commission District No. 2 [18] and the initial prices are as follows:

Docket No.	Rate schedule No.	Contract date	Total initial price (cents per Mcf at 14.65)	Estimated first month's production (Mcf at 14.65)
G-20333	136	Oct. 9, 1958	14.18	117,000
G-20487	8	Apr. 1, 1958	14.18	234,000
CI60-58	4	Jan. 23, 1959	14.18	126,000
G-20351	4	Sept. 23, 1957	14.18	300,000
G-14329	8	Jan. 20, 1958	14.75	600,000

The weighted average of all prices for the period May 15, 1958, to May 15, 1959, is 14.34 cents per Mcf. The weighted average of all prices for the period December 15, 1959 to December 15, 1960, is 14.26 cents per Mcf.

It will be noted from the appendix that the greatest volumes of gas in this district are sold at the 14.18 cents per Mcf level, and the largest volume contract based on estimated first month's deliveries is 600,000 Mcf per month at a 14.75 cents per Mcf level. In addition, it will be observed that there are only 9 non-suspect contracts at 15 cents per Mcf or higher, and that the prices in such contracts range from 15 cents per Mcf to 15.333 cents per Mcf. There are only six such contracts above 15 cents per Mcf. None of the volumes involved approach in substantiality the volumes selling at prices ranging from 14.18 cents to 14.75 cents per Mcf.

The highest non-suspect price in Texas Railroad Commission District No. 2 is 15.333 cents per Mcf and involves a comparatively small volume, *i.e.*, 45,000 Mcf estimated first-month deliveries.

The applicants attempted to show that they incurred certain costs in relation to services beyond the wellhead for dehydration, compression and gathering for delivery at a central point principally in the Fulton Beach, Alta Loma, and Zoller fields. Such evidence, however, does not justify the applicants' contract prices. In this connection Exhibit 236 and the Staff witness' testimony in support of the exhibit indicates that such gathering services are performed by other producers in these areas—that in fact many of the contracts require the delivery of 950–1,000 Btu of gas at 1,000-pound pressure at a central delivery point in the field. The in-line prices shown by Exhibit 236 show that such services are normally rendered at the prices contained in the exhibit.

The evidence offered by applicants does not serve to show that they are entitled to any more than 15 cents per Mcf in Texas Railroad Commission Districts 2 and 4 and 16 cents in Texas Railroad Commission District No. 3.

The examiner concludes that the "in line" price for the two contracts involved here covering natural gas produced in Texas Railroad Commission District No. 2 is 15 cents per Mcf at 14.65 psia.[19]

[18] These contracts are included as part of Appendix A and are marked by an asterisk.

[19] In this connection, the Court of Appeals for the District of Columbia in *The Atlantic Refining Company* case decided on March 21, 1963 (See footnote 13, *supra*) noted that "* * * the public must be protected from the time the gas first enters interstate commerce. Since there is no mechanism for refund of overcharges under Section 7, *if the Commission is to err in setting an initial rate, it should err on the low side* because the company under Section 4, can immediately increase the rate, subject to disallowance by the Commission after a full rate proceeding, the public being protected as to refunds in the interim." (Emphasis supplied.) The reference concerning the lack of a mech-

[Footnote continued on following page.]

On November 2, 1961, the Commission issued an order covering the eight "G" dockets set forth in the caption to these proceedings. This order granted temporary authorization to the producers named in the "G" dockets upon the following conditions:

> (1) each producer refund to Natural Gas Pipeline Company of America any amounts collected after the date of issuance of this order in excess of the amount computed at the rate determined to be required by the public convenience and necessity in the above-listed proceeding; (2) that the initial rates set forth in our order of July 29, 1960, 24 FPC 106, shall remain in effect until changed by Commission order in this proceeding.[20]

Prior to the issuance of its November 2, 1961 order, the Commission had issued orders granting temporary authority to each of the applicants named in the "CI" dockets set forth in the caption to sell and deliver natural gas to Natural.[21]

The only condition contained in the earlier temporary authorizations for the "CI" dockets related to price level and required that the rates remain at such price level until changed by Commission order.

The applicants filed petitions with the Court of Appeals for the Fifth Circuit to review the validity of the condition attached to the temporary authorizations. The Fifth Circuit held invalid the condition in the Commission's temporary authorizations in these proceedings prohibiting increases in price for the gas being sold pursuant to temporary authority granted herein without the express approval of the Commission and remanded these matters to the Commission.[22]

On August 23, 1962, the Commission filed a petition for rehearing *en banc* and that petition has not as yet been acted upon by the Court.

Presumably the Commission will issue such order as may be appropriate after the litigation over the validity of the Commission imposed conditions is concluded. The Commission has not up to this point, however, issued any order modifying the refund conditions contained in its temporary certificate authorizations in the "G" dockets, and the examiner considers that he is required to follow such Commission orders as are outstanding.

In these circumstances the examiner will issue an order directing each applicant in the "G" dockets to make refunds in accordance with the conditions set forth in the Commission's order of November 2, 1961, with interest at the rate

---

anism for refund of overcharges obviously refers to overcharges made in the context of the issuance of a permanent certificate. Both the Court of Appeals for the District of Columbia in *The Atlantic Refining Company* case and the Circuit Court of Appeals for the Tenth Circuit in *California Oil Company, Western Division* v. *Federal Power Commission*, No. 7148, decided in the March 1963 Term (See footnote 14, *supra*) referred to "the purpose of the Natural Gas Act to 'underwrite just and reasonable rates to the consumers of natural gas' and 'As the original § 7(c) provided, it was "'the intention of Congress that natural gas shall be sold in interstate commerce for resale for ultimate public consumption for domestic, commercial, industrial, or any other use at the lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest.'" 52 Stat. 825. The Act was so framed as to afford consumers a complete, permanent and effective bond of protection from excessive rates and charges.'" *Atlantic Refining Co.* v. *Public Service Commission, supra*, 360 U.S. at page 388.

[20] A very brief outline of the procedural background of the eight "G" dockets above listed is given in the November 2, 1961 order of the Commission issued herein. See 24 FPC 1 and 24 FPC 106.

[21] The temporary authorizations in the "CI" dockets were issued in Docket No. CI61–1221 on March 17, 1961, in Docket Nos. CI61–1282 and CI61–1283 on April 7, 1961, and in Docket Nos. CI61–1343, CI61–1344, CI61–1345, and CI61–1346 on April 25, 1961 and in Docket No. CI61–1736 on July 21, 1961.

[22] *Hunt, et al.* v. *Federal Power Commission*, 306 F. 2d 334 (July 16, 1962). [Reversed, 376 U.S. 515.]

of 7 percent with regard to all monies to be refunded [2] and will also direct that permanent certificate authorization be granted at a 16-cent per Mcf level in Texas Railroad Commission District No. 3 in Docket Nos. G–19115, G–19116, G–19125, CI61–1221, CI61–1282, CI61–1283, CI61–1343, CI61–1344, CI61–1345 and CI61–1346 and at a 15 cents per Mcf level in Texas Railroad Commission Districts 2 and 4 covering Docket Nos. G–19119, CI61–1736, G–19117, G–19118, G–19123, and G–19124.

---

[2] The Commission's order of November 2, 1961, in these proceedings provided, among other things, that "* * * until such time as a final decision is rendered herein we shall condition the temporary authorizations issued herein by requiring the refund to Natural Gas Pipeline Company of America of any amounts collected after the date of the issuance of this order in excess of the amount computed at the rate determined to be required by the public convenience and necessity in such further proceedings as may be held in this matter". (Footnotes omitted.) This order does not contain any provision relating to interest on amounts to be refunded. There is, however, ample precedent for a ruling requiring applicants to pay interest on the amounts to be refunded. For example, in *Mitchell* v. *Riegel Textile, Inc.*, 259 F. 2d 954 (CADC), an obligation arose by virtue of an administrative order relating to the payment of minimum wages by certain cotton mills. That order was stayed by court injunction. Neither the administrative order nor the injunction mentioned interest, but when the injunction was reversed the mills were held liable, not only for the underpayment of wages, but for interest thereon. *Arkadelphia Milling Co.* v. *St. Louis Southwestern Ry. Co.*, 240 U.S. 134.

The principle that lies behind the granting of interest in such cases is that the person receiving or holding the money which is afterwards found to have been improperly received or held would be unjustly enriched if he did not pay interest on it during the time he had the use of it. This principle has been applied to matters arising under the Natural Gas Act as well as elsewhere, and entirely aside from the provision in Section 4(d) of the Act, 15 U.S. 717c(e), requiring interest on refunds resulting from a rate hearing.

Mississippi River Fuel Corp. v. *F.P.C.*, 281 F. 2d 919, 927 (CADC), decided June 30, 1960, is clearly in point. In that case, the Commission directed the payment of interest on amounts due from petitioner to its customers. These amounts became due under a settlement, approved by the Commission, whereby petitioner had agreed to make refunds, the amounts of which were dependent on the amounts which petitioner's supplier might be ordered to refund to it in proceedings then pending before the Commission. When these amounts were determined, the Commission ordered refunds, with interest. The Court said:

> Mississippi also questions the power of the Commission to order the refunds to intervenors at 6% interest. It is true that the Mississippi-Intervenor settlement decree did not provide for interest payments on amounts subject to refund. But it is also true that for an appreciable period the intervenors paid higher rates than were warranted, and Mississippi has had the use of the overpayments. The situation is a little different from what it would be if the Commission, after a Sec. 4(e) investigation, had determined that rates then in effect were too high and ordered refunds. The Natural Gas Act in that situation clearly allows a refund with interest. We hold the interest payments are allowable.

When the permanent certificates were granted applicants in July 1960, there was no guaranty that such certificates might not be set aside by reason of a decision by an appellate court and when the temporary certificates were granted to applicants it was apparent that the price in the temporaries might not turn out to comply with the public convenience and necessity prices determined after a formal hearing. The acceptance of a certificate by any applicant is always subject to the hazards of litigation, and every producer of consequence such as the applicants in these proceedings are well aware of the fact that decisions of the appellate courts often require administrative agencies to modify orders which such agencies have previously issued. Moreover, equitable principles are not confined by rigid formula. Accordingly, Natural becomes entitled to have the amounts paid by it restored to it insofar as they were excessive, together with interest involving any payments for gas delivered subsequent to November 2, 1961.

On March 1, 1960, the Commission issued its Order 215A amending Section 154.102(c) of the regulations to raise the rate of interest for refund purposes. This rule, in principle, is as applicable to the refunds ordered here as it would be in a Section 4 case and for that reason the rate of interest for the refunds to be made here is fixed at 7 percent per annum.

ADDITIONAL FINDINGS AND CONCLUSIONS

On consideration of all the evidence adduced, the briefs, and the arguments, as well as upon the preceding portion of this decision, it is further found and concluded that:

(1) Each of the applicants named in the caption of this decision is a natural gas company within the meaning of the Natural Gas Act as an independent producer of natural gas, as that term is defined in Section 154.91(a) of the Commission's Regulations, engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption and such sales together with the construction and operation of any facilities are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(2) Each of the applicants named in the caption is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(3) The sale of natural gas as proposed by each of the applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor are required by the public convenience and necessity and a certificate authorizing the same should issue to each of them upon the terms and conditions of the order herein, which terms and conditions are required by the public convenience and necessity.

(4) The public convenience and necessity requires that the initial prices charged by the applicants in this proceeding be not greater than 16 cents per Mcf at 14.65 psia for the sales made by them of natural gas produced in Texas Railroad Commission District No. 3 and not greater than 15 cents per Mcf at 14.65 psia for sales made by them of natural gas produced in Texas Railroad Commission District Nos. 2 and 4.[24]

ORDER

WHEREFORE, *It is ordered*, subject to review by the Commission, that:

(A) Certificates of public convenience and necessity are hereby issued to the applicants for the sale of natural gas in interstate commerce for resale as proposed in the applications filed under the docket numbers set forth in the caption, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor upon the terms and conditions of this order.

(B) The certificates issued to the applicants in Docket Nos. G–19119, CI61–1736, G–19117, G–19118, G–19123, and G–19124 are hereby conditioned to prohibit any total initial price including all reimbursements and charges greater than 15 cents per Mcf at 14.65 psia from the date of the issuance of

[24] The sales of natural gas in Docket Nos. G–19119 and CI61–1736 relate to gas produced in Texas Railroad Commission District No. 2. The sales in Docket Nos. G–19115, G–19116, G–19125, CI61–1221, CI61–1282, CI61–1283, CI61–1343, CI61–1344, CI61–1345 and CI61–1346 relate to natural gas produced in Texas Railroad Commission District No. 3. The sales in Docket Nos. G–19117, G–19118, G–19123, G–19124 relate to natural gas produced in Texas Railroad Commission District No. 4.

this order until such prices may be lawfully changed in the manner provided for in the Natural Gas Act.

(C) The certificates issued to the applicants in Docket Nos. G–19115, G–19116, G–19125, CI61–1221, CI61–1282, CI61–1283, CI61–1343, CI61–1344, CI61–1345, and CI61–1346 are hereby conditioned to prohibit any total initial price including all reimbursements and charges greater than 16 cents per Mcf at 14.65 psia, respectively, from the date of the issuance of this order until such prices may be lawfully changed in the manner provided by the Natural Gas Act.

(D) In accordance with the conditions attached to the temporary authorizations granted on November 2, 1961, to the applicants in the "G" dockets referred to in the caption such applicants shall refund to Natural Gas Pipeline Company of America within 90 days of the issuance of this order any amounts collected from such pipeline after November 2, 1961, in excess of the amounts which would have been collected under the rates at which the "G" docket producers' sales are certificated in the instant proceeding with 7 percent interest on the amounts to be refunded from November 2, 1961 to the date of refund, and shall report to the Commission in writing the details of said refunds within 15 days after making them.

(E) The certificates of the producer applicants referred to above are conditioned so that the take-or-pay requirement in each contract is subject to the provisions of the Commission's final order in Docket No. R–199 as of the effective date of that order, provided, however, that the producers shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities.

(F) The certificates issued herein are conditioned upon their acceptance in writing by the respective producer applicants within 30 days of the issuance of this order.

(G) The certificates issued herein are not transferable and shall be effective only so long as each of said applicants continues the acts and operations herein authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(H) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 of the Commission's Regulations under said Act requiring the filing of rate schedules for the service herein authorized and is without prejudice to any findings or orders which may have been or hereafter may be made by the Commission in any proceeding now pending or hereinafter instituted by or against the applicants. Further, the action taken in these proceedings shall not foreclose nor prejudice any further proceeding or objection relating to the operation of any price or related provisions in the gas contracts here involved.

Samuel Binder,
Presiding Examiner.

APPENDIX A

SUMMARY OF COMPARABLE PRICES FOR NATURAL GAS SOLD IN TEXAS RAILROAD COMMISSION DISTRICT NO. 2

Docket No.	Rate schedule No.	Contract date	Total initial price (cents per Mcf at 14.65)	Estimated first month production (Mcf at 14.65)

THE NORTHWEST PAPER COMPANY, DOCKET NO. E-7092

DECLARATORY ORDER

(Issued December 9, 1963)*

On April 25, 1963, The Northwest Paper Company (Petitioner), a Minnesota corporation with principal offices at Cloquet, Minnesota, filed a petition, including a statement of facts, pursuant to section 1.7(c) of the Commission's Rules of Practice and Procedure, for a declaratory order to remove any

*Opinion No. 421, denying rehearing, issued March 17, 1964, 31 FPC 593. Affirmed, *The Northwest Paper Co.* v. *F.P.C.*, 344 F. 2d 47 (CAS–1965)

uncertainty as to Petitioner's need under the Federal Power Act for a license to continue the maintenance and operation of its Brainerd hydroelectric project on the Mississippi River in Crow Wing County, at Brainerd, Minnesota.

Petitioner owns and operates the Brainerd project as a power source for its paper mill located beside the dam. Normally, the paper mill consumes all of the Brainerd project's energy and also larger amounts supplied by the Minnesota Power and Light Company, but when the paper mill is closed, Petitioner may dump its excess energy to the power company.

Congress in 1886 authorized the Mississippi Water-Power and Boom Company to build a dam and other project works for water power and other purposes, across the Mississippi River at Brainerd subject to certain conditions, including conditions in the interests of navigation (24 Stat. 12). The authorized work was completed by 1889 at the site of Petitioner's existing project. The property in 1890 passed after foreclosure sale to Andrew L. Fenessy, who in the same year conveyed it by quitclaim deed to the Brainerd Water-Power Company, the owner for the next three years. After another foreclosure sale, it was conveyed to Harry J. Jacquith, *et al.*, and then through mesne conveyances to the Northern Water Power Company (Northern Power), which was acquired by Petitioner in 1910; the subsidiary in 1936 conveyed the property to Petitioner.

When Petitioner erected a new paper mill near the dam site in 1916 and 1917, Northern Power rebuilt the dam and powerhouse and installed new generators. No other major work on the project works was performed until 1950, when a flood severely undercut part of the dam and virtually destroyed the gate sections. Petitioner submitted reconstruction plans to the Army Corps of Engineers and to the Division of Waters of the State of Minnesota Department of Conservation, both of which gave their approval. The reconstruction of the project, performed in 1950 and 1951, consisted principally of the following: (1) the west abutment, consisting of a 20-foot-wide tainter gate log sluiceway, was rebuilt by consolidating the rock-filled crib wall and crest structure with intruded concrete; (2) the wooden tainter gate was replaced without changing the dimension or elevation; (3) the top of east-west control spillway structure, consisting of thirteen twelve-foot-wide tainter gates, was replaced by two 85-foot long by seven-foot-high S. Morgan Smith Company Bascule gates; (4) the crest of the dam was set at an elevation of 1176 feet, and under the crest a six-foot-thick concrete cap was installed, and Prepakt concrete grout was pressure pumped to fill voids in the original rock-filled crib and pile caps; (5) a four-foot-thick concrete face and apron cap to an elevation of 1160 feet were installed, and Prepakt concrete was pressure pumped to consolidate the rock-filled crib and piling; (6) the top of the north-south spill structure was removed, and a four-foot-thick concrete crest cap (with top elevation of 1178 feet), dam face, and apron (with top elevation of 1160 feet) were rebuilt, and the existing rock-filled crib and pile structure were consolidated by pressure-pumped concrete to fill voids; and (7) five thirteen-foot, seven-inch stop log gates were constructed to maintain the reservoir at an elevation of 1182.2 feet.

The powerhouse and generating equipment were not changed in 1950 and 1951. Since then, however, two wood grinders driven by synchronous motors during low water periods have been removed and the motors converted to generators.

Under Section 23(b) of the Federal Power Act, it is unlawful for the Petitioner, as a nonlicensee, to maintain and operate hydroelectric project works upon a navigable water of the United States, unless it received a Federal permit for such works prior to passage of the Federal Power Act on June 10, 1920. Petitioner maintains and operates hydroelectric project works upon a navigable

water of the United States. It submits, however, that it does not need a license from the Commission because of the special act of Congress approved April 15, 1886 (24 Stat. 12), which authorized the Mississippi Water-Power and Boom Company to build a dam at Brainerd, Minnesota.

The project works authorized and constructed under the special act of 1886 (24 Stat. 12) no longer substantially exist. The project twice has been extensively rebuilt and modified. There are only a few vestiges of the original project works, notably certain oak pilings upon which some of the present structures rest. In our view, it may not be presumed that Congress by the special act of 1886 intended to authorize Mississippi Water-Power and Boom Company or Petitioner to replace the project works with new project works, or to increase or reduce the project's capacity, or otherwise replace or modify the authorized project works.

The first major reconstruction and modification was undertaken in 1916 or 1917 to bring the project's capacity up to the demands of Petitioner's new paper plant near the dam site. Apparently, Petitioner does not claim that Northern Power obtained the consent of Congress for this work, as required by sections 9 and 10 of the Rivers and Harbors Act of 1899 (33 U.S.C. 401, 403). In any event, when Petitioner commenced its construction of project works in 1950, and the installation of new facilities, without having obtained a license pursuant to the provisions of the Federal Power Act, it clearly acted in violation of section 23(b) of that Act.

Upon consideration of the facts presented by Petitioner, we conclude that it will be necessary for Petitioner to file application and obtain a license, pursuant to the provisions of the Federal Power Act and the Commission's Rules and Regulations thereunder, for the continued maintenance and operation of its project works in and along the Mississippi River at Brainerd, Minnesota.

The Commission orders:

The Northwest Paper Company shall, within ninety (90) days from the date of issuance of this order, file application for license, pursuant to the provisions of the Federal Power Act and the Commission's Rules and Regulations thereunder, for the continued maintenance and operation of its project works in and along the Mississippi River at Bainerd, Minnesota.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PENOBSCOT CHEMICAL FIBRE COMPANY, PROJECT NO. 2312

ORDER ISSUING LICENSE (MAJOR)

(Issued December 9, 1963)

Application was filed on April 30, 1962, and later supplemented, by Penobscot Chemical Fibre Company (Applicant) of Boston, Massachesetts, for a license under Section 4(e) of the Federal Power Act (Act) for constructed major Project No. 2312, located on Penobscot River, in Penobscot County, in the Great Works section of Old Town, Maine.

The major portion of the project dam is of rock-filled, log and plank construction. The dam is approximately 777 feet long. Portions of this section at either end were in existence prior to 1861. The complete section was built prior to 1900. The 250-foot wing at the west end of the main section is of concrete and stone-capped construction and was built around 1902. A 4-foot concrete cap was installed around 1914. The installed capacity of the project is

7,400 horsepower and the energy generated thereby is used by Applicant in its manufacturing business.

The Penobscot River and its East and West Branch have been used extensively in boating operations for the transportation of persons and property between various points on such streams. Extensive logging operations have been conducted between the mouth of the Penobscot River at Penobscot Bay and the international boundary on the West Branch and Chamberlain Lake on the East Branch.

The Secretary of the Army and the Chief of Engineers, in reporting on the application, have advised that special terms and conditions for inclusion in any license issued for the project are not necessary for purposes of navigation or flood control, and that the plans of the structures affecting navigation are satisfactory and have been approved in accordance with Section 4(e) of the Act insofar as the interests of navigation are concerned.

The Department of the Interior, in reporting on the application, recommended for inclusion in any license issued for the project certain special conditions for the future improvement of anadromous fish migrations.

The Commission finds:

(1) The project is located upon a navigable waterway of the United States.

(2) Applicant is a corporation organized under the laws of the State of Maine and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a license for the project.

(3) Public notice of the filing of the application has been given as required by the Act. Except for an informal protest filed by the State of Maine, Department of Health and Welfare on behalf of the Penobscot Indians, which was subsequently withdrawn, no protests have been received. There are no conflicting applications pending.

(4) The issuance of a license as hereinafter provided will not affect a Government dam or the development of any water resources for public purposes which should be undertaken by the United States.

(5) The project will be best adapted to a comprehensive plan for improving and developing a waterway or waterways for the use or benefit of interstate or foreign commerce, for the improvement and utilization of water-power development, and for other beneficial public uses, including recreational purposes, upon compliance with the terms and conditions hereinafter imposed.

(6) The installed horsepower capacity of the project hereinafter authorized for the purpose of computing the capacity component of the administrative annual charge is 7,400 horsepower.

(7) The amount of annual charges to be paid under the license, based upon such capacity, for the purpose of reimbursing the United States for the costs of administration of Part I of the Act is reasonable as hereinafter fixed and specified.

(8) The energy generated by the project is used by Applicant in its manufacturing business.

(9) The exhibits designated and described in paragraph (B) below conform to the Commission's rules and regulations and should be approved as part of the license for the project.

The Commission orders:

(A) This license is hereby issued to Penobscot Chemical Fibre Company (Licensee) under Section 4(e) of the Federal Power Act (Act) for a period effective as of April 1, 1962, and terminating on December 31, 1993, for the continued operation and maintenance of major Project No. 2312 located on the

Penobscot River, a navigable waterway of the United States, in the Great Works section of Old Town, Penobscot County, Maine, subject to the terms and conditions of the Act which is incorporated by reference as a part of this license, and subject to such rules and regulations as the Commission has issued or prescribed.

(B) Project No. 2312 consists of:

(i) All lands constituting the project area and enclosed by the project boundary or the limits of which are otherwise defined, and/or interests in such lands necessary or appropriate for the purpose of the project, whether such lands or interests therein are owned or held by the applicant or by the United States; such project area and project boundary being more specifically shown and described by certain exhibits which formed part of the application for license and which are designated and described as follows:

Exhibit J: (FPC No. 2312–1) Plan View of Project Area.

Exhibit K: (FPC No. 2312–3) Detail View of Project Area.

(ii) The project consists of a rock-filled log and plank dam approximately 20 feet high and 777 feet long with a 250-foot concrete and stone capped wing-section, creating river pondage extending upstream to the tailrace of the Milford Dam of the Bangor Hydro-Electric Company; fishway; log sluice; spillways; ten operating sluice gates leading to powerhouse containing ten water wheels connected to twelve generating units (two water wheels, each connected to two generators) having a total installed capacity of 3,380 kw of a.c. and 2,174 kw of d.c., and other appurtenant facilities; the location, nature and character of which are more specifically shown and described by the exhibits hereinbefore cited and by certain other exhibits which also formed part of the application for license and which are designated and described as follows:

Exhibit L: (FPC No. 2312–4) Elevation of Power House. (FPC No. 2312–5) Floor Plan of Power House. (FPC No. 2312–6) Section View of Station. (FPC No. 2312–7) Details of Dam. (FPC No. 2312–8) 4160-volt Electrical Feeders.

Exhibit M: Two typewritten sheets entitled, "General Description and General Specifications of Equipment."

(iii) All other structures, fixtures, equipment or facilities used or useful in the maintenance and operation of the project and located on the project area, including such portable property as may be used or useful in connection with the project or any part thereof, whether located on or off the project area, if and to the extent that the inclusion of such property as a part of the project is approved or acquiesced in by the Commission; also, all riparian or other rights, the use or possession of which is necessary or appropriate in the maintenance and operation of the project.

(C) This license is also subject to the terms and conditions set forth in Form L–3, November 1, 1963, 30 FPC 1658, entitled "Terms and Conditions of License for Constructed Project Affecting Navigable Waters of the United States," which terms and conditions, designated as Articles 1 through 27, are attached hereto and made a part hereof; and subject to the following special conditions set forth as additional articles:

Article 28. The Licensee shall pay to the United States the following annual charges:

For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, one (1) cent per horsepower on the authorized installed capacity (7,400 horsepower) plus two and one-half (2½) cents per 1,000 kilowatt-hours of gross energy generated during the calendar year for which the charge is made; or such other amounts as may hereafter be determined as necessary to reimburse the United States for the costs of administration.

Article 29. The Licensee shall within one year from the date of issuance of

the license, file with the Commission for approval its proposed recreational use plan for the project. The plan shall be prepared after consultation with appropriate Federal, State and local agencies, and shall include recreational improvements which may be provided by others in addition to the improvements the Licensee plans to provide.

(D) The exhibits designated and described in paragraph (B) above are hereby approved as part of this license.

(E) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; NORTH CENTRAL OIL CORPORATION (OPERATOR), ET AL., DOCKET NOS. CI61-1570, CI61-1571 AND CI62-313

ORDER DENYING MOTIONS FOR SEVERANCE, FOR APPROVAL OF SETTLEMENT PROPOSALS AND FOR ISSUANCE OF CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 9, 1963)

On September 20, 1963, North Central Oil Corporation (Operator), *et al.* (North Central) filed a motion for severance of Docket No. CI62-313 from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.* (hereinafter referred to as the Union Texas proceeding), for approval of settlement proposal and for the issuance of a certificate of public convenience and necessity. On September 23, North Central filed a similar motion relating to Docket Nos. CI61-1570 and CI61-1571.

Consolidated Edison Company of New York, Inc. (Con-Edison), on September 27, 1963, filed a response in opposition to the motion filed on September 23, on the grounds that North Central had failed to provide for refunds in accordance with the temporary authorizations heretofore issued in Docket Nos. CI-61-1570 and CI61-1571.[1]

North Central, on October 1, filed an amendment to its offer of settlement in Docket Nos. CI61-1570 (RS-9) and CI61-1571 (RS-8). By this amendment North Central offers to make refunds of excesses collected under the rate schedules related to these certificate applications since January 1, 1962, the date on which North Central became the operator of the properties. Pioneer Oil and Gas Company had been the operator of the properties prior to that time and had been making sales since June, 1961, under refund conditioned temporary authorizations. As operator during the period June 1961 to January 1, 1962, Pioneer's filings covered the interests of North Central; since January 1, 1962, North Central's filings have covered the interests of Pioneer. The rate under both rate schedules is 23.25¢ per Mcf[2] and the proposed settlement rate is 20.625¢ per Mcf.

---

[1] On October 4, 1963 Public Service Electric and Gas Company filed a letter with the Secretary agreeing with the response of Con-Edison.

[2] All rates expressed inclusive of applicable tax reimbursement and all volumes at 15.025 psia.

Brooklyn Union Gas Company (Brooklyn Union), on October 11, 1963, filed a statement in opposition to the offer of settlement of North Central in Docket Nos. CI61–1570 and CI61–1571 noting the failure to provide for refunds as required by the temporary authorizations. Brooklyn Union states that it would not oppose the settlement if the producer would accept modification to provide for full refunds.

The failure to provide for full refunds under refund conditioned temporary authorizations is a substantial departure from the more recent settlements which have arisen from the Union Texas Proceeding and which we have approved.[3] North Central's offer also differs from the other Union Texas settlements by providing for rate increases during the moratorium period for ¾ of any additional tax which may be levied in the future. All other Union Texas settlements which we have approved have provided for rate increases for reimbursement of up to ½ of such tax increases.

In view of the foregoing, the Commission finds that both settlement proposals of North Central should be rejected and both motions for severance should be denied. Insofar as Docket Nos. CI61–1570 and CI61–1571 are concerned, there is no "settlement", but even if parties had not opposed the offer, we should reject it. A possible avoidance of refunds should not be allowed to result from a mere change in operator of gas property.

Further, to allow the provision for rate increases for ¾ of any future tax increases would be to allow North Central an advantage, for no good reason, over other producers which have settled in the Union Texas proceeding.

Although the objections described above do not apply to Docket No. CI62–313, we are of the view that a settlement in a proceeding should include all of the applications of a producer consolidated therein unless unusual circumstances do not so permit. We find no such unusual circumstances here and consequently, we shall deny both motions of North Central and reject both settlement proposals.

The Commission orders:

The Motions for severance, for approval of settlement proposals and for issuance of certificates of public convenience and necessity filed by North Central Oil Corporation (Operator), *et al.* in the above-captioned proceedings on September 20, and 23, 1963, as amended on October 1, 1963, are hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP63–348

FINDINGS AND ORDER AFTER STATUTORY HEARING AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 10, 1963)

On September 26, 1963, and on October 18, 1963, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP63–348 applications pursuant to Section 7(c) of the Natural Gas Act to amend the certificate of public convenience and necessity issued in the above docket on September 20, 1963, 30 FPC 825, as hereinafter described and as more fully described in the application.

---

[3] See orders issued August 7, 1963 (Humble Oil & Refining Company) and October 9, 1963 (Gulf Oil Corporation and Socony Mobil Oil Company) in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979 respectively.

The application filed on September 26, 1963 proposes to amend ordering paragraph (B) of the said certificate which reads as follows:

"Issuance of a certificate in this docket is conditioned on issuance of a certificate in Docket No. CP63–222."

Applicant does not now require the unit proposed in Docket No. CP63–222 in order to render the service certificated in the instant application during the 1963–64 winter. Gas presently allocated to certain customers has not been contracted for, thereby freeing it for service in the instant docket. Applicant states that it will file, in the near future an application providing for sufficient facilities to render the instant service in the following years.

Applicant therefore has petitioned the Commission to amend the certificate issued September 20, 1963 in the instant docket, by removing the condition contained in Ordering Paragraph (B) of said order.

In the application to amend filed on October 18, 1963, Applicant further requests authority to sell an additional volume of 1300 Mcf per day of firm gas (at 14.73 psia) to an existing customer, Alexander City, Alabama, for resale. No additional facilities are required to render the increased service. Minor volumes of Applicant's gas now allocated to certain customers which will not be required for service during the coming winter season will be used to serve Alexander City. Applicant intends to file an application to construct facilities sufficient for serving all customers in the years to follow.

The service to Alexander City will be rendered under Applicant's Rate Schedule OG–1.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 4, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the applications and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that:

(a) the condition contained in Ordering Paragraph (B) of the order issued September 20, 1963 in Docket No. CP63–348 be removed;

(b) that Applicant, Transcontinental Gas Pipe Line Corporation, be authorized to sell an additional 1300 Mcf of natural gas per day to the City of Alexander City, Alabama, as hereinbefore described.

The Commission orders:

(A) The condition contained in Ordering Paragraph (B) of the order issued on September 20, 1963, in Docket No. CP63–348 be and the same is hereby removed.

(B) The order of the Commission issued September 20, 1963 in Docket No. CP63–348 be and the same is hereby amended by authorizing Applicant, Transcontinental Gas Pipe Line Corporation to sell an additional volume of 1300 Mcf per day on firm basis, as hereinbefore described, to the City of Alexander City, Alabama.

(C) In all other respects, the aforesaid order issued September 20, 1963 in Docket No. CP63–348 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black

IDAHO POWER COMPANY, PROJECT NO. 1971

ORDER AMENDING AND SUPPLEMENTING ORDERS PRESCRIBING FISH FACILITIES, AND DIRECTING PRESIDING EXAMINER TO PROCEED FURTHER

(Issued December 11, 1963)*

On February 12, 1958, the Commission issued an order (19 FPC 237), pursuant to Article 35 of the license, prescribing facilities for anadromous fish for Project No. 1971, generally as shown on certain plans submitted for a forebay net barrier with skimming and trapping devices at the Brownlee development, upstream facilities at the powerhouse and spillway of the Oxbow development, and facilities for the transfer of runs from the Wildhorse River.[1] It was also provided that the Brownlee reservoir should not be filled until authorized by further Commission order.

On April 10, 1958, the Commission issued an order authorizing the filling of the Brownlee reservoir, subject to certain conditions (19 FPC 512). This order was amended by an order issued August 26, 1958, which permitted the operation of the first turbine subject to certain conditions (20 FPC 232). By telegraphic orders dated September 15 and 18, 1958, the period of turbine operation was conditionally extended, pending completion of the forebay barrier.

The Commission issued an order on September 23, 1960, which terminated the operation of the Wildhorse River facilities (24 FPC 517).

On November 17, 1960, the Commission issued an order which further modified the order of February 12, 1958, by the staying of the provision for upstream facilities at the powerhouse of the Oxbow development, and provided for: (a) the operation of the upstream facilities at the spillway of the Oxbow development, including requirements for water releases,[2] (b) artificial propagation of fall chinook salmon near the Oxbow dam, and (c) evaluation studies of fish facilities at the Brownlee and Oxbow developments (24 FPC 962).

By an order issued March 22, 1963, the Commission instituted an investigation (a) to review and evaluate the studies made pursuant to Article 34 of the license and the order issued November 17, 1960; (b) to review and evaluate the fish facilities installed at the Brownlee and Oxbow developments and determine what modifications, if any, should be made in such facilities; and (c) to determine what fish facilities should be installed at the Hells Canyon development. Prehearing conferences and hearings have been held pursuant to the order issued March 22, 1963. At these hearings the U.S. Fish and Wildlife Service, the fish and game agencies of the States of Idaho and Oregon, and the Licensee presented evidence primarily in respect to what has occurred at the Oxbow and Brownlee developments since commencement of construction. The Commission Staff also presented evidence concerning field inspections.

*Order denying rehearing and stay printed at 31 FPC 394.

[1] Article 35 of the license issued to Idaho Power Company for Project No. 1971 (14 FPC 55, 80), provides as follows:

> The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such fish ladders, fish traps or other fish handling facilities or fish protective devices and provide fish hatchery facilities for the purpose of conserving the fishery resources and comply with such reasonable modifications of the project structures and operation in the interest of fish life as may be prescribed hereafter by the Commission upon its own motion or upon the recommendations of the Secretary of the Interior and the conservation agencies of the States of Idaho and Oregon.

[2] By order issued May 27, 1963, the Commission authorized changes in water releases at the Oxbow spillway facilities.

Pursuant to a motion made on June 10, 1963, on behalf of the state fish and game agencies and granted by the Presiding Examiner, cross-examination of the fishery agencies' witnesses on all matters was deferred until completion of the evaluation studies and the presentation of evidence on the results of such studies. The final report on the evaluation studies was in preparation on October 15, 1963, and it should be completed before the end of this year.

On October 15, 1963, representatives of the Licensee, U.S. Fish and Wildlife Service of the Department of the Interior, and the fish and game agencies of the States of Idaho, Oregon and Washington proposed and entered into a stipulation which is contained in the transcript of the proceeding for that day at pages 1085–1089. The stipulation proposed and recommended that the Commission issue at an early date an order to amend and supplement previous orders prescribing fish facilities, pursuant to Article 35 of the license.

By motion filed October 18, 1963, the Licensee requested that the aforesaid stipulation be made effective; that the order issued May 27, 1963, with respect to water releases be made final; and that further hearings provided for by the Commission's order of March 22, 1963, instituting an investigation be terminated. The Presiding Examiner, in his Report, filed November 7, 1963, referred the matters involved to us for determination and further instructions.

By our order herein we are amending and supplementing prior orders substantially as requested and recommended in the stipulation. As recognized by the stipulation, these orders are interim in nature and are subject to such further changes as may be necessary. Therefore the water releases as specified in the order of May 27, 1963, will be continued pending further order of the Commission.

The stipulation, designed to meet the exigencies of the situation, does not fully cover the purposes of the investigation instituted by the order of March 22, 1963. Therefore, the Presiding Examiner should reconvene the hearings, receive further evidence on the results of the evaluation studies and on any other relevant matters that may be presented at that time, and, following cross-examination and such briefing as may be appropriate, submit his findings and conclusions, and a program for future proceedings.

The Commission finds:

It is consistent with the public interest that an order be issued amending and supplementing previous orders prescribing fish facilities for Project No. 1971, pursuant to Article 35 of the license, and to direct the Presiding Examiner to proceed further in the investigation instituted by the order issued March 22, 1963, as hereinafter provided.

The Commission orders:

(A) Idaho Power Company (Licensee) shall abandon, so far as its use for the originally intended purposes, the Brownlee net installation, including the downstream migrant barge traps, and shall remove or otherwise make nonoperative the barrier, pumping and loading system prior to the beginning of the 1964 downstream migrant season to assure free downstream migrant passage; except that the barge traps shall be operated until June 30, 1964, at the expense of the Licensee, for the benefit of the Bureau of Commercial Fisheries' Fish Passage Research Program as directed by the Program Director.

(B) The Licensee shall purchase the necessary land at a location on lower Rapid River, a tributary of the Little Salmon River near Riggins, Idaho, where a supply of gravity fed water is readily available, and shall obtain necessary water rights and construct holding facilities for approximately 300 adult spring chinook salmon or steelhead trout, and operation of the holding facilities shall commence on or before May 1, 1964. The Licensee shall provide a hatchery building with suitable trays and construct necessary raceways for rearing approximately 600,000

spring chinook salmon, or steelhead, to the age of one year plus, or until ready for seaward migration. The design and ultimate location of these experimental facilities shall be acceptable to the fishery agencies and shall be such that the facilities can be economically expanded if experience indicates the desirability thereof. The operation shall be conducted at the expense of the Licensee and shall be under the supervision of one of the fishery agencies of the States of Idaho or Oregon.

(C) The Licensee shall, on an experimental basis, as determined by the fishery agency personnel, transport to the Rapid River installation for purposes of artificial propagation approximately 300 adult spring chinook salmon and steelhead trout, or their eggs; provided, that not more than 15% of the adult steelhead trapped at Oxbow, or their eggs, shall be so transported.

(D) In operating the fish facilities at Project No. 1971, the Licensee shall:

(i) Trap and place in the Oxbow holding pond all fall chinook salmon and continue the present program of artificial propagation in the present facilities near the Oxbow dam until such time as an alternate plan is ordered by the Commission, it being provided that such facilities shall be enlarged if necessary to accommodate all fall chinook salmon trapped;

(ii) Continue to trap at Oxbow all adult spring chinook salmon and steelhead and, except as provided in Paragraphs (B) and (C) above, transport them over Oxbow and Brownlee dams;

(iii) Provide transportation (truck and drivers) to a point below the Oxbow unit for any downstream migrants captured by the facilities of the Fish Passage Research Program near Weiser and near the mouth of the Powder River or at such other comparable facility that may be installed, for such period as the program is in effect and migrants are captured; and

(iv) Provide in the annual plan of operation of the Brownlee reservoir that during the period of expected downstream anadromous fish migration, water will be spilled in the manner most advantageous for fish travel as determined by the designated representatives of the fishery agencies, consistent with the primary purposes of Project No. 1971 and the requirements of the license therefor; provided, if there is disagreement between the Licensee and the fishery agencies, the Commission, upon its own motion or upon request of either the Licensee or any of the fishery agencies, shall determine the amount and time of spill.

(E) The Licensee shall construct, operate and maintain temporary fish facilities for the Hells Canyon development generally as shown on the drawing field with the Commission on April 24, 1963, specifically designated "Hells Canyon H. E. Development, Temporary Fish Facilities" and being sheet 6 of 6 drawings filed at that time, said facilities generally consisting of a fish trap of standard type located at the mouth of the diversion tunnel and an aerial cableway which will transport the captured fish in a container over the whole construction area and deposit them in the river above the construction site. On or before January 1, 1966, a determination of what fish facilities should be installed at the Hells Canyon development will be made by stipulation of the parties, as approved by the Commission, or by the order of the Commission on its own motion or upon application of any interested party after opportunity for hearing.

(F) The Licensee shall consult and cooperate with the fishery agencies in determining upon a mutually satisfactory program to be financed by the Licensee for the purpose of evaluating and recording the degree of success achieved, in terms of maintenance of the fishery resource, by the artificial propagation facilities heretofore prescribed and as supplemented by this order. Should the Licensee and the fishery agencies be unable to agree upon the terms of the program, the Commission reserves the right to determine the same after notice

and opportunity for hearing. The Licensee shall furnish to the Commission on a timely basis reports on evaluation studies financed by the Licensee.

(G) The term "fishery agencies" as used herein shall mean the U.S. Fish and Wildlife Service, the Idaho Department of Fish and Game, the Oregon Fish Commission, the Oregon Game Commission, the Washington Department of Fisheries and the Washington Department of Game.

(H) Nothing herein shall be construed as full compliance with the provisions of Article 35 of the license for Project No. 1971.

(I) The hearings in the investigation instituted by the Commission's order issued March 22, 1963, shall be reconvened at a time and place to be announced by notice of the Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-47

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 11, 1963)

On August 26, 1963, Northern Natural Gas Company (Applicant) filed in Docket No. CP64-47 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the installation of "uprating kits" on existing gas turbine compressor units, as more fully set forth in the application.

Applicant proposes to install and operate such "uprating kits" on 8 gas turbine units in the Tescott and Macksville compressor stations located in Kansas. It appears that high-temperature operation produces gradual deterioration of certain gas turbine units and these components must be replaced or reconditioned at intervals of 50,000 to 60,000 hours in order to maintain the rated horsepower capacity. The installation of the proposed new parts will permit approximately 100,000 hours of operation before replacement or reconditioning become necessary, thereby decreasing future maintenance costs. The improved metalurgy of the new parts will enable the units to operate at higher temperatures, thereby increasing the horsepower of each unit by an estimated 500 horsepower or an overall gain of 2,000 horsepower at each of the two stations.

Applicant proposes to install the metallurgically improved "uprating kits" at an estimated unit cost of $77,000 per unit and a total estimated cost of $613,200, which cost will be financed from cash on hand or cash generated from operations. The installation will be made during the summers of 1964 and 1965.

The proposed expenditures will enable better operation of the Applicant's transmission system and will reduce future maintenance costs.

Pursuant to due notice, a public hearing was held in Washington, D.C., on November 5, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as hereto found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission and the installation and operation thereof by Applicant are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The installation and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter order and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to install and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be completed and placed in operation not later than September 21, of the year in which commenced, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations aforesaid.

[LETTER REQUIRING FILING OF RATE SCHEDULES]

DECEMBER 11, 1963

PUBLIC SERVICE COMPANY OF INDIANA, INC.
1000 East Main Street
Plainfield, Indiana
Attention: Mr. H. A. Barker, Financial Vice President

GENTLEMEN: Commission staff analysis of available office data indicates that your company currently transmits or interchanges and sells electric energy in interstate commerce at wholesale for resale to a number of purchasers for whom there are no established rate schedules on file with this Commission.

Utility operating data set forth in your 1962 Form No. 1 and in the 1962 FPC Form No. 12, Power System Statement, covering your company, indicates that energy transmitted and sold on your system is generated outside of the state in which it is consumed.

As reported in your company's 1962 FPC Form No. 1. Annual Report, you provided wholesale electric service to seventy-nine purchasers for resale, and interchanged energy with four other utilities. However, a review of the Commission's

rate schedule file indicates that no rate schedules are on file for sixty-nine of these customers. The 1962 wholesale customers for which no rate schedules are on file are listed in the attachment to this letter.

During years 1942 to 1947, your company filed rate schedules providing service to the municipalities of Bainbridge, Covington, Ladoga, Middletown, Montezuma, Paragon, Pendleton, Rockville, Tipton, Veedersburg and Etna Green. Information available to the Commission indicates that the municipality of Etna Green now receives its electric service from another electric utility. Your company has made no submittals of rate schedules that superseded, supplemented, cancelled or otherwise changed any provisions of the rate schedules applicable to service to the eleven municipalities.

Your prompt attention to the above matter will be appreciated. It is suggested that your company complete all appropriate rate schedule filings within a period of thirty days from the date of this letter in the manner provided in Part 35 of the Commission's Regulations under the Federal Power Act.

JOSEPH H. GUTRIDE,
Secretary.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CITY OF MONTEZUMA, GEORGIA, DOCKET NO. CP64-57

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued December 12, 1963)

On September 5, 1963, as supplemented on September 9, 1963, the City of Montezuma, Georgia (Applicant), filed in Docket No. CP64-57 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing South Georgia Natural Gas Company (South Georgia) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicant for resale and distribution in Montezuma and environs, all as more fully set forth in the application, as supplemented.

Applicant proposes to construct and operate a distribution system in Montezuma and approximately 11 miles of transmission line connecting said system with a proposed transmission line to be constructed by South Georgia. Applicant will also distribute gas to customers located along its proposed transmission line.

Applicant's estimated third year peak day and annual natural gas requirements are 1,098 Mcf and 180,730 Mcf, respectively.

The total estimated cost of transmission and distribution facilities for the proposed project is $696,000. Said cost will be financed by the issuance of revenue bonds in the amount of $367,000 and by a grant of $329,000 under the Accelerated Public Works Program of the Housing and Home Finance Administration.

On September 9, 1963, South Georgia filed an answer to the subject application stating that it is willing to render natural gas service to Applicant. South Georgia will construct and operate approximately 10 miles of 4½-inch pipeline connecting its 4½-inch line, located south of Americus, Georgia, with the proposed transmission line of Applicant. The total cost of South Georgia's proposed facilities is estimated to be $115,000.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on November 28, 1963

(28 F.R. 12675). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) South Georgia Natural Gas Company, a Georgia corporation having its principal place of business in Thomasville, Georgia, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 3, 1954, in Docket No. G–1915 (13 FPC 666).

(2) Applicant, City of Montezuma, Georgia, is a municipal corporation incorporated under the laws of the State of Georgia and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in said city.

(3) It is necessary and desirable in the public interest that South Georgia be directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to render natural gas service to Applicant, as set forth in the application, as supplemented, and as hereinafter ordered and conditioned.

(4) This order should be conditioned upon Applicant being prepared to receive gas from South Georgia, as proposed, within one year from the date on which this order issues.

(5) The requirements that South Georgia serve Applicant, as proposed, will not place any undue burden upon South Georgia nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) South Georgia Natural Gas Company be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to render natural gas service to Applicant, all as hereinbefore described and as set forth in the application, as supplemented.

(B) South Georgia shall report to the Commission in writing the date of commencement of service to Applicant.

(C) This order is conditioned upon Applicant being prepared to receive natural gas from South Georgia, as proposed, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

BLACK, *Commissioner*:

This case involves the use by Tennessee Gas Transmission Company (Tennessee) of a budget-type certificate issued for minor and routine construction as justification for the connection and transportation in interstate commerce of gas reserves purchased at a price in excess of $159,000,000. Also present is an attempt by Pan American Petroleum Corporation (Pan American) to avoid the requirement of obtaining a certificate of public convenience and

necessity for the sale of this gas to Tennessee by utilization of a transfer of leases.

The pertinent facts are not in issue. From 1954 through 1959, Pan American, in nonjurisdictional transactions, acquired twelve oil, gas and mineral leases, or interests therein, of undeveloped acreage in the Bastian Bay Field in Louisiana. Subsequently, six wells were drilled on these leases. Thereafter, on December 1, 1960, Pan American assigned to Tennessee all its rights and interests in the 12 leases, as well as its wells, equipment and related personal property on the lands affected, for a purchase price, subject to later redetermination, of $159,463,500. Prior to the assignment Pan American's wells were not connected to an interstate pipeline. Subsequently, Tennessee installed 2.63 miles of 12-inch line connecting these Bastian Bay Field reserves with its existing system, and gas from the Bastian Bay Field has flowed into Tennessee's system since February 3, 1961.

By order of April 6, 1961, the Commission reopened *Tennessee Gas Transmission Company*, Docket No. CP61–106, to determine (1) whether the budget-type certificate therein issued to Tennessee in January, 1961, covered the construction and operation of the 2.63 miles of pipeline connecting the Bastian Bay reserves with its interstate system and (2) the cost to Tennessee of the reserves so acquired. Thereafter, on March 12, 1962, in Docket No. CI62–1034, the Commission directed Pan American to show cause why it should not be found to be engaged in the jurisdictional sale of natural gas produced at Bastian Bay to Tennessee without having secured authorization or filed the necessary schedules therefor as required by the Natural Gas Act. The order of March 12, 1962, consolidated the show cause proceeding with the Tennessee proceeding in Docket No. CP61–106.

Following hearings held in May and June of 1962, the presiding examiner, on April 1, 1963, issued his initial decision in these consolidated proceedings. In his decision, the presiding examiner found that:

(1) Tennessee's facilities connecting the Bastian Bay Field reserves to its system were not covered by the budget-type certificate issued in 1961, and are without authorization under Section 7 of the Act.[1]

(2) Pan American's assignment of its Bastian Bay leasehold interests to Tennessee constituted an in-place sale of gas to Tennessee subject to the Commission's jurisdiction, for which no certificate of authorization has been issued under Section 7.

(3) The estimated cost to Tennessee of the Bastian Bay reserves over the life of the field is $267,657,700, assuming a rate of production of 165,000 Mcf of raw gas per day; and the weighted average cost per Mcf (including 2.3 cents Louisiana severance tax) is 31.33 cents.

(4) Pan American's original investment in the Bastian Bay leases was $16,488,673.50, and the remaining investment (deducting depreciation, depletion, and amortization up to the time of the transfer to Tennessee) when assigned to Tennessee was $14,976,872.17.

Exceptions to the examiner's decision were filed by Tennessee, by Pan American, by Pennsylvania Public Utility Commission, and by staff.[2] Tennessee

[1] The examiner also found that certain facilities in the Bastian Bay Field, which were acquired by Tennessee from Pan American, are facilities for the transportation and sale of gas in interstate commerce, subject to the jurisdiction of the Commission, and were acquired without proper authorization.

[2] Interveners in these proceedings are: New York Public Service Commission, Pennsylvania Public Utility Commission, The United Gas Improvement Co., Long Island Lighting Co., Consolidated Natural Gas Co., City of Pittsburgh, Pa., the Brooklyn Union Gas Co., Consolidated Edison Co. of New York, Inc., and (jointly) Fuels Research Council, Inc., National Coal Association and United Mine Workers of America.

and Pan American requested oral argument, which was held before the Commission on September 24, 1963.

Tennessee—Docket No. CP61–106

Tennessee contends that the construction of its 2.63-mile line connecting the Bastian Bay Field was authorized by the budget-type certificate issued on January 6, 1961, in Docket No. CP61–106, 25 FPC 129. Tennessee's argument to support this position is not persuasive. To be sure, the cost limitation of the facilities prescribed under the budget proceedings were not exceeded. (Rules of Practice and Procedure, § 2.58.) But, Order No. 185, 15 FPC 793, by which the Commission established the budget-type proceedings, provides:

> The whole problem of possible changes in the Commission's regulations permitting greater flexibility in its procedures with respect to rate filings and certification of natural-gas facilities subject to the Natural Gas Act is and will continue to be a prime concern. One recommendation, among others, was to the effect that the Commission define "facilities" requiring certificates under the Act so as to exclude *minor* installations or changes in connection with the rendition of service to existing customers or markets. The Commission recognizes the desirability of dealing with *minor* installations on a practical basis but doubts that the Natural Gas Act authorizes it to further expand its rule excluding certain facilities from the certification requirements (18 C.F.R. 2.55). . . .
>
> In the meantime and as a substitute, the Commission advises any interested natural-gas company subject to the Natural Gas Act that it may file under Section 157.6 of the Rules a single certificate application covering in general outline along the lines of a budget estimate the proposed *routine* construction intended to be undertaken by it during the current or ensuing fiscal year. . . . [15 FPC 793–794; emphasis supplied.]

Tennessee's application in this proceeding recites its purpose as relieving the applicant, as well as the Commission and its staff, of the burden and exepnse of preparing and processing numerous relatively minor and routine applications. The order of January 6, 1961, issuing the certificate states that the purpose of the application was to augment Tennessee's ability to act with reasonable dispatch in contracting for and connecting new supplies of gas to its system; and it specifically points out that the order was issued under the shortened procedures in reliance upon the fact that no petition to intervene or protest to the granting of the application had been received. Such a certificate may not reasonably be construed as authority for construction of facilities attaching an estimated 759,350,000 Mcf of reserves acquired at a cost of $159,463,500 and acquired in a transaction not previously approved by the Commission.

The very size and cost of these reserves will necessarily have a material effect on Tennessee's rates. This Commission, under the doctrine of the *CATCO* case,[3] has an obligation to scrutinize with great care the initial cost of a new gas supply before permitting it to be attached to an interstate pipeline for transportation and sale under the Act.[4] Issuance of a budget-type certificate as authority for connecting the Bastian Bay reserves, without meaningful notice to interested parties and a thorough examination by the Commission on a public record, would be inconsistent with the concept of the *CATCO* case. That this transaction presents issues of the greatest public interest is evidenced by the immediate intervention in these reopened proceedings of a number of parties, including the regulatory commissions of New York and Pennsylvania, and by the contest

[3] *Atlantic Refining Co.* v. *P.S.C. of N.Y.*, 360 U.S. 378.

[4] See also *P.S.C. of N.Y.* v. *F.P.C.*, 287 F. 2d 143, decided December 8, 1960.

of issues which has ensued. In our judgment there is no justification for Tennessee's treatment of the construction of the 2.63-mile line to attach these reserves as a routine construction authorized by the budget-type certificate. Therefore, we agree with and adopt the examiner's findings to this effect, and his reasons for so finding.

An additional reason must be noted in support of our conclusion here. The budget-type certificate issued to Tennessee in Docket No. CP61–106, did not authorize the construction of facilities for the attachment of its own gas reserves. Tennessee in its application agreed and by the order of January 6, 1961, we directed it, to submit a statement of the names of the independent producers involved, together with the dates of the gas sales contracts and the docket numbers of the related producer certificate applications involved. It is clear that the term "producer" as used in the order did not include Tennessee as a producer of its own gas reserves. Thus, the very terms of the order itself negate the argument that authority was therein conferred on Tennessee for the construction of the 2.63-mile pipeline to connect its own reserves in the Bastian Bay Field.

Tennessee excepts to the examiner's finding that part of the field facilities in Bastian Bay, transferred from Pan American to Tennessee, are jurisdictional. In our judgment, it is unnecessary at this time to pass upon the jurisdictional status of the facilities acquired by Tennessee from Pan American as part of the lease-sale transaction. It is sufficient for the purpose of this reopened proceeding to determine that the budget-type certificate issued to Tennessee in Docket No. CP61–106 did not cover the construction and operation of the facilities built by Tennessee to connect the Bastian Bay reserves.

Tennessee's exceptions renew the Company's objection to the procedure of reopening Docket No. CP61–106 after the certificate issued therein had become final. Tennessee argues, under the principles of *U.S.* v. *Seatrain Lines*, 329 U.S. 424, and *Civil Aeronautics Board* v. *Delta Airlines*, 367 U.S. 316, that the issuance of a certificate marks the end of a proceeding and that the certificate may not thereafter be modified or amended without the consent of the parties. Tennessee further contends that the present procedure puts the burden of proof on Tennessee rather than the staff, and is without authority in the Natural Gas Act. We concur with the examiner that these arguments, in these circumstances, are without merit. These proceedings do not purport to alter or amend Tennessee's certificate; they merely seek to explore the validity of Tennessee's claim as to the extent of authority therein contained. We see little difference in end effect to Tennessee if this Commission had, in the alternative, issued a show cause order in a new separate docket. In either event Tennessee's burden of proof would have been the same. The budget certificate issued in this proceeding required Tennessee to advise the Commission of the facilities which it constructed pursuant to that authorization. In response to inquiries concerning reports that Tennessee had purchased Pan American's holdings in the Bastian Bay Field, Tennessee informed the Commission that the Bastian Bay gas was being delivered via facilities constructed by Tennessee under the authority of the budget-type certificate issued in this docket. Thus the normal jurisdictional facts which the Commission's staff would have been required to prove in a show cause proceeding were not, in this instance, in issue. In our opinion Tennessee has made no showing that it has been misled or prejudiced by the proceedings followed. Therefore, we concur with the examiner that Tennessee's argument is without merit.

Pan American takes exception to the examiner's finding of the estimated cost to Tennessee of making the Bastian Bay reserves available to Tennessee's pipeline

system, contending that the cost data presented is uncertain and conjectural, and requesting that the Commission delete this from the examiner's decision. The examiner's cost figures are adopted from Tennessee's cost of service exhibit, and Tennessee did not file exception to them. While these figures are of necessity estimates based on certain assumed conditions of production and operation, they meet the requirements of our order reopening Docket No. CP61–106, and constitute a sufficient showing of Tennessee's costs for the purpose of this proceeding. Accordingly, we adopt the examiner's findings with respect to such costs. This finding, however, is made for the purposes of this proceeding only, and it is not our intention that it be binding on the parties in any future proceedings.

Pan American—Docket No. C162–103

The presiding examiner, after examining both the form and substance of the transactions between Pan American and Tennessee transferring the Bastian Bay reserves, concluded that these transactions in fact constitute a gas sales contract. Pan American has filed voluminous exceptions to the examiner's decision on this point, arguing that the Commission has no jurisdiction over the disposition or assignment of gas as a commodity prior to production. The doctrine of *F.P.C.* v. *Panhandle Eastern Pipe Line Co.*, 337 U.S. 498, relied on by Pan American, is not applicable on the facts of this case. The present transaction is readily distinguishable from the *Panhandle* case. Unlike the *Panhandle* case, where the leases sold were undeveloped, the leases here had been developed prior to the lease-sale transaction. Moreover, the reserves transferred here are to move in interstate commerce, and are not to supply an intrastate market as in *Panhandle*. Also, Pan American here retains specific rights in the leases transferred, as enumerated below; whereas Panhandle parted with all control of the leases and rights in the reserves transferred except for a future option to purchase gas.

The present case is similar in its essential aspects to the *Rayne Field*[8] and *Ship Shoal*[9] cases recently decided by this Commission. Our opinions in those cases are, in our judgment, dispositive of the issues in the present case. Therefore, we agree with and adopt the examiner's finding that the transfer of these leasehold interests, on the facts of this case, constitutes a sale of gas within the meaning of Section 1(b) of the Act, and is without authority in the absence of a certificate of public convenience and necessity issued in accordance with the provisions of Section 7 of the Natural Gas Act.

The examiner correctly found that the character of an instrument is governed by its substance and effect, and not by what the parties choose to label it. Thus, to establish the true nature of this transaction, we must look to the substance of the instruments, and to the circumstances surrounding the negotiation and execution of the instruments. The record established that, on July 15, 1960, Pan American and Tennessee entered into a "Lease Sale Agreement" which was consummated on December 1, 1960, by the execution of an "Assignment and Conveyance" and the delivery of cash and notes as specified in the agreement. Except as noted below, Pan American assigned to Tennessee all its rights and interests in the twelve leases, as well as its wells, equipment, and related personal property on the lands affected. Pan American reserved to itself the following:

(a) Rights in minerals other than natural gas, oil and other petroleum liquids;

[8] *Texas Eastern Transmission Corp.*, Docket No. G–12446, *et al.*, Opinion No. 378, issued February 6, 1963, and Opinion No. 378–A, issued July 12, 1963, 29 FPC 249 and 30 FPC 153, respectively.

[9] *Tennessee Gas Transmission Co.*, Docket No. G–16842, *et al.*, Opinion No. 403, issued September 19, 1963, 30 FPC 759.

(b) Rights in the leases below the bottom of the deepest presently known productive horizons;

(c) As a "production payment," all of the proceeds received by Tennessee from the sale of oil production attributable to the net interests assigned, until 85 percent of the recoverable reserves of oil has been produced;

(d) As a "production payment," all of the proceeds received by Tennessee from the sale of separator liquids attributable to the net interests assigned, after deduction by Tennessee of "all development, operating, gathering, producing, separating, treating, marketing, and other costs and expenses of every kind whatsoever" incurred by Tennessee "in the operation and development of the leasehold interests assigned"; provided, however, that the maximum amount which Tennessee may deduct for costs and expenses is $32,965,405, and that the production payment shall stop when 85 percent of the recoverable reserves of gas has been produced;

(e) The right to process all gas produced for the recovery of liquids, subject to a payment of 21 cents per Mcf to Tennessee for plant losses and gas used as fuel.

The purchase price, subject to later redetermination, was $159,463,500, of which $9,427,104 was payable in cash on December 30, 1960, and the balance in 17 annual installments, evidenced by promissory notes due on or before the anniversary date of each year. The purchase price was based upon the parties' agreement that the recoverable gas reserves attributable to the net leasehold interests assigned (the interests assigned less royalties) were 759,350,000 Mcf. The agreement provides for a redetermination of the reserves upon the request of either party between 1969 and 1973, and for adjustment of the purchased price on the basis of such redetermination. The pricing formula used equates to 21 cents per Mcf for the reserves attributable to the net interests assigned. Tennessee agreed to develop and produce the leases, and negotiated contracts with the royalty owners for the payment of royalties and the reimbursement of Louisiana severance taxes. Tennessee estimates that the reserves will be produced over a 29-year period.

Our review of the record in this case convinces us that the effect of this transaction is to transfer gas from Pan American to Tennessee for resale in interstate commerce subject to terms and conditions which in their result are similar to those found in contracts for the sale of gas. We therefore conclude that the transaction constitutes a sale of gas for the purpose of regulation under the Natural Gas Act. As we said in the *Rayne Field* case: "Any other result would exalt form over substance, would give greater weight to the technicalities of contract draftmanship than to the achievement of the purposes of the Natural Gas Act, and would impair our ability to control the price received for gas sold to the pipelines in interstate commerce to the detriment of the ultimate consumer."

The examiner found that this transaction was a bulk sale of gas in place, while the staff in its exceptions urges that the transaction be recognized as a continuing sale of gas in interstate commerce, with the result that the annual payments by Tennessee to Pan American would be subject to continuing regulatory supervision under Section 4 of the Act. It is not necessary that we decide this question now since we have no application for a certificate before us at this time. If and when an application for a certificate is filed, we will pass upon the transaction proposed and determine the nature of the sale for which authority is sought.

Pan American takes exception to the examiner's findings with respect to its investment in the Bastian Bay Field prior to the transfer to Tennessee. The data relied upon, says Pan American, is fragmentary and irrelevant to the deter-

mination of jurisdiction. The examiner's own discussion points out the incompleteness of the data presented, and in making his findings he has simply endeavored to give to the Commission as much data as was available to satisfy the Commission's desire for such information as expressed in its order of March 12, 1962. The data presented was sought for comparative purposes. It is not necessary to our determination of jurisdiction, and we do not rely upon it in the disposition of this proceeding.

Pan American also excepts to the examiner's findings that certain field facilities transferred to Tennessee are jurisdictional. However, as explained above in our discussion of Docket No. CP61–106, we are not now passing upon the jurisdictional status of these field facilities.

The Pennsylvania Commission, in its exceptions, urges that we not only issue an order directing compliance with the Act, but that we also take steps to protect the public interest by requiring Tennessee to keep separate accounts of its costs relating to the Bastian Bay transaction from its inception. We required the keeping of such accounts in the *Ship Shoal* case, *supra*, and we shall require the same here. The separate statement of such costs will assist the Commission in any future Tennessee rate case to take such action with respect thereto as may be necessary to protect the public interest. We shall require Tennessee to maintain such separate and accurate accounts of its Bastian Bay costs until further order of the Commission.

Conclusion

The 2.63-mile pipeline connecting the Bastian Bay reserves to Tennessee's interstate system is a jurisdictional facility constructed without authorization of this Commission. In addition, the lease-sale transaction by which Pan American transferred these reserves to Tennessee is a sale of natural gas in interstate commerce for resale, similarly without authorization of this Commission as required by the Act. Accordingly the Commission must take such action as may be necessary to protect the public interest.

The Commission finds:

1. The 2.63-mile pipeline connecting the Tennessee reserves in the Bastian Bay Field to Tennessee's interstate pipeline is a facility for the transportation and sale of gas in interstate commerce for resale, subject to the jurisdiction of this Commission.

2. The construction and operation of the 2.63-mile pipeline was not authorized by the order of January 6, 1961, in this docket, nor has other lawful authorization for the construction of this line been sought or obtained as required by Section 7 of the Act.

3. The lease-sale transaction by which Tennessee acquired the Bastian Bay reserves is a sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission.

4. Pan American has neither sought, nor received, a certificate of public convenience and necessity for this sale as required by Section 7 of the Act.

5. Tennessee and Pan American should be required to make such filings as may be necessary to bring them into compliance with the Act, within six months of the date of our order herein, and, in the interim, should be required to initiate such accounting procedures as are necessary to protect the public interest.

The Commission orders:

(A) Within six months of the date of issuance of this order, Tennessee shall make such filings and take such steps as are necessary to bring it into compliance with the provisions of the Natural Gas Act, and more particularly with the provisions of Sections 7(c) and 7(d) of the Act, in respect to its 2.63 miles of pipe-

line connecting the reserves in the Bastian Bay Field to its interstate pipeline system.

(B) Within six months of the date of issuance of this order, Pan American shall make such filings and take such steps as are necessary to bring it into compliance with the provisions of the Natural Gas Act, and more particularly with the provisions of Sections 7(c) and 7(d) of the Act, in respect to the sale of its reserves in the Bastian Bay Field to Tennessee.

(C) Until further order of the Commission, Tennessee shall accurately maintain separate accounts of all costs relating to the Bastian Bay transaction with Pan American and to the operation and development of the Bastian Bay Field and the reserves acquired therein from Pan American. Tennessee shall maintain such accounts for all such costs incurred from the inception of the Bastian Bay transaction.

(D) Exceptions to the examiner's decision of April 1, 1963, not hereinabove granted, are hereby denied.

Commissioner Woodward *dissenting.*

WOODWARD, Commissioner, *dissenting:*

The critical question involved in this proceeding is whether the Federal Power Commission has jurisdiction under the Natural Gas Act over Pan American's assignment and conveyance of leasehold interests in the Bastian Bay Field to Tennessee Gas Transmission Corporation.

The majority has confused the scope of commission power with the extent of Federal Constitutional power. Admittedly Congress, through the legislative process, has the power to control the leasehold transaction here involved, but the majority has failed to meet the impossible task of showing that Congress, in the Natural Gas Act, has vested such power in the Federal Power Commission.

The Commission's jurisdiction under Section 1(b) of the Act is not so broad as the scope of Federal power under Article I, Section 8, Cl. 3 of the Constitution. In *F.P.C.* vs. *Panhandle Eastern Pipe Line Co.*, 337 U.S. 502–503, the Supreme Court stated "* * * suffice it to say that the Natural Gas Act did not envisage Federal regulation of the entire natural gas field to the limit of Constitutional power. Rather it contemplates the exercise of Federal power as specified in the Act * * *"

In *Panhandle Eastern Pipe Line Co.*, v. *Public Service Commission of Indiana*, 332 U.S. 507, 516, the Court declared:

> Three things and three only Congress drew within its own regulatory power, delegated by the Act to its agent, the Federal Power Commission. These were: (1) the transportation of natural gas in interstate commerce; (2) its sale in interstate commerce for resale; and (3) natural gas companies engaged in such transportation or sale.

A statutory term which is crucial here is the term "sale"; the basic issue involves proper application of that term. Our primary duty is limited to giving vent to the intent of Congress as expressed in the statute; we do not possess power to construct statutes. The issue thus is one of fundamentals under the statute, and assignment and conveyance of leasehold interests is not a "sale" which can be considered to be within our statutory grant of regulatory power (see *F.P.C.* v. *Panhandle, supra*).

For the Commission to have jurisdiction over a sale of gas within the meaning of Section 1(b) of the Act, it must be a "sale in Interstate Commerce for resale." Clearly the Bastian Bay transaction was not a sale of natural gas for resale but was an outright assignment and conveyance of leasehold interests. The explicit terms of the statute exclude such a transaction from Commission jurisdiction and

serves to further emphasize that the majority's finding is totally without adequate basis in law.

In the *CATCO* case, the Supreme Court held that even after issuance of a certificate of public convenience and necessity for a jurisdictional sale under Section 7, a producer remained free to "withdraw" if deliveries had not commenced. In short, the Commission jurisdiction over a "sale", a "producer", or over his "properties" thus could not attach until such an initiation of physical delivery of gas, as there is no "dedication" until that initiation of deliveries.[1]

In *Sunray Mid-Continent Oil Co.*, v. *Federal Power Commission*, 270 F. 2d 404 (10th Cir. 1959), that court held (270 F. 2d at 409):

> By filing an application with the Commission, the applicant does not submit irrevocably to the jurisdiction of the Commission. *Atlantic Refining Co.*, v. *P.S.C. of N.Y. supra.* It is by the initiation of public service that the applicant's property becomes dedicated to that public service and the jurisdiction of the Commission's regulatory control within the statutory limits of the Act. The Act contemplates that the Commission need not accept the conditions contained in the application, *Sunray Mid-Continent Oil Co.*, v. *FPC, Supra;* it likewise contemplates that the applicant need not accept conditions imposed by the Commission in its initial acceptance. Where conditions are imposed by the Commission the applicant has the free choice to accept or reject; to dedicate his property to public service or to refuse so to do; to submit to the jurisdiction of the Commission or to remain beyond the bounds of interstate commerce.

Since such irrevocable "dedication" occurs only upon a commencement of deliveries and sale of produced natural gas, then, without question the transfer of leaseholds—even leases immediately capable of production—prior to connection or to delivery, is beyond the reach of Section 7.

The implications as to the jurisdictional facts required under Section 1(b) are obvious: until there is a sale of gas after production, there is nothing to which the Act can apply. Until there is such a sale, all properties remain outside the scope of the act.

In *Panhandle, supra*, the court pointed out that construction of other Sections so as to permit Commission control of the sale of leasehold interests "would invite expansion of power into other phases of the forbidden area" (337 U.S. at 509), and concluded: "If the Commission is of the opinion that it should have power to control the disposition of leases by natural gas companies, it is authorized to call the attention of Congress to that fact." (337 U.S. at 515–516.)

This construction of Section 1(b) has not been altered. To the contrary, judicial construction of the Act has continuously reaffirmed the clear distinction between the existence of jurisdiction over a wholesale sale of natural gas in interstate commerce for resale, and the absence of Commission jurisdiction over sales of leasehold interests. The continued validity of the *Panhandle* distinction has only recently been questioned by this Commission. Prior to February 6, 1963, this Commission consistently recognized its unqualified lack of jurisdiction over the sale, purchase or acquisition of leasehold interests by natural gas companies.

Indeed, at the time Tennessee entered into the Bastian Bay agreement in July, 1960 and December, 1960, the Commission had stated in its Panhandle opinion and also in its first *Rayne Field* decision, that it looked favorably upon such acquisition so that pipeline companies would own at least part of their own gas supply. As stated by the Commission:

> Finally, as we see it, the interest of the public definitely lies in the direction of natural gas production by pipeline systems themselves, as distin-

[1] *Atlantic Refining Co.* v. *Public Service Commission of New York*, 360 U.S. 378, 387–388 (1959).

guished from their complete dependence for gas supply upon purchases from other producers * * * such production strengthens their bargaining position in negotiating gas-purchase contracts with independent producers * * * This advantage must ultimately redound to the benefit of their customers through lower gas purchase prices and cost of service than would otherwise obtain.[2]

In *Texas Eastern Transmission Corp.*, 21 FPC 867 the Commission found:

The public will otherwise benefit from Texas Eastern's acquiring these leases instead of purchasing the gas under the producer sales contracts. For example, Texas Eastern will acquire control over the rate of production, and the minimum take or pay for provisions of the gas purchase contracts will be eliminated, thereby increasing the flexibility of the company's overall pipeline operations. Further, *since the purchase of the leases is not a contract to purchase gas*, the price paid for the leases cannot have a disruptive effect on area prices by triggering favored nation or price redetermination clauses in Texas Eastern's or any other pipeline company's contracts. Other benefits also exist. [Emphasis supplied.]

These Commission pronouncements could not help but influence the decision of any pipeline company to purchase gas leases. Certainly the benefits and advantages of company-owned production stated by the Commission are equally applicable to the instant proceeding. Now the majority has concluded that it is free to drastically reverse its prior decisions to reach a totally opposite result; that it must look to the intent and knowledge of the parties "to establish the true nature of this transaction." Consequently, this open invitation to purchase leases is suddenly withdrawn without warning and the companies, after relying on the judgment of the Commission, are summarily told they were wrong to do what the Commission had entreated them to do. This action is not only unjust; it amounts to a breach of faith. This is the identical situation which led the majority to commit grave error in the *Rayne Field* and the *Ship Shoal* cases;[3] the error they now perpetuate in the instant proceeding.

Completely apart from the fact that this exact issue has been resolved by the Commission and the courts with findings opposite to those reached by the majority here, consideration of the merits *de novo* reveals that this transaction under the statute is beyond Commission jurisdiction.

My dissenting opinions in the *Rayne Field* and *Ship Shoal* cases *supra* (statements which are equally applicable to this case) made it pointedly clear that despite the Commission's repeated attempts to secure an amendment to Section 7 of the Act which would vest it with jurisdiction over transfer of leaseholds by natural gas companies, Congress has never conferred such jurisdiction on the Commission. "An unsuccessful attempt by an administrative body to secure an express grant from Congress is significant in determining whether the power so requested was conferred by the statute sought to be amended or supplemented," *Federal Trade Commission* v. *Bunte Bros., Inc.*, 312 U.S. 349, 351, 352.

"Great weight" must be given to an agency's consistent interpretation of the law it administers, especially where the agency has sought to have the

---

[2] *Panhandle Eastern Pipeline Co.*, 13 FPC 53, 74–75 (1954).

[3] *Texas Eastern Transmission Corp.*, Docket No. G–12446, *et al.*, Opinion No. 378, issued February 6, 1963, 29 FPC 249 and Opinion 378–A, issued July 12, 1963, 30 FPC 153. *Tennessee Gas Transmission Co.*, Docket No. G–16842, *et al.*, Opinion No. 403, issued September 19, 1963, 30 FPC 759.

law amended, but Congress declined to do so and has thereby acquiesced in the agency's historical interpretation." [4]

Acts and physical results control on jurisdictional questions, not mere knowledge or even intent of parties to an agreement. See *J. M. Huber Corp.*, v. *F.P.C.*, 236 F. 2d 550, 558 (3rd Cir. 1956); *Shell Oil Co.*, v. *F.P.C.*, 247 F. 2d 900, 903 (5th Cir. 1957). The Courts have made clear that jurisdiction attaches by virtue of a physical "commitment", "dedication", "connection" and delivery in the sale of gas as produced, establishing the jurisdictional facts upon which Commission powers under Sections 1, 4 or 7 must rest. On questions of jurisdiction, desires or knowledge never control.

Decisions involving jurisdictional facts turn upon the presence or absence of those facts and the applicable statutory provisions only. Here, Section 1 controls, and decision can rest only upon the fact that an assignment and conveyance of leasehold interests has occurred, and the law that such a transaction is outside the scope of Section 1. The majority has completely failed to distinguish between the sale of a commodity in production and a property interest. Their error, I submit, is fatal.

The legislative history of the Natural Gas Act and the precedents established in judicial decisions, including decisions affirming orders of this Commission, should be followed at least until Congress sees fit to extend the scope of jurisdiction of this Commission by amendment of the Act. Any action purporting to regulate an assignment and conveyance of leasehold interests amounts to an obvious attempt to do exactly what the Supreme Court and the Courts of Appeals have emphatically told the Commission it has no power to do.

For these reasons, I respectfully dissent.

INITIAL DECISION
OF THE PRESIDING EXAMINER UPON INVESTIGATION AND ORDER TO SHOW CAUSE

(Issued April 1, 1963)

PURDUE, *Presiding Examiner:* On April 6, 1961, the Commission reopened *Tennessee Gas Transmission Co.*, Docket No. CP61–106, for the purpose of determining (1) whether a budget-type certificate issued early in 1961 in such proceeding "covered the construction and operation of . . . facilities necessary to connect" certain gas reserves in the Bastian Bay Field, Plaquemines Parish, Louisiana, "to Tennessee's system, and (2) the cost of making such reserves available to the Tennessee system." (Orders issued April 6, 1961 and March 12, 1962.) Sessions of the reopened hearing in Docket No. CP61–106 were held on July 5, 1961 and September 21 and 22, 1961.

Thereafter, by order issued March 12, 1962, the Commission instituted a proceeding against Pan American Petroleum Corp., Docket No. CI62–1034, and consolidated such proceeding with Docket No. CP61–106. The order recited, *inter alia*, ". . . we wish the record to show, as a basis for comparison, Pan American's investment in the Bastian Bay Field prior to Tennessee's acquisition." Such order directed Pan American "to show cause, if any there be, . . . why it should not be found to be engaged in the sale of natural gas produced at the Bastian Bay Field, . . . subject to the jurisdiction of the Commission to [Tennessee] without having secured the authorization or having filed the schedules therefor required by subsection 7(c) and 4(c) of the Natural Gas Act."

---

[4] *United States* v. *Bergh*, 352 U.S. 40, 47 (1956); *Gas Service Co.* v. *Federal Power Commission*, 282 F. 2d 496, 499 (D.C. Cir. 1960); *Mississippi Valley Co.* v. *Federal Power Commission*, 294 F. 2d 588, 592 (5th Cir. 1961).

On April 11, 1962, Pan American filed a motion to terminate the show cause proceeding on the ground that the Commission had no jurisdiction over it. The Commission denied the motion "without prejudice to renewing the jurisdictional argument upon completion of the hearing."

Sessions of the hearing in Docket No. CP61–106, and a hearing in Docket No. CI62–1034, as consolidated proceedings, were held on May 3 and 7, 1962, and June 26, 1962, concluding on the last mentioned date.

The following state commissions intervened in the proceedings: New York Public Service Commission and Pennsylvania Public Utility Commission. The following companies and municipalities were permitted to intervene: The United Gas Improvement Co., Long Island Lighting Co., Consolidated Natural Gas System Companies (the Consolidated Companies), Public Service Electric and Gas Co., United Fuel Gas Co., City of Pittsburgh, Pa., The Brooklyn Union Gas Co., Consolidated Edison Co. of New York, Inc., and (jointly) Fuels Research Council, Inc., National Coal Association and United Mine Workers of America (the coal interests).

At the hearings, evidence both oral and documentary, was introduced by Tennessee, Pan American, the Consolidated Companies, and the Commission Staff. Cross-examination of witnesses was conducted by the Consolidated Companies, Long Island Lighting Co., the coal interests, New York Public Service Commission, Pan American, and the Commission Staff. The Pennsylvania Public Utility Commission and The United Gas Improvement Co. participated otherwise in the hearing. After all the evidence had been introduced, Pan American renewed its motion to terminate, making the motion to the Examiner. Tennessee, Pan American, New York Public Service Commission, the Pennsylvania Public Utility Commission, The United Gas Improvement Co., Long Island Lighting Co., the Consolidated Companies, Public Service Electric and Gas Co., and the Commission Staff filed briefs after the conclusion of the hearing; and the proceedings were submitted for consideration and decision.

PRELIMINARY STATEMENT OF FACTS

The following facts are shown by the evidence:

During the period 1954 to 1959, inclusive, Pan American acquired 12 oil, gas and mineral leases, or interests therein, here in issue, on undeveloped acreage in the Bastian Bay Field, Louisiana. The field is in the Mississippi River delta, its terrain being low-lying marsh traversed by numerous bayous. Pan American became the outright owner of some of the leases, and a joint owner of the remainder together with Tidewater Oil Co. and Gulf Oil Corp. In 1955, Pan American drilled an exploratory well on one of the leases to a depth of 15,448 feet, and thereby discovered a number of productive sand zones. Between the time of completion of the well and December 1, 1960, Pan American, either as sole owner or as operator of the joint interest leases, engaged in further drilling on such lease and five other leases. In all, Pan American drilled 32 wells on the six leases, of which wells five were dry holes. There were 21 oil completions and 20 gas completions. As a result of the drilling, all of the acreage covered by the leases became proved gas properties.

On July 15, 1960, Pan American, as seller, and Tennessee, as purchaser, entered into a so-called "Lease Sale Agreement," which the parties consummated as of December 1, 1960 by their execution of a so-called "Assignment and Conveyance," and by Tennessee delivering to Pan American cash and notes as specified in the agreement.

By the "Lease Sale Agreement," Pan American purportedly agreed to convey to Tennessee, and Tennessee purportedly agreed to purchase, Pan American's

rights in the twelve leases; also Pan American's wells, equipment and related personal property on the premises. The purchase price, subject to a later redetermination, was $159,463,500, of which sum $9,427,104 was payable in cash at the closing date of the transaction (December 30, 1960); and the remainder, by eight promissory notes in the amount of $9,427,104 each, and nine promissory notes in the amount of $8,291,060 each. The first note was due and payable on or before the first anniversary of the closing date; and each of the other notes, on or before the anniversary of the closing date in each of the subsequent years. Tennessee was required to negotiate satisfactory agreements for the purchase of existing royalty interests in the leases.

The parties further agreed that the recoverable gas reserves attributable to the "net leasehold interests" to be assigned (*i.e.*, the leasehold interests less royalties to which they were subject) were 759,350,000 Mcf,[1] and recoverable oil reserves attributable to such interests, 7,650,000 barrels. The agreement provides for a redetermination of the gas reserves at the request of either party between 1969 and 1973; a formula for adjusting the purchase price upward or downward on the basis of such redetermination; and a substitution, for outstanding promissory notes, of new promissory notes having amounts in accordance with the adjusted purchased price. Both before and after the redetermination, the purchase price divided by the recoverable reserves of gas attributable to the net interests assigned by Pan American equals 21 cents per Mcf.

The agreement also provides for a redetermination of the oil reserves underlying the premises within the aforementioned period, 1969–73.

By the "Assignment and Conveyance," Pan American purportedly assigned to Tennessee its interests in the twelve leases, and in the wells and other property on the lands affected by the leases, for the purchase price specified in the "Lease Sale Agreement," payable in the manner prescribed in such agreement. The assignment was subject to reservations contained in the "Assignment and Conveyance" in essence as follows:

(a) Pan American did not convey its rights in minerals other than natural gas, oil and other petroleum liquids.

(b) Pan American did not convey its rights in the leases below the bottom of the deepest presently-known productive horizons.

(c) Pan American reserved, as a "production payment," all of the proceeds received by Tennessee from the sale of oil produced attributable to the net interest conveyed; the production payment to terminate when 85% of the recoverable reserves of oil have been produced.

(d) Pan American reserved, as a "production payment," all proceeds received by Tennessee from the sale of separator liquids, produced from the assigned leases, attributable to the net interest in production of separator liquids; after the deduction by Tennessee from such proceeds of "all development, operating, gathering, producing, separating, treating, marketing, and other costs and expenses of every kind whatsoever" incurred by Tennessee "in the operation and development of the leasehold interests assigned"; with a proviso that the maximum amount of the costs and expenses which Tennessee may deduct from such proceeds is $32,965,405 (subject to adjustment in terms of the Wholesale Price Index); and with a further proviso that the production payment shall be in effect until 85% of the total estimated recoverable reserves of gas attributable to the net leasehold interests assigned shall have been produced. The reimbursement of Tennessee's costs and expenses up to $32,965,405 is insured by a reserve of $1,000,000, the residue of which is payable to Pan American upon termination of the production payment.

[1] Unless otherwise specified, all volumes of natural gas referred to herein are at a pressure base of 15.025 psia.

(e) Pan American retained the right to process all gas produced from the leaseholds assigned, including gas attributable to royalty interests, for recovery of natural-gas liquids; agreeing to pay Tennessee 21 cents per Mcf for plant losses and use of gas as fuel.

Tennessee agreed that it would develop and produce and otherwise comply with the obligations of the leases as a prudent operator, pursuant to a specified plan to complete the development of the field.

The royalty portion of the gas is more than 25% of the total volume which Tennessee will receive from the leases. Tennessee negotiated contracts with the owners of the royalty interests whereby it agreed to pay royalties from 1960 to January 1, 1962, at 22.5¢ per Mcf, and at 25¢ per Mcf thereafter; and to make reimbursement for the Louisiana severance tax of 2.3¢ per Mcf.

Tidewater Oil Co. and Gulf Oil Corp. are the owners of still other interests in the Bastian Bay Field. In late 1959, these two companies arranged to sell their Bastian Bay gas as produced to United Gas Pipe Line Co., under a contract which provided that the gas would be consumed in Louisiana. Tidewater and Gulf commenced deliveries under this contract about July 1, 1960, into a line of United that runs from the field to New Orleans, where the gas is consumed.

As a prerequisite to Tidewater and Gulf making the deliveries to United, it was necessary that facilities be installed leading from individual wells to a central collection point in the field; and from such point to United's line. In the spring of 1960, Tidewater, Gulf and Pan American jointly installed a collection system in the field; Pan American installed certain other facilities hereinafter more particularly referred to; and United installed facilities connecting therewith. Pan American bore a proportionate part of the costs of these facilities, because all of the then owners of interests recognized that most of the operators in the field would own an interest in the majority of permanent producing units which eventually stood to be established for the field by the Louisiana Department of Conservation. Normally under such circumstances in Louisiana, a jointly-owned gas collection system is installed by all working interest owners.

The wells tied into the collection system prior to December 1, 1960, consisted of five in which Tidewater, Gulf and Pan American all owned working interests. Between July 1, 1960, and December 1, 1960, the collection system was used solely to collect gas produced and owned by Tidewater and Gulf from the connected wells. Pan American owned no interest in the gas that was then produced or delivered into the system, nor did Pan American operate either the connected wells or any of the gas collection facilities.

Pan American's wells were not connected to an interstate pipeline system prior to the execution of the "Assignment and Conveyance."

Immediately after the "Assignment and Conveyance" was executed, Tennessee installed 2.63 miles of 12" line connecting the Bastian Bay Field with existing pipeline facilities of Tennessee. It arranged for Tenneco Oil Co., a subsidiary of a subsidiary of Tennessee, to operate the leases on its behalf. On February 3, 1961, Tennessee, through its agent Tenneco, commenced, and has since continued, to take gas from the Bastian Bay leases by virtue of the "Lease Sale Agreement" and the "Assignment and Conveyance."

Tennessee introduced evidence to the effect that it cannot determine at this time the rates at which it will produce the Bastian Bay properties; but on the basis of certain assumptions, it submitted an estimated operation schedule whereby the reserves will be produced over a 29-year period. The evidence shows that the minimum period during which the reserves can be produced safely is from 22 to 24 years.

Position of Parties and Staff

Tennessee either asserts, contends, or asks the Commission to find, as follows: (1) that all of the Bastian Bay facilities which it acquired from Pan American, and the 2.63-mile line, are gathering facilities; (2) that even if some of these facilities are transmission facilities, the budget-type certificate which the Commission issued in Docket No. CP61-106 covered the construction and operation thereof; (3) that the Commission had no jurisdiction to reopen the proceedings in Docket No. CP61-106; and (4) that the Commission has no jurisdiction over Tennessee's "acquisition of the Bastian Bay leases" for the reason that the "acquisition" is exempt from the provisions of the Natural Gas Act by Section 1(b) thereof.

Pan American contends that the Commission has no jurisdiction over it as to the transaction in question, and that it did not, and does not, engage in the sale of natural gas, except that prior to the transaction with Tennessee it made some minor sales for rig fuel in the field.

Position of Intervenors and Staff as to Budget-Type Authorization

Intervenors The United Gas Improvement Co. and Pennsylvania Public Utility Commission, and the Staff, take the position that Tennessee's budget-type authorization did not cover the construction, acquisition or operation of facilities, subject to this Commission's jurisdiction, necessary to connect the Bastian Bay reserves to Tennessee's system.

Intervenor Long Island Lighting Co. regards the budget-type certificate as covering jurisdictional facilities of Tennessee, but argues that the certificate should be revoked because of the asserted failure of Tennessee to make a full disclosure of the facts.

The New York Public Service Commission takes the position that "jurisdictional issues . . . are peculiarly within the compass of the expertise of the Commission and its Examiners," and directs its brief to the "cost aspects of the case."

Intervenors Consolidated Companies and Public Service Electric and Gas Co. do not treat the question whether the budget-type authorization covered jurisdictional facilities.

Position of Intervenors and Staff on Question of Pan American-Tennessee Transaction Being a Sale of Gas

The United Gas Improvement Co. takes the position that the Bastian Bay transaction between Tennessee and Pan American was a sale for resale in interstate commerce of natural gas in place, and should be held to be a sale of natural gas within the jurisdiction of the Commission.

Long Island Lighting Co. is of the view that the transaction is a "purchase of gas in place form of transaction"; and that "it appears to be possible for the Commission to control the price" either (a) by holding that the transaction constituted a sale by Pan American of gas in place, or (b) by its jurisdiction over the construction of pipeline facilities to connect the reserves.

The Staff take the position that the transaction is a long-term, continuing sale of gas in which Pan American is now engaged.

The Pennsylvania Public Utility Commission agrees with the Staff.

The New York Commission declines to take a position, for the same reason it did not take a position on the question of the budget-type authorization.

The Consolidated Companies do not treat the question of the Commission's jurisdiction over Pan American.

Public Service Electric and Gas Co. "takes no position on the question of jurisdiction, but urges that the Commission decide this important issue in these proceedings."

Requirements Requested by Intervenors

Most of the intervenors request the Commission to impose certain requirements on Tennessee, or to condition the sale by Pan American. One intervenor requests the making of a certain finding. These requests are specified and treated of, *infra*, page 1513.

Improper Arguments

Counsel for Pan American and the Staff go outside the record by referring to or quoting portions of the record and briefs in a case upon which Pan American and Tennessee rely, *Federal Power Commission* v. *Panhandle Eastern Pipe Line Co.*, 337 U.S. 498. Some counsel also predicate arguments upon material in the Commission's files not received in evidence. The Examiner is confident that there was no intentional dereliction, but laxity of counsel in not basing their arguments on the record should cease. The Examiner reiterates what he said in *St. Lawrence Gas Co.*, 26 FPC 265, 278–79 (adopted as part of the Commission's opinion therein):

> . . . counsel for both applicants have gone outside the record and quoted from briefs in certain other proceedings before the Commission. The Examiner has disregarded these extraneous quotations. Counsel should remember that their argument should be based on the evidence in the case.

Again, in *El Paso Natural Gas Co.*, Docket No. G–16235 (decision issued Dec. 18, 1962), 30 FPC 77 at page 111, the Examiner made the same point concerning arguments based on material which had not been received in evidence.

Making reference to the briefs and record in the *Panhandle* case, *supra*, is doubly futile. Counsel employ the references as a premise for arguing what the United States Supreme Court meant by an expression in its opinion, and by its holding; and had the material been offered the Examiner would have rejected it on the ground of incompetency, irrelevancy and immateriality. A litigant in construing an opinion cannot go "behind the facts stated in the opinion as the basis upon which it rests and resorting to the record . . . ." *Coons* v. *Journeyman Barbers, etc.* (Minn.), 23 N.W. 2d 345, 346. ". . . the controlling effect of a decision must relate to the factual condition as stated in the opinion." *Madison County* v. *School District No. 2* (Neb.), 27 N.W. 2d 172, 175.

DISCUSSION

Tennessee Has Failed to Procure Necessary Commission Authorization for Construction and Operation of Facilities Connecting Bastian Bay Gas Reserves to Its System

Facilities and Operations in Bastian Bay Field

The uncontradicted evidence establishes, and the Examiner finds the existence of, the facts set out in the ensuing paragraph, relative to facilities and operations in the Bastian Bay field:

There are 15 gas wells and 5 oil and gas wells, either wholly or partially subject to the leases in question, which are connected to the collection system. There is a low-temperature separation unit at each well site, through which the well stream is produced, and a meter immediately downstream therefrom. A line 2½" in diameter runs from each of the separation units, through the meter, to the collection lines. These lines are from 6" to 12" in diameter and extend to the central collection point in the field, where the gas is assembled into a single commingled stream.

The evidence is conflicting as to what the situation is at and downstream from the central collection point.

A map, Exhibit 18, entitled "Gas Collection System, Bastian Bay Area, Dec. 1, 1960," was introduced in evidence. A small portion of the map, referred to as

a "cross-hatched area," purports to depict this situation. But it is not clear from the record whether the cross-hatched area is drawn to scale or is merely schematic. The recitals in the ensuing paragraph are based on the map, and are made on the assumption that the drawing of the area is according to scale.

The "central point" to which the collection system converges is approximately 180' in length. More particularly, three collection lines converge and enter a 12'' line at near-by points, the distance between the two farthest apart of the three collection lines at the points of entry being about 180'. The 12'' line runs in a general northerly-southerly direction. About 100' downstream from the southernmost point of entry of a collection line, a line takes off from the 12''-line and extends about 400' to a platform in the field designated "United Gas." The 12''-line continues, from the point of take-off, about 350' to a platform designated "Tennessee Gas Transmission." The distance between the two platforms is about 125'.

A Tenneco employee testified in substance as follows:

That the way the gas is collected at the present time, it is collected from each completion into these gas gathering lines, transported to a central point, where part of it is diverted into the United system and part of the Tennessee system. [Tr. 615.]

You ask me to describe the exact physical facilities which are located in that central point in the field. As I recall, all of the gas comes to a central point and goes through a small separator; then it goes through a pipeline to a Tennessee-owned platform, at which point Tennessee takes gas into their system; there is a pressure regulator on Tennessee's platform which diverts gas into the line owned by United, which goes to a United-owned platform some 100 or 150 feet away from the Tennessee-owned platform. [Tr. 619–20.]

There is a line leading from the central point where all this gas is assembled to the commencement of the 2.6 miles of 12-inch line; there is several hundred feet; I believe that is a single line; as to the diameter of that line, I believe it is 30-inch pipe; I am not sure; understand, it handles the gas that goes to United and the gas that goes to Tennessee; all of the gas that goes to Tennessee enters the 2.6 miles of 12-inch line. [Tr. 648–49.]

You inquire if the 30-inch line is between the platform and the 12-inch line. What I intended to say was that there is a line of large diameter pipe, which I think is something in the neighborhood of 30-inch, extending from the platform back to the junction of all the field gathering lines; the division of the gas stream between Tennessee and United Gas take place on Tennessee's platform. [Tr. 655–56.]

It will be seen that, according to the witness' description, there is no line (as depicted on Exhibit 18) diverging 100' downstream from the central collection point and extending to the platform of United Gas; that, instead, a single line continues from the central point to Tennessee's platform; and at such platform the division of the gas stream between Tennessee and United Gas takes place, and United Gas' portion enters a line extending thence to United Gas' platform. It will be further seen that according to this witness, the line between the central collection point and Tennessee's platform is not a 12'' line but a line "in the neighborhood of" 30'' in diameter.

A Pan American employee testified in substance as follows, referring to Exhibit 18:

That [on December 1, 1960,] the only facilities that existed in that shaded area, cross-hatched area, were the pipelines as so indicated, the collection lines and a manifold which is located on the surface of the ground at the approximate location of the No. 12 inch as appears in the shaded area. [Tr. 811.]

The manifold is a large piece of pipe of which several collection lines terminate

in, which has valves that control gas entering into this manifold and leaving the manifold on this chamber and is diverted to, in this instance, separate outlets. [Tr. 811–12.]

If you will notice there is a line that goes to the TGT platform and one that goes to the United Gas platform; those lines originate at the gas manifold; that manifold to that point, to the point to the manifold, Pan American, Tidewater and Gulf shared in the cost; the manifold is approximately 15 feet long. [Tr. 812.]

In the testimony of the Pan American employee, there is for the first time a reference to a manifold. No such facility is depicted on Exhibit 18. It will be noted that this witness first said that the location of the manifold is "at the approximate location of the No. 12 inch as appears in the shaded area." This statement is ambiguous, but if what the witness meant is the approximate location in the shaded area of the figure and symbol "12", then the manifold is some 100' downstream from the terminus of the central collection point. His subsequent statement that the lines of the TGT platform and the United Gas platform "originate at the gas manifold," from which there are "separate outlets," accords with this interpretation of the testimony. But the witness elsewhere indicates that the collection lines terminate in the manifold.

The evidence shows, and the Examiner finds, that the recitals in the following six paragraphs are correct:

Tennessee, through its agent Tenneco, operates and controls the 20 wells and all of the other facilities above described; except whatever line leads to the United Gas platform, and such platform; and except Tennessee's 2.63-mile line.

Either the line going to the United Gas platform commences at a point on the line between the central collection point and the Tennessee platform, or else it commences at the Tennessee platform. In either event, the division of the gas stream between Tennessee and United Gas takes place where such line begins, and all of the gas flowing through such line goes to United Gas.

A meter station, consisting of a meter house and two meter runs, is located on the Tennessee platform. The 2.63 miles of 12" line that Tennessee constructed commences at the meter station, and extends in a southwesterly direction to, and makes a connection with, a pipeline of said company called the Muskrat line. Tennessee, itself, operates the 2.63-mile line.

Throughout the length of the pipeline between the central collection point and the Tennessee platform, and throughout the length of the 2.63-mile pipeline leading from the platform to the Muskrat line, at no point (except at the ends of the lines as described below) does natural gas enter into or leave such lines.

No matter where the line to the United Gas platform commences, all of the Bastian Bay gas going to Tennessee flows continuously (except for about five percent of the time when the wells are shut in) from the wells on the leases, at reduced well pressures of from 950 to 1000 pounds psig, through the separation units and adjacent meters, the collection system including the central collection point, and through the line between the central collection point and the Tennessee platform, the Tennessee meter station, and the 2.63 miles of 12" line, into the Muskrat line.

Pan American built the line between the central collection point and the Tennessee platform, and constructed the Tennessee platform and the meter house thereon. (The record does not disclose whether Pan American or Tennessee installed the meter equipment.)

As hereinafter found (p. 1500), the Muskrat line is a transportation facility, and there is a continuous flow of the Bastian Bay gas through such line and through other transmission lines of Tennessee to areas of ultimate consumption in other states.

Facilities Subject to Commission Jurisdiction

The Staff ask the Examiner to find that the manifold, the pipe acquired by Tennessee from Pan American beyond the point of assemblage, "related facilities," and Tennessee's 2.63-mile line extending from Tennessee's platform to the Muskrat line, are transmission facilities.

Additional evidence should be adduced before a finding is made with reference to the manifold. The Examiner is unable to determine where the manifold is located—whether at the central point of assemblage or 100' downstream therefrom. The Pan American witness in one place says, in effect, if the Examiner understands his testimony, that the location of the manifold is about 100' downstream from the terminus of the point of assemblage of the gas; and in another place says, in effect, that the collection lines terminate in the manifold. If the latter situation be correct, how can the manifold be 100' downstream from the central collection point?

Indeed, the Examiner is not satisfied that there is a manifold. No manifold is shown on the map, and only one of the two witnesses said that there is such a facility.

There is particular doubt that a manifold exists downstream from the central collection point. If, between the terminus of the central collection point and Tennessee's platform, no line takes off leading to the United Gas platform, what is the need for a manifold between such points? It has been seen that the witness whose company, Tenneco, is operating the facilities says he believes that a single line lies between the central point and Tennessee's platform. Additional evidence that no line takes off between the central point and the Tennessee platform is the testimony of this witness that the pipeline connecting these points is about 30'' in diameter. Such testimony, if true, would seem to indicate that this line transports both Tennessee's gas and United's gas to the Tennessee platform. Because why have a 30'' line to move, by well pressure, Tennessee's gas only—a volume that can be transported from the Tennessee platform onward in a 12'' line?

The nature and extent of the additional evidence which should be adduced respecting the manifold is a decision for counsel to make primarily, but such matters as the following occur to the Examiner: (1) more persuasive evidence that there is, in fact, a manifold; (2) a diagram of the manifold and related facilities; (3) additional and more specific evidence respecting the manifold, particularly its location in relationship to the collection lines; (4) testimony as to the operation of the manifold and as to the flows of gas into and out of the manifold; (5) additional and more specific testimony as to the function or functions, and the purpose or purposes, of the manifold.

It is deemed unnecessary, however, to call for further evidence respecting the manifold and to open the record for the purpose of receiving the same, in view of the conclusion hereinafter reached that other facilities constructed by Pan American are subject to the Commission's jurisdiction.

At the central point in the field where all the gas going to Tennessee and United Gas has been assembled in a pipeline as a commingled mass, gathering has been accomplished. From that point on, the large volume of gas going to Tennessee is directed as a single commingled stream, on its way to ultimate markets, through the line extending from the central collection point to the Tennessee platform, through the Tennessee meter station, and through Tennes-

see's 2.63-mile line. The sole function of (a) the line between the terminus of the collection point and the Tennessee platform, and (b) the 2.63-mile line, is to transport natural gas, from a definite, established point where gathering has been completed, on its way to ultimate markets. When the gas enters the line extending from the point of central assemblage to the Tennessee platform, it has been definitely committed to its interstate journey to markets in states other than Louisiana. Clearly, such line and the 2.63-mile line are facilities for the transmission and ultimate sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission under Section 7 of the Act. *J. M. Huber Corp.*, 14 FPC 340, 347–48; *Barnes Transportation Co.*, 18 FPC 369, 372.

Likewise, the Tennessee meter station (consisting of the meter house and the meter runs therein), and the platform on which the station rests, are all facilities for the transmission and sale of natural gas in interstate commerce. According to the evidence, the meter runs are devices to measure the volume of gas flowing through the pipeline. Obviously, the runs, the platform built to support them, and the house built to protect them, are facilities incident to, and in furtherance of, the transportation and ultimate sale of the gas in interstate commerce.

Facilities Not Covered by Budget-Type Certificate

It has been noted that Tennessee next takes the position that the budget-type certificate issued to it in Docket No. CP61–106 covers the construction and operation of any transmission facilities required to connect the Bastian Bay gas to its system. This position is without merit; the budget-type certificate has no application to Tennessee's Bastian Bay acts and operations.

Tennessee filed its application in Docket No. CP61–106 on October 4, 1960. The pleading expressly stated that it was an "application * * * consistent with the policy declaration of the Commission contained in its Order No. 185."

Order No. 185, issued February 8, 1956, adopted amendments to the Regulations under the Natural Gas Act developed in cooperation with representatives of industry and the Utility Committee of the Hoover Commission Task Force on Paperwork. The order recites that,

> One recommendation . . . was to the effect that the Commission define "facilities" requiring certificates under the Act so as to exclude minor installations or changes in connection with the rendition of service to existing customers or markets. [15 FPC 793, 794.]

The order goes on to say that the Commission has recommended to Congress that it be given authority to exclude certain facilities from certification requirements, and then proceeds as follows:

> In the meantime and as a substitute, the Commission advises any interested natural-gas company subject to the Natural Gas Act that it may file . . . a single certificate application covering in general outline along the lines of a budget estimate the proposed routine construction intended to be undertaken by it during the current or ensuing fiscal year, listing the facilities proposed, the estimated cost of each item, the capacity, purpose, and time of intended construction, customers affected by each facility proposed, effect of proposals upon gas supply and deliverability, rates, service, and other pertinent information. A hearing could then be held on such a proposal and a certificate issued in accordance with the general application. [*Id.*]

The application in Docket No. CP61–106 sought a certificate "authorizing the construction and operation of 'gathering' facilities as proposed herein." (Quotation marks around "gathering" added.) The application recited, *inter alia*, that,

> Applicant seeks "budget-type" authorization . . . to construct and operate such facilities as are necessary to enable it to receive deliveries of natural gas into its pipeline system during the calendar year 1961.

And further:

> During the present calendar year Applicant has substantially improved its over-all system gas supply. This has been made possible in part by the ability of Applicant to attach new reserves pursuant to its "budget-type" authorization [for 1960] to construct the necessary facilities without the time consuming requirement of obtaining specific authorization. . . .
>
> When granted, the authorization requested herein will relieve Applicant of the time and expense of preparing numerous relatively minor certificate applications, and the Commission and its Staff of the burden of processing such routine applications . . . .
>
> Upon the granting of the authorization herein applied for, Applicant agrees to submit, on or before March 1, 1962, a statement showing: (a) the names of fields connected, (b) an estimate of the gas reserves attached, (c) a general description of the facilities constructed, (d) the location of said facilities, (e) the cost of the facilities so constructed, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket number of the producer applications.

By order of January 6, 1961, in the proceeding, the Commission issued a certificate authorizing Tennessee

> to construct and operate the proposed facilities to take natural gas from producers thereof during the calendar year 1961, all as more fully described in the application . . . .

With the above quoted facts and recitals before us, the conclusion plainly follows that the facilities necessary to attach to Tennessee's system the Bastian Bay reserves covered by the leases in question are not encompassed by such budget-type order. Facilities to attach the vast estimated volume of gas reserves, 759,350,000 Mcf, the right to which reserves Tennessee had just obtained at a cost to it (more or less) of $159,463,500, are not "minor installations" or "minor changes" in connection with the rendition of service, or "routine construction." Nor would an application seeking a certificate authorizing the construction and operation of such facilities be a "relatively minor certificate application," or a "routine application." Nor would the processing by the Staff of such an application be a "routine" matter—as witness (1) the action of the Commission in issuing its order of April 6, 1961, after the Commission, as set out in the order, was "informed that Tennessee has purchased oil and gas reserves developed by Pan American Petroleum Corporation in the Bastian Bay Field . . . for approximately $150,000,000, and that gas from these reserves is being delivered into the interstate transmission system of Tennessee by means of facilities which Tennessee states were constructed and are being operated" under the authorization of Docket No. CP61–106; (2) the hearing thereafter had and briefs filed herein; and (3) the instant decision. Substantially the same principal questions involved in this reopened proceeding would have been among the major questions presented if Tennessee had filed an application for authorization for the construction and operation of the facilities needed to attach the Bastian Bay reserves.

Moreover, the proposal stands to have a material effect upon Tennessee's rates. This proposition is established by an estimate of Tennessee (hereinafter considered) that at an assumed average daily production of 165,000 Mcf, the average cost to Tennessee of the Bastian Bay gas, over a 29-year period commencing in 1961, will range from 25.57¢ per Mcf to 40.59¢ per Mcf.

Furthermore, the January 6, 1961 order simply authorized Tennessee "to construct and operate" facilities; it did not authorize Tennessee to acquire any facilities for the transportation or sale of natural gas. And we have already seen that some of the facilities which Tennessee acquired from Pan American are facilities for the transportation and sale of natural gas in interstate commerce for resale.

Finally, such order authorized Tennessee to construct and operate facilities "to take natural gas from producers thereof." As hereinafter shown, upon the consummation of the Pan American-Tennessee transaction, Tennessee became the owner of the Bastian Bay gas reserves in question. Therefore, it has not, and is not, "taking" the natural gas "from producers thereof."

For these reasons, Tennessee cannot be heard to say that the budget-type order authorized its jurisdictional acts and operations related to the Bastian Bay field.

The Examiner concludes that Tennessee constructed and acquired, and is now operating, facilities subject to the Commission's jurisdiction, in violation of Section 7(c) of the Natural Gas Act.

Commission Order of April 6, 1961

Tennessee next objects to the Commission order of April 6, 1961, in Docket No. CP61–106. It avers that the Commission had no authority to reopen the proceeding for the reason that the certificate issued therein had become final and cannot be modified or altered.

Tennessee closes its eyes to the plain object and purpose of the April 6, 1961 order, which is entitled, "Order Reopening Proceedings and Fixing Date of Hearing." By the order, the Commission obviously did not intend to vacate or modify its earlier order of January 6, 1961, issuing the budget-type certificate to Tennessee, or to grant a rehearing. It has already been seen that what the Commission undertakes to do by the order of April 6, 1961, is to provide for a hearing in order to determine whether the January 6 budget-type authorization "covered the construction and operation of the facilities necessary to connect the Bastian Bay field reserves to Tennessee's system, and [t]he cost of making natural gas from such reserves available to the Tennessee system." As stated in the Commission's later orders of June 29, 1961, and March 12, 1962, in Docket No. CP61–106:

> By letter dated March 1, 1961, Tennessee asserted that the authority [to construct and operate Bastian Bay facilities] had been granted by the certificate issued in this docket. It is proper to give Tennessee an opportunity to demonstrate as much and it is simpler to do so by reopening this record than by establishing a new one.
>
> The basic purpose of these proceedings in Docket No. CP61–106 is to determine whether Tennessee has and is engaged in acts subject to our jurisdiction, in connection with the Bastian Bay Field, without having obtained such authorization as the Natural Gas Act requires.

If Tennessee, in its actions relating to the Bastian Bay Field, constructed or acquired facilities for the transportation or sale of natural gas in interstate commerce for resale, or is engaged in the transportation or sale of natural gas in interstate commerce for resale, then Tennessee was or is violating the Natural Gas Act—unless the acts and operations in question be within the authorization of the budget-type certificate. Manifestly, by its order of April 6, 1961, the Commission instituted an investigation to determine these questions. Section 14(a) expressly empowers the Commission to conduct such an investigation:

> The Commission may investigate any facts, conditions, practices, or matters, which it may find necessary or proper in order to determine whether any person has violated or is about to violate any provision of this act . . . .

The Commission could have assigned a new docket number to the investigative proceeding. The fact that it did not do so, but chose to conduct its investigation by employing the same docket number as that in the budget-type proceeding, and by reopening that proceeding, is inconsequential.

The method that the Commission adopted of instituting the investigation was within the broad ambit of its authority in procedural matters. In the order of April 6, 1961, the Commission found that the reopening of the Docket No. CP61–106 proceeding for the purpose of holding a hearing to make the determinations above stated, is "in the public interest." Section 16 of the Natural Gas Act confers upon the Commission "power . . . to perform any and all acts, and to . . . issue . . . such orders . . . as it may find necessary or appropriate to carry out the provisions of this act."

Tennessee has not been misled or prejudiced by the Commission's method of instituting the investigation, and has no cause for complaint.

United States v. *Seatrain Lines*, 329 U.S. 424, and *Civil Aeronautics Board* v. *Delta Airlines, Inc.*, 367 U.S. 316, cited by Tennessee, are not relevant. The former case simply held that under the circumstances there presented a certificate could not be revoked; and the latter case, that a certificate could not be changed in a manner not authorized by statute. Here, as already seen, the Commission, by its order of April 6, 1961, did not attempt to revoke or change the budget-type certificate; nor did it bring into question the validity or finality of such certificate.

Commission Jurisdiction over Tennessee's "Acquisition"

Lastly, Tennessee urges that the Commission has no jurisdiction over the "acquisition of the leases," claiming that Section 1(b) exempts the "lease transaction." It will be hereinafter shown that the transaction was in fact a sale of gas in place. So Tennessee's argument about a "lease transaction" is based upon a false premise, and is invalid.

Pan American Sold Bastian Bay Gas to Tennessee in Interstate Commerce for Resale without Having Secured Authorization, and without Having Filed Schedules, Required by Natural Gas Act

Tennessee is Engaged in Transportation and Sale of Bastian Bay Gas in Interstate Commerce for resale

It has been shown that Tennessee's claim is erroneous that certain facilities constructed by Pan American, and the 2.63-mile line which Tennessee constructed, are facilities for gathering; and that such facilities are in fact transportation facilities. Pan American asserts that Tennessee's Muskrat line, more particularly referred to below, and through which Tennessee's Bastian Bay gas moves, is a gathering line.

Except as to the foregoing facilities, Tennessee and Pan American do not claim in their briefs that Tennessee is not engaged in the transportation and sale of the Bastian Bay gas in interstate commerce. At the hearing, however, Tennessee was not willing to say that it is transporting and selling Bastian Bay gas in interstate commerce.

Findings should be made on these points.

It has already been seen that Bastian Bay gas flows continuously from the field, in the 2.63-mile line, into the Muskrat line.

The evidence shows that the latter facility is a combined 20- and 24"-line, "several hundred miles" in length, that runs at the edge of and parallel to the Gulf of Mexico. Its function is to transport natural gas destined for markets. The reasons above given, and authorities cited, which led to the conclusion that the line from the terminus of the central collection point to the Tennessee plat-

form, and the 2.63-mile line, are not gathering lines, but transportation lines make manifest the fact that the several-hundred-mile-long-20- and 24''-Muskrat line, likewise is not a gathering line but a transportation line. In its brief, Tennessee, itself, says that it has "major gas transportation facilities in the immediate vicinity of Bastian Bay," which description apparently refers to the Muskrat line, *inter alia*.

The evidence establishes the facts recited in the ensuing two paragraphs, *viz:*

Some 5 or 6 miles west of the connection of the 2.63-mile line with the Muskrat line, a 30'' Delta-Portland line of the Tennessee Company commences at a connection with the Muskrat line and extends northward through Louisiana, Mississippi and a corner of Alabama, to Centerville, Tennessee; thence a continuation of the Delta-Portland line ties into the main transmission system of the Tennessee Company at a point in Tennessee near the Kentucky border. Tennessee's main transmission system extends thence to the Kentucky border, and thence through Kentucky, West Virginia, Ohio, Pennsylvania, New York, New Jersey, Massachusetts, New Hampshire, Rhode Island and Connecticut; in all of which states Tennessee sells natural gas, transported in its system, to other companies for resale.

When the Bastian Bay gas enters the Muskrat line, it becomes commingled with other volumes of gas in such line; and the continuous flow keeps up on into the Delta-Portland line, where the Bastian Bay gas become commingled with still additional volumes of gas; and Bastian Bay gas is carried northward in such line, as part of a commingled, homogeneous mass. There is a continuous movement of the stream of gas in the Muskrat and Detla-Portland line, and the continuation of the latter line, on into the main system of the Tennessee Company; where the stream becomes commingled with still other volumes of gas.

The Examiner takes notice, as a matter of specialized knowledge of the operation of natural-gas transmission pipelines, or else as a matter of general knowledge (see *e.g.*, *Deep South Oil Co. of Texas* v. *Federal Power Commission*, 247 F. 2d 882, 887–88), that there is a continuous movement of the volumes of gas in the main system of the Tennessee Company, through Tennessee, Kentucky, West Virginia, Ohio, Pennsylvania, New York, New Jersey, Massachusetts, New Hampshire, Rhode Island and Connecticut, to areas of ultimate consumption in those states. Tennessee sells the gas transported northeastwardly from the point in Tennessee where the volumes of gas in the extension of the Delta-Portland line enter its main transmission system, to numerous customers of Tennessee in the states above mentioned.

Tennessee produced as a witness a senior planning engineer in its employ, experienced in pipeline and compressor station construction, and in the design of pipeline facilities. This witness, on cross-examination, averred that the gas form his comany's Bastian Bay leases went as far as the first sales point on the Delta-Portland line, but that from there, "I have no way of knowing where the Bastian Bay goes." The witness further testified as follows:

> PRESIDING EXAMINER: Aren't you willing to say that that gas, except for such—Bastian Bay gas I am talking about—except for such minor portions thereof which may be used for fuel, continues on to points of ultimate consumption in the states other than Louisiana which I specified in my previous question to you [Tennessee, Kentucky, West Virginia, Ohio, Pennsylvania, New York, New Jersey, Massachusetts, New Hampshire, Rhode Island and Connecticut] or in some of those states? The WITNESS: Possibly.

PRESIDING EXAMINER: Well, as a practical matter you know that to be a fact, don't you, sir? The WITNESS: If it says [stays] homogeneous, yes, sir, and it is not pulled out as such I would assume that would happen.

The witness also testified that after a methane molecule of Bastian Bay gas is commingled with other methane molecules, there is no way of tracing the molecules to find out just where each one goes.

The molecules of Bastian Bay gas having become commingled with the molecules of gas from other sources in Tennessee's system, the inference seems to be justified, and the Examiner finds, that Bastian Bay gas is a part of the particular volume of gas which Tennessee delivers at each point of distribution on its main system, from the point where the extension of the Delta-Portland line ties into the main transmission system, northeastward to the terminus of the system. *Cf., Deep South Oil Co. of Texas*, 14 FPC 83, 85–86. There the Commission held that natural gas from a particular source was sold in interstate commerce, where such gas was commingled with natural gas from other sources, and the commingled gas, in whole or in part, was sold to interstate pipeline companies which transported the commingled mass purchased by them across state lines for ultimate public consumption.

Moreover, the Tennessee Company witness, on cross-examination, in attempting to cast doubt upon the proposition that Bastian Bay gas enters the main system of his company in the State of Tennessee, made concessions the effect of which is to establish that said company sells Bastian Bay gas in interstate commerce. The witness testified that Bastian Bay gas might not reach the main system because all of it might be disposed of (1) to customers to whom the Tennessee Company sells gas at points on the Delta-Portland line and on the line extending therefrom that connects with the main system, and (2) for fuel usage in the compressors on such two lines. In impliedly accepting the proposition that Bastian Bay gas either goes to the customers who take gas from these two lines, or else enters the main system, the witness conceded facts which show that the Tennessee Company sells gas in interstate commerce. For the Tennessee Company's sales from the Delta-Portland line and the extension thereof, just as are the sales from the main system, are all sales in interstate commerce for resale. The sales are to four companies at points on the two lines as follows: to Transcontinental Gas Pipeline Corp., at a point in Mississippi; to Alabama-Tennessee Natural Gas Co., at a point in Alabama; and to East Tennessee Natural Gas Co. and Tennessee Natural Gas Lines, Inc., at points in Tennessee.

It apparently occurring to the witness that the sales to these companies are made in interstate commerce, he said, ". . . by some odd chance it could be that all your fuel would be Bastian Bay gas." This speculation is of no avail. There are nine compressors on the Delta-Portland line and the extension thereof. Although at the time of the hearing, the production from the Tennessee Company's Bastian Bay reserves had only been from 40,000 Mcf per day to 55,000 Mcf per day, it would seem that even these volumes are way over the quantity of gas that would be consumed as compressor fuel. The witness did not say, nor did the Tennessee Company attempt to prove, that the compressor fuel usage would be anywhere near as much as such volumes. Also, the Examiner disregards the fanciful hypothesis that all the Bastian Bay gas becomes compressor fuel, as being of no probative value.

The Examiner finds and concludes that in addition to the sale of volumes from its main system which are in part Bastian Bay gas, Tennessee, at the aforementioned points on the Delta-Portland line and the extension thereof, sells a commingled, homogeneous mass of gas, made up in part of gas from the

Bastian Bay field, to Transcontinental, Alabama-Tennessee, East Tennessee, and Tennessee Natural.

The Examiner further finds and concludes that by reason of the foregoing operations and acts, Tennessee is engaged in the transportation and sale for resale of Bastian Bay gas in interstate commerce.

Pan American Sold the Gas in Bulk to Tennessee in Interstate Commerce

The oil, gas and mineral leases which Pan American purportedly assigned to Tennessee are not in evidence. But manifestly, the leases at least gave Pan American the right, to the extent of its leasehold interests, to produce all the oil and the gas "from the surface of the earth to the depths of the deepest presently known productive horizons." For the "Assignment and Conveyance" "assigned" to Tennessee, Pan American's oil and gas leasehold interests to such depths; and said instrument defines the "Leasehold Interests Assigned" as "The leasehold interests . . . in and to the oil, gas, separator liquids and natural gas liquids in and produced from all formations under the lands [to the depths of the deepest presently known productive horizons]." Also, the "Lease Sale Agreement" between Pan American and Tennessee treats Tennessee as thereby becoming entitled to all known recoverable reserves of gas attributable to the net leasehold interests "assigned."

The record is clear that Tennessee, as "assignee" of the leases, has the exclusive right to produce all of the known recoverable reserves in the lands covered by the leases attributable to the net leasehold interests "assigned." In the "Assignment and Conveyance," Pan American warrants the title to the leasehold interests assigned. In the "Lease Sale Agreement," the parties stipulated "that the quantity of recoverable reserves of gas attributable to the net leasehold interests assigned . . . is 759,350,000,000 cubic feet, . . ." Tennessee agreed to purchase such "net leasehold interests" for $159,463,500. At the stipulated total volume of recoverable reserves of 759,350,000 Mcf, this sum equates to 21¢ per Mcf. In the negotiations which finally resulted in the execution of the "Lease Sale Agreement" and the "Assignment and Conveyance," Tennessee was at first acting as agent for Southern California Edison Co., which was considering the purchase from Pan American of the Bastian Bay gas. Pan American made an offer to sell the leases at such sum as would result in a purchase price of 21¢ per Mcf for the gas; and Tennessee's representatives stated that if Edison did not enter into a contract with Pan American, Tennessee would like to purchase the gas upon the same basis. Clearly, the parties intended that the price of $159,463,500 would give Tennessee the right to produce the entire 759,350,000 Mcf.

Also, the parties further agreed that some years hence a redetermination of the quantity of recoverable reserves could be made; and that such adjustment in the purchase price of $159,463,500 for the "leases" would be made as to retain a price for the gas of 21¢. Obviously, this agreed-upon arrangement contemplated the production by Tennessee of all of the recoverable gas reserves attributable to the net leasehold interests, to the depths above specified.

It is also to be noted in this connection that the "Assignment and Conveyance" provides that when a leasehold interest assigned is "no longer productive," Tennessee shall either reassign the leasehold interest to Pan American, or join with Pan American in releasing the leasehold interest to the lessor.

By the terms of the agreements, Tennessee is to pay Pan American a stipulated consideration; and Tennessee is obligated to develop the properties.

Moreover, it is plain from the evidence that in entering into the "Lease Sale Agreement," the purpose of Pan American was to sell gas, and the purpose of Tennessee was to purchase gas. The senior vice president of Tennessee

in charge of gas supply, who participated in the negotiations between Tennessee and Pan American, himself, substantially admits as much (italics added):

> From the very outset of our negotiations, Pan American made it clear that the only type of agreement in which it had any interest was for a sale of leases. Pan American was not interested in a gas sales contract. Thus to obtain this gas, any prospective purchaser had to agree to a purchase of the leases. So far as Tennessee was concerned, an acquisition of leases was desirable . . . . [Tr. 204.]
>
> Our original negotiations *for the Bastian Bay gas* were prosecuted as agent for Southern California Edison Company of Los Angeles. At that time Edison was attempting *to purchase the Bastian Bay gas* which could be produced into the Tennessee pipeline system, and Tennessee was to deliver from its South Texas system to a pipeline serving Edison an equal daily volume of gas . . . . [Tr. 205.]
>
> As I recall, in this meeting representatives of Pan American . . . stated that 21 cents was the lowest price that they would consider *for the purchase of this gas* in the manner in which it has been bought . . . .
>
> We, Tennessee, told Pan American at that time, in the event Edison did not *buy the Bastian gas* at that price, and under the conditions which were discussed at that meeting, that we would like to *puchase such gas* upon the same basis for Tennessee Gas.
>
> As events changed, we turned out to be the buyer. [Tr 207.]

In addition, as pointed out by the Staff and The United Gas Improvement Co., the "Lease Sale Agreement" includes the essential provisions of a gas sales contract. It has been seen that the amount which Tennessee agreed, subject to redetermination, to pay Pan American, $159,463,500, was arrived at on the basis of the estimated gas reserves priced at 21¢ per Mcf. This sum was not a flat purchase price. The amount which Tennessee will actually pay is geared to 21¢ times the volume, in Mcf, of gas reserves as estimated upon a redetermination to be made years hence, when that volume can be arrived at within close limits of accuracy.

It is true that the gas will be produced over a minimum period of from 22 to 24 years, and that Tennessee's estimated operation schedule calls for production over a 29-year period; whereas Tennessee will have paid the entire purchase price, in annual installments, by the end of 17 years. But this situation is analogous to that which stands to result from the take-or-pay, or prepayment, provisions commonly found in present-day gas-purchase sales agreements, where there is, in the words of The United Gas Improvement Co., "the sale on a per Mcf basis over an extended period of time of natural-gas reserves to be produced from a specific area, with payments being made periodically," even though a proportionate volume of reserves has not been taken.

It is also true that in the ordinary gas-purchase sales agreement, the seller operates and develops the field; whereas by the instant agreements, Tennessee operates, and is to complete the development of, the field. This factor is immaterial, since Tennessee is to be reimbursed for the great burden, and perhaps all, of its costs and expenses of development and operation. (See *supra*, page 1490, for summarization of the pertinent provisions of the "Lease Sale Agreement.") An expert witness for Tennessee prepared an estimate over a 29-year period of (1) the investment that Tennessee would incur in completing the development of the property; (2) the operation and maintenance expenses that Tennessee would incur; (3) the separator liquids, or condensate, revenues; (4) the portion of the condensate revenues that would be due to Pan American under the "Lease Sale Agreement;" and (5) the portion of such revenues that would be retained

by Tennessee under the agreement. The Tennessee witness came up with the following figures for the 29-year period:

Net capital investment, representing Tennessee's contribution in developing the field ($12,115,200 minus $4,713,000)	$7,402,200
Operating and maintenance expenses	28,251,700
Total outlay by Tennessee	35,653,900
Estimated condensate revenues	40,209,000
Portion of condensate revenues to be due to Pan American	6,426,000
Portion of condensate revenues to be retained by Tennessee	33,783,000

Assuming that the results of the actual operations will accord with the estimates, Tennessee will fail, by $1,870,900, to receive reimbursement for its total outlay of $35,653,900:

Total outlay by Tennessee	$35,653,900
Portion of condensate revenues to be retained by Tennessee	33,783,000
Unreimbursed amount	1,870,900

But no one can predict with exactness what sum Tennessee will receive from the condensate revenues. A principal feature of the uncertainty is the question of the division of such revenues between Tennessee and Pan American. To the extent that the portion of the condensate revenues to become due to Pan American is greater or less than that set out in Tennessee's projection, the portion to be retained by Tennessee will be less or greater. According to the projection, Pan American would receive its portion of the condensate revenues from the sixth through the twelfth years of the 29-year period. A projection over a 29-year period cannot be precise; nor can that portion thereof be precise covering the sixth to the twelfth years. Tennessee's expert witness who prepared the projection readily said that if an increase in condensate revenues in the earlier years was due to larger production than that employed in making the exhibit, and everything else remained the same, then Pan American would receive more of the condensate revenues than shown in the estimate, and Tennessee would retain less; that "Of course, the opposite is true, too. My guess would be the opposite would be more likely to prevail, . . ." It would not take much difference in the rate of production, during the sixth-to-twelfth-year period, from that employed in the exhibit to wipe out entirely the unreimbursed portion of Tennessee's outlay for production and gathering.

Apparently in entering into the "Lease Sale Agreement" the parties came as close as they could by their estimations to achieve the result of Tennessee having the Bastian Bay gas at 21¢ per Mcf free and clear of production and gathering costs and expenses.

The foregoing facts establish that the "Lease Sale Agreement" and the "Assignment and Conveyance" constitute a sale to Tennessee of the gas in place. "The character of an instrument depends upon its effect, since courts look to the real nature of an agreement, and not at all upon what the parties call it . . . not only the terms of an instrument, but the surrounding circumstances and the situation of the parties will be examined. 'Conduct and purpose have a quality imprinted on them by the law,' *Shapiro* v. *Wilgus*, 287 U.S. 348, 357." *Cook* v. *Ball* (C.C.A. 7), 144 F. 2d 423, 431, certiorari denied 323 U.S. 761. Where a "lease" gives an exclusive right in the "lessee" to mine all the minerals, and the "lessee" must pay either a stipulated consideration or is compelled to extract all of the minerals, the transaction is a sale of the minerals in place. *Hummel* v. *McFadden* (Pa.), 150 A. 2d 856, 860, and cases cited note 7; *National Coal Co.* v. *Overholt* (W. Va.), 94 S.E. 735, 737–38; *Kennedy* v. *Hicks* (Ky.), 203 S.W. 318;

cf., Texas Eastern Transmission Corp., F.P.C. Opinion No. 378, 29 FPC 249. If a so-called "lease" of such character be a sale of gas in place, then manifestly a so-called "assignment of lease" vesting such right in and imposing such obligations on the assignee, is a sale of gas in place to the assignee.

Even if in Louisiana or some other jurisdiction, the law be different from that laid down in the foregoing cases, in our opinion the rule of such cases should prevail in the instant proceedings for three reasons. First, the rule, it seems to us, is sound; especially where, as here, it is apparent that the parties intended to consummate a transaction, under the guise of an "assignment of leases," that would, in effect, be a sale of the gas.

Second, the transaction is indisputably, in practical effect, a sale of gas in interstate commerce for resale; and regulation of the sale is necessary in order to carry out "the overriding congressional purpose" of Congress in the adoption of the Natural Gas Act. Such purpose, and the necessity for regulation of the sale in order to achieve the purpose is made clear by decisions of the United States Supreme Court. In *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672, 682–84, the Court said:

> . . . we believe that the legislative history indicates a congressional intent to give the Commission jurisdiction over the rates of all wholesales of natural gas in interstate commerce, ... There can be no dispute that the overriding congressional purpose was to plug the "gap" in regulation of natural-gas companies resulting from judicial decisions prohibiting, on federal constitutional grounds, state regulation of many of the interstate commerce aspects of the natural-gas business. A significant part of this gap was created by cases holding that "the regulation of wholesale rates of gas and electrical energy moving in interstate commerce is beyond the constitutional power of the states." . . . The committee reports on the bill that became the Natural Gas Act specifically referred to two of these cases and to the necessity of federal regulation to occupy the hiatus created by them. Thus, we are satisfied that Congress sought to regulate wholesales of natural gas occurring at both ends of the interstate transmission systems.

And in *Federal Power Commission* v. *Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1, 19, speaking of regulation of natural-gas companies, the Court said: ". . . it is . . . clear that Congress did not desire that an important aspect of this field be left unregulated."

Third, the transaction should be considered to be a sale of gas and not a mere assignment of leases in order to give a uniform application to the nation-wide regulation that the Natural Gas Act effects. Since "the paramount interest" in sales for resale in interstate commerce is "national," there should be uniformity in their regulation. One of the cases that led to the enactment of the Natural Gas Act was *Missouri* v. *Kansas Gas Co.*, 265 U.S. 298. Treating of a wholesale sale in interstate commerce, the Supreme Court there said, at pages 309–310, "The paramount interest is not local but national, admitting of and requiring uniformity of regulation." See also the *Phillips* case, *supra*, 347 U.S. at page 680. And note the following language, at page 681 of the *Phillips* decision: ". . . the jurisdiction of the Federal Power Commission was not intended to vary from state to state, ..."

In *Petroleum Exploration* v. *Commissioner of Internal Revenue* (C.C.A. 4), 193 F. 2d 59, the lessees in an oil and gas lease, covering certain acreage in Illinois, assigned the instrument to an oil company, and the assignee company, through drilling operations, discovered oil on the premises and thereafter the lessees and the assignee sold their interest in the property to another oil company. The Court of Appeals noted that "the decisions of the state courts in oil-producing states are somewhat at variance;" and held that under what in

its opinion was the correct rule to be applied, the lease, when executed, merely gave the lessees an option to explore the premises and vested no estate in them to any oil underlying the lands (p. 63); but that when oil was discovered, "a new property was brought into being, consisting of the oil in place beneath the surface of the premises" (p. 62); that the lessees thereupon "acquired a new term for as long as the oil should be produced, for a new consideration, the one-eighth royalty thereof;" and that what they "actually and really sold was their interest in the oil in place" (p. 63). In so holding, the court made use of the following language at page 62 (quoted with approval in *Texas Eastern Transmission Corp.*, Opinion No. 378, *supra*):

> The Supreme Court has made it clear that, regardless of the form of a transaction and the recondite niceties of the local art of property and conveyancing, it will, to give a uniform application to a nation-wide scheme of taxation, appraise the transaction according to its economic and practical consequences [citing cases].

So here, in order "to give a uniform application to" the "nationwide scheme of" regulation under the Natural Gas Act, the transaction in question should be held to be a sale of gas.

Pan American correctly points out that in Louisiana the execution of an oil and gas lease does not convey title to any oil and gas that may be found beneath the surface of the land, but merely clothes the lessee with the right to extract oil and gas. In this respect the law of Louisiana differs from that of Texas, New Mexico and some other oil-producing states, where the courts have repeatedly held that an oil and gas lease is a present conveyance of the oil and gas under the premises. See, *e.g.*, *Gulf Production Co.* v. *Warren* (Tex. Civ. App.) 99 S.W. 2d 616, certiorari denied 302 U.S. 707; *Staplin* v. *Vesely* (N.M.), 72 P. 2d 7, 8.

Relying upon the law in Louisiana, Pan American contends that it could not make a sale of the gas by the execution of the instruments in question because it had no title to convey. This contention is without merit. After Pan American acquired the leases it proceeded to discover the gas and oil reserves involved in the "Lease Sale Agreement" and "Assignment and Conveyance." Upon the authority of the *Petroleum Exploration* case, *supra*, and in order to achieve uniformity of regulation under the Natural Gas Act, the Examiner holds that since Pan American had discovered the gas before it entered into the "Lease Sale Agreement" and "Assignment and Conveyance," it could, and did, by said instruments, sell to Tennessee the gas reserves attributable to its "net leasehold interests."

Next, Pan American argues that it cannot be held to have made a sale of natural gas to Tennessee in interstate commerce for the reason that its transaction with Tennessee was consummated before the wells were connected to Tennessee's system and before the gas started moving in interstate commerce. This claim is likewise without merit.

The evidence establishes, and the Examiner finds that Tennessee sought and obtained the Bastian Bay gas for its interstate markets; and that when Pan American and Tennessee conducted the negotiations, respecting the Bastian Bay reserves, which were consummated in the execution of the "Lease Sale Agreement" and "Assignment and Conveyance," Pan American was well aware of Tennessee's object and purpose in wanting the gas. The senior vice president of Tennessee in charge of gas supply, who, as has been stated, participated in the negotiations between Pan American and Tennessee, testified that Tennessee acquired the Bastian Bay leases in furtherance of Tennessee's efforts to meet requirements respecting its gas supplies that the Federal Power Commission had

imposed on said company. Such requirements could only pertain to the transportation and sale by Tennessee of natural gas in interstate commerce. The witness further said that Tennessee also acquired the reserves in order to augment its overall gas supply; that "for Tennessee to maintain its position as a major supplier of natural gas to the market area it serves, it had no alternative but to maintain a continuous program of gas acquisition."

It has been seen that Pan American made it clear in the negotiations that the only type of agreement in which it had any interest was for a sale of leases. Manifestly, Pan American's purpose in taking this position was to endeavor to avoid Federal Power Commission jurisdiction over the transaction as a sale of gas in interstate commerce for resale. These considerations establish that Pan American knew that if Tennessee acquired the Bastian Bay gas, the latter company would transmit and sell such gas in interstate commerce for resale.

Still additional evidence compels the same conclusion. It has been shown that a segment of Tennessee's interstate transmission system was but two and a half miles from the central point of the Bastian Bay field collection system.

Moreover, the record shows that at the time the negotiations between Pan American and Tennessee were conducted, there was, and now is, no market in Louisiana for the gas which Tennessee sought and obtained; and consequently that there was, and is, no place for the gas to go except out of the state. The estimate of the gas reserves, as agreed upon between Pan American and Tennessee (subject to redetermination), is the immense volume of 759,350,000 Mcf; and the evidence shows that Pan American was of the view at the time the transaction was entered into, that the volume might be as much as 938,000,000 Mcf. The evidence shows that the intrastate market which United serves has absorbed only 12,000 Mcf per day of Bastian Bay gas; and that at the time of the Pan American-Tennessee negotiations, United proposed, and still proposes, to sell the bulk of its Bastian Bay gas in interstate commerce. Further, a Tennessee witness, himself, said that at the time of such negotiations, Tennessee had, and now has, no market in Louisiana for any of the Bastian Bay gas. Tennessee is even flaring casinghead gas produced from the properties affected by the leases, pending the installation of a compressor to discharge such gas into its interstate transmission system.

Lastly, it has been noted that immediately after the contracts with Pan American were consummated, Tennessee proceeded to connect the Bastian Bay reserves to its interstate transmission system; and since February 3, 1961, has in fact been taking the Bastian Bay gas into such system.

Clearly, at the time the contracts were consummated, the gas, to the knowledge of Pan American, was destined for movement in interstate commerce for resale.

The law is settled that the sale of an article or commodity destined at the time of sale for movement in interstate commerce is an inseparable part of interstate commerce, and is a sale in interstate commerce. *Dahnke-Walker Milling Co.* v. *Bondurant*, 257 U.S. 282, 290–91; *Lemke* v. *Farmers Grain Co.*, 258 U.S. 50, 54–55; *Currin* v. *Wallace*, 306 U.S. 1, 10. (These three cases are cited approvingly in the jurisdictional case, *Interstate Natural Gas Co.* v. *Federal Power Commission*, 331 U.S. 682, 688, note 10.)

Pan American also argues, upon the authority of *Federal Power Commission* v. *Panhandle Eastern Pipe Line Co.*, *supra*, 337 U.S. 498, that the transaction between Pan American and Tennessee is beyond the coverage of the Natural Gas Act. This argument must be rejected, for the reason that the case is not applicable. It merely held that the sale by a natural-gas company of undeveloped gas leases is not subject to the Commission's jurisdiction under the Act.

The Court was not there faced with a situation, as here, where, under the guise of a sale of leases, a company has effected a sale of gas in place, in interstate commerce. In the *Panhandle* case the question was not even raised whether the transfer of gas leases was in fact a sale of gas. Even if the Court had considered such question and had ruled that the transfer was a sale of gas, the transaction there involved would not have been jurisdictional for such reason; because the gas was to be moved only in intrastate commerce. "Questions which merely lurk in the record, neither brought to the attention of the court nor ruled upon, are not to be considered as having been so decided as to constitute precedents." *Webster* v. *Fall*, 266 U.S. 252, 256. Also see the treatment of the *Panhandle* case in *Texas Eastern Transmission Corp., supra*, pp. 254–255; and in an Examiner's decision in *Tennessee Gas Transmission Co.*, Docket No. G–14562 (issued January 8, 1962), pp. 17–19, [not reported; see 29 FPC 4].

The Examiner has considered the many other cases that Pan American and Tennessee cite on the foregoing questions. The cases either are inapplicable or else militate against the position of said parties, except as they serve to refute the contention of staff counsel that Pan American is engaged in a continuing sale of gas. Mention should perhaps be made of *Public Service Commission of New York* v. *Federal Power Commission*, 287 F. 2d 143. There, the Staff did not contend that the "acquisition of leases" involved in that case were in fact jurisdictional sales (287 F. 2d at p. 145), nor was such question otherwise raised. Nor did the court rule upon the question. Hence the holding in the *Public Service Commission* case does not contravene the conclusion here arrived at that the Pan American-Tennessee transaction was a jurisdictional sale of gas. *Webster* v. *Fall, supra.*

There is nothing in the legislative history of the Natural Gas Act which Pan American cites that contravenes the Examiner's finding and conclusion that Pan American has made an in-place sale of natural gas to Tennessee in interstate commerce for resale.

Pan American Has Not Procured Necessary Authorization

Concededly, Pan American has procured no authorization for the sale of Bastian Bay natural gas to Tennessee, or filed any schedule therefor, pursuant to the Natural Gas Act.

Contention of Staff and Pennsylvania Public Utility Commission

As above indicated, the Staff and the Pennsylvania Public Utility Commission contend that, subsequent to the consummation of the Pan American-Tennessee transaction, Pan American has been and is today selling the Bastian Bay gas in interstate commerce to Tennessee. The Examiner is of the opinion that this position is not valid. The claim is refuted by the Examiner's conclusion that Pan American made a sale of gas in interstate commerce to Tennessee in place, and by the facts and law which support such conclusion.

Cost of Making Reserves Available to Tennessee System

Uncertainty exists as to what the cost will be of making the Bastian Bay reserves available to the Tennessee system. The evidence shows that the costs will vary substantially depending upon the rate of production, and that the future rate of production is an unknown quantity. The maximum sustained rate consistent with sound engineering practice is 240,000 Mcf per day, as long as well pressures permit; but more flexibility can be obtained if the gas is produced at a lesser rate and also deliverability can be maintained for a longer period. According to the evidence, Tennessee desires for the Bastian Bay reserves to be a flexible source of supply. One of its officers testified that flexibility is an

advantage of the Bastian Bay supply because by such supply Tennessee can meet fluctuations in needs for gas caused by operating conditions and the "take-or-pay" requirements of gas purchase contracts. This testimony is offset in measure by evidence introduced by the Consolidated Companies that allowables fixed by the Louisiana Department of Conservation limit the extent to which flexibility in the production of the Bastian Bay reserves can be achieved.

The Staff, in their initial brief, have set out clearly the estimated cost, and bases therefor, of making the Bastian Bay reserves available to the Tennessee system as reflected in Tennessee's cost-of-service study, Exhibit 12; also Tennessee's estimated costs at certain different rates of production than the rate assumed in Exhibit 12. The Staff make certain comments with reference to the estimates, with which the Examiner generally agrees. Tennessee, in its reply brief, takes no exception to the analysis and comments of the Staff. The Examiner quotes from, and adopts, most of such portion of the Staff's brief, with modifications contained in the words and figures in parentheses:

> Tennessee presented one cost of service study (and the results of four others) estimating unit costs of Bastian Bay at various assumed rates of production. We think such estimates meet the requirements of the Commission's orders and furnish a background for understanding the workings of the Bastian Bay transaction. The basic cost of service study (Ex. 12) assumes sustained average daily production of 165,000 Mcf of raw gas per day so long as the field can produce at that rate. At that production rate Tennessee estimates the weighted average cost over the life of the field would be 31⅓ cents per Mcf (. . . including severance tax at 2.3 cents per Mcf), and the average cost in each year would be:

Year	*¢/Mcf*	*Year*	*¢/Mcf*	*Year*	*¢/Mcf*
1961	34.09	1971	30.64	1981	37.83
1962	29.97	1972	30.23	1982	39.64
1963	25.57	1973	30.36	1983	39.90
1964	26.56	1974	31.05	1984	39.43
1965	27.40	1975	32.14	1985	36.10
1966	31.18	1976	32.82	1986	35.74
1967	31.33	1977	35.28	1987	36.08
1968	31.42	1978	37.12	1988	37.97
1969	31.39	1979	37.25	1989	40.59
1970	31.25	1980	37.41		

> Tennessee estimates the weighted average cost over the life of the field at the various assumed rates and sustained average daily production are:

Daily Raw Gas Production Mcf/day at 14.73 psia	*Weighted Avg. Cost ¢/Mcf/at 15.025 psia*
240,000	26.13
200,000	27.74
165,000	31.33
100,000	39.39
40,000	79.13

> Tennessee's cost figures are necessarily estimates. Definitive conclusions regarding the estimated cost of service (Ex. 12) are neither necessary nor appropriate here since this is not a rate or accounting case. But the methods used in deriving Tennessee's cost estimates do help elucidate how the Bastian Bay arrangement works.

Tennessee's gas reserves estimate is somewhat lower than the 759,350 MMcf . . . agreed upon in . . . the Lease Sale Agreement as the recoverable reserves of gas attributable to the net leasehold interests assigned. Assuming that a gas reserves redetermination under . . . the Lease Sale Agreement would arrive at the current Tennessee estimate, Tennessee adjusted the $159,463,500 purchase price in accordance with the provisions . . . of the Lease Sale Agreement as follows:

$$\$159,463,500 \times \frac{692,981 \text{ MMcf}}{759,350 \text{ MMcf}} = \$145,526,000.$$

The 759,350 MMcf is the figure agreed upon in the Lease Sale Agreement; and 692,981 MMcf is the redetermined reserve estimate, ...

In its [exhibit,] Tennessee capitalized the recomputed amounts for down payment and note payments to Pan American in the year when [, according to the exhibit,] cash payments would actually be made.

Tennessee's [exhibit] also capitalized [$12,115,200, rounded to] $12,115,000 [, which on the face of the exhibit might be interpreted to represent] estimated costs of additional development. [The $12,115,000, however, should be reduced by $4,713,000; for the witness who prepared Exhibit 12 testified, in explaining the exhibit, that, "The amounts of depreciable property include $4,713,000 of property already installed in the field" by Pan American. Necessarily, Tennessee will not be obligated to expend the $4,713,000, which is part of the $12,115,000.] Under the Lease Sale Agreement and Tennessee's estimates [all or nearly all of the difference, $7,402,000, is to be], borne . . . by deductions from Pan American's liquid revenues. [See pages 1504–1505, *supra*.] Nonetheless, Tennessee treated [the items making up the $12-115,000] as rate base items and included amortization of such costs in its estimated cost of service. Tennessee treated the anticipated reimbursements (or income) out of separator liquids revenue as credits to its estimated cost of service.

Combining the down payment with the [$12,115,000] and payments on the notes (after allowing for redetermination of gas reserves) Tennessee arrived at a gross investment of [$157,641,000] over the life of the field. Items for depreciation, depletion and amortization of such investment enter the cost of service, as does a ['pre-tax'] return . . . calculated at 11% [on net investment]. Tennessee is claiming such return on well-mouth properties in current rate cases in lieu of the more usual allowance for return plus federal income taxes. Tennessee says the results under either method are fairly similar. (However, under the 'pre-tax' return we lose sight of the intangible development cost tax deductions which will be generated for Tennessee in Bastian Bay.)

Tennessee has also estimated its operation and maintenance expense over the life of the field and its royalty expense, based on 25 cents per Mcf . . . for 26.2539% of the gas. (This average royalty burden is more than double the usual ⅛ royalty.)

Tennessee treated as credits to its cost of service the deductions to meet operating and development costs which it subtracts from Pan American's retained condensate revenues; the condensate revenues anticipated after Pan American's production payments expire; and the estimated reimbursement for plant fuel. (Estimated revenues if any for crude oil, after Pan American's oil payment expires, do not appear in the cost of service.)

Tennessee's total estimated cost over the life of the Bastian Bay Field breaks down as follows:

Item	Amount
1. Depletion and depreciation of down payment and notes	$145,526,000
2. Royalty expense	60,299,000
3. Pre-tax return	59,653,000
4. Operation and maintenance	28,251,700
5. Depreciation and amortization of further development costs	12,115,000
6. Condensate revenues retained by Tennessee—Credit	(33,783,000)
7. Reimbursement for plant fuel—Credit	(4,404,000)
Total net cost of service	267,657,700

The basic reasons for Tennessee's high estimated costs at Bastian Bay are (a) the high payments to Pan American amounting to 21 cents per Mcf of net interest gas, (b) the high royalty payments agreed to by Tennessee amounting to 25 cents per Mcf as produced, and (c) the return and tax allowance which may be claimed on the large prepayments accumulated as a result of paying Pan American much more quickly than the gas is produced. Items (a) and (b) represent, for each Mcf . . .:

21¢ for .737461 Mcf=15.486681¢
25¢ for .262539 Mcf= 6.563475¢
1.0 Mcf for 22.050156¢

When we add the Louisiana severance tax of 2.3 cents per Mcf (which is payable by Tennessee on all volumes produced) we arrive at a cost in excess of 24.35 cents per Mcf—before allowing for the added cost of prepayments.

Pan American's Investment in Bastian Bay Field

The Examiner finds that Pan American's total original investment applicable to the Bastian Bay leases, as recorded in its books and records, amounts to $16,448,673.50 broken down as follows:

Leasehold	$3,947,519.05
Well Tangibles	3,411,615.35
Well Intangibles	7,785,680.39
Lease Equipment	658,717.84
Related Field Facilities	645,140.87
	16,488,673.50

These amounts represent direct expenditures which are capitalized under Pan American's accounting system, and consist of the following: leasehold (capitalized costs of lease acquisitions, including bonus payments to lessors, charged directly to, and recorded in, leasehold accounts, together with capitalized geological and geophysical expenditures), well tangibles, well intangibles, lease equipment, and related field facilities.

The investment figure of $16,488,673.50 does not include allocated portions of expenditures capitalized but recorded in other accounts that may be deemed related thereto, for exploration department investment, district office investment, division office investment, and general office investment. Nor does such investment figure include restated or allocated portions of the following types of expenditures incurred in exploration and development operations which, under Pan American's accounting system, are recorded as operating expenses: development and exploratory dry hole costs; rentals, including delay, gas-well and minimum royalty payments; geological and geophysical expenditures not capital-

ized; cancelled and surrendered acreage; tangible and intangible costs applicable to cancelled well locations; general and division office operating expenses; district office exploration department operating expense; option expense; contributions to development; and taxes (other than income taxes). (The Examiner expresses no opinion as to whether a restatement of these items of operating expense as capital items would be justified or proper; he is here merely summarizing the evidence as to what the $16,488,673.50 does and does not comprise.) Nor does the $16,488,673.50 encompass an allocated portion of company working capital, including materials and supplies.

The Examiner further finds that the related reserves for depreciation, depletion and amortization for the investment of $16,488,673.50, as of the time that the Pan American-Tennessee transaction was consummated, amounted to $1,511,801.33; so that the remaining investment as recorded was $14,976,872.17.

Additional Requests of Certain Intervenors

The Consolidated Companies, the New York Public Service Commission, Public Service Electric and Gas Co., and Long Island Lighting Co., urge that Tennessee be directed to maintain supplemental accounts identifying all costs (and physical units) related to Bastian Bay operations.

The Consolidated Companies also request the issuance of an order herein providing that Tennessee be required, in all future rate proceedings, to submit a separate cost of service for the Bastian Bay gas, and that the allowance to Tennessee in rate proceedings be limited to an amount which may be fixed in the pending area rate proceedings, Docket No. AR1–2.

The New York Commission also requests the making of a finding that no evidence has been presented which would justify Tennessee's inclusion, for the Bastian Bay gas, of more than the "in-line" price for southern Louisiana gas acquisitions in its cost of service for rate purposes.

The United Gas Improvement Co. and Long Island request that the Commission condition the instant sale in accordance with the price line established in the *CATCO* case (360 U.S. 378).

Imposition of any such requirements, limitation, or condition, and the making of such finding, are beyond the scope of the instant proceedings, as delineated in the Commission's orders.

Motion to Terminate Show Cause Proceeding

For the reasons stated at pages 1500 to 1510, *supra*, Pan American's motion to terminate the show cause proceeding is hereby denied.

HOWELL PURDUE,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SIERRA PACIFIC POWER COMPANY, DOCKET NO. E-7134

ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued December 13, 1963)

Sierra Pacific Power Company (Applicant), a corporation organized under the laws of the State of Maine and doing business in the States of Nevada and California, with its principal place of business in Reno, Nevada, filed an application on October 29, 1963, as amended on November 13, 1963 and November 26, 1963 for authorization, pursuant to Section 204 of the Federal Power Act, to issue un-

secured, short-term Promissory Notes in a principal amount not to exceed $12,000,000 outstanding at any one time.

The proposed notes, payable to such bank or banks from which Applicant may borrow funds, will be issued for periods not exceeding twelve months from the date of original issue or renewal thereof, and will have maturity dates not later than December 31, 1964. Said notes will bear interest at a rate per annum not in excess of ¼th of 1% over the prime rate in effect in New York City at the time of the borrowing or renewal of the loans. The application indicates that none of the notes proposed to be issued will be resold to the general public, and that no finder's fee or other negotiation fee, commission, or remuneration will be paid in connection therewith to any third person.

By order issued August 16, 1962 (Docket No. E–7042), Applicant was authorized to issue up to $12,000,000 short-term notes for periods not exceeding twelve months from the date of original issue or renewal thereof, as the case may be, such notes to have maturity dates not later than December 31, 1963.

The proposed application would extend this period to December 31, 1964, and would include extension or renewal of notes outstanding under present authorization. Such notes totaled $3,475,000 as of October 28, 1963 according to the application.

The Applicant proposes to apply and use the net proceeds to be obtained from the unsecured Promissory Notes, pending permanent financing to reimburse Applicant for construction expenditures and, together with cash from operations, to carry out Applicant's construction programs contemplated and now in progress for 1963 and 1964. These programs jointly will require approximately $27,886,300 and provide for the expenditure of approximately $22,641,800 for electric facilities, $3,493,700 for water facilities and $1,750,800 for gas facilities. Principal items in Applicant's electric program are $4,042,500 in 1963 for the completion of Tracy Steam Unit #1; $1,120,000 in 1964 for the Geothermal Plant near Battle Mountain; $190,000 in 1963 and $4,100,000 in 1964 for Tracy Steam Unit #2; $315,000 in 1964 for the Tahoe Valley Distribution Substation and Feeders; $255,000 in 1963 for the Spanish Springs Distribution Substation (2 miles north of Sparks); $136,000 in 1963 for Mount Rose-Steamboat 120 kv line; $440,000 for Tracy Substation-Brunswick 120 kv line; $290,000 in 1963 for Buckeye-Tahoe Valley 120 kv line; $184,000 for the Brunswick 120/60 kv Transmission Substation; $192,000 in 1963 for improvement to Reno 23 kv Underground System; and $145,000 for Battle Mountain-Beowawe Electric Extension; $150,000 in 1964 for Steamboat-Tracy 120 kv Transmission Line (636 MCM); $1,080,000 in 1964 for the Lovelock-Winemucca 120 kv line (75 miles H-Frame 397.5 MCM); $180,000 in 1964 for the Buckeye 120/60 kv Substation (40,000 kva).

Written notice of the application has been given to the Public Service Commission of Nevada and the Public Utilities Commission of California, and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on November 8, 1963 (28 F.R. 11943), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before November 20, 1963 with the Federal Power Commission, Washington, D.C., 20426. No protest, petition, or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued May 14,

1959, *In the Matter of Sierra Pacific Power Company*, Docket No. E-6873 (21 FPC 684).

(2) The proposed issuance of Promissory Notes in the aggregate principal amount of $12,000,000 all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $12,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(2) thereof.

(6) The proposed issuance of securities, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of $12,000,000 outstanding at any one time, whether an original issue or a renewal note, upon the terms and conditions and for the purposes set forth in the application, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon the final maturity of all notes to be issued pursuant thereto, being not later than December 31, 1964.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any security to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CHANDELEUR PIPE LINE COMPANY, DOCKET NO. CP64-37

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 16, 1963)

On August 8, 1963, Chandeleur Pipe Line Company (Applicant) with its principal place of business in Louisville, Kentucky, filed in Docket No. CP64-37 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a pipe line to transport natural gas produced by California Company (Calco),

from the Main Pass Block 41 Area Field located on the Outer Continental Shelf in the Gulf of Mexico to a delivery point onshore for Standard Oil Company, incorporated in Kentucky—(Kyso), (Calco and Kyso are wholly-owned subsidiaries of the Standard Oil Company of California), for use in its refinery and related facilities located near Pascagoula, Mississippi, as hereinafter described, all as more fully described in the application herein.

Applicant requests authority to construct and operate approximately 72 miles of 12-inch outside diameter pipe line, together with related measuring and regulating facilities. The estimated cost of such facilities is $5,850,000 including interest and overhead.

Applicant states that it is a wholly-owned subsidiary of Kyso and that the natural gas to be transported will be owned by Kyso and will be used by it in the operation of its Pascagoula refinery and related facilities which are now under construction. It is anticipated that Applicant's proposed pipe line will be used to transport approximately 50,000 Mcf of natural gas on a maximum day and approximately 30,000 Mcf on an average day for use in refinery operations.

Applicant further states that Kyso has entered into a 20-year contract to buy natural gas from Calco which owns leases and presently unproduced gas reserves in the Main Pass Block 41 Area Field. The gas purchased by Kyso under this contract will be delivered to Applicant at a central point in the Main Pass Block 41 Area Field for transportation and redelivery onshore to Kyso.

The application states that the cost of constructing the proposed facilities will be financed with funds made available to Applicant by its parent company, Kyso.

After due notice, the Public Service Commission of the State of New York, on November 22, 1963, filed a notice of intervention in this proceeding. However, said notice was withdrawn by letter received December 4, 1963. No other notice or petition to intervene or protest to the granting of the application has been filed.

At a hearing held on December 13, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, a Delaware corporation with its principal place of business in Louisville, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity required that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Chandeleur Pipe Line Company, to construct and operate facilities and to transport natural gas in interstate commerce for use in Kyso's refinery located at Pascagoula, Mississippi, as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

CHICAGO DISTRICT PIPELINE COMPANY, DOCKET NO. RP64-5

ORDER ESTABLISHING HEARING AND PROCEDURE ON PETITION TO INTERVENE AND MODIFYING ORDER

(Issued December 16, 1963)

On October 7, 1963, the Coal Interests[1] filed a joint petition seeking leave to intervene in the above-designated proceeding. In their joint petition, the Coal Interests alleged, *inter alia*, that they, or their members, are competitors of Chicago District Pipeline Company (CDP) and that CDP's proposal to change its form of rate is a device to shift costs to underprice coal in the boiler fuel market, which proposal would give gas in the Northern Illinois-Indiana area an unfair price advantage over its competitors, including Coal Interests, thereby resulting in a greater loss of market for coal. Therefore, Coal Interests allege that they "have a direct and substantial interest at stake in this proceeding which is not adequately protected by any party thereto" and that "they will be seriously aggrieved by any Commission order allowing the change in rate form."

On October 16, 1963, CDP filed an answer to the Coal Interests' joint petition, a motion to strike certain allegations contained therein, and applications for subpoenas directed to the Coal Interests. In its answer, CDP alleges, among other things, that the Coal Interests' intervention herein is not necessary or appropriate to the administration of the Natural Gas Act and is not in the public interest, and, further, that the Coal Interests in their joint petition have not shown that they have "any interest that may be directly affected in these proceedings and which is not adequately represented by existing parties." In addition to its answer, CDP moves to strike certain allegations contained in the joint petition on the grounds, among others, that they are "frivolous", "irrelevant", and "consist of unfounded legal conclusions". CDP, also, requests the issuance of a subpoena directed to the Coal Interests for the production of witnesses and documentary evidence, in the event that the joint petition to intervene is granted, "in order that CDP and this Commission may be apprised of the information by

---

[1] Consisting of Fuels Research Council, Inc.; National Coal Association; United Mine Workers of America; and Mid-West Coal Producers Institute, Inc.

which to test the truth or falsity of certain allegations contained in said Joint Petition."

On October 28, 1963, Coal Interests filed an answer to CDP's motion to strike and applications for subpoenas. In its answer, Coal Interests request the Commission to deny CDP's motion to strike and applications for subpoenas on the grounds, among others, that the allegations contained in their joint petition are neither "frivolous" nor "irrelevant" and that CDP's applications for subpoenas do not name specific individuals or documents and that compliance with CDP's request would be "burdensome" and would constitute "an unreasonable search and seizure."

On November 8, 1963, CDP filed amended applications for subpoenas and its reply to the answer filed by Coal Interests on October 28, 1963. In its amended applications for subpoenas, CDP renewed its request for denial of Coal Interests' joint petition to intervene and for applications for subpoenas directed alternatively to either the Coal Interests or to certain individuals named by CDP. In its amended applications, CDP states, among other things, that it has requested documents and testimony from which it can derive the price and volumes of sales of coal made in the Chicago area during the year 1962 and, that in view of the Coal Interests objection to the issuance of subpoenas to produce "unnamed witnesses", it has attached a list of persons to be subpoenaed, which persons are presidents of coal producers who are members of Coal Interests.

On November 21, 1963, Coal Interests filed their answer to CDP's amended applications for subpoenas requesting the Commission to reject the aforementioned amended applications as "a blatant attempt to circumvent the Commission's rules so that it might file an answer to the Answer of Petitioners in reply to the Applications for Subpoena."

Based on the foregoing documents, the standing of the Coal Interests to intervene in this proceeding has been placed in issue. In *National Coal Ass'n* v. *F.P.C.*, 191 F. 2d 462 (CADC, 1951), the Court accepted the allegations of the petition for review and, therefore, found that Coal Interests were "aggrieved" parties within the meaning of Section 19(b) of the Natural Gas Act. In making its finding, the Court stated (191 F. 2d at 466):

> The Commission cannot now shift to petitioners the responsibility for its own failure to contest petitioner's allegations. The corollary of its authority to allow intervention is the duty to explore all pertinent aspects of an intervener's relationship to the matter under consideration, including the authority of an association or labor union to represent its affected members. The Commission would now rely upon its own failure to make a record on these points to deprive petitioners of standing to seek judicial review, even though petitioners are otherwise within a class entitled to review. * * *

Under these circumstances, it is appropriate "to make a record on these points" and require Coal Interests to substantiate the allegations contained in their joint petition through direct testimony and exhibits. This, we believe, should be done as a preliminary matter, prior to consideration of the merits of the CDP proposed increase.

Our usual procedure on petitions to intervene has been to grant or deny those petitions based on the documents filed with this Commission. However, in the instant case, we are reluctant to decide the issues joined by these documents without the benefit of a record as contemplated by the *National Coal Ass'n* case. The trial of this matter at a preliminary hearing may result in a possible delay of the decision on CDP's increased rate proposal, which will permit CDP to place its rate proposal in effect at an earlier stage of this proceeding to the possible detriment of the consumers. However, CDP has written staff counsel that it will agree to defer the effectiveness of its increased rate proposal until,

at least, August 1, 1964, so that it may have an opportunity to explore the allegations in the Coal Interests' joint petition without undue detriment to the consuming public. Based on CDP's willingness to defer the effectiveness of its proposed rates, we are willing to convene such a hearing.

In order to permit the determination of the Coal Interests' joint petition to intervene prior to commencing the hearing on CDP's proposed rate change, it will be necessary to modify our order issued herein on October 31, 1963. In addition, in order to permit an orderly determination of CDP's rate change proposal, we are amending the hearing order to specify that the staff and those who have been permitted to intervene (and the Coal Interests who may file any presentation they desire, subject to being stricken if it is subsequently determined that their proposed intervention should be rejected) may file a limited presentation, if they so desire, limited to their position on the cost of service filed by CDP. The filing of evidence with respect to cost is not intended to limit the position of any party on the issues of cost allocation, rate form and rate design. The filing of evidence by any party to this proceeding on the issues of cost allocation, rate form, and rate design will be deferred to a date to be hereinafter set by the Presiding Examiner.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the Natural Gas Act that the issues joined in the aforementioned documents be decided on a record as quickly as practicable and that our order issued herein on October 13, 1963, be modified as hereinafter ordered.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act [18 CFR, Chapter I], a public hearing shall be held on a date fixed by notice by the Presiding Examiner heretofore designated to preside at this proceeding concerning the issues joined in the aforementioned documents.

(B) On or before January 6, 1964, Coal Interests shall serve upon the Presiding Examiner and all parties their direct testimony and exhibits in support of their joint petition to intervene filed on October 7, 1963, in this proceeding and the allegations contained therein.

(C) The order issued herein on October 31, 1963, is hereby modified in the following respect: The testimony and exhibits to be served by the staff and the Interveners in accordance with ordering paragraph (C), may initially be limited solely to evidence pertaining to CDP's cost of service. Evidence on cost allocation, rate form, and rate design shall be served on a date to be fixed by the Presiding Examiner. In keeping with our intent that this proceeding be expedited to the fullest extent possible, the Presiding Examiner shall establish an early date for service of evidence on those remaining issues immediately following the Commission's decision on the issues as to the proposed intervention of the Coal Interests herein set for preliminary hearing.

(D) In all other respects, the order issued herein on October 31, 1963, shall remain in full force and effect.

(E) Immediately upon completion of the prehearing conference set for January 15, 1964, in paragraph (D) of the October 31, 1963 order, a prehearing conference shall be convened on the issues referred to in paragraph (A) above for the purpose of establishing such procedures that will result in the most expeditious determination of this matter, including setting of dates of filing testimony and exhibits by any other party. The Presiding Examiner is directed to proceed to issue an initial decision together with his proposed findings on the

intervention issues directly upon completion of the testimony and the filing of any briefs that he may deem necessary.

(F) The Presiding Examiner may convene other prehearing conferences that will assist him in expediting this proceeding to its final determination.

Commissioner Ross *not participating.*

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP63-296 (PHASE I), CP63-296 (PHASE II); TRANSWESTERN PIPELINE COMPANY, DOCKET NO. CP64-34

ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND SEVERING PROCEEDINGS

(Issued December 16, 1963)

On May 6, 1963, as supplemented on May 28, 1963, and October 4, 1963, El Paso Natural Gas Company (El Paso) filed, in Docket No. CP63-296, an application for a certificate of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act (Act) authorizing the sale, in interstate commerce, of natural gas to Southern California Gas Company and Southern Counties Gas Company of California (jointly referred to as Southern) and the construction and operation of certain compression facilities. On August 2, 1963, Transwestern Pipeline Company (Transwestern) filed, in Docket No. CP64-34, an application for a certificate of public convenience and necessity pursuant to Section 7(c) of the Act authorizing the sale, in interstate commerce, of natural gas to Pacific Lighting Gas Supply Company (Pacific Lighting).

In its application in Docket No. CP63-296, El Paso proposed to sell and deliver to Southern at its existing points of delivery near Blythe, California, and near Topcock, Arizona, up to 100,000 Mcf per day[1] of natural gas, on a firm basis, for a limited term ending November 1, 1965, or upon commencement of the receipt of gas by Southern at the Arizona-California boundary under either the Rock Springs project[2] or some other permanent arrangement, whichever is the earlier. The proposed daily deliveries of 100,000 Mcf which will be sold under a new rate schedule, Rate Schedule G-1, were to be in addition to daily deliveries by El Paso to Southern of its current maximum contracted daily demand of 1,130,000 Mcf under El Paso's Rate Schedule G. The rate proposed for the new service was to be the commodity rate (currently 22.48 cents per Mcf) in effect from time to time under El Paso's Rate Schedule G. The proposal carried an obligation on the part of Southern to take or pay for an annual average quantity of 40,000 Mcf per day during 1964 and 65,000 Mcf per day during 1965. Of the volumes proposed to be delivered, 60,000 Mcf per day could be delivered through previously authorized El Paso facilities, without the construction of additional facilities.

In order to deliver the additional 40,000 Mcf per day of natural gas, El Paso proposed to construct and operate, at an estimated cost of $3,481,000, certain additional compressor stations and appurtenant facilities on its San Juan mainline in New Mexico and Arizona. These facilities would add 13,690 compressor

---

[1] In El Paso's proposal, all volumes are at 14.9 psia at a temperature of 60° F. In Transwestern's proposal all volumes are at 14.73 psia at a temperature of 60° F.

[2] The applications behind that project were denied in *El Paso Natural Gas Co., et al.*, Opinion No. 393, 30 FPC 77, issued July 12, 1963.

horsepower to El Paso's system. Upon termination of the interim sales for which authorization was sought, El Paso stated that it would use the facilities to sell and deliver natural gas to its customers located east of California.

In its application in Docket No. CP64–34, Transwestern proposed to sell and deliver to Pacific Lighting at its existing delivery point near Needles, California, up to 410,000 Mcf per day of natural gas on an annual average basis. Of these volumes, 350,000 Mcf per day would be at a rate of 39.6 cents per Mcf under Transwestern's Rate Schedule CDQ–1 and 60,000 Mcf per day would be at a rate of 21 cents per Mcf under Rate Schedule LX. Transwestern is presently authorized to sell and deliver to Pacific Lighting up to 345,000 Mcf per day of natural gas on an annual average basis, of which 300,000 Mcf per day are sold under Rate Schedule CDQ–1 at 42 cents per Mcf and additional volumes are sold under Rate Schedule LX at 21 cents per Mcf. The deliveries proposed in the application in Docket No. CP64–34 can be made without the construction of additional facilities by Transwestern's reducing its delivery pressure from 800 psig to 690 psig.

By order issued October 21, 1963, the Commission consolidated the applications in the above-named dockets for the purpose of hearing. Hearing was commenced on November 18, 1963, and on December 4, 1963, two separate proposed stipulations and agreements entered into by the parties to the proceeding were received into evidence without objection. On December 6, 1963, the presiding examiner certified these two stipulations and agreements to the Commission.

In brief, the stipulation and agreement relating to El Paso's application filed in Docket No. CP63–296 provides that:

(1) That docket shall be divided into two phases. Phase I shall relate to the sale and delivery of up to 60,000 Mcf per day for which no additional facilities are required and Phase II shall relate to the sale of up to an additional 40,000 Mcf per day and the facilities as proposed to be constructed and operated in El Paso's application in Docket No. CP63–296, as supplemented and heretofore filed with the Commission.

(2) With respect to Phase I, the parties stipulated and agreed to the following, in addition to other matters:

(a) A permanent certificate should be issued to El Paso, effective on or before December 31, 1963, to sell and deliver to Southern up to 60,000 Mcf per day for a limited period.

(b) El Paso shall have a firm obligation to deliver, upon advance operating arrangements, all or any portion of such volumes of gas as are requested by Southern but Southern shall have no obligation to take such volumes.

(c) The rate for all gas so delivered shall be the commodity charge in effect from time to time under El Paso's Rate Schedule G.

(d) If any portion of the years 1964 and 1965 are included in any test year in a future rate proceeding involving El Paso, El Paso agrees not to use any revenue deficiency accruing from the sale of the 60,000 Mcf per day as support for increased rates.

(3) With respect to Phase II, the parties stipulated and agreed, in addition to other matters:

(a) The issuance of a permanent certificate relating to the sale and delivery of gas described in Phase I of the stipulation and agreement shall not prejudice El Paso with respect to pursuing its application for the construction and operation of new facilities to enable it to sell and deliver an additional 40,000 Mcf per day to Southern.

(b) In the event a certificate is granted authorizing the construction of the facilities described in Phase II, the sale and delivery of up to 40,000 Mcf per

day will terminate on November 1, 1965, or upon the commencement of any new service which results from any order issued by the Commission in Docket No. CP63–204, *et al.*, whichever is the earlier.

(4) Rate Schedule G–1 shall be made available to any buyer purchasing natural gas in the State of California under El Paso's Rate Schedule G.

In brief, the stipulation and agreement relating to Transwestern's application in Docket No. CP64–34, provides, in addition to other matters:

(1) A limited term certificate of public convenience and necessity should be issued to Transwestern in Docket No. CP64–34 authorizing it to sell and deliver to Pacific Lighting up to 410,000 Mcf of gas per day on an annual average basis, and its maximum daily demand quantity shall be increased to 410,000 Mcf per day under the delivery conditions provided in its February 7, 1958, contract with Pacific Lighting as amended.

(2) The certificate shall provide for the filing of a superseding and acceptable tariff revision, appropriate service agreement and rate schedule to be effective January 1, 1964, similar to, and in place of, Transwestern's existing Rate Schedule LX which will provide a rate of 24 cents per Mcf for the sale of the first 50,000 Mcf per day sold thereunder and 21 cents per Mcf for volumes sold thereunder in excess of 50,000 Mcf per day. The daily contract demand volumes shall be the 300,000 Mcf now provided for in Transwestern's existing Rate Schedule CDQ–1 and the presently effective service agreement with Pacific Lighting.

In addition, both stipulations and agreements provide generally that the certificates shall be for a limited period ending November 1, 1965, or upon commencement of any new service which results from any order issued by the Commission in Docket No. CP63–204, *et al.*, whichever is the earlier and that no part of either stipulation and agreement shall be binding unless the order to be issued by this Commission shall provide that it is without prejudice to the applications in Docket Nos. CP63–204, CP63–223, CP64–76 and CP64–91.

Counsel for El Paso and Transwestern moved for waiver of the intermediate decision procedure pursuant to Section 1.30(c) of the Commission's Rules of Practice and Procedure. No party objected to the motions.

No additional facilities need be installed in order to render the service for which authorization is requested in either Docket No. CP63–296 (Phase I) or Docket No. CP64–34. The gas to be sold pursuant to the authorization to be granted herein is not required to meet the needs of any domestic and commercial resale customers and will not be required to meet these needs immediately after November 1, 1965. Therefore, we find that the public convenience and necessity require that permanent certificates issue for the limited term of up to November 1, 1965, under the terms of the stipulations and agreements entered into by the parties to the proceeding.

The Commission further finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware Corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) Applicant, Transwestern Pipeline Company, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(3) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The sales and deliveries of natural gas as proposed by Applicants, are

required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder should be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) The stipulations and agreements entered into and submitted to this Commission by El Paso Natural Gas Company and by Transwestern Pipeline Company and entered into the record on December 4, 1963, in Docket No. CP63–296, *et al.*, are hereby accepted and approved.

(B) The proceeding in El Paso Natural Gas Company, Docket No. CP63–296 is hereby divided into two phases. Phase I shall hereafter relate to the sale and delivery of up to 60,000 Mcf of natural gas per day to Southern California Gas Company and Southern Counties Gas Company of California (Southern) for which no additional facilities are required. Phase II shall hereafter relate to the sale and delivery of up to an additional 40,000 Mcf of natural gas per day to Southern and the construction and operation of the facilities proposed in that docket.

(C) A certificate of public convenience and necessity is hereby issued authorizing El Paso Natural Gas Company to sell and deliver to Southern California Gas Company and Southern Counties Gas Company of California up to 60,000 Mcf of natural gas per day for a limited period ending November 1, 1965, or upon the commencement of any new service which results from any order issued by this Commission in *Transwestern Pipeline Company, et al.*, Docket No. CP63–204, *et al.*, whichever is the earlier.

(D) El Paso shall have a firm obligation to deliver, upon advance operating arrangements any portion of such volumes of gas as are requested by Southern, but Southern shall have no obligation to take such gas, as provided in the stipulation and agreement herein approved.

(E) The rate for all gas so delivered by El Paso shall be the commodity charge in effect from time to time under Rate Schedule Gas contained in El Paso's FPC Gas Tariff Original Volume No. 1.

(F) If, in the future, all or any portions of the years 1964 or 1965 are included in any test year in a future rate proceeding involving El Paso, then any deficiency accruing from the sale of this 60,000 Mcf of natural gas per day during such period will not be used as support for increased rates.

(G) El Paso shall promptly file acceptable and appropriate tariff sheets required to implement its stipulation and agreement. The Commission, pursuant to Section 154.51 of its Regulations under the Natural Gas Act, for good cause shown hereby waives its 30-day notice requirement as set out in Section 154.22 of the Regulations.

(H) The certificate issued by paragraph (C) above and the rights granted thereunder shall in no way prejudice El Paso with respect to pursuing its application for the construction and operation of facilities and the sale and delivery of natural gas which now constitutes Phase II of Docket No. CP63–296.

(I) A certificate of public convenience and necessity is hereby issued authorizing Transwestern Pipeline Company to sell and deliver to Pacific Lighting Gas Supply Company up to 410,000 Mcf of natural gas per day on an annual average basis, and its maximum daily demand quantity is increased to 410,000 Mcf of natural gas per day under the delivery conditions provided in its February 7, 1958, contract, as amended, with Pacific Lighting. Said certificate is

limited for a period ending November 1, 1965, or upon the commencement of any new service with results from any order issued by this Commission in *Transwestern Pipeline Company, et al.*, Docket No. CP63–204, *et al.*, whichever is the earlier.

(J) Transwestern shall promptly file an acceptable tariff revision, appropriate service agreement, and rate schedule similar to, and in place of, its existing Rate Schedule LX, providing a rate of 24 cents per Mcf for the sale of the first 50,000 Mcf per day sold thereunder and 21 cents per Mcf for volumes sold thereunder in excess of 50,000 Mcf per day, all such volumes to be computed on an annual average basis. The rate and purchase obligation for the contract demand volumes shall be that now provided in Transwestern's existing Rate Schedule CDQ–1 and presently effective service agreement. All such rates shall remain subject to change as now provided in its tariff and service agreement with Pacific Lighting. The Commission, pursuant to Section 154.51 of its Regulations under the Natural Gas Act, for good cause shown, hereby waives its 30-day notice requirement as set out in Section 154.22 of the Regulations.

(K) The certificates issued in paragraphs (C) and (I) above shall be without prejudice to the applications in Docket Nos. CP63–204, CP63–223, CP64–76 and CP64–91.

(L) The certificates issued in paragraphs (C) and (I) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3) and (e) of Section 157.20 of the Regulations.

(M) The sale and delivery of natural gas authorized in paragraphs (C) and (I) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one month from the date on which this order issues.

(N) A hearing on Phase II of El Paso's application in Docket No. CP63–296, as amended, will be held on January 8, 1964, at 10:00 a.m. (EST), in a Hearing Room of this Commission, 441 G Street NW., Washington, D.C. All testimony and exhibits in support of Phase II shall be served in writing on all parties and the Commission staff on or before January 3, 1964.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

GRARIDGE CORPORATION (OPERATOR), ET AL., DOCKET NO. G–19246, ET. AL.

ORDER DENYING APPLICATIONS FOR REHEARING

(Issued December 16, 1963)

On November 29, 1963, the Public Service Commission of the State of New York filed an application for rehearing of Opinion No. 408, 30 FPC 1156, and accompanying order which issued in the above-styled proceedings. On December 2, 1963, the Long Island Lighting Company, The Brooklyn Union Gas Company, and the Philadelphia Gas Works Division of The United Gas Improvement Company filed a similar joint application. In the aforesaid opinion we held that the price level issue need not be considered in certification proceedings involving producers who have succeeded to other producers' interests under gas sales contracts and seek certificates authorizing the continuance of the sales for which their predecessors were issued permanent certificates. The applications for rehearing present

nothing which was not carefully considered by the Commission in the course of the proceedings, and consequently we adhere to said opinion and order for the reasons stated therein.

The Commission finds:

No new facts or principles of law have been presented in the applications for rehearing which were not fully considered by the Commission prior to the rendition of the aforesaid opinion and order, or, having now been so considered, warrant further hearing, modification or revocation of said opinion and order.

The Commission orders:

The applications for rehearing filed herein by the Public Service Commission of the State of New York, the Long Island Lighting Company, The Brooklyn Union Gas Company, and the Philadelphia Gas Works Division of The United Gas Improvement Company are hereby denied.

Commissioner Ross *dissenting.*

TRANSWESTERN PIPELINE COMPANY, DOCKET NOS. CP63–204 AND CP64–91; GULF PACIFIC PIPELINE COMPANY, CP63–223; EL PASO NATURAL GAS COMPANY, CP64–76

ORDER DENYING MOTION TO REJECT FIRST AMENDMENT TO APPLICATION

(Issued December 16, 1963)

In our order of October 21, 1963,[1] we denied the motion of El Paso Natural Gas Company (El Paso) to consolidate its Docket No. CP61–26 with Gulf Pacific Pipeline Company's (Gulf Pacific), Docket No. CP63–223. We stated, however, in that same order, that El Paso could seek to amend its application in Docket No. CP64–76 in order to construct facilities and to deliver an additional 575,000 Mcf daily to California.[2] On November 12, 1963, El Paso did file a timely First Amendment to its Original Application, seeking to deliver the above-mentioned additional 575,000 Mcf daily. This amendment was noticed by this Commission on November 21, 1963.

On November 27, 1963, Gulf Pacific filed a "Motion Requesting Rejection of El Paso's First Amendment to Original Application in Docket No. CP64–76". On November 29, 1963, Southern California Edison Company (Edison) sent a telegram in support of Gulf Pacific's motion. And on December 6, 1963, Humble Oil and Refining Company (Humble) filed a "Protest Against Allowance of Amendment to Application and Motion to Treat Said Amendment as New Application to be Considered Subsequent to the Disposition of Docket Nos. CP63–204, CP63–223, CP64–76 (as Supplemented But Not as Amended) and CP64–91. These parties allege that this amendment is a wholly new and different application, on the grounds that the amendment seeks to increase the total cost of the project from approximately $49 million to approximately $197 million; that the amendment involves 575,000 Mcf daily rather than 250,000 Mcf daily; that the delivery point and delivery pressure have been changed by the amendment; and that the routing of the gas pipelines has been changed. In addition Humble urges that

[1] "Order Consolidating Proceedings, Fixing Date of Hearing Conference and Denying Motion to Consolidate and for Time to Amend" *Transwestern Pipeline Company, et al.*, docket No. CP63–204, *et al.*, p. 4.

[2] *Ibid.*

whether El Paso's filing is considered to be an amendment or a new application, it should, in either case, only be considered subsequent to the disposition of the consolidated proceedings in Docket Nos. CP63–204, CP63–223, CP64–76 (without amendment) and CP64–91.

El Paso filed an "Answer of El Paso Natural Gas Company to Motion of Gulf Pacific Requesting Rejection of El Paso's First Amendment to Original Application" on December 5, 1963.

In this instance a difference in size or in the technical specification is hardly determinative. The important fact is that El Paso has submitted a proposal to serve Southern California, supplementary to its original application, which will enable us to make a more informed judgment as to the needs of this market. Of course, in permitting El Paso to file this amendment we are making no determination as to the merits of its proposal, or of any of the other proposals consolidated in this proceeding. After careful consideration of the contentions set forth in the motion objecting to the amendment, we find them to be without merit.

We have indicated repeatedly our intention to proceed with the consideration of the natural gas needs of Southern California as expeditiously as possible and we therefore set October 12, 1963, as the final date for the filing of initial applications and provided that any amendment to an application should be filed not later than November 14, 1963. El Paso's amendment was filed November 12, 1963. Thus, El Paso's application and the amendment thereto were timely filed. We had no intention of precluding any party from filing an amendment of its initial application where such an amendment would enable us to make a more enlightened decision regarding the public interest, in these matters, and we so provided in our October 12, 1963 order. We find that this proposal does constitute an amendment to the timely filed application submitted by El Paso, as contemplated by that order.

The Commission orders:

The motion of Gulf Pacific Pipeline Company requesting rejection of El Paso's First Amendment to Original Application in Docket No. CP64–76 filed on November 27, 1963, the supporting motion filed by Southern California Edison on November 29, 1963, and the protest filed by Humble Oil and Refining Company on December 6, 1963 should be, and are hereby, denied.

(Issued December 16, 1963)

On November 7, 1963, Humble Oil & Refining Company (Humble) filed a petition for rehearing and reconsideration of our "Order Granting in Part and Denying in Part Motions to Consolidate" issued on October 21, 1963, in *Transwestern Pipeline Co., et al.*, Docket No. CP63–204, *et al.*,[1] and on November 21, 1963, Gulf

[1] By order issued December 5, 1963 we granted rehearing of Humble's petition for the limited purpose of further considering the issues raised therein.

Pacific Pipeline Company (Gulf Pacific) filed an application for rehearing and reconsideration of the above order and of two other orders also issued on October 21, 1963—"Order Consolidating Proceedings, Fixing Date of Hearing Conference and Denying Motion to Consolidate and for Time to Amend," *Transwestern Pipeline Co., et al.*, Docket No. CP63–204, *et al.*, and "Order Consolidating Proceeding and Noticing Applications," *El Paso Natural Gas Co., et al.*, Docket No. CP63–296, *et al.*

By the three October 21, 1963, orders we announced that we would conduct two separate consolidated hearings on applications for new or increased natural gas service to the Southern California market area. In one proceeding we consolidated the application for minor expansion of El Paso Natural Gas Company (El Paso) in Docket No. CP63–296 with the application for minor expansion of Transwestern Pipeline Company (Transwestern) in Docket CP64–34. In the other proceeding we consolidated applications for major expansions by Transwestern (Docket Nos. CP63–204 and CP64–91) and El Paso (Docket No. CP64–76) with the application to construct a new pipeline filed by Gulf Pacific in Docket No. CP63–223. Both Humble and Gulf Pacific urge that we reconsider our decision to hold two hearings and hold one hearing instead.

By separate order issued concurrently herewith we are issuing certificates of public convenience and necessity to El Paso and Transwestern in Docket Nos. CP63–296 (Phase I) and CP64–34, respectively, pursuant to the terms of stipulations and agreements voluntarily entered into by all parties (including Humble and Gulf Pacific). To the extent that we are issuing certificates agreeable to Humble and Gulf Pacific the reconsideration sought is moot. However, the parties have not agreed to the proper disposition of the portion of the El Paso application which is being set for further hearings as Phase II of Docket No. CP63–296. The Humble and Gulf Pacific motions merit our attention to the extent that they urge reconsideration of our decision not to consolidate Docket No. CP63–296 (Phase II) with the major expansion and new pipeline applications.

Humble[2] and Gulf Pacific allege that certification of El Paso's application in Docket No. CP63–296 may prejudice Gulf Pacific's application which is being heard in the other consolidated proceeding. In Phase II of its application, El Paso requests authority to construct and operate additional compressor and appurtenant facilities on its southern division in order to deliver up to an additional 40,000 (at 14.9 psia) Mcf per day of natural gas. These deliveries would be made to El Paso's customers in Southern California until a termination date of November 1, 1965, with the facilities to be used thereafter for customers of El Paso located east of California. Humble and Gulf Pacific allege that El Paso may desire to continue to use these facilities after November 1, 1965, to serve its Southern California customers. The mere speculation that an application does not correctly state the applicant's intention does not justify the consolidation of the application with other applications not otherwise requiring consolidation. This is a matter which can be explored at the hearing and, if necessary, treated by way of conditions on any grant which we might make.

Our preliminary indication is that certification of El Paso's application in Docket No. CP63–296 (Phase II), . . . should have little or no bearing on the feasibility or desirability of the applications for major construction.[3] Humble and Gulf Pacific challenge this statement as an illegal finding of fact. However, the statement does not constitute a finding of fact by us, but merely reflects preliminary indications on which we relied to determine whether to exercise our

[2] Humble is the major supplier of natural gas in the Gulf Pacific project and supports that project.

[3] "Order Granting in Part and Denying in Part Motions to Consolidate," *Transwestern Pipeline Co., et al.*, Docket No. CP63–204, *et al.*, issued October 21, 1963, Mimeo p. 3.

discretion to consolidate all applications. We have made no final conclusions as to the effect of Docket No. CP63–296 (Phase II) on the major consolidated proceedings. In the Phase II proceeding, Humble and Gulf Pacific will be permitted to attempt to prove that these preliminary indications on which we relied were incorrect.[4] If they do, we will, of course, withhold any grant which cannot, by proper condition, be made to eliminate the alleged conflict.

Both Humble and Gulf Pacific rely on the following as precedent in support of their contentions that a single consolidated hearing is required:

> . . . But as we understand the *Ashbacker* rule, which is essentially a rule of basic fairness, it prescribes that there should be joint consideration of two applications not only where it can be determined in advance that they are in fact mutually exclusive, but also whenver it appears that prior action on one will seriously jeopardize the chance of the other being granted. [*El Paso Natural Gas Co., et al.*, 27 FPC 984, 985.]

We agree that the above-quoted language is controlling here. However, Humble and Gulf Pacific have misinterpreted its significance. That language does not even state that a consolidated hearing must be held where jeopardy is *proved*, but only requires that joint consideration be given to all applications. (In fact, the applications under consideration in that statement were not consolidated for hearing.) *A fortiori*, there is no need for consolidation where it appears to the Commission, as it does here, that prior action on the El Paso application (Phase II) will *not* seriously jeopardize the chance of Gulf Pacific's application being granted.

The Commission orders:

Humble Oil & Refining Company's petition for rehearing and reconsideration of our "Order Granting in Part and Denying in Part Motions to Consolidate" issued on October 21, 1963, in *Transwestern Pipeline Co., et al.*, Docket No. CP63–204, *et al.*, and Gulf Pacific Pipeline Company's application for rehearing and reconsideration of that order and our "Order Consolidating Proceeding, Fixing Date of Hearing Conference and Denying Motion to Consolidate and for Time to Amend" issued on October 21, 1963, in *Transwestern Pipeline Co., et al.*, Docket No. CP63–204, *et al.*, and our "Order Consolidating Proceeding and Noticing Applications" issued on October 21, 1963, in *El Paso Natural Gas Co., et al.*, Docket No. CP63–296, *et al.*, are therefore denied.

Before Commissioners: Joseph C. Swidler, Chairman, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP64–64

FINDINGS AND ORDER AFTER STATUTORY HEARING, PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued December 18, 1963)

On September 16, 1963, El Paso Natural Gas Company (Applicant) filed in Docket No. CP64–64 an application pursuant to Section 7(b) of the Natural Gas Act for permission and approval to abandon and remove certain metering facilities located on Applicant's 8⅝ inch pipeline in Coke County, Texas.

---

[4] Both Humble and Gulf Pacific have been permitted to intervene in that proceeding. ("Order Permitting Intervention," *El Paso Natural Gas Co., et al.*, Docket No. CP63–296, *et al.*, issued December 2, 1963.)

The facilities to be abandoned were authorized to be constructed by an order issued by the Commission on November 28, 1961 in Docket No. CP62–62, 26 FPC 763.

Applicant has been using two metering facilities, Jameson and Millican respectively, to take gas from two sources which gas is being purchased from Sun Oil Company (Sun), but other arrangements have been made by which Sun will deliver all gas commingled to Applicant through the one Jameson facility thus eliminating the need for the Millican facility after November 1, 1963.

Applicant proposes to remove all surface parts of the Millican metering facility and to abandon the subsurface elements of that installation.

Applicant states that there will be no cessation of service being rendered.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 13, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware Corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of Natural Gas Act as heretofore found by the Commission in its order of January 11, 1944, in Docket No. G–288 (4 FPC 486).

(2) The facilities to be abandoned, as hereinbefore described and as more fully described in the application, in this proceeding, are subject to the jurisdiction of the Commission and abandonment of such facilities by Applicant is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(3) Such abandonment, as hereinbefore described, is permitted by the public convenience and necessity and an order authorizing and approving same should be issued as hereinafter ordered.

The Commission orders:

(A) Permission for and approval of the abandonment by El Paso Natural Gas Company, of the facilities hereinbefore described, as more fully described in the application, in this proceeding, be and the same are hereby granted.

(B) Applicant shall advise the Commission of the date of removal of the facilities within 10 days thereafter.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

FUELS RESEARCH COUNCIL, INC., NATIONAL COAL ASSOCIATION, UNITED MINE WORKERS OF AMERICA, AND MID–WEST COAL PRODUCERS INSTITUTE, INC. *v.* MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP62–57; MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP64–109

NOTICE OF APPLICATION AND DATE OF HEARING, AND ORDER GRANTING MOTION TO VACATE SHOW CAUSE ORDER AS MOOT, DENYING MOTION FOR INTERIM RELIEF, DENYING REQUEST FOR TEMPORARY CERTIFICATE, GRANTING PETITIONS TO INTERVENE, AND SEVERING AND TERMINATING PROCEEDING IN DOCKET NO. CP62–57

(Issued December 18, 1963)

Take notice that Michigan Wisconsin Pipe Line Company (Michigan Wisconsin), a Delaware corporation with principal place of business at One Woodward

Avenue, Detroit, Michigan 48226, filed on November 12, 1963, in Docket No. CP64–109, an application for a certificate of public convenience and necessity, pursuant to Section 7(c) of the Natural Gas Act, authorizing it to construct and operate facilities required for the sale and delivery of natural gas to Wisconsin Public Service Corporation (Public Service) for use in the latter's electric generating station located at a point near Weston, Wisconsin, subject to the jurisdiction of the Commission, as hereinafter described and as more fully represented in the application which is on file with the Commission and open for public inspection.

The facilities for which Michigan Wisconsin seeks certificate authorization are located at a point about 18 miles from the origin of Michigan Wisconsin's branch line which extends northward to Tomahawk, Wisconsin. The facilities consist of a tap on the Tomahawk branch line and 3,972 feet of eight-inch pipeline extending westward from the tap to a meter station. The cost of the facilities, including payment for acquirement of site and rights-of-way and allowance for overheads and interest during construction, is $48,655. A balance sheet attached to the application indicates that Michigan Wisconsin could finance the facilities from cash on hand.

Exhibit N to Michigan Wisconsin's application shows that annual volumes of about 6,284,040 Mcf of gas would be delivered to Public Service for consumption in the Weston generating plant, and that of the total volume, approximately 2,850,028 Mcf would be sold under Michigan Wisconsin's ACQ–1 Rate Schedule and 3,434,012 Mcf would be sold under Michigan Wisconsin's OS–1 Rate Schedule.

The above-described application was filed in response to the Commission's order issued October 30, 1963, in Docket No. CP62–57, 30 FPC 1138 requiring Michigan Wisconsin to show cause why it should not be ordered to file an application for authority to construct and operate the facilities it had already constructed for the purpose of delivering gas to Public Service for use in its Weston plant. Concurrently with the filing of its application in Docket No. CP64–109, Michigan Wisconsin filed on November 12, 1963, a motion requesting that the aforesaid show cause order be vacated as moot because Michigan Wisconsin had, by voluntarily filing its application in Docket No. CP64–109, taken the action which would have been the subject of the show cause proceeding in Docket No. CP62–57. It appears that Michigan Wisconsin's filing of an application for a certificate authorizing it to construct and operate the Weston delivery facilities does render the show cause order moot.

On November 13, 1963, Public Service filed a motion for interim relief from paragraph (B) of the Commission's show cause order issued October 30, 1963. Paragraph (B) of the show cause order had prohibited Michigan Wisconsin from "* * * utilizing facilities, heretofore constructed without apparent authority, for making deliveries of natural gas to Public Service for use by the latter in its Weston generating station prior to the issuance by the Commission of a final order in this proceeding." Public Service's eight-page motion alleges that the economic effect upon its operations of the discontinuance of gas deliveries to the Weston plant will be severe; otherwise, the motion is devoted to arguments asserting that the show cause order should not have been issued.

On November 22, 1963, the Fuels Research Council, Inc., *et al.* (Coal Petitioners) filed an answer to the aforementioned motions of Michigan Wisconsin and Public Service. The Coal Petitioners' answer indicates that they agree that Michigan Wisconsin's filing of its application in Docket No. CP64–109 did render moot our show cause order in Docket No. CP62–57. As to Public Service's motion for interim relief from paragraph (B) of the show cause order, however, the Coal Petitioners correctly observe that "* * * Since there is no authority

under which deliveries of gas can lawfully be made to Weston, no relief can be granted to Public Service in * * *" Docket No. CP62–57.

The Public Service Commission of Wisconsin, on November 18, 1963, filed an answer in support of Public Service's motion for interim relief from ordering paragraph (B) of the Commission's show cause order. The Wisconsin Commission points out that the use of gas at Weston by Public Service was "a factor" in the reduction of Public Service's electric rates in an annual amount of $1,750,000, and that discontinuance of natural-gas service at the Weston plant will work against the objective of maintaining the lowest possible fuel costs for generating electricity. The Wisconsin Commission's answer also requests that gas deliveries at Weston be continued, pending consideration of Michigan Wisconsin's application in Docket No. CP64–109, by "other appropriate means" in the event modification of paragraph (B) of the show cause order is considered to be an inappropriate means of resuming gas service to the Weston plant. We have already indicated above why modification of paragraph (B) of the show cause order would be an inappropriate way to restore gas service to Weston. Nevertheless, the Wisconsin Commission's request for restoration of service by "other appropriate means" will be considered as a filing in support of Michigan Wisconsin's application for a temporary certificate which Michigan Wisconsin filed November 12, 1963, in Docket No. CP64–109, seeking authorization to utilize the Weston delivery facilities for continuance of gas service to Public Service's Weston plant pending hearing and disposition of its application for a permanent certificate.

In support of its application for a temporary certificate Michigan Wisconsin alleges: (1) that the Weston delivery point was the cheapest way that could have been found for providing natural-gas service to Public Service's Weston generating plant; (2) that gas is cheaper than the coal which Public Service will have to buy because of the Commission's requirement that gas deliveries be discontinued; (3) that Michigan Wisconsin had no reason to oppose Public Service's desire for a delivery point for the use of gas at its Weston plant; (4) that Michigan Wisconsin had "assumed" that it had authority to construct and operate the Weston facilities after the issuance of the Commission's order accompanying Opinion No. 336 in *Michigan Wisconsin Pipe Line Co.*, 24 FPC 177; (5) that Public Service had already constructed 2.5 miles of pipeline to receive delivery of gas for its Weston plant and that the Coal Petitioners knew this for one year before they filed their petition for a show cause order and that the Commission didn't issue its show cause order for two years after the filing of the Coal Petitioners' petition; (6) that there is no "conceivable basis upon which" Michigan Wisconsin's application in Docket No. CP64–109 could be denied on the merits; (7) that the "balancing of the equities" requires maintenance of the *status quo* pending hearing and consideration of its application; (8) that Michigan Wisconsin relied upon the deliveries of gas to the Weston plant in its rate proceeding in Docket No. RP60–9 and in negotiating the "take-or-pay" provisions in its gas purchase contracts in the Woodward, Oklahoma, area in *Michigan Wisconsin Pipe Line Co.*, 27 FPC 449; (9) that the sole beneficiaries of a refusal of the Commission to issue temporary authorization would be the Coal Petitioners whose stockholders would reap increased profits from the sale of the coal which Public Service will be forced to buy at unregulated prices; and (10) that denial of the temporary certificate would only add to the Coal Petitioners' incentive to delay the forthcoming hearing and disposition of Michigan Wisconsin's certificate application filed in Docket No. CP64–109.

On November 27, 1963, the Coal Petitioners also filed an answer in opposition to the granting of Michigan Wisconsin's request for a temporary certificate.

The Coal Petitioners state in their answer in opposition to issuance of a temporary certificate: (1) that Michigan Wisconsin has neither alleged nor shown that an emergency exists which would prevent maintenance of adequate service to Michigan Wisconsin's customers; (2) that Michigan Wisconsin's request for a temporary certificate in primarily a defense to the Commission's show cause order and that this defense is misplaced in a proceeding where Michigan Wisconsin is requesting that the show cause order be vacated as moot; (3) that the only justification alleged by Michigan Wisconsin as grounds for the issuance of a temporary certificate is legally insufficient because such justification is based upon Michigan Wisconsin's own interpretation of the economic advantages to it and Public Service from making deliveries of gas at Weston and that Michigan Wisconsin's allegations in its request for a temporary certificate are in conflict with other facts stated by Michigan Wisconsin in its application for a permanent certificate; (4) that issuance of a temporary certificate would seemingly result in Michigan Wisconsin's withdrawing gas from storage in order to make boiler fuel sales and would again raise the question mentioned by the Commission in its order issued November 12, 1963, in *Michigan Wisconsin Pipe Line Co., et al.*, Docket No. CP63–230, *et al.*, 30 FPC 1239, 1241, as to whether Michigan Wisconsin and its customers have operated in a manner which is wholly consistent with the public interest; (5) that there is now an ample supply of coal available to meet all of Public Service's fuel requirements at its Weston plant and that the public will not want for an adequate fuel supply during the interim period necessary for the holding of a hearing and the rendering of a decision regarding Michigan Wisconsin's application; and (6) that issuance of a temporary certificate would be tantamount to a decision on the merits, contrary to the position taken by the Coal Petitioners, without affording them full opportunity for a complete hearing.

There is considerable validity to the contentions made by the Coal Petitioners' answer to Michigan Wisconsin's request for a temporary certificate. Our holding herein, that the filing by Michigan Wisconsin of its application in Docket No. CP64–109 has rendered the show cause order moot, makes further discussion of whether or not the Weston delivery facilities were constructed without authority irrelevant. It further appears that two issues to be considered in the hearing regarding Michigan Wisconsin's application is whether the sale of boiler fuel to the Weston plant is in the public interest, and whether, as we noted in our order issued in Docket No. CP63–230, *et al.*, *supra*, Michigan Wisconsin's and Public Service's operations have been consistent with the public interest, particularly as to the period of time within which Public Service has consumed the ACQ related to the MDQ which it may have nominated for a specific contract year.

However, it is unnecessary to comment further upon either Michigan Wisconsin's or the Coal Petitioners' allegations because Michigan Wisconsin's request for a temporary certificate contains a very obvious and fatal deficiency as hereinafter indicated. Despite the fact that Section 7(c) of the Act restricts the issuance of temporary certificates to "* * * cases of emergency, to assure maintenance of adequate service * * *", Michigan Wisconsin did not allege at any place in its nine-page request for a temporary certificate that an emergency exists because we ordered it to stop delivering gas to Public Service for use in the latter's Weston generating station. In fact, the statements in Michigan Wisconsin's request for a temporary certificate do not even attempt to show that an emergency exists within the meaning of Section 7 of the Natural Gas Act, and it necessarily follows that we cannot make the requisite finding that there is an emergency which would justify the issuance of a temporary certificate under the circumstances of this proceeding.

We do agree with Michigan Wisconsin that the "*status quo*" should be maintained pending the hearing and disposition of its application for a permanent certificate. In our opinion, however, the *status quo* means that when Michigan Wisconsin filed its application, the parties were appropriately placed in the same position they would have been in had no facilities ever been constructed or any deliveries of gas ever initiated for serving the Weston plant. Therefore, notice of the filing of the application in Docket No. CP64–109 will be duly published in the Federal Register and the hearing thereon will be held, pursuant to Section 7 of the Act, in the same manner as any other application is heard and decided. At the conclusion of that hearing, after all parties have had an opportunity to be heard, we shall determine whether operation of the Weston delivery facilities is required by the public convenience and necessity.

Petitions to intervene in the proceeding in Docket No. CP64–109 were filed on November 14, 1963, and November 27, 1963, by Public Service and the Coal Petitioners, respectively. On November 18, 1963, the Public Service Commission of Wisconsin filed a notice of intervention in Docket No. CP62–57 and on November 29, 1963, the Wisconsin Commission filed a notice of intervention in Docket No. CP64–109.

The Commission finds:

(1) The motion of Michigan Wisconsin to vacate the show cause order in Docket No. CP62–57 as moot should be granted and the proceeding in Docket No. CP62–57 should be terminated and severed from the hearing to be held on Michigan Wisconsin's application in Docket No. CP64–109.

(2) Public Service's motion for interim relief under paragraph (B) of the show cause order issued in Docket No. CP62–57 should be denied for the reasons that such order is hereinafter vacated and that there is no outstanding certificate authority under which deliveries of gas to Public Service's Weston plant can lawfully be made.

(3) Michigan Wisconsin's request for a temporary certificate in Docket No. CP64–109, and Public Service's and the Wisconsin Commission's motions in support thereof, should be denied because Michigan Wisconsin's and Public Service's failure to make a showing that an emergency exists within the meaning of the Natural Gas Act precludes the issuance of a temporary certificate authorizing deliveries of gas to the Weston plant pending hearing and disposition of the application for a permanent certificate in Docket No. CP64–109.

(4) It is desirable to grant the petitions to intervene of Public Service and the Coal Petitioners in order that they may establish the facts and law from which the nature and validity of their alleged rights and interests may be determined and show what further action may be appropriate under the circumstances in the administration of the Natural Gas Act.

The Commission orders:

(A) The show cause order issued October 30, 1963, in Docket No. CP62–57 is hereby vacated as moot because of Michigan Wisconsin's having filed its application in Docket No. CP64–109; the proceeding in Docket No. CP62–57 is hereby terminated and severed from the hearing provided for in paragraph (D) hereof.

(B) Public Service's motion for interim relief from paragraph (B) of the show cause order issued in Docket No. CP62–57 is hereby denied for the reasons given in paragraph (2) of this order.

(C) Michigan Wisconsin's request for a temporary certificate in Docket No. CP64–109, together with Public Service's and the Wisconsin Commission's motions in support thereof, are hereby denied for the reason given in paragraph (3) of this order.

(D) Pursuant to the authority contained in, and subject to the authority conferred upon the Federal Power Commission by the Natural Gas Act, including particularly Sections 7, 14, 15, and 16, and the Commission's Rules and Regulations under that Act, a public hearing shall be held commencing January 21, 1964, at 10:00 a.m. (EST), in a hearing room of the Federal Power Commission, 441 G Street, N.W., Washington, D.C., 20426, concerning the matters involved in and the issue presented by the application in Docket No. CP64–109, particularly as those issues have been hereinbefore discussed.

(E) Protests or petitions to intervene in this proceeding may be filed with the Federal Power Commission, 441 G Street, Washington, D.C., 20426, in accordance with the Rules of Practice and Procedure [18 CFR 1.8 or 1.10] on or before January 9, 1964.

(F) Public Service and the Coal Petitioners be and they are hereby permitted to become interveners in the proceeding in Docket No. CP64–109 subject to the rules and regulations of the Commission: *Provided, however*, that the participation of such interveners shall be limited to matters affecting asserted rights and interests as specifically set forth in said petitions for leave to intervene; and *provided, further*, that the admission of such interveners shall not be construed as recognition by the Commission that they or any of them might be aggrieved because of any order or orders of the Commission entered in this proceeding.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

HUNT INDUSTRIES (SUCCESSOR TO LYDA HUNT-MARGARET TRUSTS, LYDA HUNT-CAROLINE TRUSTS, LYDA HUNT-HERBERT TRUSTS, LYDA HUNT-BUNKER TRUSTS, LYDA HUNT-LAMAR TRUSTS), DOCKET NOS. G–13840,* G–16423, G–17162,* G–20445,* G–20535, AND RI60–432*

ORDER SUBSTITUTING RESPONDENTS, REDESIGNATING PROCEEDINGS, AND REQUIRING FILING OF SUCCESSOR'S AGREEMENTS AND UNDERTAKINGS

(Issued December 18, 1963)

On July 20, 1963, Hunt Industries (Industries) filed a certificate application to continue sales formerly made by Lyda Hunt-Margaret Trusts, Lyda Hunt-Caroline Trusts, Lyda Hunt-Herbert Trusts, Lyda Hunt-Bunker Trusts, and Lyda Hunt-Lamar Trusts (Trusts).[1] Industries also filed notices of succession to Trusts' rate schedules. The application for certificate authorization states that Trusts have formed a partnership under the name of Industries and Trusts' interests were assigned to Industries effective on April 1, 1963. The application further states that Industries will assume all refund obligations of Trusts in the above-designated rate proceedings. We will therefore require that Industries file agreements and undertakings in each of the above-designated rate suspension proceedings in accordance therewith.

By order issued November 29, 1963, the certificates of public convenience and necessity issued to Trusts, in Docket Nos. G–10333, G–10795, G–11802, CI61–1621 and CI63–48 were amended by substituting Industries as the certificate holder, Industries' notices of succession to the rate schedules of Trusts were accepted for

*The proceedings in Docket Nos. G–13840, G–17162, G–20445, and RI60–432 were consolidated with the Southern Louisiana Area Rate Proceeding, Docket No. AR61–2, *et al.*, by order issued May 10, 1961, 25 FPC 942.

[1] The certificate application has been construed as a motion to substitute Industries in lieu of Trusts as respondent in each of the above-designated proceedings.

filing, and Trusts' FPC Gas Rate Schedule Nos. 2, 4, and 5, involved in the related rate suspension proceedings, were redesignated, respectively, as Industries' FPC Gas Rate Schedule Nos. 1, 3, and 4.

The Commission finds:

It is necessary and proper in carrying out the provisions of the Natural Gas Act that Industries be substituted for Trusts in the above-designated rate suspension proceedings, that the proceedings be redesignated accordingly, and that agreements and undertakings be filed by Industries in each of the proceedings assuming all refund obligations in these proceedings, including the refund obligations heretofore undertaken by Trusts.

The Commission orders:

(A) Hunt Industries is hereby substituted as respondent in lieu of Lyda Hunt-Margaret Trusts, Lyda Hunt-Caroline Trusts, Lyda Hunt-Herbert Trusts, Lyda Hunt-Bunker Trusts, and Lyda Hunt-Lamar Trusts, in the proceedings in Docket Nos. G–13840, G–16423, G–17162, G–20445, G–20535, and RI60–432, and such proceedings are hereby redesignated accordingly.

(B) Within 30 days from the date of issuance of this order, Hunt Industries shall execute, in the form set out below, and shall file with the Secretary of the Commission, an acceptable agreement and undertaking in each of the proceedings, in Docket Nos. G–13840, G–16423, G–17162, G–20445, G–20535, and RI60–432, to assure refund of any excess charges which the Commission may require in these proceedings. Unless notified to the contrary by the Commission within 30 days from the date of submission, the agreements and undertakings shall be deemed to be satisfactory, and to have been accepted for filing.

(C) Hunt Industries shall comply with the refunding and reporting procedure required by the Natural Gas Act and Section 154.102 of the Regulations thereunder, and its agreements and undertakings shall remain in full force and effect until discharged by the Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MISSISSIPPI RIVER TRANSMISSION CORPORATION, DOCKET NO. CP61–274

ORDER AMENDING ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 18, 1963)

On October 22, 1963, Mississippi River Transmission Corporation (Movant) filed a motion to amend the Commission's order issued July 21, 1961, in Docket No. CP61–274, to permit construction and operation of certain additional natural gas facilities consisting of approximately 4,000 feet of 4.5-inch pipeline to enable Movant to deliver to Storage Corporation natural gas for the purpose of further testing the St. Jacob Storage Field located near St. Jacob, Illinois, and to connect the said pipeline with existing and proposed wells so as to enable Storage Corporation to inject gas into the storage reservoir. The motion also requests authorization for the installation of necessary metering, dehydration and miscellaneous equipment. Certain meter runs and separators will be taken from existing wells in the south area of the gas field in order to minimize the investment in facilities.

The estimated cost of the proposed changes in construction is $16,000 for which sum Movant is indemnified against loss by Storage Corporation, all as more fully described in the motion on file herein.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the motion to amend has been filed.

At a hearing held on December 13, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the motion to amend filed on October 22, 1963, and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued July 21, 1961, in Docket No. CP61–274 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued July 21, 1961, in Docket No. CP61–274 be and the same is hereby amended to authorize the construction, installation and operation of additional facilities as hereinbefore described and as more fully set forth in the motion to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP64–68

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 18, 1963)

On September 19, 1963, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP64–68 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1964 and the operation of meter stations, lateral pipelines and taps on Applicant's existing natural gas transmission system to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The total cost of all facilities for which authorization is sought herein will not exceed a maximum of $3,500,000, with no single project to exceed a cost of $500,000. Applicant has budgeted these costs from funds on hand for the year 1964.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally co-extensive with said system.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 13, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including

the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1964 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,500,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct during the calendar year 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $3,500,000, with no single project to exceed a cost of $500,000.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP64-58

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 18, 1963)

On September 6, 1963, Northern Natural Gas Company (Applicant) filed in Docket No. CP64-58 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain measuring and regulating facilities for the delivery of natural gas from its transportation system to Archer-Daniels Midland Company for use in a dehydration plant located near Tice in Haskell County, Kansas, all as more fully described in the application.

Applicant estimates that the proposed facilities will cost $8,530 which will be financed from funds on hand.

Applicant states that a volume of 136 Mcf per year of firm gas will be used for space and water heating and that the interruptible load will total 395,000 Mcf per year. The interruptible gas will be used for dehydrating alfalfa during the summer season from April through November.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 13, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application exhibits and supplements submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and

operate facilities and to deliver natural gas in interstate commerce as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EXPENDITURES FOR POLITICAL PURPOSES—AMENDMENT OF ACCOUNT 426, OTHER INCOME DEDUCTIONS, UNIFORM SYSTEM OF ACCOUNTS, AND REPORT FORMS PRESCRIBED FOR ELECTRIC UTILITIES AND LICENSEES AND NATURAL GAS COMPANIES—FPC FORMS NOS. 1 AND 2, DOCKET NO. R–226

ORDER NO. 276

ORDER REVISING ACCOUNT 426, OTHER INCOME DEDUCTIONS, AND ANNUAL REPORT FORMS

(Issued December 18, 1963)

The Commission has under consideration in this proceeding the amendment of Account 426 of its Uniform System of Accounts, Other Income Deductions, by the promulgation of five new subaccounts within the present Account 426. It also has under consideration the revision of Instruction No. 3 to the Schedule of Particulars Concerning Certain Income Deduction and Interest Charges Accounts included in FPC Forms Nos. 1 and 2, Annual Reports of Electric Utilities and Licensees (Classes A and B) and of Natural Gas Companies (Classes A and B), respectively, to provide for the reporting within that schedule of amounts entered in newly designated Subaccounts 426.1, 426.2, 426.3 and 426.5; and the further revision of its FPC Forms Nos. 1 and 2 to require that all expenditures for political purposes to be included in newly designated Subaccount 426.4 be reported in a separate schedule.

This proceeding was commenced by a notice of proposed rulemaking served upon interested parties, including State and Federal regulatory agencies, and by publication in the Federal Register on December 28, 1962 (27 F.R. 12839). The proposed amendment of Account 426 by the promulgation of five subaccounts (Subaccounts 426.1, 426.2, 426.3, 426.4 and 426.5) and the proposed revisions of FPC Forms Nos. 1 and 2 by changing the present wording of Instruction No. 3 to the Schedule of Particulars Concerning Certain Income Deduction and Interest Charges Accounts and by adding a separate schedule entitled "Expenditures for Political Purposes" were set forth in the notice.

Currently, Account 426 is utilized for recording numerous expenditures, which are primarily non-operating in nature, of public utilities and licensees subject to the provisions of the Federal Power Act and of natural gas companies subject to the provisions of the Natural Gas Act. Representative non-operating expenditures include items such as donations; life insurance of officers and employees wherein the public utility or gas company is beneficiary; penalties for violation of regulatory statutes; expenditures for the purpose of influencing public opinion as to the election of public officers, referenda, proposed legislation, proposed ordinances, repeal of existing laws or ordinances, and approval

or revocation of franchises; and expenditures for the purpose of influencing decisions of public officers. The utilization of five subaccounts within the present Account 426 will make possible for the first time the separate classification and identification of five categories of income deductions that cannot now be individually identified from the account balance in Account 426. The Amendments to Forms Nos. 1 and 2 will provide for more detailed annual reporting of the various categories of expenditures.

The notice of proposed rulemaking afforded a period of 55 days for the submission to the Commission of written data, views, comments and suggestions concerning the proposed amendments. Ninety-six responses were received from numerous segments of the electric and gas industry, mass communication and advertising media, state public service commissions, professional, press, radio and television associations, law firms and individual citizens. All have been given due consideration by the Commission. We are adopting certain of the suggested modifications of the original proposals and are rejecting the others for the reasons hereinafter set forth.

A principal source of criticism of the rules as originally proposed by the Commission was that the proposed Subaccount 426.4, relating to expenditures for political purposes, had been drafted in a manner which not only was ambiguous and indefinite as to exactly what expenditures were intended to be included, but also appeared to include expenditures—of which regulatory expenses are typical—which properly should be included in above-the-line operating expense or capital accounts of the Uniform System of Accounts. We have concluded that there is considerable merit to such criticism. No matter where the line be drawn with respect to either the general category of expenditures to be labeled as "political" for purposes of accounting and reporting or assignment of particular costs, there will be many people who will believe that some expenditures so listed should not have been classified as political and others who will be equally convinced that certain operating expenses were in fact expenditures for political purposes. This does not mean, as some have suggested, that we should abandon our effort at separate classification and reporting of political expenditures, or even that we should limit our effort to those types of expenditures with respect to which all persons would agree in advance concerning the classification. But it does indicate that if we wish to define a class of expenditures for political purposes in a way which can be applied with an appreciable degree of uniformity and comparability by the numerous public utilities, licensees and natural gas companies, we may have to forego inclusion of certain types of expense which *may* in fact be made for political purposes, but either usually are not, or are not subject to sufficiently clear definition to be capable of consistent application. Conversely the classification may encompass particular expenditures which usually are but which in a particular case may not have been made for political purposes.

Accordingly we are excluding from the text of Subaccount 426.4 the phrase "or having any direct or indirect relationship to political matters, including the influencing of public opinion with respect to public policy," and are adding thereto a clause excluding "expenditures which are directly related to appearances before regulatory or other governmental bodies in connection with the reporting utility's existing or proposed operations." In addition we are changing the title of the subaccount. As modified, the subaccount will read as follows:

426.4 Expenditures for Certain Civic, Political and Related Activities

This account shall include expenditures for the purpose of influencing public opinion with respect to the election or appointment of public officials, referenda, legislation, or ordinances (either with respect to the possible adoption

of new referenda, legislation or ordinances or repeal or modification of existing referenda, legislation or ordinances); or approval, modification, or revocation of franchises; or for the purpose of influencing the decisions of public officials, but shall not include such expenditures which are directly related to appearances before regulatory or other governmental bodies in connection with the reporting utility's existing or proposed operations.

Several of the comments received stated that the amendment of Instruction No. 3 to the Schedule of Particulars Concerning Certain Income Deduction and Interest Charges Accounts in the Commission's Annual Reports, FPC Forms Nos. 1 and 2, to require individual reporting of all amounts of $100 or more charged to proposed Subaccounts 426.1, 426.2, 426.3 and 426.5, would impose a considerable burden upon the reporting utilities and encumber the Commission with details of insignificant expenditures. We believe that modification of Instruction No. 3 to allow grouping of any amounts of less than $1,000 in the aforesaid subaccounts for reporting purposes would eliminate these objections without conflicting with the overall purposes of the accounting and reporting amendments contemplated herein. Inasmuch as the books of reporting utilities have been closed for the reporting year 1962, we also conclude that the proposed amendments to our Uniform System of Accounts and annual report forms should be made applicable commencing with the reporting year 1963. In addition, although the new schedule for Subaccount 426.4 hereafter prescribed does not permit any grouping of expenditures, we will permit such grouping for reporting years which begin in 1963 in accordance with our outstanding requirements for earlier years.

A number of the comments upon the proposed amendments suggest that any effort to classify and require the special reporting of expenditures for political purposes would infringe upon freedom of speech and other constitutional guarantees, that the term "political" will have a misleading connotation because of its utilization in certain state penal statutes concerning political activities, that the extension of the definition of political expenditures to those not specifically covered by the "*ECAP*" case * would be improper, and that the contemplated amendments are "socialistic" in nature.

By requiring that expenditures for political purposes be placed in Subaccount 426.4 for accounting purposes, we do not impose any censorship or prohibition upon expenditures of that nature by electric and gas utilities. Moreover, this Commission in the afore-mentioned "*ECAP*" case rejected assertions that placing such expenditures in a "below the line" account for accounting purposes constituted an infringement upon freedom of speech or other constitutional guarantees, and its opinion and order in that case was upheld by the courts. Nor do we find any sound basis for concluding that the mere designation of an expenditure as "political" by this Commission will in itself signify improper or illegal conduct by the person or party making that expenditure. As mentioned above, however, we are changing the title of Subaccount 426.4. We note also that such classification does not constitute a determination that the expenditures should be excluded from a utility's cost of service in rate proceedings.

Whether a given utility's specific expenditures should be charged to Subaccount 426.4 or placed in an appropriate operating expense account must be determined, of course, in the first instance by a proper application of the standard set forth in the text of the subaccount, as here modified, by the officers of electric and gas utilities who are conversant with the day-to-day operations of their respective business entities. It should be recognized that certain expenditures,

*Commission Opinion and Order No. 337, *Alabama Power Company, et al.*, 24 FPC 278, affirmed *sub nom Southeastern Electric Power Company* v. *F.P.C.*, 304 F. 2d 29, cert. denied, 371 U.S. 924.

such as those covering a trip to Washington, D.C., may involve a joint cost requiring allocation of the charge to Subaccount 426.4 and to another account or accounts. Although the preparation of an exhaustive list of items that normally should be placed in Subaccount 426.4 or in appropriate operating expense accounts would be impractical, particularly in the absence of specific fact situations, the following table illustrates the type of expenditures that it would appear should be placed in each category:

Subaccount 426.4

Advertising in various mass communication media to influence the election or appointment of public officers or proposed legislation at Federal, state, or local levels.

Advertising in mass communication media to promote legislation exempting independent producers of natural gas from Federal regulation.

Advertising in mass communication media to influence the general public or public officials on the private v. public power question. (Such advertising even where it has no specific or express objective is calculated to affect public or official attitudes toward future legislative or administrative action.)

Letters or inserts in customers' bills or in reports to stockholders to influence the opinion of recipients as to the election or appointment of public officers or pending legislation.

Payments for lobbying or other fees to persons or organizations including law firms, service companies or other affiliated interests, for influencing the passage or defeat of pending legislative proposals or influencing official decisions of public officers.

Payments for the preparation or distribution of editorial or cartoon material intended to influence the public on political matters.

Cost to utility of time utilized by employees in a house-to-house campaign or other devices for influencing public opinion as to public power or natural gas legislation together with associated company expenses.

Membership fees in organizations engaged in lobbying on legislative matters.

Cost to utility for meals, lodging and other personal and social items of persons involved in any of the above activities.

Operating Expense Accounts

Reasonable expenditures for promotional and "good will" advertising.

Costs of appearances before the Federal Power Commission or other Federal and State regulatory agencies in various regulatory proceedings.

Costs of submitting comments on this proceeding or other regulatory proceedings.

Necessary appearances before or communications to Congress or legislative bodies regarding matters of direct operating concern to the utility company.

Appearances before zoning and tax appeal boards.

Appearances before municipal councils or other local authorities on charter or franchise regulations of direct operating concern to the utility company.

Appearances before or communication with local bodies or officials regarding ordinances such as those concerning tree-trimming and safety of equipment.

Appearances before or communication with local bodies or officials concerning permits such as those for erecting poles on public property or obtaining rights of way.

With respect to reporting expenditures in Subaccount 426.4 in the new schedule for that purpose to be added to FPC Forms Nos. 1 and 2, the schedule itself is

largely self-explanatory. If a particular expenditure has been charged to Subaccount 426.4, the amount and nature thereof should be duly reported in the new schedule.

The Commission further finds:

(1) The notice and opportunity to participate in this rulemaking proceeding with respect to the matters presently before this Commission through the submission, in writing, of data, views, comments, suggestions and arguments in the manner as described above, are consistent and in accordance with all procedural requirements therefor as prescribed in Section 4 of the Administrative Procedure Act. In view of the foregoing and the modification of the proposed amendments to our accounting and reporting requirements to reflect valid objections raised thereto, opportunity for oral argument or a formal hearing in this matter would serve no useful purpose and is therefore unnecessary.

(2) In view of the foregoing and upon consideration of all relevant matters presented, adoption and promulgation of the proposed amendments of Account 426 of the Commission's Uniform Systems of Accounts for Public Utilities and Licensees and Natural Gas Companies and of FPC Forms Nos. 1 and 2 by the addition of the attached schedule for reporting expenditures for certain civic, political and related activities and the revision of Instruction No. 3 to the Schedule of Particulars Concerning Certain Income Deduction and Interest Charges Accounts contained therein for use in reporting for the calendar year beginning January 1, 1963, or subsequently during the calendar year 1963 if an established fiscal year is other than the calendar year, and years thereafter, are necessary and appropriate for the purposes of the Federal Power and Natural Gas Acts.

(3) Good cause exists for adoption and promulgation of the matters referred to above immediately upon issuance of this order; all as hereinafter provided.

The Commission, acting pursuant to the authority granted by the Federal Power Act, as amended, particularly Sections 3(13), 4 (a), (b), (c), 301(a), 302, 304, 309 and 311 thereof (16 U.S.C. 796(13), 797 (a), (b), (c), 825(a), 825a, 825c, 825h, and 825j) and by the Natural Gas Act, as amended, particularly Sections 8(a), 9, 10, and 16 thereof (15 U.S.C. 717g(a), 717h, 717i and 717o), *orders:*

(A) Account 426 of the Commission's Uniform Systems of Accounts for Public Utilities and Licensees and for Natural Gas Companies, Other Income Deductions, hereby is amended to include Subaccounts 426.1, 426.2, 426.3, 426.4, and 426.5, all set forth in the attachment hereto.

(B) Instruction No. 3 to the Schedule of Particulars Concerning Certain Income Deduction and Interest Charges Accounts in the Commission's Annual Reports, FPC Forms Nos. 1 and 2, 18 CFR 141.1 and 260.1, is hereby amended to read as follows:

3. Other Income Deductions (Account 426)—Report the nature, payee, and amount of other income deductions for the year as required by Subaccounts 426.1, Donations; 426.2, Life Insurance; 426.3, Penalties; and 426.5, Other Deductions, of the Uniform System of Accounts. Amounts of less than $1,000 may be grouped by classes within the above subaccounts if the number of items so grouped is shown. Additionally, report the total amount of income deductions included in Subaccount 426.4, particulars of which are contained in the separate schedule "Expenditures for Certain Civic, Political and Related Activities."

(C) FPC Forms Nos. 1 and 2 are hereby further amended by the addition of the new report schedule "Expenditures for Certain Civic, Political and Related Activities" attached hereto for the reporting of such expenditures.

(D) The amendments and revisions of Account 426 of the Commission's Uniform System of Accounts and FPC Forms Nos. 1 and 2, all as set forth in paragraphs (A) through (C) above, shall become effective upon the date of issuance of this order, and shall be utilized in accounting and reporting for the calendar year beginning January 1, 1963, or subsequently during the calendar year 1963 if an established fiscal year is other than the calendar year, and years thereafter.

(E) The Secretary of the Commission shall cause prompt publication of this order to be made in the Federal Register.

Commissioner Black, *concurring.*

Commissioner Woodward *dissenting.*

ATTACHMENT

Amendment to Parts 101, 104, 105, 201, 204, 205
(18 CFR Parts 101, 104, 105, 201, 204, 205)

Account 426, Other Income Deductions, appearing in each of the above-numbered parts, is amended to read:

426 Other Income Deductions

This account shall include miscellaneous expense items which are non-operating in nature but which are properly deductible before determining total income before interest charges. The account shall be maintained according to subaccounts shown below.

426.1 Donations

This account shall include all payments or donations for charitable, social or community welfare purposes.

426.2 Life Insurance

This account shall include all payments for life insurance of officers and employees where company is beneficiary (net premiums less increase in cash surrender value of policies).

426.3 Penalties

This account shall include payments by the Company for penalties or fines for violation of any regulatory statutes by the company or its officials.

426.4 Expenditures for Certain Civic, Political and Related Activities

This account shall include expenditures for the purpose of influencing public opinion with respect to the election or appointment of public officials, referenda, legislation, or ordinances (either with respect to the possible adoption of new referenda, legislation or ordinances or repeal or modification of existing referenda, legislation or ordinances) or approval, modification, or revocation of franchises; or for the purpose of influencing the decisions of public officials, but shall not include such expenditures which are directly related to appearances before regulatory or other governmental bodies in connection with the reporting utility's existing or proposed operations.

426.5 Other Deductions

This account shall include other miscellaneous expenses which are non-operating in nature, but which are properly deductible before determining total income before interest charges.

NOTE.—The classification of expenses as nonoperating and their inclusion in this account is for accounting purposes. It does not preclude Commission consideration of proof to the contrary for ratemaking or other purposes.

Form Approved Budget Bureau 54–RO 05.19

Annual Report of..... Year ended December 31, 19....

EXPENDITURES FOR CERTAIN CIVIC, POLITICAL AND RELATED ACTIVITIES
(Subaccount 426.4)

1. Report below all expenditures incurred by the respondent during the year for the purpose of influencing public opinion with respect to the election or appointment of public officials, referenda, legislation or ordinances (either with respect to the possible adoption of new referenda, legislation or ordinances or repeal or modification of existing referenda, legislation or ordinances); approval, modification, or revocation of franchises; or for the purpose of influencing the decisions of public officials which are accounted for as Other Income Deductions, Expenditures for Certain Civic, Political and Related Activities; Subaccount 426.4.

2. Advertising expenditures in this Subaccount shall be classified according to subheadings, as follows: (a) radio, television, and motion picture advertising; (b) newspaper, magazine, and pamphlet advertising; (c) letters or inserts in customers' bills; (d) inserts in reports to stockholders; (e) newspaper and magazine editorial services; and (f) other advertising.

3. Expenditures within the definition of paragraph (1), other than advertising shall be reported according to captions or descriptions, clearly indicating the nature and purpose of the activity.

4. If respondent has not incurred any expenditures contemplated by the instructions of Subaccount 426.4, so state.

5. For reporting years which begin during the calendar year 1963 only, minor amounts may be grouped by classes if the number of items so grouped is shown.

NOTE: The classification of expenses as nonoperating and their inclusion in this account is for accounting purposes. It does not preclude Commission consideration of proof to the contrary for ratemaking or other purposes.

BLACK, Commissioner, *concurring:*

The Commission in its order should make clear that the term "political" in the title to subaccount 426.4 is used in its broadest meaning. The examples set forth in the order of types of expenditures which would be placed in this subaccount indicate that this is our intention, but I believe this should be specially emphasized.

The utilities and the advertising agencies have displayed great ingenuity in conveying a "message" which is not always political in the ordinary sense of the word, but which concerns itself with problems of broad national social or economic policy. These efforts are intended to influence fundamental attitudes or beliefs and bear no reasonable relationship to the necessary operations of a utility company or the furnishing of utility service. The industry is, of course, free to spend its money this way, but such costs should be reported as income deductions below the line. Unless we make this clear, I am fearful that too restrictive an interpretation may be put on the language of subaccount 426.4 and expenditures for these purposes may be lost in various above-the-line operating expense accounts.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP60–23

ORDER AMENDING ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 18, 1963)

On October 16, 1963, Southern Natural Gas Company (Applicant) filed in Docket No. CP60–23 an application to amend the certificate issued on October 3, 1960, in the above entitled proceeding, as hereinafter described and as more fully described in said application.

Applicant requests authority to increase its interruptible service to Southern Cement Company (Cement) at Roberta, Shelby County, Alabama. The present maximum volume is 15,340 Mcf per day. Applicant requests authorization to increase the maximum volume to 17,000 Mcf per day.

The gas is and will be used in Cement's lime and cement manufacturing operations. None of the gas is or will be used for boiler fuel.

No additional facilities are necessary to deliver the increased volume.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 13, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued October 3, 1960, in Docket No. CP60–23 be amended as hereinafter ordered.

The Commission orders:

(A) The order issued October 3, 1960, in Docket No. CP60–23 be and the same is hereby amended by authorizing Applicant, Southern Natural Gas Company, to increase the volume of its interruptible service to Southern Cement Company from a maximum of 15,340 Mcf per day to a maximum of 17,000 Mcf per day.

(B) In all other respects the aforesaid order issued October 3, 1960, in Docket No. CP60–23, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TEXAS GAS TRANSMISSION CORPORATION, DOCKET NO. CP64–46

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 18, 1963)

On August 21, 1963, Texas Gas Transmission Corporation (Applicant) filed in Docket No. CP64–46 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 1.14 miles of 4-inch pipeline and one purchase meter station, to be located in the Perry Field, Vermilion Parish, Louisiana.

The facilities will be used to transport, for the account of Hope Natural Gas Company (Hope), gas to be produced by Hope, and gas to be purchased by Hope from Exchange Oil & Gas Company in the Perry Field. The facilities will enable Hope to supplement its existing South Louisiana gas supply for the requirements of the customers of the Consolidated Natural Gas System with no increase in cost of gas or transportation.

The transportation by Applicant, for the account of Hope, will be rendered under the certificate issued to Applicant on August 10, 1959, in Docket No. G–17335.

The estimated cost of the facilities is $32,860, to be financed from cash on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 13, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Texas Gas Transmission Corporation, a Delaware Corporation having its principal place of business in Owensboro, Kentucky, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation of natural gas by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Texas Gas Transmission Corporation, to construct and operate facilities and to transport natural gas as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within sixty days from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL.; COLORADO OIL AND GAS CORPORATION, CI60–721 AND CI63–813; TEXAS GAS EXPLORATION CORPORATION (OPERATOR), ET AL., CI61–1125; SKELLY OIL COMPANY (OPERATOR), ET AL., CI61–1419; TEXAS GAS EXPLORATION CORPORATION, CI62–930

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT PROPOSALS AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 18, 1963)

Motions for severance, for approval of settlement proposals and for issuance of certificates of public convenience and necessity in their respective dockets were filed in the above-captioned proceedings on August 30, 1963, by Colorado Oil and Gas Corporation (Colorado); on September 10, 1963, by Texas Gas Exploration Corporation (Texas Exploration); and on September 16, 1963, by Skelly Oil Company (Skelly).

The settlement proposals are similar to those previously approved by the Commission[1] and provide for the issuance of permanent certificates at initial rates of 20.625¢ per Mcf[2] for sales from the taxing jurisdiction of the State of Louisiana and 19.0¢ per Mcf for a sale in the Federal domain, five year moratoria on rate increase filings commencing April 1, 1963 (subject to the usual exceptions), extension of the take-or-pay make-up periods to four years in all contracts which provide lesser make-up periods, and refunds of amounts above the settlement rate collected since the date of initial delivery in Docket No. CI61–1125 wherein the temporary authorization contains an express refund condition.[3]

No answers to these motions have been received.

These proposals, generally, are in the public interest and we shall approve them subject to the following reservations and conditions.

Since deliveries have been made at rates above the settlement rates since the proposed effective date, refunds of such excesses are required. Colorado and Skelly propose to pay interest on such amounts to be refunded at a rate of 7 percent per annum. Texas Exploration's proposal contains no interest provision. In accordance with our present policy, we shall require that interest at 7 percent per annum be paid on all amounts to be refunded under these settlement proposals, such interest to accrue through the last day of the month in which the respective proposals were filed, August 31, 1963, in the case of Colorado and September 30, 1963, in the cases of Skelly and Texas Exploration.

In the context of proposals, we interpret the term "delivered" as used in paragraph 1 of the Colorado and Texas Exploration proposals and the term "sold" as used in the Skelly proposal to include gas required to be taken during the moratorium periods but paid for and not taken when paid for. In other words, prepayments shall not be made during the moratorium periods at rates higher than the rates in effect for gas physically delivered. Our approval of these settlements is conditioned upon such interpretation.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part

[1] See *e.g.*, orders issued August 7, 1963, and October 9, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979, respectively.

[2] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[3] See Appendix for further details.

the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposals also provide that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlements will be so conditioned.

On April 16, 1962, an amendatory agreement dated December 15, 1961, was filed by Skelly as Supplement No. 3 to its Rate Schedule No. 172. This supplement added thereto the interests of Columbia Carbon Company and Hudson Gas & Oil Corporation in certain acreage in the North Scott Field. The certificate issued below in Docket No. CI61–1419 will include such interests.

The "*et al.*" sellers whose interests are covered by Texas Exploration's filings in Docket No. CI61–1125 and Rate Schedule No. 5 are, Sun Oil Company, Southwest Gas Producing Company, Inc., United Producing Company, Inc., H. B. Zachry, Charles B. Wrightsman, Arley A. Sarver and Line Service, Inc. The certificate issued below to Texas Exploration as Operator covers such interests.

In accordance with the above we shall sever these individual dockets from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, omit the intermediate decision in regard to these dockets [4] and issue certificates of public convenience and necessity in accordance with the applications, settlement proposals and conditions of this order.

The Commission finds:

(1) Each of the applicants herein is a "natural-gas" company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Each of the applicants herein is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motions for waiver of the intermediate decisions are granted.

(B) The matters in Docket Nos. CI60–721, CI63–813, CI61–1125, CI61–1419

[4] The hearings in the Union Texas Petroleum, *et al.*, consolidated proceeding concluded July 25, 1963.

and CI62-930 are hereby severed from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued upon the conditions set forth herein to the applicants for the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposals and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications and settlement proposals herein.

(D) The certificates issued by paragraph (C) above, are granted upon the express conditions that the applicants comply fully with the terms of this order and the settlement proposals which settlement proposals are expressly approved, as modified by this order.

(E) Interest shall be paid on all amounts to be refunded under the terms of the settlements and this order (including refunds of all amounts collected for deliveries made since April 31, 1963, above that which would have been collected at the settlement rates) at a rate of 7 percent per annum, such interest to accrue through the last day of the months in which the respective settlements were filed August 31, 1963, in the case of Colorado and September 30, 1963, in the case of Skelly and Texas Exploration. All refunds required by this order shall be made within 90 days from the date of issuance hereof.

(F) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposals the applicants shall report to the Commission, in triplicate, the amount of the refunds made to each pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with releases from the purchasers showing receipt of the refunds in conformity with the settlements and the conditions of this order.

(G) Upon full compliance of the applicants with all the terms of this order and of the settlement proposals as modified, the applicants shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(H) The certificates herein issued are not transferable and shall be effective only so long as the applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(I) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however,* that the 30-day notice provisions of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rates as required by this order and the settlement proposals.

(J) The grant of certificates herein and approval of the settlement proposals is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants, particularly any proceeding under Section 5 of the Natural Gas Act or Section 5(c) of the Outer Continental Shelf Lands Act and is without prejudice to claims or contentions which may be made by the Commission, applicants, the Commission staff, or any affected party herein in any other proceeding.

(K) Upon full compliance of Skelly with all the terms of this order and of its settlement proposal as modified, Supplement No. 3 to Rate Schedule No. 172 shall be accepted for filing effective as of the date of initial delivery.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL.; CONTINENTAL OIL COMPANY, G–16840, G–17521 AND G–20242

ORDER DENYING MOTION FOR SEVERANCE AND REJECTING OFFER OF SETTLEMENT

(Issued December 18, 1963)*

On September 23, 1963, Continental Oil Company (Continental) filed a motion for severance of the above-captioned Continental dockets[1] from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.* (hereinafter referred to as the Union Texas proceeding) and for the issuance of certificates of public convenience and necessity in accordance with the settlement proposal attached to the motion.

No answers to Continental's motion and offer have been filed.

The terms of the Continental proposal conform, generally, to the other settlements in the Union Texas proceeding which have been approved by the Commission[2] and provide for maximum initial rates of 20.625¢ per Mcf[3] for sales from south Louisiana, effectively April 1, 1963; a five-year moratorium on rate increase filings (subject to the usual exceptions); and extension of the make-up periods to four years in the rate schedules which provide for lesser make-up periods.

However, the refund provisions of Continental's proposal differ substantially from the provisions of the recent Union Texas proceeding settlements which have been approved by the Commission. The temporary authorizations heretofore issued in Docket Nos. G–17521 and G–20242 contain express refund conditions; the temporary authorization in Docket No. G–16840 contains no such condition. The recent Union Texas settlements have provided full refunds of all amounts collected since the dates of initial deliveries in excess of that which

*Reconsideration denied, 31 FPC 235.
[1] Continental does not propose to settle the matters in Docket Nos. CI61–586 and CI62–147 both of which are also consolidated herein.
[2] See orders issued August 7, 1963 (Humble Oil & Refining Company) and October 9, 1963 (Gulf Oil Corporation and Socony Mobil Oil Company, Inc.), in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979, respectively.
[3] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

would have been collected at the settlement rates in those cases in which the temporary authorizations contain express refund conditions. In cases in which the temporary authorizations did not contain refund conditions, the settlements have provided for no refunds of any amounts collected for deliveries made prior to the effective date of the settlement.[4] Continental, however, proposes that it refund two-thirds of the difference between that which has been collected from the dates of initial deliveries under all three temporary authorizations and that which would have been collected at the settlement rate, yet Continental gives no reason for its proposed departure from the Union Texas settlement standards.

We are of the view that, except in unusual circumstances, all parties who choose to settle should be treated alike insofar as it is possible to do so. It appears that Continental's proposal would result in less money being refunded to its pipeline purchasers than would be refunded had it followed the pattern of the recent Union Texas proceeding settlements. As noted above, Continental gives no reason why such a result should be allowed.

In view of the above, we are of the view that Continental's motion should be denied and offer of settlement rejected.

The Commission orders:

The motion for severance and issuance of certificates in accordance with settlement offer filed by Continental Oil Company in the above-captioned matters on September 23, 1963 is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL., K&H OPERATING CO., AGENT FOR SWORD COMPANY, ET AL., DOCKET NO. G–18058

ORDER REJECTING OFFER OF SETTLEMENT AND DENYING PETITION FOR ISSUANCE OF CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 18, 1963)

On October 22, 1963, K&H Operating Co., Agent for Sword Company, *et al.* (K&H), filed an offer of settlement of the matters in Docket No. G–18058 and a petition for issuance of a certificate of public convenience and necessity in accordance with the application and offer of settlement.

On November 19, 1963, the Public Service Commission of the State of New York (PSC) filed an answer in opposition to the petition of K&H. PSC contends that K&H should be required to make refunds of amounts above the proposed settlement rate collected since the date of initial delivery under the temporary authorization heretofore issued to K&H.

Without determining the merits of the settlement offer or the objection of PSC but because there is no agreement between these parties, we shall reject the offer of settlement and deny the petition. Contested matters can best be decided in the formal proceedings in Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.* The hearings in that proceeding, which includes Docket No. G–18058, concluded on July 25, 1963.

---

[4] See orders listed in footnote 2 *supra*. In addition see orders issued in the *Union Texas* proceeding on November 12, 1963 (*Mississippi River Fuel Corp., et al.*), and November 27, 1963 (*The Atlantic Refining Co.*), 30 FPC 1280 and 1376 respectively.

The Commission orders:

The petition for issuance of a certificate of public convenience and necessity filed in the above-entitled matters on October 22, 1963, by K&H Operating Co., Agent For Sword Company, *et al.* is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL.; UNION TEXAS PETROLEUM, A DIVISION OF ALLIED CHEMICAL CORPORATION, DOCKET NO. G–14227; JOSEPH E. SEAGRAM & SONS, INC. D/B/A FRANKFORT OIL COMPANY, DOCKET NO. CI61–1412

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT PROPOSAL AND CONDITIONALLY ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 18, 1963)

On October 30, 1963, Union Texas Petroleum, a division of Allied Chemical Corporation (Union Texas) and Joseph E. Seagram & Sons, Inc. d/b/a Frankfort Oil Company (Seagram) filed a motion for severance of Docket Nos. G–14227 and CI61–1412 from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, for the issuance of a certificate of public convenience and necessity in Docket No. CI61–1412 in accordance with the application and attached settlement proposal and for an order vacating the authority in Docket No. G–14227 to sell gas produced in the Chegby Field, St. James and La Fourche Parishes, Louisiana. An amendment to the settlement offer was filed on December 11, 1963.

A certificate of public convenience and necessity was originally issued in Docket No. G–14227 in 1958. *Transcontinental Gas Pipe Line Corporation*, 20 FPC 264. This certificate was issued to Union Texas (formerly Union Oil and Gas Corporation of Louisiana) and sales commenced under Union Texas' F.P.C. Gas Rate Schedule No. 9. Effective November 1, 1960, the Union Texas leases in the Chegby Field were assigned to Seagram and, on March 29, 1961, Seagram filed an application in Docket No. CI61–1412 for authority to continue the sales from the Chegby Field. However, the order issuing the certificate to Union Texas in Docket No. G–14227 was remanded to the Commission in *Public Service Commission of New York* v. *F.P.C.*, 361 U.S. 195. Subsequently, on July 30, 1962, in accordance with a settlement agreement, the certificate was reissued to Union Texas in Docket No. G–14227 except insofar as it concerned the acreage in the Chegby Field. *Texaco Inc.*, 28 FPC 247.

Union Texas and Seagram in the instant motion and settlement offer propose to settle the Chegby Field aspect upon terms similar to the settlement terms approved by the Commission in Docket No. G–14227 on July 30, 1962.

The settlement proposes a future price of 20.625¢ per Mcf [1], effective July 1, 1962; a five year moratorium on rate increase filings, except that such filings may be made (1) prior to the end of the moratorium period to the extent that the maximum suspension period under Section 4(e) of the Natural Gas Act may be extended beyond 5 months or the Commission may hereafter be authorized to lengthen such period and, (2) at any time for reimbursement of one-half the amount of increased taxes provided that such increase does not exceed the reimbursement to which Seagram is entitled by contract; refunds by Union

[1] Inclusive of tax reimbursement; pressure base 15.025 psia.

Texas and Seagram for periods prior to July 1, 1962, of two-thirds of the difference between the charges they have collected and those they would have collected at the settlement rate; refunds of the full difference for periods subsequent to June 30, 1962; interest on all amounts to be refunded at a rate of 6 percent per annum as to volumes delivered before March 1, 1960 and at 7 percent as to volumes delivered after that date, such interest to accrue through October 31, 1963; extension of the take-or-pay make-up period to four years.

Union Texas will pay a total of $10,832.08 of principal and interest and Seagram will pay the remainder.

We find this proposal generally to be in the public interest and shall approve it subject to the following reservations and conditions.

In the context of the proposal we interpret the term "delivered" as used in paragraph 1 of the proposal to include gas required to be taken during the moratorium period but paid for and not taken and our approval is conditioned upon such interpretation.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

In accordance with the above we shall sever these individual dockets from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, omit the intermediate decision in regard to these dockets[2] and issue a certificate of public convenience and necessity in Docket No. CI61–1412 in accordance with the application, settlement proposal and conditions of this order. The matter in Docket No. G–14227 will be terminated insofar as it concerns the Chegby Field.

The Commission finds:

(1) Joseph E. Seagram & Sons, Inc. is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sale of natural gas is subject to the jurisdiction of the Commission, and such sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Seagram is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, is required by the public convenience and necessity and is in the public interest upon the conditions set forth below, and a certificate should be issued as ordered below.

---

[2] The hearings in the Union Texas Petroleum, *et al.*, consolidated proceeding concluded July 25, 1963.

(5) The conditions attached to the certificate herein issued are required by the public convenience and necessity.

(6) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motion for waiver of the intermediate decisions is granted.

(B) The matters in Docket Nos. G–14227 and CI61–1412 are hereby severed from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) A certificate of public convenience and necessity is hereby issued upon the conditions set forth herein to Joseph E. Seagram & Sons, Inc., d/b/a Frankfort Oil Company for the sales of natural gas in interstate commerce for resale as proposed in Docket No. CI61–1412 and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in Seagram's application and settlement proposal herein.

(D) The certificate issued by paragraph (C) above, is granted upon the express condition that Seagram and Union Texas comply fully with the terms of this order and the settlement proposal, as amended, which settlement is expressly approved, under the conditions of this order.

(E) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal as modified, Seagram and Union Texas shall report to the Commission, in triplicate, the amount of the refunds made to the pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with releases from the purchaser showing receipt of the refunds in conformity with the settlement as approved.

(F) Upon full compliance of Seagram and Union Texas with all the terms of this order and of the settlement proposal, Seagram and Union Texas shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(G) The certificate herein issued is not transferable and shall be effective only so long as Seagram continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(H) The grant of the certificate herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however,* that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(I) The grant of the certificate herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Union Texas and Seagram, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, Union Texas, Seagram, the Commission staff, or any affected party herein in any other proceeding.

(J) Upon full compliance of Union Texas and Seagram with all the terms of this order and the settlement proposal, Joseph E. Seagram & Sons, Inc. d/b/a Frankfort Oil Company's Rate Schedule No. 6 and supplements Nos. 1, 3, and 4 thereto shall be accepted for filing effective November 1, 1960, and Supplement No. 2 shall be accepted for filing effective January 30, 1961.

APPENDIX

	Rate schedule No.	Docket No.	Present rate (cents per Mcf)	Settlement rate (cents per Mcf)	Buyer

DAUGHERTY AND KIDD, DOCKET NO. G-17122

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, REQUIRING REFUND, AND TERMINATING PROCEEDING

(Issued December 19, 1963)

On November 21, 1963, Daugherty and Kidd (Daugherty) submitted an Offer of Settlement, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, in the above-designated proceeding, which relates to the jurisdictional sale of natural gas by Daugherty, under its FPC Gas Rate Schedule No. 1, to Tennessee Gas Transmission Company (TGT), in Texas Railroad Commission District No. 3. The proposed increased rate of 16.16947¢ per Mcf at 15.025 psia was suspended and later became effective subject to refund on April 18, 1960, in Docket No. G-17122.

Under the terms of the offer, Daugherty proposes to eliminate the favored-nation, price redetermination, and periodic escalation provisions from the rate schedule involved, and to establish a settlement rate of 15.0¢ per Mcf, including present tax reimbursement, for the remaining term of the contract. Daugherty also proposes to make appropriate refunds to TGT. The estimated amount of the refund is approximately $9,500, exclusive of interest, and the estimated decrease in annual revenues is approximately $2,500.

The proposed settlement is consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61-1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, for jurisdictional sales of natural gas in Texas Railroad Commission District No. 3, and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of the Offer of Settlement shall not be construed as approval of any future increased rate filed in accordance with its reservation of the right to file increases to cover future tax increases.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the Offer of Settlement filed by Daugherty with the Commission on November 21, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Daugherty and Kidd with the Commission on November 21, 1963, is hereby approved in accordance with the provisions of this order.

(B) Daugherty and Kidd shall file, within 30 days from the date of issuance of this order, a notice of change providing for the 15.0¢ per Mcf rate, including present tax reimbursement, specified in its Offer of Settlement, and an executed contractual amendment to its FPC Gas Rate Schedule No. 1, eliminating the favored-nation, price redetermination, and periodic escalation provisions therefrom. Both the notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Rules of Practice and Procedure.

(C) Within 30 days from the date of issuance of this order, Daugherty and Kidd shall refund to TGT all amounts collected under its FPC Gas Rate Schedule No. 1, in Docket No. G–17122, in excess of the settlement rate of 15.0¢ per Mcf, together with simple interest at the rate of 7 percent per annum, from the date of receipt of such excess amounts by Daugherty and Kidd to the date of refund. Daugherty and Kidd shall bear all costs incidental to the making of refunds.

(D) Within 45 days from the date of issuance of this order, Daugherty and Kidd shall report to the Commission in writing, the details of its calculations resulting in refunds ordered pursuant to paragraph (C) above, together with a copy of a release from TGT with respect to such refunds.

(E) Upon notification by the Secretary of the Commission that Daugherty and Kidd has complied with the terms and conditions of this order, the rate and charge of 15.0¢ per Mcf at 15.025 psia, including present tax reimbursement, specified in its Offer of Settlement, shall be effective as of the date of issuance of this order, the above-designated proceeding shall be deemed terminated, and Daugherty and Kidd's refund obligation with respect to the above-designated proceeding shall be deemed discharged.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TENNESSEE GAS TRANSMISSION COMPANY AND UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP64–92

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 19, 1963)

On October 14, 1963, Tennessee Gas Transmission Company (Tennessee) and United Gas Pipe Line Company (United) (sometimes hereinafter referred to jointly as Applicants) filed in Docket No. CP64–92 a joint application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the transportation of natural gas by Tennessee from Iberia Parish, Louisiana, to Jefferson Davis Parish, Louisiana, for United and the construction and operation of such additional facilities by Applicants necessary to effectuate said transportation service, all as more fully set forth in the joint application.

United proposes to construct and operate a measuring station and necessary appurtenances for the installation of a proposed interconnection of its 16-inch Weeks Island Line with the 16-inch and 24-inch lines of Tennessee in Iberia Parish and 5.4 miles of 20-inch line in Jefferson Davis Parish. Further, the application indicates that United proposes to construct and operate a measuring station and necessary appurtenances for the installation of an alternate delivery point in the Bastian Bay Field, Plaquemines Parish, Louisiana. The total cost of United's proposed facilities is estimated to be $784,631.

Tennessee proposes to construct and operate a metering station and necessary appurtenances for the installation of a proposed interconnection between its

16-inch line and United's herein proposed 20-inch line in Jefferson Davis Parish. The total cost of Tennessee's proposed facilities is estimated to be $88,700.

The application shows that United will deliver natural gas to Tennessee at the proposed Iberia Parish interconnection of their two systems and Tennessee will transport natural gas for United and redeliver same at the proposed interconnection of the two systems in Jefferson Davis Parish. The subject transportation service is to provide increased quantities of natural gas for United in the Lake Charles area, Louisiana.

Applicants have entered into an agreement, dated October 3, 1963, providing for the proposed service for a period of four years. Said agreement provides for the following maximum daily quantities of natural gas (at 15.025 psia) to be transported by Tennessee for United: first year—73,146 Mcf; second year—93,032 Mcf; third year—106,384 Mcf; and fourth year—122,983 Mcf.

United will pay Tennessee a transportation charge equal to 45 cents multiplied by the daily quantity of natural gas applicable during the month.

By letter dated October 25, 1963, Applicants were granted a temporary certificate authorizing the construction and adoption of the proposed facilities and the proposed service.

Pursuant to due notice, a public hearing was held in Washington, D.C., on December 10, 1963, respecting the matters involved in and the issues presented by the joint application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Tennessee Gas Transmission Company, a Delaware corporation having its principal place of business in Houston Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of July 12, 1947, in Docket No. G–910 (6 FPC 777).

(2) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G–216 (3 FPC 3).

(3) The facilities hereinbefore described, as more fully described in the joint application in this proceeding, are to be used for the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation of such facilities and the subject transportation and delivery of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) Applicants are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The construction and operation of the subject facilities by Applicants and the subject transportation and delivery of natural gas by Tennessee are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c) (3), (c) (4) and (e) of Section 157.20 of such Regulations.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record

and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued to the Applicants in this proceeding, jointly, authorizing the construction and operation of the subject facilities by Applicants and the transportation and delivery of natural gas by Tennessee, as hereinbefore described, all as more fully described in the joint application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas by Tennessee shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NOS. CP64-5, CP64-27, AND CP61-203; ALGONQUIN GAS TRANSMISSION COMPANY, CP64-6, CP64-29, AND G-8513; GULF OIL CORPORATION, CI64-26

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING ABANDONMENT

(Issued December 19, 1963)

On July 5, 1963, as supplemented on July 29, 1963, and October 4, 1963, Texas Eastern Transmission Corporation (Texas Eastern), a Delaware corporation with its principal office in Houston, Texas, filed in Docket No. CP64-5, an application with the Federal Power Commission, pursuant to Section 7 of the Natural Gas Act and the Commission's Rules and Regulations, for a certificate of public convenience and necessity authorizing the construction and operation of additional facilities to its pipeline system to enable it to deliver and sell additional volumes of gas to its customers.

Texas Eastern proposes to construct and operate, together with related facilities: approximately 177 miles of 36-inch pipeline from a point near Venice, Louisiana, to its 30-inch pipeline system in Pointe Coupee Parish, Louisiana; approximately 638 miles of 30-inch pipeline loops at various points along its existing pipeline system between Opelousas, Louisiana, and Lambertville, New Jersey; approximately 18 miles of 12¾-inch pipeline from the terminus of its 24-inch pipeline near Hanover, New Jersey, to a point near Wanaque, New Jersey; a measuring and regulating station to be located near Wanaque, New Jersey; approximately 13,000 horsepower of additional compression on its existing pipeline system; it further proposes to convert and activate the Accident Field, an existing gas producing facility located in Garrett County, Maryland, into an underground storage reservoir, including the installation of field lines and workover of existing wells and to drill new wells, to install approximately 5,500 horsepower of compression, and related facilities; and approximately 29 miles of 30-inch pipeline to connect the Accident Field to its pipeline system.

The aforesaid facilities are designed to provide Texas Eastern with an additional 408,010 Mcf at 14.73 psia peak day capacity. The facilities are to be constructed over a four year period beginning in 1964 in order to sell and deliver additional maximum daily quantities of 336,553 Mcf of gas at 14.73 psia to 36 existing customers under Texas Eastern's Annual Firm Gas rate schedules and an additional 33,967 Mcf of gas at 14.73 psia to 5 existing customers under its Winter Service rate schedule, except that Texas Eastern stated that prior to the commencement of construction which it has scheduled for the year 1966–67 it would submit satisfactory proof of sales commitments for that phase of the proposed expansion and that construction of facilities proposed for the heating season 1965–66 would not be included as Gas Plant in Service prior to the commencement of such heating season.

Texas Eastern stated that it has entered into a gas purchase contract with Gulf Oil Corporation (Gulf) which would provide for the delivery of 4.4 trillion cubic feet of natural gas over a 26 pear period. The proposed 177 miles of 36-inch pipeline from Venice, Louisiana, to its mainline would be constructed to enable Texas Eastern to take into its system the volumes of gas which Gulf, in Docket No. CI64–26, proposes to sell and deliver to Texas Eastern at Venice. Texas Eastern proposes to take 541,889 Mcf of gas at 14.73 psia on a peak day from this source of supply.

The anticipated cost of the project is $195,046,000, with the estimated cost of the anticipated construction in 1964 being $92,392,000, in 1965 $47,105,000, in 1966 $40,207,000 and in 1967 $15,342,000. This project, together with the other above-listed Texas Eastern projects (Docket No. CP64–27 and the amendment in Docket No. CP61–203) would be financed through the issuance of first mortgage pipeline bonds, debentures and capital stock.

On July 5, 1963, Gulf filed an application in Docket No. CI64–26 seeking a certificate authorizing the sale of approximately 4.4 trillion cubic feet of natural gas to Texas Eastern from reserves located in fields in Southern Louisiana, primarily the West Delta Block 27 Field, Plaquemines Parish, Louisiana.[1]

Under the contract, gas will be delivered at the tailgate of a gas processing plant and facilities to be located near the East flank of the Venice Field, in Section 25, Township 21 South, Range 30 East, Plaquemines Parish. The gas is to come primarily from the West Delta Block 27 Field. Gulf indicated it had interest reserves in that field available for sale to fulfill the agreement with Texas Eastern presently estimated to be approximately 2.7 trillion cubic feet. Gulf further indicated that it had additional gas available to fulfill the overall contractual requirement.[2]

The volumes of gas which Texas Eastern is obligated to take are subject to a gradual buildup. Under the terms of the contract, the following daily contract quantities will be available to Texas Eastern:

Commencing	*Mcf/d*
Date of initial delivery	150,000
Nov. 1, 1965	250,000
Nov. 1, 1966	325,000
Nov. 1, 1967	425,000
Nov. 1, 1968, through remaining term of contract	500,000

The price of gas depends upon the Annual Load Factor at which Texas Eastern takes the gas from Gulf. It varies, pursuant to a specific scale, from a minimum of 19.0¢ per Mcf at 100 percent annual load factor to 20.987¢ per

[1] Notice of Gulf's application was issued on July 16, 1963, and published in the Federal Register on July 19, 1963 (28 F.R. 7405).

[2] Upon the use of additional gas reserves to fulfill the requirements of this contract, Gulf should notify the Commission of the source of such gas.

Mcf at 80 percent annual load factor.[3] Texas Eastern has advised us of its present intention to take this gas at 100 percent load factor or more, thereby realizing the lowest possible price under the terms of the contract. The price escalates 2.0 cents per Mcf on the first day of the eleventh year following the date of initial delivery and an additional 1.0 cent per Mcf on the first day of the 21st year. There are no indeterminate price increase provisions or provisions for tax reimbursement for future tax increase.

On July 5, 1963, concurrently with its application in Docket No. CP64–5, Texas Eastern filed a Motion to Amend Order Issuing Certificate of Public Convenience and Necessity issued in Docket No. CP61–203 on December 17, 1962, 28 FPC 1035. Under said order, the Commission authorized Texas Eastern, *inter alia*, to construct and operate approximately 57 miles of 14-inch pipeline from Castor, Louisiana, to West Monroe, Louisiana. Texas Eastern now requests that the order be amended to authorize the construction and operation of 20-inch pipeline instead of 14-inch pipeline. The 57 miles of 14-inch pipeline has not yet been constructed.

Texas Eastern stated that the substitution of a 20-inch pipeline in lieu of the 14-inch Castor-to-West Monroe pipeline will permit quantities of Texas and Louisiana gas, previously transported over the Southern Louisiana pipeline system, to be transported over this second connecting link to Kosciusko, Mississippi, thus permitting the gas purchases from Gulf to be transported over Texas Eastern's Southern Mississippi pipeline to Kosciusko at a minimum cost.

The estimated cost of the 20-inch line is $4,719,000, which is approximately $1,333,000 in excess of the estimated cost of the 14-inch line.

On July 25, 1963, Texas Eastern filed in Docket No. CP64–27 an application with the Commission pursuant to Section 7 of the Act and the Commission's Rules and Regulations, for a certificate of public convenience and necessity authorizing Texas Eastern to deliver natural gas to Algonquin Gas Transmission Company (Algonquin at the interconnection of their facilities near Hanover, New Jersey, equivalent to the quantities of natural gas to be delivered by Algonquin to Public Service Electric and Gas Company (Public Service) for the account of Texas Eastern at existing points of delivery in Bernards Township and Morris Township, New Jersey.

Concurrently with Texas Eastern's application in Docket No CP64–27, on July 25, 1963, as supplemented on October 4, 1963, Algonquin Gas Transmission Company (Algonquin), a Delaware corporation with its principal office in Boston, Massachusetts, filed in Docket No. CP64–29, an application for authority to abandon the transportation of natural gas for the account of Public Service previously authorized in Docket No. G–8513 and for a certificate of public convenience and necessity seeking authorization to transport and deliver natural gas to Public Service for the account of Texas Eastern at the aforesaid delivery points, in exchange for deliveries of equivalent amounts to Algonquin by Texas Eastern.

Algonquin stated that Public Service, on April 30, 1963, notified Algonquin that it was canceling the existing transportation agreement, filed as Algonquin's FPC Gas Rate Schedule X–2, effective November 1, 1964. The cancellation was in accord with the 18-month cancellation clause incorporated in the existing agreement between Algonquin and Public Service.

Algonquin and Texas Eastern seek certificates of public convenience and necessity authorizing the exchange agreement between them. The exchange agreement is for a term of 20 years commencing November 1, 1964, and provides

[3] The proposed maximum price consists of a mixture of 85 percent gas obtained from gas reserves located within the Louisiana taxing jurisdiction and 15 percent gas obtained from reserves located outside the Louisiana taxing jurisdiction.

for Algonquin to make deliveries to Public Service for the account of Texas Eastern at Bernards Township and Morris Township, New Jersey, out of its own gas received at Lambertville, New Jersey. Equal volumes of gas are to be delivered to Algonquin by Texas Eastern downstream on Algonquin's system at Hanover, New Jersey.

Algonquin further proposes to transport and deliver 15,400 Mcf per day of gas at 15.025 psia to Public Service at Wanaque, New Jersey, for the account of Texas Eastern for a period of one year commencing November 1, 1964, and for the transportation and delivery of 20,000 Mcf per day at 15.025 psia for an additional year commencing November 1, 1965.[4] The annual charge for the year commencing November 1, 1965, will be $21,420, plus the product of 110 times 20,000 times 2 cents. The transportation and delivery service which Algonquin proposes to render Public Service at Wanaque for the account of Texas Eastern requires that Texas Eastern deliver to Algonquin at Hanover, New Jersey, the volumes necessary to be delivered by Algonquin to Public Service at Wanaque.

On July 16, 1963, Algonquin filed in Docket No. CP64–6, an application pursuant to Section 7 of the Act and the Commission's Rules and Regulations, for a certificate of public convenience and necessity seeking authorization to construct and operate certain facilities and to render service as hereinafter described.

Algonquin proposes to construct and operate the following facilities:

(1) 23.1 miles of 30-inch pipeline loop between main line valve 25, Naugatuck, Connecticut and main line valve 28A, Rocky Hill, Connecticut.

(2) 15.5 miles of 30-inch pipeline loop between main line valve 36A, Burrillville, Rhode Island and main line valve 40, Mendon, Massachusetts.

(3) 6.4 miles of 30-inch pipeline loop between main line valve 14B, Cortlandt, New York and main line valve 15, Yorktown, New York.

(4) 22.2 miles of 30-inch pipeline loop between main line valve 31, Coventry, Connecticut and main line valve 35, Pomfret, Connecticut.

Algonquin stated that this additional looping will increase its system capacity sufficiently to enable it to sell in interstate commerce for resale an additional 20,735 Mcf at 14.73 psia per day from November 1, 1964, and 20,934 Mcf at 14.73 psia per day from November 1, 1965, of long-term firm gas under its Rate Schedule F–1.

The over-all capital cost of these facilities is estimated to be $15,213,900, which would be financed through the use of retained earnings, short-term bank loans and the issuance in the spring of 1965 of 20-year debt securities in the principal amount of $13,500,000.

Algonquin would receive increases in its supply of gas from its sole supplier, Texas Eastern, in order to satisfy the additional sales requirements.

Notice of the above-listed Texas Eastern and Algonquin applications was issued on November 4, 1963 (28 F.R. 12072). Petitions to intervene and notices of intervention in the several dockets were submitted by:

The Brooklyn Union Gas Company
Philadelphia Gas Works Division of the United Gas Improvement Company
Elizabethtown Consolidated Gas Company
United Natural Gas Company
New Jersey Natural Gas Company
Public Service Electric & Gas Company

[4] In its supplement to application in Docket No. CP64–5, filed October 4, 1963, Texas Eastern agreed that the exchange arrangement should be extended to a period of two years, commencing November 1, 1964, as proposed by Algonquin.

Long Island Lighting Company
The Consolidated Natural Gas System Companies
The East Ohio Gas Company
Hope Natural Gas Company
New York State Natural Gas Corporation
The Peoples Natural Gas Company
The River Gas Company
The Manufacturers Light & Heat Company
The Ohio Fuel Gas Company
Pennsylvania Public Utilities Commission
Public Service Commission of New York
Consolidated Edison Company of New York, Inc.

No party has indicated opposition to the issuance of certificates of public convenience and necessity as proposed.

We find that the proposed sale and the proposed projects are in the public interest. The proposed sale by Gulf guarantees the availability of a substantial quantity of gas at a price, which when taken at a high load factor rate is in the public interest. The proposed projects will make this gas available to the public and will otherwise make gas available to the public under terms which are consistent with the public interest. Accordingly, we shall herein grant certificates of public convenience and necessity as requested and as hereinafter conditioned.

Pursuant to due notice a public hearing was held in Washington, D.C., on December 2, 1963, respecting the matters involved in and the issues presented by the applications herein. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Gulf Oil Corporation, Texas Eastern Transmission Corporation and Algonquin Gas Transmission Company are "natural-gas" companies within the meaning of the Natural Gas Act, subject to the jurisdiction of the Commission.

(2) The proposed sale of natural gas by Gulf is subject to the jurisdiction of the Commission, and such sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The sale proposed by Gulf, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, is required by the public convenience and necessity and is in the public interest upon the conditions set forth below and a certificate should be issued as ordered below.

(4) The facilities described above and more fully described in the applications of Texas Eastern in Docket No. CP64–5 and Algonquin in Docket No. CP64–6 and the facilities described above and more fully described in the Motion to Amend Order Issuing Certificate filed by Texas Eastern in Docket No. CP61–203 will be used for the transportation of natural gas in interstate commerce as integral parts of the pipeline system of Texas Eastern and Algonquin and their construction and operation are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) The public convenience and necessity permit Algonquin to abandon the transportation of natural gas for the account of Public Service previously authorized in Docket No. G–8513, as requested herein.

(6) It is in the public interest that Algonquin transport and deliver quantities of natural gas, as set forth above and as more fully set forth in the application of Algonquin in Docket No. CP64–29, and that Texas Eastern transport and deliver equivalent amounts of gas to Algonquin in exchange therefor, as set forth above and as more fully set forth in the application of Texas Eastern in Docket No. CP64–27.

(7) The proposed construction and operation of facilities and transportation proposed by Texas Eastern and Algonquin are required by the public convenience and necessity and certificates therefor should be issued as hereinafter ordered and conditioned.

(8) Gulf, Texas Eastern and Algonquin are able and willing to do the acts and perform the services proposed and to conform to the provisions of the Natural Gas Act and the rules and regulations thereunder.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued to Gulf Oil Corporation for the sale of natural gas in interstate commerce for resale proposed in its application as hereinafter conditioned, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor. The certificate issued by this paragraph is not transferable and shall be effective only so long as Gulf continues the acts or operation hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission and shall be accepted in writing within 30 days after the issuance of this order.

(B) Certificates of public convenience and necessity are hereby issued under the conditions hereinafter set forth to Texas Eastern Transmission Corporation and Algonquin Gas Transmission Company authorizing each to construct and operate the facilities described above and to make the sales proposed, as more fully described above and in each applicant's respective applications, as supplemented.

(C) Algonquin is hereby granted permission to abandon the transportation of natural gas, as previously authorized in Docket No. G–8513, for the account of Public Service Electric and Gas Company, as requested in Docket No. CP64–29, upon condition that it accept the certificate herein issued in Docket No. CP64–29.

(D) The general terms and conditions set forth in paragraphs (a), (b), (c) and (e) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, shall attach to the issuance of the certificates granted in paragraph (B) hereof and to the exercise of the rights granted thereunder.

(E) The time within which the facilities to be constructed by Texas Eastern and authorized in paragraph (B) hereof shall be constructed and placed in actual operation, as provided in paragraph (b) of Section 157.20 of the Commission's Regulations, is hereby fixed at four years, subject, however, to the express condition that prior to the commencement of construction of those facilities proposed to be constructed in the years 1966 and 1967 (as summarized in Texas Eastern's application in Docket No. CP64–5, Exhibit K, pp. 34 and 47) Texas Eastern shall submit satisfactory proof of sales commitments for that phase of its proposed expansion, and subject, further, to the condition that those facilities proposed to be constructed for the heating season 1965–66 (as summarized in the application in Docket No. CP64–5, Exhibit K, p. 17) will not be included as Gas Plant in Service prior to the commencement of such heating season.

(F) The certificate of public convenience and necessity hereby issued to Texas Eastern for the development and operation of the Accident Field in Garret County, Maryland, as a storage facility is hereby conditioned upon the following specific terms:

(i) The maximum reservoir inventory shall not exceed 48,401,000 Mcf (at 15.025 psia), without further approval of the Commission.

(ii) Semi-annual reports shall be submitted during the developmental operations at the end of each cycle of injection and withdrawal, in the fall and spring, respectively, stating:

(a) The reservoir inventory and the corresponding reservoir pressures of the wells;

(b) The maximum rates of injection and withdrawal during each operation cycle;

(c) Location of new wells, both injection-withdrawal and observation. Drilling, electric and micro-logs of such wells shall be submitted with the reports.

(G) The time within which the facilities to be constructed by Algonquin and hereby authorized in paragraph (B) hereof shall be constructed and placed in actual operation as provided in paragraph (b) of Section 157.20 of the Commission's Regulations is hereby fixed at two years.

(H) The transportation and delivery of volumes of natural gas by Algonquin to Public Service Electric and Gas Company at Wanaque, New Jersey, for the account of Texas Eastern, commencing November 1, 1964, in exchange for deliveries of equivalent quantities of natural gas by Texas Eastern to Algonquin near Hanover, New Jersey, as proposed by Algonquin in Docket No. CP64–29, as supplemented, shall be extended for an additional year commencing November 1, 1965, under the terms proposed in the aforesaid application, as supplemented.

(I) The Commission's order issued December 17, 1962, in Docket No. CP61–203, 28 FPC 1035, is hereby amended to permit Texas Eastern to construct and operate 57 miles of 20-inch pipeline in lieu of the construction and operation of 57 miles of 14-inch pipeline, as set forth above. In all other respects said order shall be effective as issued.

(J) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of part 154 of the Commission's Rules and Regulations thereunder, requiring the filing of rate schedules for the services herein authorized, where applicable, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the respective Applicants. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objection relating to the operation of any price or related provision in the gas purchase contract herein involved.

(K) The petitions to intervene of those parties listed in the body of this order are granted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

ARKANSAS POWER & LIGHT COMPANY, DOCKET NO. E–6709

DETERMINATION OF CHARGES FOR HEADWATER BENEFITS

(Issued December 20, 1963)

The Commission by order of July 29, 1953 and superseding order of October 4, 1956 instituted an investigation under Section 10(f) of the Federal Power Act

to enable it to determine what part, if any, of the annual cost of interest, maintenance, and depreciation on the United States' Blakely Mountain project on the Ouachita River, Arkansas, should be charged to Arkansas Power and Light Company (Company) for headwater benefits received at its downstream Carpenter and Remmel projects, which are jointly licensed as Project No. 271.

The Corps of Engineers completed the Blakely Mountain project in 1955 for flood control and power production. Its earthfill dam creates a gross static head of 178 feet and retains a reservoir of 2,768,000 acre-feet, of which 1,083,000 is allocated to power production. Blakely Mountain's two 37,500 kilowatt units annually generate an average 156 million kilowatt-hours. Under a 30-year contract, the Southwestern Power Administration delivers Blakely Mountain's entire output to the Company as it schedules.

The Company's Carpenter project, built in 1932, has an installed capacity of 56,000 kilowatts. Its two units annually generate an average 92 million kilowatt-hours. Carpenter's concrete gravity dam creates a 95 foot gross static head and retains a 190,560 acre-foot reservoir. The Company's Remmel project, which was constructed in 1924, consists of an Ambursen-type dam, a 36,700 acre-foot reservoir, and three units with a 9,300 kilowatt combined capacity, generating annually an average 50 million kilowatt-hours. Remmel's gross static head is 53 feet.

The Company is charged below only for headwater benefits received after August 5, 1957, when it is estimated that the value of the Company's power gains from streamflow regulation offset the value of its earlier power losses from the filling of the upstream reservoir.

The staff report on its investigation, which recommended the findings and determinations made below, was sent for comment to the Company, the Chief of Engineers of the Department of Army, and the Secretary of the Interior. Each responded that the recommended payments were acceptable.

The Commission determines:

(1) As of August 5, 1957, the value of Arkansas Power & Light Company's power gains from streamflow regulation offset the value of its earlier power losses from the filling of the upstream Blakely Mountain reservoir.

(2) The equitable proportion of the annual charges for interest, maintenance, and depreciation on the Blakely Mountain project to be paid by Arkansas Power & Light Company to the United States for headwater benefits received at its Carpenter and Remmel projects between August 5, 1957 and December 31, 1957 is $27,750 and for each of the five successive calendar years is $69,360. Accordingly, the total charge for the period through December 31, 1962 is $374,550.

(3) For headwater benefits received thereafter, Arkansas Power & Light Company shall be billed annually pursuant to Section 11.30 of the Regulations under the Federal Power Act in the amount of $69,360 until such time as the Commission upon its own motion or upon motion of any party finds that changed conditions warrant revision.

The Commission finds:

The cost to the Commission of making the determination herein is $17,500.

The Commission orders:

(A) Payment to the Commission of the sum of $374,550 and $17,500 for the purposes stated above shall be made by Arkansas Power & Light Company within sixty (60) days from the date of issuance of this determination.

(B) For headwater benefits received after December 31, 1962, the Arkansas Power & Light Company shall be billed annually pursuant to Section 11.30 of the Regulations under the Federal Power Act in the amount of $69,360 until such time as the Commission upon its own motion or upon motion of any party finds that changed conditions warrant revision.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross., Harold C. Woodward and David S. Black.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP63-159

ORDER DENYING REHEARING

(Issued December 20, 1963)

On November 22, 1963, Panhandle Eastern Pipe Line Company (Panhandle) filed an Application for Rehearing of our Opinion No. 410 and accompanying order in this proceeding, issued November 12, 1963, 30 FPC 1260. By said Opinion and Order we issued a certificate of public convenience and necessity to Panhandle for the transportation in interstate commerce of an average of 1,000 Mcf of natural gas per day and up to 2,000 Mcf of natural gas per day to the National Helium Corporation (National Helium) plant located near Liberal, Kansas, to be used as fuel, space heating and other miscellaneous purposes, subject to certain conditions.

We have carefully considered each of Panhandle's allegations and arguments, but find that no new allegation of fact or law has been presented warranting a shift in the views expressed in Opinion 410. In our initial order we fully explained the relationship of the Helium Act Amendments of 1960 to the Natural Gas Act. We are only assuring here, as we have done in the past, that if a pipeline makes arrangements to have some of the BTU content of its gas stream siphoned off for non-jurisdictional use that it file an application to transport this "shrinkage volume" so that we can consider the extent to which action is required by public convenience and necessity and what conditions may be required to make the pipeline's jurisdictional customers whole.

Panhandle has not been deprived of property without due process of law. By our order we are affording Panhandle full opportunity upon the filing of an application to present its evidence and argument concerning the transportation of its natural gas for the extraction of liquids therefrom. In any such proceeding it will have a chance to show why it believes that, unlike the situation presented in the *Northern* case (Opinion No. 374, 28 FPC 1155), there is no need for any condition to the grant to compensate its jurisdictional customers for any resulting loss in BTU or pipeline expandability. But Panhandle has no basis for complaint because we are unwilling to assume that it could prove the case it has heretofore been unwilling to make.

The Commission orders:

The rehearing applied for by Panhandle Eastern Pipe Line Company on November 22, 1963, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward and David S. Black.

SUN OIL COMPANY, DOCKET NOS. G–13316, G–13425, G–13426, G–15010, G–15011, G–16621, G–16622, G–16810, G–18094, G–19774, G–19775, RI60–162, RI61–122, RI61–139, RI61–454, RI62–115, RI62–342, RI63–112, RI64–232

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE, CONTRACTUAL AMENDMENTS, AND WAIVERS, REJECTING NOTICES OF CHANGE, REQUIRING WITHDRAWAL OF NOTICES OF CHANGE, REQUIRING REFUNDS, TERMINATING PROCEEDING IN PART, AND TERMINATING PROCEEDINGS

(Issued December 20, 1963)

On July 19, 1963, Sun Oil Company (Sun) submitted an Offer of Settlement, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, in the above designated rate suspension proceedings. Sun filed an amendment to the offer on October 15, 1963. These proceedings relate to eight sales to Texas Eastern Transmission Corporation (Texas Eastern) in North Louisiana and Texas Railroad Commission District Nos. 2, 4, and 6. The data pertinent to these proceedings are set forth in Appendix A hereto.

Under the terms of the offer, Sun proposes to delete the favored-nation, price redetermination, and periodic escalation provisions from the rate schedules involved, and to file waivers of its contractual right to file for any increases in rate, in excess of the settlement rates, until February 5, 1968. Sun further offers to refund all amounts collected in excess of the settlement rates. The estimated total refund resulting from these settlement rates is approximately $8,830. The estimated annual decrease in rates from the suspended rates is approximately $2,200.

On October 1, 1963, Sun filed notices of change in rate in its FPC Gas Rate Schedule Nos. 23 and 91. These proposed increases are in excess of the applicable area rate ceilings and were suspended in Docket No. RI64–232. As a condition of this order, we will require that Sun withdraw these rate filings.

In support of the offer, Sun cites the deletion of the favored-nation and price redetermination provisions from its gas purchase contracts with Texas Eastern, and states that such provisions were important elements of consideration required by Sun under the contracts for the long-term commitment of its gas reserves to the performance of the contracts. Texas Eastern has concurred in the offer.

Since the proposed settlement rates are acceptable under the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, in Docket No. R–234, 29 FPC 589, the public interest will best be served by accepting Sun's proposed Offer of Settlement.

However, we desire to make it clear that acceptance of this Offer of Settlement shall not be construed as approval of any future increased rates proposed by Sun.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the Offer of Settlement filed by Sun

with the Commission on July 19, 1963, as amended on October 15, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Sun with the Commission on July 19, 1963, as amended on October 15, 1963, is hereby approved in accordance with the provisions of this order.

(B) Sun shall file, within 30 days from the date of issuance of this order, notices of change in its FPC Gas Rate Schedule Nos. 23, 24, 32, 74, 88 and 91, reflecting the settlement rates set forth in Appendix A hereto, and executed contractual amendments to its FPC Gas Rate Schedule Nos. 23, 32, 35, 36 and 91, which Sun shall execute with Texas Eastern in conformity with Sun's Offer of Settlement, as amended, in all respects. The notices of change and the contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) The notices of change in Sun's FPC Gas Rate Schedule Nos. 24, 74 and 88, tendered with the Offer of Settlement on July 19, 1963, are hereby rejected.

(D) Within 30 days from the date of issuance of this order, Sun shall refund to Texas Eastern all amounts collected in Docket Nos. G–18094, G–19774, RI60–162, RI61–122, RI61–139, RI61–454, RI62–115, RI62–342, and RI63–112, in excess of the settlement rates, together with appropriate interest, from the date of receipt of such excess amounts by Sun to the date of refund. Sun shall bear all costs incidental to the making of such refunds.

(E) Within 45 days from the date of issuance of this order, Sun shall report to the Commission in writing the details of its calculations resulting in refunds ordered pursuant to paragraph (D) above, together with copies of releases from Texas Eastern with respect to such refunds.

(F) Within 30 days from the date of issuance of this order, Sun shall file waivers of its contractual right to file for any increase in rate, in excess of the settlement rates, under its FPC Gas Rate Schedule Nos. 24, 32, 74 and 88, until February 5, 1968.

(G) Within 30 days from the date of issuance of this order, Sun shall withdraw the rate increase filings under its FPC Gas Rate Schedule Nos. 23, and 91, tendered on October 1, 1963, which are under suspension in Docket No. RI64–232.

(H) Upon notification by the Secretary of the Commission that Sun has complied with the terms and conditions of this order, the settlement rates set forth in Appendix A hereto shall be effective as of the date of issuance of this order, and the proceedings in Docket Nos. G–13316, G–13425, G–13426, G–15010, G–15011, G–16621, G–16622, G–16810, G–18094, G–19774, G–19775, RI60–162, RI61–122, RI61–139, RI61–454, RI62–115, RI62–342, RI63–112 shall be deemed terminated and Sun's refund obligations with respect to these proceedings shall be deemed to be discharged, and the proceeding in Docket No. RI64–232 shall be deemed terminated insofar as it pertains to Sun's FPC Gas Rate Schedule Nos. 23 and 91.

(I) The acceptance of this Offer of Settlement is without prejudice to any findings or determinations that may be made in any proceeding now pending, or hereafter instituted by or against Sun.

A. J. INDUSTRIES, INC., PROJECT NO. 2307

ORDER MODIFYING ORDER ISSUING LICENSE (MAJOR)

(Issued December 23, 1963)

On November 1, 1963, A. J. Industries, Inc., applicant for license for Project No. 2307, has requested reconsideration and modification of Articles 35 and 39 of our order issued October 24, 1963 issuing a license for Project No. 2307, 30 FPC 1064.

Article 35 requires both the initiation and completion by the licensee of a program for the repair and modification of the generating equipment and appur-

tenant facilities of the Salmon Creek and Annex Creek developments within the first year from the effective date of the license, while also requiring continuation of such repair and modification during the second and third years.

Article 39 requires the licensee, among other things, to make "monthly readings" of measurements of the deflection of the crown of the Salmon Creek dam at its crest and simultaneous readings of the water surface elevation and water and air temperatures. We are advised that weather conditions during the winter months of the year could render impossible monthly readings throughout the entire year.

The Commission finds:

It is appropriate and consistent with the public interest that our aforementioned order issued October 24, 1963 be modified as hereinafter provided.

The Commission orders:

(A) Articles 35 and 39 of our aforementioned October 24, 1963 order are hereby modified to read as follows:

Article 35. The Licensee shall repair and modify the Salmon Creek and Annex Creek developments to make the structures safe and adequate and restore the project to a satisfactory operating condition in accordance with the following schedule, the period to begin as of the effective date of the license:

First year

1. Installation of air vent in blowoff line at outlet of Annex Creek Dam.
2. Initiation of a program for the repair and modification of the generating equipment and appurtenant facilities of the Salmon Creek and Annex Creek Developments.

Second year

1. General cleanup around Salmon Creek dam and in and around Salmon Creek Reservoir.
2. Scale downstream face of Salmon Creek dam.
3. Replacement of supports for Salmon Creek penstock No. 1.
4. Initiation of the rehabilitation of the Salmon Creek flume.
5. Continuation of the program for the repair and modification of generating equipment.

Third Year

1. Drill and grout Salmon Creek Dam.
2. Repair saddle dams at Upper Annex Creek Lake.
3. Replacement of supports for Salmon Creek penstock No. 1.
4. Continuation of the rehabilitation of the Salmon Creek flume.
5. Clean and paint valves of outlet of Salmon Creek dam.
6. Continuation of the repair and modification of generating equipment.

Fourth year

1. Gunite and waterproof upstream face of Salmon Creek dam.
2. Continuation of the rehabilitation of the Salmon Creek flume.
3. Check the plate thickness of all penstocks.
4. Continuation of the program for the repair and modification of generating equipment.

Fifth year

1. Repair tailrace concrete at Annex Creek power plant.
2. Completion of the rehabilitation of the Salmon Creek flume.

3. Completion of the repairs and modifications to the generating equipment and appurtenant facilities of the project.

Article 39. The Licensee shall make provisions at the Salmon Creek dam for measurement of the deflection of the crown of the dam at its crest; and, subject to prevailing weather conditions, shall make monthly readings of the measurements together with simultaneous readings of the water surface elevation and water and air temperatures. The Licensee shall also submit an annual report of such measurements and readings together with a report on the overall condition of the dam, particularly with respect to the condition of the repairs as prescribed in Article 35.

(B) The aforementioned Commission order issued October 24, 1963, as modified by this order, shall be accepted by the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Commissioner Ross *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP63–126; PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. CI63–1455; PAN AMERICAN PETROLEUM CORPORATION, DOCKET NOS. CI64–169, CI64–170, CI64–171, CI64–172, CI64–173, CI64–174, CI64–175, CI64–176, CI64–177, CI64–178, CI64–179, CI64–180

ORDER GRANTING MOTION TO OMIT THE INTERMEDIATE DECISION, APPROVING PROPOSED SETTLEMENT AND ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 23, 1963)

On December 11, 1963, the Presiding Examiner certified to us a proposed settlement by the Applicants, El Paso Natural Gas Company (El Paso) and Pan American Petroleum Corporation (Pan American), in the above-entitled proceeding. The applications which were consolidated for hearing in this proceeding, together with all amendments thereto, have already been fully described in three notices heretofore issued [1] and these facts need not be repeated here. Only two of the applications listed in the caption of this order now require detailed consideration. These are the amended application of El Paso filed in Docket No. CP63–126 on November 5, 1963, and the amended application of Pan American filed in Docket No. CI64–175 on November 6, 1963.

In its amended application, Pan American is requesting a certificate authorizing it to sell to El Paso in interstate commerce for resale natural gas pursuant to the terms and conditions of a gas purchase contract, dated October 2, 1963, between El Paso and Pan American. The gas which Pan American proposes to sell under this contract is to be produced from the Dakota formation, as defined in the contract, underlying about 74,636 acres located in the San Juan Basin area, San Juan and Rio Arriba Counties, New Mexico, including Pan

[1] "Order to Show Cause, Notice of Applications, and Consolidation of Proceedings" issued June 4, 1963, and published in the Federal Register on June 11, 1963 (28 F.R. 5696); "Notice of Applications and Order Permitting Intervention and Granting Motions to Consolidate Proceedings and Fix Date of Prehearing Conference" issued August 16, 1963, and published in the Federal Register on August 23, 1963 (28 F.R. 9333); and "Notice of Amendments to Applications and Date for Reconvening of Hearing" issued November 15, 1963, and published in the Federal Register on November 22, 1963 (28 F.R. 12374).

American's interest in gas produced from all wells[2] which were previously described in Pan American's applications filed in Docket Nos. CI64–169, CI64–171, CI64–173, CI64–175, CI64–177, and CI64–179.

The recoverable reserves underlying the acreage subject to the contract are estimated to be between 746 billion cubic feet[3] and 916 billion cubic feet, the lower of the two reserve estimates being El Paso's and the higher estimate being Pan American's. El Paso and Pan American agreed, for the purposes of negotiating the contract, that the presently-developed recoverable reserves, attributable to existing wells, total 227 billion cubic feet.

The contract provides for an initial price of 13 cents per Mcf and for fixed escalations of 1 cent per Mcf on January 1, 1969, and at the end of each five-year period thereafter. Pan American agrees to pay all taxes on the gas prior to delivery if such taxes were in effect on the contract date of October 2, 1963, and El Paso agrees to reimburse Pan American for three-fourths of any additional taxes which become effective after the contract date.

Under Article XV of the contract, in recognition of the unrecovered development costs already incurred by Pan American and of additional costs to be incurred by Pan American up to January 6, 1964, El Paso agrees to make a prepayment of $2,692,787 to Pan American on January 6, 1964. The prepayment is equivalent to a total quantity of 20,713,750 Mcf priced at 13 cents per Mcf and is the amount of gas El Paso estimates it would purchase under the contract over a two-year period if such gas were to be purchased at a rate of one Mcf per day for each 8,000 Mcf of presently-developed reserves. To eliminate objections by the parties to El Paso's making the prepayment, El Paso made the following stipulation and agreement (Settlement Proposal, Article V, Section 5):

> (5) *Initial prepayment by El Paso.* El Paso hereby stipulates and agrees that no part of the initial prepayment of $2,692,787 to be made to Pan American on January 6, 1964, will be included in El Paso's rate base, and El Paso further agrees not to claim such amount, or any part thereof, as a component of rate base in any pending or future proceedings involving El Paso under Sections 4 or 5 of the Natural Gas Act, *provided*, however, that such stipulation and agreement by El Paso are solely for the purposes of settlement of possible contested issues in these proceedings and of obtaining expeditious issuance of certificates herein; that it is understood by all parties that such stipulation and agreement shall not foreclose El Paso from proposing to include in its rate base take-or-pay amounts which might accrue under the contract herein between El Paso and Pan American, and that such stipulation and agreement are not, and shall not be, available or used as a precedent with respect to any other prepayments heretofore made by El Paso, or which may be made hereafter by El Paso;

Although the contract provides that El Paso has the full 20-year term within which to recoup the initial prepayment, El Paso estimates that it will have recovered the initial prepayment by the end of 1967. Article XXII of the contract further provides that if at the end of such 20-year period, El Paso has not recovered, through offsets described in Article IV of the contract, all of the initial prepayment and any take-or-pay amounts which might have accrued under Article IV, Pan American has the option of (1) extending the contract so as to permit El Paso to recover such amounts pursuant to Article IV, or (2)

[2] There is one exception. Pan American's contract does not cover its non-signatory, non-operating working interest in the Farmington Gas Unit "A" No. 1 Well which is operated by Pioneer Production Company and which was described in Pan American's original application filed in Docket No. CI64–175.

[3] All volumes and prices stated in this order are at a pressure base of 15.025 psia.

paying to El Paso in cash at the end of the 20th year, or any time thereafter, any portion of the prepayment or take-or-pay amounts which El Paso has not recovered. If Pan American elects to pay the cash amount, the contract will thereupon be terminated.

El Paso estimates average deliveries of gas under the contract will be about 28,000 Mcf per day during 1964, and that deliveries will gradually increase, as the acreage is developed up to 140,000 Mcf per day by 1969 after full development is reached.

By separate letter agreement dated October 2, 1963, El Paso has agreed at all times to process the gas for Pan American in three existing plants in the San Juan Basin (the Chaco, Blanco, and San Juan River Plants) and to recover such liquids and liquefiable hydrocarbons as might be economically recovered by El Paso. El Paso and Pan American agreed that Pan American would reimburse El Paso, pursuant to Section 5 of Article I of the gas purchase contract, for five percent of the total volume of gas processed by El Paso for Pan American. El Paso estimates that this five-percent reimbursement for inlet volumes represents the reduction in gas volumes which will occur at the plants because of the processing operations to be performed by El Paso.

The processing agreement further provides that Pan American shall be delivered 75 percent of the gasoline recovered, and from 15 percent to 33⅓ percent of the additional liquid products recovered, dependent upon the monthly average price received by El Paso for the applicable liquid products, and El Paso shall retain the remaining portion of the gasoline and additional liquid products recovered as its compensation for processing. The percentages of such additional liquid products to be delivered to Pan American correspond exactly with the percentages applicable in existing processing arrangements entered into by El Paso with respect to similar gas in the San Juan Basin area, and, while Pan American's 75-percent share of the gasoline recovered is greater than that specified in existing El Paso contracts in the area involved (a maximum of 33⅓%), the difference is offset by Pan American's reimbursement to El Paso of the loss in gas volumes at the plants. El Paso's existing contracts in the San Juan Basin area provide that El Paso shall bear the plant loss in gas volumes. Consequently, El Paso's portion of revenues, under its processing agreement with Pan American, will be the same as the revenues obtained by El Paso under existing processing arrangements in the area, since the smaller gasoline percentage to be retained by El Paso under its agreement with Pan American will be offset by Pan American's reimbursement to El Paso of the loss in gas volumes at the plants. Additionally, whereas El Paso's existing processing arrangements in the area guarantee all producers a minimum of one cent per Mcf for liquids, whether their gas is processed or not, Pan American's return for liquids arises solely from the actual processing of the gas, and there is no reference in the gas purchase contract or processing agreement to any stated minimum return for liquids per Mcf.

The net effect of the processing agreement is that El Paso will pay Pan American 13 cents per Mcf for gas at the tailgates of El Paso's plants. Although the actual Btu content after processing is expected to be in excess of 1100 Btu's per cubic foot, the contract will specifically provide for the Btu content to be in excess of 1050 Btu's.[4]

---

[4] Although Article VI, Section 2, of the gas purchase contract presently provides for a Btu content in excess of 1000, El Paso and Pan American have agreed to amend the gas purchase contract so as to provide for a Btu content in excess of 1050 Btu's per cubic foot, pursuant to Article V, Section 6, of the settlement proposal. This amendment will be filed as a supplement to Pan American's contract which is herein being accepted for filing as Pan American's FPC Gas Rate Schedule No. 363.

El Paso states that the gas purchase contract between it and Pan American will not trigger any favored-nations clauses in its existing contracts involving the purchase of gas in the San Juan Basin area. The initial price of 13 cents per Mcf in the gas purchase agreement is consistent with and conforms to the Commission's Statement of General Policy No. 61–1, 24 FPC 818, as amended, and the pricing provisions are otherwise consistent with the Commission's Regulations.

Since Pan American has included under its contract dated October 2, 1963, all of its interest in the acreage from which "Dakota" gas was being produced by El Paso as the operator, Pan American has complied with Section 154.91 (c) (2) of the Commission's Regulations under the Natural Gas Act which provides that where the operator of gas properties is an interstate pipeline company, the "* * * co-owners shall make all required filings." The issuance herein of a certificate to Pan American in Docket No. CI64–175 will render moot the remaining applications filed by Pan American in response to the show cause order issued June 4, 1963, in Docket No. CI63–1455.

Although El Paso's application indicates that it does not expect take-or-pay amounts to accrue under the contract except for small amounts in 1974 and 1975, Article IV of the contract does provide for El Paso's take-or-pay obligations to be determined in the aggregate by taking into account all of the wells subject to the gas purchase agreement. Therefore, it seems appropriate to make the minimum take-or-pay provisions in the contract subject to the Commission's determination of the rule-making proceeding in Docket No. R–199, with the proviso, that in no event shall Pan American be required to accept minimum take-or-pay provisions of less than 80 percent.

El Paso's amended application in Docket No. CP63–126 seeks authorization to construct and operate a total of approximately 269.6 miles of field gathering lines, consisting of 4½-inch through 20-inch pipe of varying lengths, and the necessary measuring, regulating, and connecting facilities required for attachment of Pan American's wells to El Paso's system in the San Juan Basin. The total estimated cost of these facilities, including allowance for overhead and contingency provisions, is $10,742,300.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated October 29, 1942, in Docket No. G–242, 3 FPC 851.

(2) Applicant, Pan American Petroleum Corporation, a Delaware corporation with its principal place of business in Tulsa, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(3) The sale of natural gas proposed by Pan American, as more fully described in its application in Docket No. CI64–175, as amended, is subject to the jurisdiction of the Commission, and such sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(4) El Paso and Pan American are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(5) The construction and operation of the facilities proposed by El Paso, and the sale proposed by Pan American, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth herein, and certificates should be issued to each of them as hereinafter ordered and conditioned.

(6) The conditions attached to the certificates of public convenience and necessity herein issued are required by the public convenience and necessity.

(7) The settlement proposal hereinabove referred to is in the public interest and is consistent with the requirements of the public convenience and necessity.

(8) Pan American has filed notices of withdrawal of its applications filed under Section 7(c) of the Natural Gas Act in Docket Nos. CI64–169, CI64–171, CI64–173, CI64–177, and CI64–179, together with notices of withdrawal of the respective related rate schedules filed by it under Section 4 of the Act, and such withdrawals should be permitted in furthering the administration of the Natural Gas Act.

(9) Pan American has filed notices of withdrawal of its applications filed under Section 7(b) of the Natural Gas Act in Docket Nos. CI64–170, CI64–172, CI64–174, CI64–176, CI64–178, and CI64–180, and all such withdrawals should be permitted in furthering the administration of the Natural Gas Act.

(10) The certificates of public convenience and necessity issued herein render unnecessary and moot further proceedings regarding the show cause order issued in Docket No. CI63–1455, as well as further consideration of Pan American's applications filed in Docket Nos. CI64–169 through CI64–174, and in Docket Nos. CI64–176 through CI64–180, and the proceedings in all such dockets should be terminated.

(11) No party has opposed the waiver of the intermediate decision in this proceeding.

The Commission orders:

(A) The motion for waiver of the intermediate decision is granted.

(B) A certificate of public convenience and necessity is hereby issued to El Paso in Docket No. CP63–126, upon the terms and conditions of this order, authorizing the construction and operation of the facilities proposed, as more fully described above and in its application, as amended.

(C) A certificate of public convenience and necessity is hereby issued to Pan American in Docket No. CI64–175, upon the terms and conditions of this order, authorizing the sale by Pan American of natural gas in interstate commerce for resale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described above and in Pan American's application, as amended.

(D) The certificate herein issued to El Paso is granted upon the express condition that El Paso shall comply fully with the terms of its stipulation and agreement as to waiver of any future claims to inclusion of all or any part of the initial prepayment to be made by El Paso to Pan American on January 6, 1964, in El Paso's rate base in any future proceedings under Sections 4 or 5 of the Natural Gas Act.

(E) The certificate herein issued to Pan American is not transferable and shall be effective only so long as it continues the acts or operations hereby authorized in accordance with the provisions of the Natural Gas Act, and the applicable rules, regulations, and orders of the Commission.

(F) The grant of the certificates herein and approval of the settlement proposal shall not be construed as a waiver of the requirements of Section 4 of the

Natural Gas Act, or of Part 154 of the Commission's Regulations thereunder requiring the filing of rate schedules for the service authorized, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the Applicants, and is without prejudice to claims or contentions which may be made by the Commission, Applicants, the Commission's staff, or any affected party herein in any other proceeding. Further, the action in this proceeding shall not foreclose nor prejudice any further proceedings or objection relating to the operation of any price or related provision in the gas purchase agreement herein involved.

(G) The rate schedule consisting of the gas purchase agreement dated October 2, 1963, and the letter agreement dated October 2, 1963, between El Paso and Pan American, tendered for filing by Pan American on November 6, 1963, and December 10, 1963, respectively, are hereby accepted for filing, effective as of the date of this order, and designated Pan American Petroleum Corporation's FPC Gas Rate Schedule No. 363 and Supplement No. 1 thereto.

(H) The certificate herein issued to Pan American is granted upon the express condition that Pan American and El Paso shall comply fully with their stipulation and agreement to amend Article VI, Section 2, of the gas purchase agreement as expressed in Article V, Section (6), of the settlement proposal, and that Pan American shall file such amendment as a supplement to its rate schedule.

(I) Withdrawal of the applications filed by Pan American pursuant to Section 7(c) of the Natural Gas Act in Docket Nos. CI64–169, CI64–171, CI64–173, CI64–177, and CI64–179, together with the withdrawal of the respective related rate schedules filed by it under Section 4 of the Act, are all permitted and approved, pursuant to Section 1.11(d) of the Commission's Rules of Practice and Procedure.

(J) Withdrawal of the applications filed by Pan American pursuant to Section 7(b) of the Natural Gas Act in Docket Nos. CI64–170, CI64–172, CI64–174, CI64–176, CI64–178, and CI64–180 is hereby permitted and approved, pursuant to Section 1.11(d) of the Commission's Rules of Practice and Procedure.

(K) The proceedings in Docket No. CI63–1455, in Docket Nos. CI64–169 through CI64–174, and in Docket Nos. CI64–176, through CI64–180, are hereby terminated.

(L) The certificate issued to El Paso in paragraph (B) above and the rights granted thereunder are conditioned upon El Paso's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(4), and (e) of Section 157.20 of such Regulations.

(M) The certificate herein issued to Pan American in paragraph (C) above is granted upon the further express condition that the allowance of the take-or-pay provisions in Pan American's contract is subject to our ultimate disposition with respect to such provisions in the rulemaking proceeding in Docket No. R–199. Upon establishment by regulation or otherwise of general policies governing such provisions in producer contracts, Pan American shall file within 30 days thereafter an amendment to its Rate Schedule No. 363 in conformity therewith, acceptable to the Commission; provided, however, that Pan American shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities. Any changes or modifications to be made in accordance with this paragraph (M) shall be prospective only.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-235

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 23, 1963)

On February 19, 1963, Northern Natural Gas Company (Applicant) filed in Docket No. CP63-235 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities and the sale and delivery of natural gas to Iowa Electric Light and Power Company for resale and distribution by the latter in the communities of Clarence, Mechanicsville and Stanwood, all in Cedar County, Iowa, all as more fully set forth in the application on file with the Commission.

Applicant proposes to construct and operate approximately 6.3 miles of 3-inch and 2.4 miles of 2-inch lateral pipeline as well as the necessary measuring facilities. The total estimated cost of the proposal facilities is $173,900, which cost will be financed from cash on hand, reserve accruals and retained earnings.

The total estimated third year peak day and annual natural gas requirements for the three communities are 1,049 Mcf and 118,786 Mcf, respectively.

Pursuant to due notice, a public hearing was held in Washington, D.C., on December 3, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate the proposed facilities and to sell and deliver natural gas as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale of natural gas authorized in paragraph (A) above shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

RATE FILINGS BASED UPON KANSAS OIL AND GAS SEVERANCE TAX ACT, DOCKET NO. R-167

ORDER TERMINATING PROCEEDING

(Issued December 23, 1963)

On January 30, 1958, the Supreme Court of the State of Kansas, in *State of Kansas, ex rel. Dole, et al.* v. *Kirchner, et al.* (182 Kan. 437, 321 P.2d 183), held the Kansas Oil and Gas Severance Tax Act (Chap. 516, Laws of 1957, G.S. 1957 Supp. 79-4201) to be unconstitutional in that the subject of the law was not clearly expressed in its title as required by the Constitution of the State of Kansas.

In this proceeding the Commission has under consideration a proposed rulemaking that would provide for the rejection of all filings made pursuant to the Severance Tax Act, in view of the unconstitutionality of the tax. Notice of the proposed rulemaking involved herein was issued on April 24, 1958 and published in the Federal Register on April 29, 1958 (23 F.R. 2850). When giving notice of the proposed rulemaking the commission invited all interested parties to submit data, views and comments in writing concerning such rulemaking. In response to the Commission's notice, comments were received from ten interested parties.

We believe that at this late date a rulemaking proceeding would be a cumbersome and inappropriate means by which to exercise our jurisdiction over the matter involved herein. Such matter can more conveniently be decided when properly raised in individual proceedings before us. We note, moreover, that a buyer of natural gas who has paid seller on the basis of an unconstitutional tax can invoke the jurisdiction of an appropriate court in the event he is entitled

to a refund under his contract.[1] We conclude, therefore, that the above-entitled proceeding should be terminated.

The Commission finds:

The proceeding in Docket No. R–167 should be terminated.

The Commission orders:

The proceeding in Docket No. R–167 is hereby terminated.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL.; BRADCO PROPERTIES, INC., ET AL., DOCKET NO. CI60–88; COLUMBIAN FUEL CORPORATION, DOCKET NO. CI62–1068

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT PROPOSALS AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 23, 1963)

Motions for severance, for approval of settlement proposals and for issuance of certificates of public convenience and necessity in their respective dockets were filed in the above-captioned proceedings on October 18, 1963, by Columbian Fuel Corporation (Columbian) and on October 29, 1963, by Bradco Properties, Inc., *et al.* (Bradco).

The settlement proposals are similar to those previously approved by the Commission[1] and provide for the issuance of permanent certificates at initial rates of 20.625¢ per Mcf,[2] five year moratoria on rate increase filings (subject to the usual exceptions) and extension of take-or-pay make-up periods to 4 years in both contracts.[3]

The temporary authorizations heretofore issued to both applicants contain no express refund conditions and applicants do not propose to refund any amounts collected for deliveries made prior to April 1, 1963, the effective date of the proposed rate reductions. Both Applicants will refund amounts collected for deliveries since March 31, 1963, above that which would have been collected at the settlement rates. Interest on such amounts to be refunded is to accrue at 7% per annum through October 31, 1963.

These proposals generally are in the public interest and we shall approve them subject to the following reservations and conditions.

In the context of the proposals, we interpret the term "delivered" as used in paragraph 1 of each proposal to include gas required to be taken during the moratorium periods but paid for and not taken. Our approval of these settlements is conditioned upon such interpretation.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part

---

[1] *Cf. Pan American Petroleum Corp.* v. *Superior Court of Delaware for New Castle County, et al.*, 366 U.S. 656 (1961).

[1] See *e.g.*, orders issued August 7, 1963, and October 9, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979, respectively.

[2] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[3] See Appendix for further details.

the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

In accordance with the above we shall sever these individual dockets from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, omit the intermediate decision in regard to these dockets[4] and issue certificates of public convenience and necessity in accordance with the applications, settlement proposals and conditions of this order.

The Commission finds:

(1) Each of the applicants herein is a "natural-gas" company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Each of the applicants herein is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motions for waiver of the intermediate decisions are granted.

(B) The matters in Docket Nos. CI60–88 and CI62–1068 are hereby severed from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued upon the conditions set forth herein to the applicants for the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement

[4] The hearings in the Union Texas Petroleum, *et al.*, consolidated proceeding concluded July 25, 1963.

proposals and this order, and for the contruction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications and settlement proposals herein.

(D) The certificates issued by paragraph (C) above, are granted upon the express condition that the applicants comply fully with the terms of this order and the settlement proposals which settlement proposals are expressly approved, as modified by this order.

(E) The refunds required by the settlement proposals and this order shall be made within 90 days from the date of issuance of this order.

(F) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposals the applicants shall report to the Commission, in triplicate, the amount of the refunds, made to each pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with releases from the purchasers showing receipt of the refunds in conformity with the settlements and the conditions of this order.

(G) Upon full compliance of the applicants with all the terms of this order and of the settlement of proposals as modified, the applicants shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(H) The certificates herein issued are not transferable and shall be effective only so long as the applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(I) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however,* that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rates as required by this order and the settlement proposals.

(J) The grant of certificates herein and approval of the settlement proposals is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, applicants, the Commission staff, or any affected party herein in any other proceeding.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; SUN OIL COMPANY, G-19574 AND CI62-1186

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT PROPOSAL AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 23, 1963)

On October 14, 1963, Sun Oil Company (Sun) filed a motion for severance of the above-captioned Sun proceedings from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket Nos. G-13221, *et al.*, (hereinafter referred to as the Union Texas proceeding), for approval of the attached settlement proposal and for the prompt issuance of certificates of public convenience and necessity in accordance with the applications and the settlement proposal.

The terms of the settlement proposal are similar to the terms of other settlements in the Union Texas proceeding which have been approved by the Commission [1] and provide for initial rates of 20.625¢ per Mcf [2] for sales from south Louisiana, effective April 1, 1963; a five-year moratorium on rate increase filings (subject to the usual exceptions); and extension of the make-up periods for take-or-pay gas to four years in all rate schedules which provide lesser make-up periods.[3]

The rate under Rate Schedules Nos. 113 (G-19574) and 147 (CI62-1186) will be 20.625¢ per Mcf during the moratorium period and Sun proposes to refund to the pipeline purchasers the dollar amount of the difference between the rates collected for gas delivered since March 31, 1963, and that which would have been collected at the settlement rate. The temporary authorizations relating to these rate schedules do not contain express refund conditions.

Sun proposes to pay interest on all amounts to be refunded at a rate of 7 percent per annum to accrue through October 31, 1963.

In general, the proposal is in the public interest and we shall conditionally approve it.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61-2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61-2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61-2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61-2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

Sun, by separate motion and offer filed on October 22, 1963, proposes a settlement of the matters in Docket No. CI60-75, another certificate application

---

[1] See orders issued August 7, 1963 (Humble Oil & Refining Company), and October 9, 1963 (Gulf Oil Corporation and Socony Mobil Oil Company, Inc.), in *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*, 30 FPC 456 and 979, respectively.

[2] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[3] See Appendix for further details.

in the Union Texas Proceeding. However, on November 22, 1963, the Public Service Commission of New York filed a response in opposition to the offer in Docket No. CI60–75. Therefore that motion will be denied and the offer rejected by separate order. Although there are other Sun dockets consolidated in the Union Texas proceeding (G–3653 G–11116, G–16267 and CI60–490) our records show that the proposed initial prices in those dockets are less than the settlement rate of 20.625¢ per Mcf. Therefore, although we are of the view that settlements should include all dockets in the proceeding, in the circumstances here presented and since sales under the temporary authorizations heretofore issued in Docket Nos. G–19574 and CI62–1186 are currently being made without refund conditions and at high rates, we are constrained to conditionally approve the settlement of the matters in Docket Nos. G–19574 and CI62–1186 separately.

In accordance with the above we shall sever these Sun dockets from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, omit the intermediate decision in regard to these dockets [4] and issue certificates of public convenience and necessity in accordance with the applications, settlement proposal and conditions of this order.

The Commission finds:

(1) The Sun Oil Company is a "natural-gas" company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Sun is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motion for waiver of the intermediate decisions is granted.

(B) The matters in the Sun dockets listed in the caption to this order are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued to Sun Oil Company upon the conditions set forth herein authorizing the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in Sun's applications and settlement proposal herein.

[4] The hearings in the Union Texas Petroleum, *et al.*, consolidated proceeding concluded July 25, 1963.

(D) The certificates issued by paragraph (C) above, are granted under the express condition that Sun comply fully with the terms of this order and the settlement proposal, which settlement is expressly approved, under the conditions of this order.

(E) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal Sun shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchasers, showing separately the amount of principal and interest so paid and the bases used for such determination, together with releases from the purchasers showing receipt of the refunds in conformity with the settlement as approved.

(F) Upon full compliance of Sun with all the terms of this order and of the settlement proposal, Sun shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(G) The certificates herein issued are not transferable and shall be effective only so long as Sun continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules regulations and orders of the Commission.

(H) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(I) The grant of certificates herein and approval of the settlement proposal are without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Sun, particularly any proceeding under Sections 4 or 5 of the Natural Gas Act and are without prejudice to claims or contentions which may be made by the Commission, Applicant, the Commission staff, or any affected party herein in any other proceeding.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP64–83

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 24, 1963)

On October 1, 1963, Cities Service Gas Company (Applicant) filed in Docket No. CP64–83, an application pursuant to Section 7(c) of the Natural Gas Act

for a certificate of public convenience and necessity authorizing the installation and construction during the calendar year 1964, and the operation of small field compressor units ranging in size from 200 to 300 horsepower on gathering laterals in various gas producing fields to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producer thereof, all as more fully set forth in the application.

Such compressor units will enable Applicant to take into its system supplies of gas from certain fields in which it has certain contractual obligations. Such obligations require Applicant to make ratable field purchases and to operate its field lines at pressures sufficiently low to permit the wells to feed into these lines. The wellhead pressures of certain wells are declining; therefore, additional compressors are needed.

The total cost of the proposed facilities will not exceed a maximum of $500,000, and the cost of such units for any single producing area will not exceed $125,000. The proposed facilities will be financed from treasury cash.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 20, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the installation and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The installation and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to installation and construction during the calendar year 1964, and the total expenditures for facilities to be installed and constructed thereunder should be limited to a maximum of $500,000, with no single project to exceed a cost of $125,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to install and construct during the calendar year 1964 the proposed compressor facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted by paragraph (A) above is hereby limited to installation and construction during the calendar year 1964, and the total expenditures for facilities to be installed and constructed thereunder are hereby limited to a maximum of $500,000, with no single project to exceed a cost of $125,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP64-84

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 24, 1963)

On October 1, 1963, Cities Service Gas Company (Applicant) filed in Docket No. CP64-84 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the calendar year 1964 and operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with its system.

The total cost of the proposed facilities will not exceed a maximum of $3,000,000 and no single project will exceed a cost of $500,000. The application states that the proposed facilities will be financed from treasury cash.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 20, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the calendar year 1964 and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct during the calendar year 1964, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the calendar year 1964, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP63-197

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 24, 1963)

On January 7, 1963, as amended on July 3 and September 25, 1963, Colorado Interstate Gas Company (Applicant) filed in Docket No. CP63-197 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the operation of certain existing facilities to exchange natural gas with Phillips Petroleum Company (Phillips), all as more fully set forth in the application, as amended.

The application, as amended, shows that Applicant will sell to Cabot Corporation (Cabot) up to a maximum daily average of 20,000 Mcf of natural gas through 12:01 a.m., January 1, 1965. Said volumes of gas will be used by Cabot in its carbon black operations, Panhandle Field, Texas. Pursuant to an agreement, dated May 8, 1963, as amended, between Applicant and Phillips, the gas to be sold by Applicant to Cabot will be delivered by Phillips from its system in Carson County, Texas, to Cabot for the account of Applicant. The application, as amended, further shows that in exchange for the volumes delivered by Phillips, Applicant will deliver equivalent volumes to Panhandle Eastern Pipe Line Company (Panhandle) for the account of Phillips. Said volumes will be delivered by means of existing facilities interconnecting Applicant's and Panhandle's system in Texas County, Oklahoma. Such deliveries are provided for by an agreement dated May 8, 1963, as amended, between Applicant and Panhandle. Applicant proposes to deliver to Panhandle for Phillips' account a maximum daily average of 25,000 Mcf for the period ending 12:01 a.m., January 1, 1965.

Therefore, Applicant requests authorization to operate existing facilities to deliver to Panhandle gas equal in volume to that exchanged with Phillips and delivered by Phillips to Cabot for the account of Applicant.

Applicant states that it has an excess supply of gas and is making the short-term sale to Cabot in order to help comply with minimum take provisions of its gas purchase and lease agreements.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as amended, has been filed.

At a hearing held on December 20,1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, amendments and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record.

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G-294 (4 FPC 936).

(2) The facilities hereinbefore described, as more fully described in the application, as amended, in this proceeding, are to be used in the transportation and delivery of natural gas in interstate commerce, subject to the jurisdiction

of the Commission and the operation thereof and the subject transportation and delivery of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The operation of the subject facilities and the proposed transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) The certificate hereinafter issued should be further conditioned as follows:

(a) The volume of gas sold to Cabot should be limited to a maximum daily average of 20,000 Mcf, for the period covered by the agreement, as amended, between Applicant and Phillips, expiring 12:01 a.m., January 1, 1965.

(b) The volume of replacement gas to be delivered by Applicant to Panhandle should be limited to a maximum daily average of 25,000 Mcf; provided, however, that the total volumes of gas delivered by Applicant to Panhandle during the period terminating 12:01 a.m., January 1, 1965, should not exceed the total volume of gas delivered by Phillips to Cabot for the account of Applicant.

(c) The certificate hereinafter issued should terminate at 12:01 a.m., January 1, 1965.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Colorado Interstate Gas Company, to operate existing facilities and to transport and deliver natural gas, as hereinbefore described, all as more fully described in the application, as amended, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(C) The certificate issued by paragraph (A) above is hereby further conditioned as follows:

(a) The volume of gas sold to Cabot shall be limited to a maximum daily average of 20,000 Mcf, for the period covered by the agreement, as amended, between Applicant and Phillips, expiring 12:01 a.m., January 1, 1965.

(b) The volume of replacement gas to be delivered by Applicant to Panhandle shall be limited to a maximum daily average of 25,000 Mcf; provided, however, that the total volumes of gas delivered by Applicant to Panhandle during the period terminating 12:01 a.m., January 1, 1965, shall not exceed the total volume of gas delivered by Phillips to Cabot for the account of Applicant.

(c) The certificate issued by paragraph (A) above shall terminate at 12:01 a.m., January 1, 1965.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. CP64-86

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 24, 1963)

On October 3, 1963, Kansas-Nebraska Natural Gas Company, Inc. (Applicant) filed in Docket No. CP64-86 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the 12-month period commencing November 28, 1963, and the operation of routine pipeline, measuring and compression facilities on Applicant's existing gathering and transmission systems to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities proposed hereunder will not exceed a maximum of $1,450,000, with no single project to exceed a cost of $360,000. These costs will be defrayed from current working capital.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 20, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Kansas-Nebraska Natural Gas Company, Inc., a Kansas corporation having its principal place of business in Phillipsburg, Kansas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-259 (3 FPC 966).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit within 60 days after the expiration of the authorization granted hereinafter, a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing November 28, 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $1,450,000, with no single project to exceed a cost of $360,000.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Kansas-Nebraska Natural Gas Company, Inc., to construct during the 12-month period commencing November 28, 1963, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit within 60 days after the expiration of the authorization granted by paragraph (A) above a statement in compliance with Section 2.58(c) of the Commission's Rules of Practice and Procedure.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing November 28, 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $1,450,000, with no single project to exceed a cost of $360,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP61-30 AND DOCKET NO. CP64-71 (PHASE I)*

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 24, 1963)

On September 23, 1963, as amended on October 18, 1963, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP64-71 (Phase I) an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities in order to enable Applicant to purchase and receive from

*The application in Docket No. CP64-71 is divided into two phases. This order pertains exclusively to Phase I of said application.

Texaco Inc. (Texaco)[1] natural gas produced from the Kelsey and Encinitas Fields, Brooks County, Texas, all as more fully set forth in the application, as amended.

The facilities proposed in both Phase I and Phase II of the application are ultimately to enable Applicant to receive gas from four fields in Willacy and Hidalgo Counties, Texas, as well as from Kelsey-Encinitas Fields. However, since the producer certificate proceedings involving the Willacy and Hidalgo Counties fields are still pending before the Commission, Applicant requests that the Phase I facilities be considered and authorized separately.

Specifically, in Phase I Applicant proposes to construct and operate in Jim Wells and Brooks Counties, Texas, approximately 24.15 miles of 16-inch and 19.43 miles of 8-inch pipeline, metering facilities, tap connection and other miscellaneous appurtenant facilities in order to receive the Kelsey-Encinitas Fields gas.

The application shows the estimated cost of Phase I facilities to be $1,500,000, which cost will be financed by short-term borrowing pending permanent financing.

On September 23, 1963, Applicant filed in Docket No. CP61–30 an application to amend further the Commission's order issued July 11, 1961, as amended on December 12, 1962, by deleting therefrom authorization to construct and operate 30 miles of 10-inch pipeline originally proposed to have been constructed to receive gas from the Kelsey-Encinitas Fields, all as more fully set forth in the application to amend.

Since construction has not commenced, Applicant requests the deletion of the authorization for said 30 miles of 10-inch line because the Kelsey-Encinitas gas can be more economically attached under Applicant's proposals in both Phases in Docket No. CP64–71.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the applications has been filed.

At a hearing held on December 20, 1963, the Commission on its own motion received and made a part of the record in these proceedings all evidence, including the application, amendment thereto and exhibits in Docket No. CP64–71 (Phase I) and the application to amend in Docket No. CP61–30, submitted in support of the authorizations sought herein, and upon consideration of the records,

The Commission finds:

(1) Applicant, Natural Gas Pipeline Company of America, a Delaware corporation having its principal place of business in Chicago, Illinois, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 13, 1942, in Docket No. G–235 (3 FPC 830).

(2) The facilities to be constructed by Applicant, as hereinbefore described and as more fully described in the application, as amended, in Docket No. CP64–71 (Phase I), are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and construction and operation thereof by Applicant are subject to the requirments of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the facilities proposed by Applicant in Docket No. CP64–71 (Phase I) are required by the public convenience and

[1] Texaco was authorized to sell gas to Applicant by the Commission's orders issued March 27 and August 27, 1963, in Docket Nos. CI61–118 and CI61–119.

necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter to Applicant and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued July 11, 1961, as amended December 12, 1962, in Docket No. CP61–30 be further amended as hereinafter ordered.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Natural Gas Pipeline Company of America, to construct and operate the facilities as hereinbefore described, all as more fully described in the application in Docket No. CP64–71 (Phase I), upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities authorized in paragraph (A) above shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

(D) The Commission's order issued July 11, 1961, as amended December 12, 1962, in Docket No. CP61–30 be and the same is hereby further amended by deleting therefrom authorization to construct and operate 30 miles of 10-inch pipeline, and appurtenant facilities, to have been constructed to enable Applicant to receive gas from the Kelsey-Encinitas Fields, all as hereinbefore described and as set forth in the subject application to amend.

(E) In all other respects said order, as amended, shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. G–1907

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 24, 1963)

On October 7, 1963, Southern Natural Gas Company (Petitioner) filed a petition to amend the Commission's order issued May 4, 1953, 12 FPC 550, in Docket No. G–1907, by authorizing the sale and delivery of 500 Mcf of natural-

gas on a firm basis to United Merchants and Manufacturers, Inc. (United Merchants) at its Clearwater Finishing Company plant at Clearwater, South Carolina, and by authorizing the installation and operation of additional metering facilities necessary for such sale.

Petitioner has agreed to supply its present customer, United Merchants, with 500 Mcf of natural gas per day on a firm basis in addition to the gas now being supplied on an interruptible basis. In order to make the sale and delivery, certain metering facilities to render the service must be installed at an estimated cost of $2,835, which cost is to be financed from funds on hand.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the petition has been filed.

At a hearing held at Washington, D.C., on December 20, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the petition to amend and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued May 4, 1953, in Docket No. G–1907 be amended as hereinafter conditioned and ordered.

The Commission orders:

(A) The Commission's order issued May 4, 1953, in Docket No. G–1907 be and the same is hereby amended by authorizing the construction and operation hereinbefore described and the sale of 500 Mcf of natural gas per day on a firm basis to United Merchants and Manufacturers, Inc. as more fully set forth in the petition to amend.

(B) The certificate issued hereby is granted on the express condition that the sale authorized herein shall be subject to curtailment and interruption if required to meet the existing and future contract demands of Applicant's customers for firm resale service.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP64–38

FINDINGS AND ORDER AFTER STATUTORY HEARING, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 24, 1963)

On August 9, 1963, Southern Natural Gas Company (Applicant) filed in Docket No. CP64–38 an application (and supplements thereto on September 20 and 27, 1963), pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain line taps and metering facilities and the sale and delivery of additional volumes of natural gas to South Carolina Natural Gas Company, for resale in the communities of Bath and Graniteville, Aiken County, South Carolina, all as more fully set forth in the application.

Applicant states that the present capacity of its Clearwater and Graniteville branch lines are adequate to supply the requested requirements of the communities of Bath and Graniteville and that the estimated cost of the proposed facilities is $29,800, which is to be financed from funds on hand.

The estimated maximum volume of gas for the third year and thereafter is 1,249 Mcf on peak days and 159,000 Mcf per year. Neither of the above named communities has heretofore been served with natural gas. Temporary authorization to construct and operate the proposed facilities and render the proposed service gas granted by the Commission on October 11, 1963.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application has been filed.

At a hearing held on December 20, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application exhibits and supplements submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Southern Natural Gas Company is a "natural-gas company" within the meaning of the Natural Gas Act as found by the Commission in its order of October 6, 1942 in Docket No. G–296 (3 FPC 822).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Southern Natural Gas Company, to construct and operate facilities and to sell natural gas in interstate commerce for resale as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL.; GEORGE R. BROWN, ET AL., DOCKET NO. G–18131;[1] REUBEN W. MAYRONNE, JR., D/B/A RIVERSIDE OIL COMPANY (OPERATOR), ET AL., DOCKET NO. G–20182;[1] GEORGE R. BROWN (OPERATOR), ET AL., DOCKET NO. CI60–580;[1] TIDEWATER OIL COMPANY (OPERATOR), ET AL., DOCKET NO. CI62–638;[2] TEXAS GULF PRODUCING COMPANY, DOCKET NO. ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING SETTLEMENT PROPOSALS AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 26, 1963)

Motions for severance, for approval of settlement proposals and for issuance of certificates of public convenience and necessity in their respective dockets were filed in the above-captioned proceedings on November 8, 1963, by George R. Brown (Brown); on November 13, 1963, by Texas Gulf Producing Company (Texas Gulf); on November 15, 1963, by Tidewater Oil Company (Tidewater) and Reuben W. Mayronne, Jr., d/b/a Riverside Oil Company (Riverside).

The settlement proposals are similar to those previously approved by the Commission[3] and provide for the issuance of permanent certificates at maximum initial rates of 20.625¢ per Mcf[4] for sales from the taxing jurisdiction of the State of Louisiana; five-year moratoria on rate increase filings commencing April 1, 1963 (subject to the usual exceptions); extension of the take-or-pay make-up periods to four years in all contracts which provide lesser make-up periods; and refunds with interest at 7 percent per annum of amounts above the settlement rate collected for deliveries made since the effective date of the rate reductions.[5]

The effective rate during the moratorium period will be 20.625¢ per Mcf in all cases except Docket Nos. CI60–580, CI63–823 and CI63–824. In Docket No. CI60–580 Brown proposes that the certificate be issued at the initial rate of 20.25¢ per Mcf and that the increased rate in effect subject to refund in Docket No. RI62–145 (22.25¢ per Mcf) remain in effect subject to further orders of the Commission in the rate proceeding in Docket No. RI62–145. In Docket Nos. CI63–823 and CI63–824, Tidewater proposes that the initial rates of 19.75¢ per Mcf[6] and 19.25¢ per Mcf remain in effect during the moratorium period.

---

[1] Applications, related rate schedules and settlement offers include interests of "*et al.*" sellers designated in such filings.

[2] Signatory co-owners in the contract covering this sale are Hudson Gas & Oil Corporation (Hudson) and R. E. Hibbert (Hibbert). Hudson has its own rate schedule (No. 6) on file and its own application for a certificate pending in Docket No. CI62–841. Likewise, Hibbert has his own rate schedule on file (No. 6) and his own application pending in Docket No. CI62–702.

Tidewater as operator proposes to settle as to its own interests and those of the non-signatory owners. However, the signatory co-owners are not included in the settlement.

[3] See *e.g.*, orders issued August 7, 1963, and October 9, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979, respectively.

[4] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[5] See Appendix for further details.

[6] In its motion and offer, Tidewater states that the initial rate in this docket is 19.5¢ per Mcf. However, our records show it as 19.75¢ per Mcf and the certificate herein issued will be at the latter rate.

No answers to these motions have been received.

These proposals, generally, are in the public interest and we shall approve them subject to the following reservations and conditions.

Texas Gulf proposes to make refunds of amounts collected above the settlement rate for the period April 1, 1963, to November 1, 1963, with interest at 7 percent per annum. Since time has passed since Texas Gulf filed its offer and further collections of the higher rate may have been made, the excess must also be refunded. Our approval is so conditioned.

In keeping with our present policy, we shall require that the interest to be paid by Texas Gulf accrue through the last day of the month in which the settlement proposal was filed, November 30, 1963.

In the context of the proposals, we interpret the term "delivered" as used in paragraph 1 of the proposals to include gas required to be taken during the moratorium periods but paid for and not taken when paid for. In other words, prepayments shall not be made during the moratorium periods at rates higher than the rates in effect for gas physically delivered. Our approval of these settlements is conditioned upon such interpretation.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposals also provide that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlements will be so conditioned.

In accordance with the above we shall sever these individual dockets from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, omit the intermediate decision in regard to these dockets[7] and issue certificates of public convenience and necessity in accordance with the applications, settlement proposals and conditions of this order.

The Commission finds:

(1) Each of the applicants herein is a "natural-gas" company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Each of the applicants herein is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public

[7] The hearings in the Union Texas Petroleum, *et al.*, consolidated proceeding concluded July 25, 1963.

interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motions for waiver of the intermediate decisions are granted.

(B) The matters in Docket Nos. G–18131, G–20182, CI60–580, CI62–638, CI63–772, CI63–823 and CI63–824 are hereby severed from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued upon the conditions set forth herein to the applicants for the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposals and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications and settlement proposals herein.

(D) The certificates issued by paragraph (C) above, are granted upon the express condition that the applicants comply fully with the terms of this order and the settlement proposals which settlement proposals are expressly approved, as modified by this order; the certificate issued to Texas Gulf is granted upon the further express condition that it refund amounts above the settlement rates, if any, collected for deliveries made subsequent to November 1, 1963, and prior to the reductions required by the settlement and this order.

(E) Interest shall be paid on all amounts to be refunded under the terms of the settlements and this order (including refunds of all amounts collected for deliveries made since March 30, 1963, above that which would have been collected at the settlement rates, except in Docket No. CI60–580) at a rate of 7 percent per annum, such interest to accrue through the last day of the month in which the settlements were filed, November 30, 1963. All refunds required by this order shall be made within 90 days from the date of issuance hereof.

(F) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposals, the applicants shall report to the Commission, in triplicate, the amount of the refunds made to each pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with releases from the purchasers showing receipt of the refunds in conformity with the settlements and the conditions of this order.

(G) Upon full compliance of the applicants with all the terms of this order and of the settlement proposals as modified, the applicants shall be relieved of any further refund obligations in these certificate proceedings and said proceeding shall terminate.

(H) The certificates herein issued are not transferable and shall be effective only so long as the applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(I) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the 30-day notice provisions of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rates as required by this order and the settlement proposals.

(J) The grant of certificates herein and approval of the settlement proposals are without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants, particularly any proceedings under Sections 4 or 5 of the Natural Gas Act and are without prejudice to claims or contentions which may be made by the Commission, applicants, the Commission staff, or any affected party herein in any other proceeding.

(K) Upon full compliance of Riverside with all the terms of this order and of its settlement proposal as modified, Supplements Nos. 1, 2 and 3 to Rate Schedule No. 2 shall be accepted for filing effective as of the date of initial delivery.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; HERMAN BROWN, DOCKET NO. CI61-709; GEOLOGICAL, GEOPHYSICAL ASSOCIATES, INC. (OPERATOR), ET AL.,[1] DOCKET NO. CI61-1519

ORDER SEVERING PROCEEDING, CONDITIONALLY APPROVING SETTLEMENT PROPOSALS AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 26, 1963)

On September 18, 1963, Geological, Geophysical Associates, Inc. (Operator), *et al.* (GGA), filed a motion for severance of the above-entitled GGA docket from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.* (hereinafter referred to as the Union Texas proceeding), for approval of the attached settlement offer, and for the issuance of a certificate of public convenience and necessity in accordance with the application and settlement proposal. GGA's settlement proposal was amended on November 6, 1963.

On November 21, 1963, the Estate of Herman Brown, Deceased (Brown) filed a similar motion and settlement offer in Docket No. CI61-709.

The terms of the Brown proposal and the GGA proposal, as amended, are similar to other settlements in the Union Texas proceeding which have been

[1] The application, related rate schedule and settlement proposal include the interests of the *"et al."* sellers set forth in the rate schedule.

approved by the Commission[2] and provide for initial rates of 20.625¢ per Mcf[3] for sales of gas from south Louisiana; a five year moratorium on rate increase filings (subject to the usual exceptions) effective April 1, 1963; extension of the take-or-pay make-up periods to four years; refunds of all amounts collected in excess of the settlement rates since the dates of initial deliveries under the refund-conditioned temporary authorizations.[4]

As originally filed, GGA's offer did not provide for refunds of amounts in excess of the settlement rate collected since the date of initial delivery. This aspect of GGA's offer was objected to on September 27, 1963, by Consolidated Edison Company of New York, Inc., on October 4, 1963, by Public Service Electric and Gas Company, and on October 11, 1963, by The Brooklyn Union Gas Company. GGA's amendment filed on November 6, 1963, cured the objectionable omission.

In general, these proposals are in the public interest and we shall conditionally approve them.

Brown proposes to pay interest on all amounts to be refunded at a rate of 7 percent per annum to accrue through November 30, 1963. GGA's proposal, as amended, does not provide for interest. We shall require that GGA pay interest on the amounts to be refunded at a rate of 7 percent per annum, such interest to accrue through the last day of the month in which GGA filed the amendment to its offer, November 30, 1963.

In the context of the proposals, we interpret the term "delivered" as used in paragraph 1 of the settlement offers to include gas required to be taken during the moratorium period but paid for and not taken and our approval is conditioned upon such interpretation. Thus, prepayments, if any, shall be made during the moratorium periods at rates no higher than the rates in effect for gas physically delivered.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposals also provide that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order.

However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlements will be so conditioned.

In accordance with the above we shall sever these individual dockets from the Union Texas proceeding, omit the intermediate decision in regard to these dockets,[5] and issue certificates of public convenience and necessity in accordance with the applications, settlement proposals, as amended, and conditions of this order.

The Commission finds:

(1) Each of the applicants is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate

[2] See orders issued August 7, 1963 (Humble Oil & Refining Company) and October 9, 1963 (Gulf Oil Corporation and Socony Mobil Oil Company, Inc.) in Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, 30 FPC 456 and 979, respectively.

[3] All rates expressed inclusive of applicable tax reimbursement and all volumes expressed at 15.025 psia.

[5] The hearings in the Union Texas Petroleum, *et al.*, consolidated proceeding concluded July 25, 1963.

commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) No party has opposed the waiver of the intermediate decisions in these proceedings.

The Commission orders:

(A) The motions for waiver of the intermediate decisions are granted.

(B) The matters in Docket Nos. CI61–709 and CI61–1519 are hereby severed from the consolidated proceeding Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*

(C) Certificates of public convenience and necessity are hereby issued to the applicants in Docket Nos. CI61–709 and CI61–1519 upon the conditions set forth herein authorizing the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposals, as amended, and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the applications and settlement proposals herein.

(D) The certificates granted by paragraph (C) above, are granted upon the express condition that applicants comply fully with the terms of this order and the settlement proposals, as amended, which settlements are expressly approved under the conditions of this order.

(E) Within 90 days from the date of issuance of this order, applicants shall refund to the respective pipeline purchasers the difference between the amounts collected since the dates of initial deliveries and the amounts that would have been collected under the settlement rates together with interest computed at a rate of 7 percent per annum, such interest to accrue through the last day of the month in which the settlement proposals, as amended, were filed, November 30, 1963.

(F) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposals, as amended, each applicant shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchaser, showing separately the amount of principal and interest so paid and the bases used for such determination, together with a release from the purchaser showing receipt of the refunds in conformity with the settlement as approved.

(G) Upon full compliance of applicants with all the terms of this order and and of the settlement proposals, as amended, applicants shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(H) The certificates herein issued are not transferable and shall be effective only so long as applicants continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(I) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however,* that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(J) The grant of certificates herein and approval of the settlement proposals, as amended, is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against applicants, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, applicants, the Commission staff, or any affected party herein in any other proceeding.

CITY OF NEW BOSTON, ILLINOIS, DOCKET NO. CP64-22

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued December 27, 1963)

On July 23, 1963, the City of New Boston, Illinois (Applicant), filed an application herein, and on November 19, 1963, a supplement thereto, pursuant to Section 7(a) of the Natural Gas Act, for an order of the Commission directing Michigan Wisconsin Pipe Line Company (Michigan Wisconsin) to establish physical connection of its transportation facilities with the facilities proposed to be constructed by Applicant, and to sell and deliver to Applicant the volume of natural gas estimated to be required for sale and distribution in the third year of operation in the community of New Boston, as hereinafter described.

Applicant shows that its annual and peak day requirements for the first three years of operation will be as follows:

Year of operation	(*Volumes—Mcf*) *Peak day*	*Annual*
1st	391	42,620
2d	426	46,687
3d	465	50,240

Applicant proposes to construct and operate a municipally owned natural gas distribution system within the borders of the City of New Boston and also two regulating stations and appurtenant equipment. It is also proposed on the basis of the 10 cent formula, Michigan Wisconsin construct a 4-inch lateral line from a point on its main transmission line in Illinois to a measuring station, which it will also construct, to be located approximately 1.5 miles north of its main pipeline.

Applicant estimates the cost of constructing the proposed distribution system and the New Boston portion of lateral line (approximately 1.5 miles) and said two regulating stations and appurtenant equipment will be approximately $210,000, which will be financed by the sale of gas revenue bonds.

Pursuant to due notice, the hearing was convened on November 20, 1963. Such hearing was recessed on that date to reconvene on December 2, 1963. On the latter date a public hearing was held respecting the matters involved in and the issues presented by the application.

No protest or petition to intervene has been received. Michigan Wisconsin, having filed herein an answer on August 23, 1963, questioned the economic feasibility of the project.

On November 19, 1963, New Boston filed herein an amendment to its application. Thereafter, on November 22, 1963, Michigan Wisconsin filed an amendment to its answer stating that New Boston's said amendment to its application satisfactorily meets the issues raised by Michigan Wisconsin's answer of August 23, 1963, and that it has no objection to the entry of an order granting New Boston's application.

Michigan Wisconsin's original answer had stated that it could provide the requested service from its presently authorized gas supplies without the construction of additional main line facilities.

Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and the Commission render a decision herein pursuant to section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) The City of New Boston, Illinois is a municipal corporation and is legally authorized to construct, own and operate a local gas distribution system.

(2) Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 30, 1946 in Docket No. G-669 (5 FPC 953).

(3) It is necessary and desirable in the public interest that the Commission, by order, direct Michigan Wisconsin Pipe Line Company to establish physical connection of its transportation facilities with the facilities proposed to be constructed by the City of New Boston, Illinois and to sell and deliver to New Boston a maximum volume of 465 Mcf of natural gas per day for resale and distribution in said community.

(4) The extent of the required lateral to be constructed by Michigan Wisconsin Pipe Line Company in order to render service to the City of New Boston, Illinois, as set forth in paragraph (3) *supra* should be determined by Michigan Wisconsin's ten cent formula as heretofore approved by the Commission.

(5) The requirement that Michigan Wisconsin serve applicant as above set forth will not place any undue burden upon it nor require it to enlarge its facilities, nor impair its ability to render adequate service to its existing customers.

(6) A request having been made by staff counsel for omission of the intermediate decision procedure and all requirements of the provisions of Section 1.30(c)(1) [18 CFR 1.30(c)(1)] of the Commission's Rules of Practice and Procedure

having been satisfied, sufficient cause exists for the Commission forthwith to render its final decision in the instant proceeding.

The Commission orders:

(A) Michigan Wisconsin Pipe Line Company be and the same is hereby directed to establish physical connection of its transportation facilities with the facilities proposed to be constructed by the City of New Boston, Illinois, and to sell and deliver a maximum volume of 465 Mcf of natural gas per day to New Boston for resale and distribution in New Boston.

(B) Michigan Wisconsin Pipe Line Company shall apply its "10-cent formula", as heretofore approved by the Commission, in order to determine the amount of expenditures to be made by it for the cost of the transportation facilities necessary to render service to the City of New Boston, Illinois.

(C) The City of New Boston, Illinois, shall be prepared to receive natural gas service from Michigan Wisconsin Pipe Line Company within one year from the date of issuance of this order.

(D) Michigan Wisconsin Pipe Line Company shall report to the Commission in writing the date of commencement of service to said City of New Boston.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PAN AMERICAN PETROLEUM CORPORATION (OPERATOR), ET AL., DOCKET NO. G-7486

FINDINGS AND ORDER RESCINDING IN PART ORDER ISSUED JUNE 3, 1963, RESCINDING ORDER ISSUED OCTOBER 29, 1963, AND DISMISSING APPLICATION FOR REHEARING

(Issued December 27, 1963)

On January 24, 1961, Pan American Petroleum Corporation (Operator), *et al.* (Applicant), filed in Docket No. G-7486 an application to amend the order issuing a certificate in said docket to authorize the sale of natural gas from additional acreage. Concurrently therewith Applicant filed a Supplemental Gas Purchase Agreement dated September 20, 1960, dedicating the additional acreage to performance under the basic agreement, Applicant's FPC Gas Rate Schedule No. 136. The supplemental agreement was accepted for filing as Supplement No. 16 to said rate schedule.

By letter dated August 2, 1961, Applicant was requested to advise the Commission whether it would accept authorization for the additional sale conditioned upon the refunding of any amounts collected in excess of the rate found to be just and reasonable in the pending proceeding in Docket No. RI61-45. Docket No. RI61-45 is a rate proceeding in which a proposed increased rate, designated as Supplement No. 15 to Applicant's FPC Gas Rate Schedule No. 136, is being collected subject to refund. By letter dated December 4, 1961, Applicant advised the Commission that it was unwilling to accept permanent authorization with such a condition.

On April 12, 1963, the Commission issued a notice of the application to amend (published in the Federal Register on April 20, 1963, 28 F.R. 3944) and stated therein the rate of 15.559869¢ per Mcf for Supplement No. 16. This is the rate proposed in Supplement No. 15 and being collected subject to refund as may be determined in Docket No. RI61-45. On June 3, 1963, an order was issued in Docket No. G-7486, *et al.*, which granted authorization to sell natural gas from the additional acreage; and on October 29, 1963, the Commission issued an order amending the order of June 3, 1963, to make the sale of gas pursuant to

Supplement No. 16 subject to the rate proceeding in Docket No. RI61–45. On November 27, 1963, Applicant filed an application for rehearing of the order of October 29, 1963.

Inasmuch as Applicant has expressed its unwillingness to accept authorization for the sale of gas from additional acreage conditioned upon the refunding of any amounts collected in excess of the rate found to be just and reasonable in Docket No. RI61–45, the orders of June 3, 1963, and October 29, 1963, should not have been issued in Docket No. G–7486 and were, in fact, issued by mistake. The Commission realizes that the issuance of the October 29, 1963, order was not the way to correct its error in inadvertently granting permanent authorization at the increased rate. Inasmuch as the sale from additional acreage is being made pursuant to temporary authorization issued March 8, 1961, there will be no change in position for Pan American by the rescission of the orders of June 3, 1963, and October 29, 1963. We see no reason why Applicant should be allowed to profit by the error. See, *e.g.*, *American Trucking Assn., Inc.*, v. *Frisco Transportation Co.*, 358 U.S. 133, 145. It would be an anomaly to authorize the sale of gas pursuant to a supplement to a contract under conditions other than those conditions which apply to the basic contract, particularly where the Applicant has indicated that the basic contract should apply to the additional volumes of natural gas covered by the supplemental agreement.

The Commission finds:

(1) Applicant has not agreed to accept permanent authorization in Docket No. G–7486 for sales made pursuant to Supplement No. 16 to Applicant's FPC Gas Rate Schedule No. 136 conditioned upon the refunding of any amounts collected in excess of the rate found to be just and reasonable in Docket No. RI61–45.

(2) The orders of June 3, 1963, and October 29, 1963, were issued by mistake.

The Commission orders:

(A) The order issued June 3, 1963, in Docket No. G–7486, *et al.*, be and the same is hereby rescinded insofar as said order authorized the sale of natural gas by Pan American Corporation (Operator), *et al.*, to El Paso Natural Gas Company pursuant to Supplement No. 16 to Pan American Petroleum Company (Operator), *et al.*, FPC Gas Rate Schedule No. 136; and in all other respects, said order shall remain in full force and effect.

(B) The order issued October 29, 1963, in Docket No. G–7486 be and the same is hereby rescinded.

(C) The application for rehearing of the order issued October 29, 1963, filed November 27, 1963, be and the same is hereby dismissed as moot.

(D) The matter of the application for authorization to sell natural gas from additional acreage filed in Docket No. G–7486 on January 24, 1961, shall be considered further in such proceedings as may be appropriate under the circumstances.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PAN AMERICAN PETROLEUM CORPORATION, DOCKET NO. CI61–516

ORDER DENYING APPLICATION FOR REHEARING

(Issued December 27, 1963)

On November 29, 1963, Pan American Petroleum Corporation (Applicant) filed in Docket No. CI61–516 an application for rehearing of the order issued

November 7, 1963, 30 FPC 1230, rescinding in part the order issued September 13, 1963 [not reported] in Docket No. G–4616, *et al.* The order issued September 13, 1963, amended the order issuing a certificate of public convenience and necessity to Applicant to authorize the sale of natural gas from additional acreage. The order issued November 7, 1963, rescinded said authorization.

On May 13, 1963, Applicant filed in Docket No. CI61–516 an application to amend the order issuing a certificate in said docket to authorize the sale of natural gas from additional acreage. Concurrently therewith Applicant filed an Amendatory Agreement dated April 4, 1963, dedicating the additional acreage to performance under the basic agreement, Applicant's FPC Gas Rate Schedule No. 330. The Amendatory Agreement was accepted for filing as Supplement No. 7 to said rate schedule. On June 19, 1963, the Commission granted a temporary certificate to Applicant pursuant to Section 157.28 of the Regulations under the Natural Gas Act to commence the sale of natural gas as proposed in the application of May 13, 1963. Said temporary certificate was conditioned as was the original certificate issued in said docket in the order accompanying Opinion No. 353 (27 FPC 449). In the letter order issuing the temporary certificate Applicant was requested to advise the Commission if it would accept permanent authorization with the same rate conditions. Applicant has not expressed its willingness to do so but did accept the temporary certificate and commence delivery pursuant thereto. On September 13, 1963, unconditioned permanent authorization was issued by mistake under the abridged hearing procedure.

Applicant asserts that the revocation of the permanent authorization to sell natural gas from additional acreage is in excess of Commission authority, is in violation of due process, is contrary to stability in Commission decisions, good order, proper administrative procedure, and the public interest, and constitutes an unlawful imposition of sanctions.

In fact, under the circumstances of this case the revocation of permanent authorization tends to promote consistency and stability in Commission decisions and is in the public interest.

The Commission, after a public hearing, determined under what conditions and at what rates natural gas might be sold under the basic contract and incorporated those determinations in Opinion No. 353. Applicant has accepted Opinion No. 353. The sale of gas from additional acreage was made under an amendatory agreement which states that the new sale ". . . shall be subject to the terms of the Contract to the same extent as if additional acreage had been originally described on the schedule attached as Exhibit 'A' to the Contract and in all other respects included under the terms of the Contract." Thus, it is apparent that Applicant intended the sales under the Amendatory Agreement to be made under the same conditions as the sales under the basic contract. Applicant has not been deprived of its right to due process by the prompt correction of a mistake by the Commission which should have been recognized by it clear and apparent when the erroneous notice for hearing was issued. Significantly, Pan American made no effort to contact the Commission to determine whether it intended to impose the Opinion No. 353 conditions, which it had previously been advised was the Commission's intention. In the absence of any change in position as a result of the Commission's error we see no reason why it should be allowed to so profit. See *e.g. American Trucking Assn., Inc.*, v. *Frisco Transportation Co.*, 358 U.S. 133, 145. Applicant is still entitled to a hearing under the Natural Gas Act on the issues presented by the application to amend.

The Commission finds:

The application for rehearing of the order of November 7, 1963, in Docket No. CI61–516 (Docket No. G–4616, *et al.*) sets forth no assignments of error to justify the revocation and vacation of said order as requested.

The Commission orders:

The application for rehearing of the order of November 7, 1963, in Docket No. CI61–516 (Docket No. G–4616, *et al.*) be and the same is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

UNITED STATES DEPARTMENT OF THE INTERIOR, SOUTHWESTERN POWER ADMINISTRATION, DOCKET NO. E–6407

ORDER CONFIRMING AND APPROVING RATES FOR SALE OF ELECTRIC POWER AND ENERGY

(Issued December 27, 1963)

Pursuant to the Flood Control Act of 1944 (58 Stat. 887), the Secretary of the Interior, on behalf of the Southwestern Power Administration (SWPA) on June 17, 1963, submitted for confirmation and approval, proposed increased rates for the third five-year period beginning January 1, 1964, for the sale of power and energy to Arkansas Power and Light Company, as provided for under the terms of an agreement, dated January 29, 1952, as supplemented, between the United States of America, Arkansas Power and Light Company (Arkansas Power) and Reynolds Metals Company (Reynolds), and on October 16, 1963 submitted supplemental information in relation thereto.

By order issued April 28, 1952, the Commission approved the schedule of rates and charges embodied in the agreement of January 29, 1952 (Aluminum Contract) as amended by supplemental agreement of April 25, 1952, to be effective for the 30-year term thereof,[1] subject to the provisions of the supplemental agreement for redetermination of rates by the Secretary for the second and each succeeding five-year period and confirmation and approval by the Commission.

The agreement, as supplemented, provides for SWPA to sell 150,000 kilowatts and 30,000,000 kilowatt-hours per month of firm hydroelectric power and energy to Arkansas Power and for the latter in turn to sell 110,000 kw at a high load factor to Reynolds at its alumnium plant at Arkadelphia, Arkansas. Payment by Arkansas Power during the first five-year period of the contract term, is at the base rate of 6 mills per kwh for the first 22,000,000 kwh of monthly energy and 3 mills per kwh for the remaining 8,000,000 kwh; the average of these rates it 5.2 mills. In addition, SWPA may sell to Arkansas Power up to 25,000,000 kwh of secondary energy per month at a rate of 1.25 mills per kwh during the first five-year period of the term of the agreement; 1.50 mills per kwh during the next ten-year period; 1.75 mills per kwh during the next five-year period and 2.00 mills per kwh during the final ten-year period.

The agreement further provides that the base rate for firm power service shall be reviewed and redetermined by the Secretary effective as of the commencement of the second and each succeeding five-year period provided that the increased rate resulting therefrom shall not exceed, for each period, 110%,

[1] The 30-year term began January 1, 1954.

115%, 117½%, 120% and 122½% respectively, of the initial base rate; nor shall such redetermined rate be higher than would be required to meet the standards of Section 5 of the Flood Control Act of 1944 if equally applied to all customers of SWPA that are similarly situated.

In the above filing, the Secretary reports that, pursuant to the agreement, he has reviewed the base rate and has redetermined it to be 115% of the initial base rate effective for the period of the eleventh through the fifteenth year of service thereunder, beginning with January 1, 1964, and requests confirmation and approval thereof by this Commission. The proposed rate is 6.90 mills per kwh for the first 22,000,000 kwh of monthly energy and 3.45 mills per kwh for the remaining 8,000,000 kwh. The average of these rates is 5.98 mills per kwh.

In support of the proposed increase from 110 to 115% of the initial base rate, the Secretary refers to the information and data submitted in previous filings of repayment studies and other analyses as support for the present review by the Commission. Specific reference was made to the repayment study and data filed in 1956, in Docket No. IT–5971, *et al.*, together with other analyses and data filed in support of the existing Aluminum contract rate level which became effective January 1, 1959.

The Secretary points out that in 1956 it was shown that if the Aluminum Contract rates continued to become effective, the revenue estimate for 1958 as shown in SWPA repayment studies would have to be reduced by $1,098,000 and by lesser amounts for succeeding years totaling $22,000,000 for the remaining years of the contract which deficiency would result from inability to apply the standard P–1 rate schedule to these sales. This discrimination between classes of customers which existed in 1958 still exists. Preferred customers who purchase power and energy at load factors and under the same character and conditions of service as outlined in the Aluminum Contract continue to pay an average of 8.25 mills per kilowatt-hour under the P–1 rate schedule while Arkansas Power and Light Company pays SWPA today an average of only 5.72 mills per kilowatt-hour. This difference amounts to an annual loss of revenue of $910,800 to the Government which totals $4,554,000 over a five-year period. The Secretary further states that the rate must be increased to the maximum allowable for the next five-year period beginning January 1, 1964, in order to minimize to the greatest extent the deficiency under the Aluminum Contract. The average rate of 5.98 mills per kilowatt-hour to be effective January 1, 1964, under the Aluminum Contract would still be far below the level of the P–1 rate schedule, but would reduce the loss by $93,600 per year and lessen the degree of inequity and discrimination in the Aluminum Contract rate level. This must be accomplished in order to comply as much as possible with requirements of Section 5 of the Flood Control Act of 1944 which requires among other things that rate schedules shall be drawn having regard to the recovery (upon the basis of the application of such rate schedules to the capacity of the facilities of the projects) of the cost of producing and transmitting such electric enegry, including the amortization of the capital investment allocated to power over a reasonable period of years.

The most recent information concerning the financial status of SWPA was filed in support of SWPA's Rate Schedule P–2 which was approved by the Commission by order issued April 30, 1962 (Docket No. E–6975). This information included a comparison of estimated revenues and costs for fiscal year 1962, estimated by SWPA in November, 1961, which revealed that anticipated revenues would fall short by about $4 million of paying operating expenses and interest charges for that year. Furthermore, applying the proposed P–2 Rate Schedule and consummation of contemplated new power marketing contracts, the annual

costs, including interest charges, would be slightly in excess of revenues, so there would still be no amortization of investment costs. The proposed base rate for firm power and energy under the Aluminum Contract as redetermined by the Secretary would still be lower than the rates provided under Rate Schedule P–2. The sale of firm power and energy under the Aluminum Contract would yield annual revenues of $2,152,800, compared to $2,880,000, if equivalent power were sold under Rate Schedule P–2, a difference of $727,200.

An analysis of the cost studies filed with the Commission in Docket No. IT–5971 *et al.*, and subsequent cost studies filed in Docket No. E–6975, and with particular reference to the facilities used and service rendered to Arkansas Power, shows that the proposed rates will not produce revenue in excess of the cost of service to Arkansas Power.

Arkansas Power and Reynolds were invited to comment on the filing by the Secretary and have filed protests to the proposed increased rates requesting that the application thereof be rejected. In support of their contention, they refer to certain cost studies which they submitted with their previous protests filed in Docket No. IT–5971, *et al.* In these cost studies in which the companies attempt to show that the rates are adequate they fail to include all facilities and costs necessary to render service to Arkansas.

The Commission finds:

(1) The proposed rates as redetermined by the Secretary for the third five-year period beginning January 1, 1964, for the sale of power and energy to Arkansas Power, as provided for under the terms of the agreement referred to above are not higher than would be required to meet the standards of Section 5 of the Flood Control Act of 1944 if equally applied to all customers of SWPA that are similarly situated.

(2) The proposed rates as redetermined by the Secretary for the third five-year period beginning January 1, 1964, for the sale of power and energy to Arkansas Power, as provided for and limited by the terms of the agreement referred to above are justified and should be approved.

The Commission orders:

The proposed rates as redetermined by the Secretary for the third five-year period beginning January 1, 1964, for the sale of power and energy to Arkansas Power as provided in the agreement referred to above, hereby are confirmed and approved.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

YUBA COUNTY WATER AGENCY, PROJECT NO. 2246

ORDER MODIFYING ORDER ON REHEARING

(Issued December 27, 1963)

The Commission on May 16, 1963, 29 FPC 1002, issued an order for the issuance of a license to the Yuba County Water Agency (Applicant), an agency of the State of California with offices at Marysville, California, for the Yuba River development, Project No. 2246, on the Yuba River and its tributaries, North Yuba River, Middle Yuba River, and Oregon Creek, in the counties of Yuba, Nevada, and Sierra, California. Applicant petitioned on June 14, 1963 for rehearing of the license order with respect to articles 33, 38, 39, 40, 46, 49, and 55. The Commission on July 15, 1963 granted a rehearing.

(1) Article 49, recommended by the Secretary of Interior, forbids Applicant from interfering with future depletion and consumptive use of the Yuba River and tributaries. Because of the formal agreement dated June 12, 1963 between Applicant and the Bureau of Reclamation upon river operations, article 49 is no longer necessary. The Secretary of Interior does not object to the deletion of article 49 if the Commission approves the agreement on river operations. As hereinafter provided, the agreement of June 12, 1963 will be approved as contemplated by article 50 of the license order.

(2) Applicant requested that the second sentence of footnote one to article 33 be reworded so that it could not be construed to replace certain terms of an agreement dated November 28, 1962 between Applicant and the California Department of Fish and Game. The footnote will be modified substantially as Applicant asked.

(3) Applicant requested that article 38, compelling Applicant to make minimum possible alteration of natural fish and wildlife habitat consistent with reasonable economic practices, be deleted. However, the modification proposed by the Secretary of Interior is acceptable to Applicant.

(4) Article 46 requires Applicant to operate its project for flood control according to rules prescribed by the Secretary of Army and specified in a formal agreement between Applicant and the District Engineer. Article 46 makes this agreement "subject to review from time to time as requested by either party." Applicant has requested that article 46 be amended to enable it, by agreement with the District Engineer, to provide periodic review in lieu of review at the request of the parties. The Corps of Engineers has reported that it has no objection to incorporating a review provision in the agreement.

(5) Applicant's objections to articles 39, 40, and 55 are without substantial basis. (a) Applicant's objection to article 39 would be met by notice and opportunity for hearing. Any request for Commission action under article 39 will be referred to the Applicant and it will be afforded an opportunity for hearing before such action is taken. (b) Applicant states that article 40 does not specify the location of the outlet works of New Bullards Bar dam. However, article 30 requires that the Applicant submit drawings for Commission approval which would show the location of the outlet works of New Bullards Bar dam. (c) Applicant requests that article 55 be modified so that any coordination required would not impair the capacity or energy output of the project. As stated in *South Carolina Electric and Gas Company*, Project No. 2315, issued November 21, 1963, 30 FPC 1338, this article contemplates that coordination will result in net benefits to be shared by all parties involved, including the Applicant.

The Commission finds:

It appears appropriate and in the public interest that article 49 be deleted from the Commission's order of May 16, 1963; that articles 33, 38, and 46 be modified as hereinafter provided; that the application for modification be denied with respect to articles 39, 40, and 55; and that the agreement dated June 12, 1963 between Applicant and the Bureau of Reclamation be approved as hereinafter provided.

The Commission orders:

(A) Article 49 is deleted from the order of May 16, 1963, in Project No. 2246.

(B) Footnote one to article 33 of the order of May 16, 1963, is amended to read:

[1] Or natural flow, whichever is less, measured at a point not more than 500 feet downstream of dam. Maximum 24-hour fluctuations of plus or minus 10 percent are permitted for flows in Middle Yuba below Hour House Diversion and Oregon Creek below Low Cabin Diversion.

(C) Article 38 of the order of May 16, 1963 is amended to read:

Article 38. The Licensee shall construct and operate the project in a manner providing minimum possible alteration of fish and wildlife habitat, consistent with reasonable economic practices, except where habitate changes result from specific modification of construction and operation designed to enhance fish and wildlife under ways and means approved by the California Department of Fish and Game, the Secretary of Agriculture, and the Secretary of the Interior.

(D) Article 46 of the order of May 16, 1963 is amended to read:

Article 46. The Licensee shall operate the project reservoirs for flood control in accordance with rules prescribed by the secretary of the Army, such rules to be specified in a formal agreement between the Licensee and the District Engineer, U.S. Army Engineers District, Sacramento, California. Said agreement shall be subject to review from time to time at the request of either party; provided, however, that a different procedure of review may be prescribed by formal agreement.

(E) The application for modification of articles 39, 40, and 55 is denied.

(F) The aforesaid agreement dated June 12, 1963 between Applicant and the Bureau of Reclamation as contemplated by article 50 of the order of May 16, 1963, is approved.

(G) The order issued by the Commission on May 16, 1963 in Project No. 2246, as amended by this order, shall be accepted by Yuba County Water Agency and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP63-188 (PHASE II)*

FINDINGS AND ORDER AFTER STATUTORY HEARING ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 30, 1963)

On December 31, 1962, as amended and supplemented on January 7, January 28, February 12 and July 3, 1963, Cities Service Gas Company (Applicant) filed in Docket No. CP63-188 (Phase II) an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction, acquisition and operation of certain facilities and the acquisition of certain leasehold interests and gas reserves in order to develop and operate as an underground gas storage field, the Webb gas field located in Grant County, Oklahoma, all as more fully set forth in the application, as amended and supplemented.

Applicant proposes to clean out and plug old wells in the Webb field and drill, equip and connect some 40 new wells for storage injection and withdrawal. Applicant will also construct and operate a gathering system, dehydration plant and a 26-inch pipeline to connect the 40 wells to its Blackwell Compressor Station which is to be used for input and withdrawal operations.

Applicant has entered into contracts to acquire from Arkansas Louisiana Gas Company (Arkansas Louisiana), Oklahoma Natural Gas Company (Oklahoma Natural) and Champlin Oil and Refining Company (Champlin) their respective

---

*The application in Docket No. CP63-188 is divided into two phases. This order pertains exclusively to Phase II of said application.

leasehold interests in the Webb field and the remaining gas reserves in said field. Oklahoma Natural and Champlin have been selling their production from the field to Arkansas Louisiana who has been using such production, along with that from its own interests, to help supply the customers on its system. Applicant and Arkansas Louisiana have agreed on an existing reserve figure of 6,000 MMcf. Of this amount, Arkansas Louisiana own 15.42 per cent. Pursuant to the agreement between Applicant and Arkansas Louisiana, the latter will receive its 15.42 per cent interest free of cost from Applicant at various points of connection between Applicant's and Arkansas Louisiana's systems; the balance of the agreed-on reserves will be delivered and sold to Arkansas Louisiana for 11.5 cents per Mcf over a 10-year period. Pursuant to the agreements between Applicant and Oklahoma Natural and Champlin, the former will receive $175,000 for its interests and the latter will receive $1,878 for its interests.

Applicant states that although the peak day firm demands of its existing customers are steadily increasing, its peak day supply of gas is steadily decreasing in certain areas south of the Blackwell and Barker County areas and the Eureka Field. Applicant states further that by utilization of the proposed Webb Storage Field, it will increase its peak day deliverability of gas required to serve the peak day requirements of its customers. Applicant proposes to be able to fill partially the storage reservoir with gas during the off-peak months in 1964 so as to utilize from Webb Storage, on the peak day of 1964–65, approximately 50,000 Mcf of gas. The application indicates that the field will be able to deliver ultimately 200,000 Mcf per day with a 10,000 MMcf working gas volume at a capacity pressure of 1,040 psia. Applicant will develop such capacity commensurate with the deliverability required to meet its increasing peak day demands.

The total estimated cost of Phase II of the proposed project is $4,985,000, which cost will be financed by treasury cash.

After due notice, no petition to intervene, notice of intervention or protest to the granting of the application, as amended and supplemented, (Phase II) has been filed.

At a hearing held on December 20, 1963, the Commission on its own motion received and made a part of the record in this proceeding all evidence, including the application, amendment, supplements and exhibits, submitted in support of the authorization sought herein, and upon consideration of the record,

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G–298 (4 FPC 471).

(2) The facilities and leasehold interests hereinbefore described, as more fully described in the application, as amended and supplemented, in this proceeding (Phase II), are subject to the jurisdiction of the Commission, and the construction, acquisition and operation of such facilities and the acquisition of such leasehold interests by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction, acquisition and operation of the proposed facilities and the acquisition of the subject leasehold interests by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinbefore ordered and conditioned.

(4) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c), (d) and (e) of Section 157.20 of such Regulations.

(6) The certificate hereinafter issued should be further conditioned upon the maximum top storage pressure of 1040 psia at the wellhead (shut-in) not being exceeded without further Commission authorization.

(7) The certificate hereinafter issued should be further conditioned upon Applicant's submitting to the Commission semi-annual reports, coinciding with the termination of two injection and withdrawal cycles, containing the information hereinafter specified:

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct, acquire and operate the proposed facilities and to acquire the subject leasehold interests and remaining gas reserves all as hereinbefore described, all as more fully described in the application, as amended and supplemented, in this proceeding (Phase II), upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c), (d) and (e) of Section 157.20 of such Regulations.

(C) The facilities referred to in paragraph (A) above shall be constructed, or acquisition consummated, and the acquisition of leasehold interests shall be consummated, and all facilities placed in actual operation, all as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

(D) The certificate issued by paragraph (A) above is hereby further conditioned upon the maximum top storage pressure of 1040 psia at the wellhead (shut-in) not being exceeded without further Commission authorization.

(E) The certificate issued by paragraph (A) above is hereby further conditioned upon Applicant's submitting to the Commission semi-annual reports, coinciding with the termination of two injection and withdrawal cycles, containing the following information:

(1) the total volume of gas in the reservoir;

(2) the volumes of gas injected or withdrawn by months;

(3) the daily maximum injection and withdrawal volumes experienced during the reporting interval;

(4) the shut-in wellhead pressure for each well;

(5) the top storage pressure (wellhead and reservoir) experienced during the reporting interval;

(6) structure maps of the reservoir (when revised); and,

(7) a brief discussion of current operations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP61-143; NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP61-149; ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP61-163

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING TARIFF FILINGS

(Issued December 30, 1963)

On September 16, 1963, September 13, 1963, and September 20, 1963, Colorado Interstate Gas Company (Colorado) in Docket No. CP61-143, Natural Gas Pipeline Company of America (Natural) in Docket No. CP61-149 and Arkansas Louisiana Gas Company (Arkansas Louisiana) in Docket No. CP61-163, filed, respectively, applications to amend the Commission's order issued January 3, 1963, in Docket No. CP61-143, *et al.*, 29 FPC 8, to authorize the extension of the duration of the certificates of public convenience and necessity, issued by said order, to May 1, 1964, all as more fully set forth in the respective applications to amend.

The order of January 3, 1963, issued certificates authorizing Colorado to sell up to 25,000 Mcf of natural gas per day at 14.5 cents per Mcf to Arkansas Louisiana and authorizing the exchange of natural gas among Colorado, Arkansas Louisiana and Natural in order to effect said sale of gas. Said certificates were limited in duration to a period extending through December 31, 1963.

The gas sold by Colorado is delivered to Arkansas Louisiana by Natural in Grady County, Oklahoma; Colorado delivers equivalent volumes to Natural at an interconnecting point between their two systems in the Mocane field, Oklahoma. Colorado states that it has an excess supply of gas and, therefore, desires to continue to make the subject sale to Arkansas Louisiana until May 1, 1964, in order to comply with minimum take provisions of its gas purchase and lease agreements; further, Applicant estimates that by the end of 1964 it will not have taken its minimum take supply obligations to the accumulated extent of 114,319 MMcf. Arkansas Louisiana states that it has need for gas under the subject arrangement through the forthcoming heating season.

On December 13, 1963, Natural tendered for filing its First Revised Sheet No. 32 and Third Revised Sheet Nos. 33 and 34 to its FPC Gas Tariff, Second Revised Volume No. 2, covering the subject extension of the exchange arrangement. Natural requests that the thirty day notice period provided by the Commission's Regulations under the Natural Gas Act for the filing of proposed tariff changes, be waived with respect to the subject filings.

On November 29, 1963, Colorado tendered for filing its Third Revised Sheet No. 49 to its FPC Gas Tariff, Second Revised Volume No. 2, covering the subject extension of the exchange arrangement. Also on November 29, 1963, Colorado tendered for filing its Third Revised Sheet No. 36, Second Revised Sheet Nos. 37 and 39, Fourth Revised Sheet No. 38 and First Revised Sheet No. 39A to its FPC Gas Tariff, Second Revised Volume No. 2, covering the subject extension of the sale of gas to Arkansas Louisiana.

Due notice of the filing of the applications to amend and opportunity for hearing thereon has been given by publication in the Federal Register on November 22, 1963 (28 F.R. 12373). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued January 3, 1963, in Docket No. CP61–143, *et al.*, be amended as hereinafter ordered.

(2) The public convenience and necessity require that the revised tariff filings of Natural and Colorado, hereinabove described, be accepted for filing to become effective January 1, 1964.

The Commission orders:

(A) The Commission's order issued January 3, 1963, in Docket No. CP61–143, *et al.*, be and the same is hereby amended to authorize the extension of the duration of the certificates of public convenience and necessity issued by said order, to May 1, 1964, all as hereinbefore described and as set forth in the respective applications to amend.

(B) Natural's First Revised Sheet No. 32 and Third Revised Sheet Nos. 33 and 34 to its FPC Gas Tariff, Second Revised Volume No. 2 are hereby accepted for filing to become effective January 1, 1964.

(C) Colorado's Third Revised Sheet Nos. 49 and 36, Second Revised Sheet Nos. 37 and 39, Fourth Revised Sheet No. 38 and First Revised Sheet No. 39A to its FPC Gas Tariff, Second Revised Volume No. 2, are hereby accepted for filing to become effective January 1, 1964.

(D) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MINNESOTA POWER & LIGHT COMPANY, DOCKET NO. E–7094

DECLARATORY ORDER

(Issued December 30, 1963)

A petition was filed on April 25, 1963 by the Minnesota Power & Light Company (Petitioner), pursuant to Section 1.7(c) of the Commission's Rules of Practice and Procedure for a declaratory order to remove an uncertainty as to the necessity under the Federal Power Act to obtain a license for its Sylvan Project on the Crow Wing River in Cass, Crow Wing, and Morrison Counties, Minnesota.

Petitioner is a corporation which was organized under the laws of the State of Minnesota as Duluth Edison Electric Company on January 24, 1906 and reorganized as the Minnesota Power & Light Company on October 26, 1923. Petitioner is a public utility company engaged principally in the generation, purchase, transmission and distribution of electricity within the State of Minnesota.

The Sylvan hydroelectric project was constructed by the Cuyuna Range Power Company in 1913. It was constructed under Section 9 of the Rivers and Harbors Act of 1899 (30 Stat. 1151) as supplemented by the General Dam Act of June 23, 1910 (36 Stat. 593), which provided that such structures could be constructed under the authority of the legislature of a State, across rivers and other waterways, the navigable portions of which lie wholly within the limits of a single State, provided the location and plans thereof are sub-

mitted to and approved by the Chief of Engineers and by the Secretary of War before construction is commenced,

Section 2841, Chap. 58 of the Revised Laws of Minnesota for 1905 provided State authorization for the construction of the Sylvan Project, and on April 12, 1912 the original plans and location received the approval of the Chief of Engineers and the Secretary of War.

Petitioner is the successor in interest of the facilities constructed by the Cuyuna Range Power Company. Succession was by purchase in 1924. Apparently, there have been no modifications or departures from the originally approved plans at the project since it was completed in 1913.

The principal project works consist of a concrete gravity dam with spillway sections 168 feet and 20 feet in length with flashboards four feet high, earth dikes at each abutment and a powerhouse integral with a dam having a total installed capacity of 1800 KW consisting of three 600 KW units.

Pursuant to Section 23(b) of the Federal Power Act it is unlawful for a non-licensee to operate and maintain hydroelectric project works upon navigable waters of the United States unless they are operated and maintained under a Federal permit issued therefor prior to the passage of the Federal Water Power Act on June 10, 1920. Petitioner maintains and operates project works upon a navigable water of the United States. It submits, however, that it and its predecessor in interest have at all times complied with requirements of the law respecting the project and that it is not required to obtain a license from the Federal Power Commission as the authority given for the project under Section 9 of the Rivers and Harbors Act of 1899 is valid and continuing.

The authorization granted to Petitioner's predecessor by the Secretary of War on April 12, 1912 states that it is to be expressly understood that the approval given shall be subject to all other pertinent provisions of the General Dam Act, approved June 23, 1910 (36 Stat. 593). Section 4 of that Act provides in pertinent part as follows:

> . . . That the authority granted under or in pursuance of the provisions of this Act shall terminate at the end of a period not to exceed fifty years from the date of the original approval of the project under this Act, . . .

Petitioner contends that this provision is inapplicable to its project since the original authority was granted by Congress and the Minnesota Legislature under the Rivers and Harbors Act of 1899 and not pursuant to the Act of 1910.

If we were to adopt Petitioner's position that its project was authorized by an act of the State of Minnesota Legislature and not by a Federal permit pursuant to the Act of 1910 then we would be obliged to conclude that Petitioner has been maintaining and operating its project in violation of section 23(b) of the Federal Power Act since the amendment of August 26, 1935. We do not agree with Petitioner's position, however, that its April 12, 1912 authorization did not include the terms and conditions of the General Dam Act of 1910 (36 Stat. 593).

The legislative history of the Act of 1910 clearly supports this conclusion (H. Rept. 1160, 61st Cong. 2d Sess.). Mr. Stevens, floor leader of the bill, made the following remarks (45 Cong. Rec. 5683–5684), in explanation of the bill during floor debate:

> The changes in the present law are substantially these: The Act of 1899, which placed under the control of the Secretary of War the granting of the privileges for constructing dams across navigable streams wholely within the limits of one state, contained very few restrictions upon such privileges, not at all such as obtained as to dams authorized by Congress. This bill brings that class of dams within all the restrictions of this Act, just exactly the same as relate to dams in interstate navigable streams.

The Commission finds that the authority granted by the Secretary of War for the Sylvan Project was for a term not to exceed 50 years commencing on April 12, 1912. The 50 year term having expired, the Sylvan Project is currently being unlawfully operated and maintained without a valid Federal permit granted prior to June 10, 1920 or a license from this Commission.

Upon consideration of the facts presented in the petition, we therefore conclude that it will be necessary for petitioner to file application and obtain a license, pursuant to the provisions of the Federal Power Act and the Commission's Rules and Regulations thereunder, for the continued maintenance and operation of the Sylvan project on the Crow Wing River in the State of Minnesota.

The Commission orders:

Minnesota Power & Light Company shall, within ninety (90) days from the date of issuance of this order, file application for license, pursuant to the provisions of the Federal Power Act and the Commission's Rules and Regulations thereunder, for the continued maintenance and operation of its Sylvan project works on the Crow Wing River in Cass, Crow Wing and Morrison Counties, Minnesota.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MINNESOTA POWER & LIGHT COMPANY, DOCKET NO. E-7095

DECLARATORY ORDER

(Issued December 30, 1963)*

A petition was filed on April 25, 1963, by the Minnesota Power & Light Company (Petitioner), pursuant to Section 1.7(c) of the Commission's Rules of Practice and Procedure, for a declaratory order to remove an uncertainty as to the necessity, under the Federal Power Act, to obtain a license for its Little Falls Project on the Mississippi River in Morrison County in the State of Minnesota.

Petitioner is a corporation which was organized under the laws of Minnesota, as Duluth Edison Electric Company on January 24, 1906 and reorganized as the Minnesota Power & Light Company on October 26, 1923. Petitioner is a public utility company engaged principally in the generation, purchase, transmission and distribution of electricity within the State of Minnesota.

The Little Falls Water Power Company in 1887 constructed a project at Little Falls pursuant to authorization granted by a Special Act of Congress of July 3, 1886, Chap. 623, 24 Stat. 123. Petitioner is the successor in interest to the Little Falls Water Power Company having acquired the facilities at Little Falls in 1924.

The initial construction at the Little Falls Project which was completed about 1887 comprised a timber crib dam at the present power house site, and a rock crib dam to provide a logging pond and divert water to a paper company canal. Also, mill buildings near the head of the canal were equipped with mechanical water power facilities. Some of such facilities were abandoned around 1910 and some of the facilities were razed about 1920.

Water power development at the Little Falls site continued after 1887 as manufacturing requirements increased. During this time, energy requirements for

*Order issued March 2, 1964 granted rehearing and stay, 31 FPC 476. See order denying application for rehearing, 31 FPC 592. Affirmed, *Minnesota Power & Light Co.* v. *F.P.C.*, 344 F. 2d 53 (CA4-1965)

manufacturing purposes were changing from mechanical to electrical so that the continuing development also included installation of hydroelectric power facilities. The Company in 1906 installed its first hydro-electric power equipment which included two generating units, each having a capacity of 400 kilowatts. The concrete structure in the center of the river which accommodates the log sluice gate, and two taintor gates and the concrete structure lying to the east of the #4 spillway and the retaining wall along the river bank were constructed in 1912. The #4 spillway was constructed in 1914. The present power house structure was erected in 1918, when the timber crib dam was substantially replaced by the present concrete structure, to accommodate three additional generators; two having a capacity of 800 kilowatts and one having a capacity of 1120 kilowatts. Construction at or around 1918 included the concrete and brick installation from the shop building to the log sluice, a stop log gate section and about 250 feet of flashboard section. The total installed capacity is 3520 kilowatts.

In the period of 1925 through 1927, which was subsequent to the enactment of the Federal Water Power Act, Petitioner states that a substantial amount of structural work was accomplished, including the replacement of portions of the power house and the wheel pits and portions of the dam itself. In the period of 1928–29, Petitioner constructed at 33/2.3 KV substation and in 1962, it replaced some spalled concrete on the dam structure. The foregoing construction was accomplished without a license from the Federal Power Commission.

Pursuant to Section 23(b) of the Federal Power Act it is unlawful for a nonlicensee to operate and maintain hydro-electric project works upon navigable waters of the United States unless they are operated and maintained under a Federal permit issued therefor prior to the passage of the Federal Water Power Act on June 10, 1920. Petitioner maintains and operates project works upon a navigable water of the United States. It submits, however, that it and its predecessor in interest have at all times complied with requirements of the law respecting the project and that it is not required to obtain a license from the Federal Power Commission as the authority given for the project under the Act of Congress of 1886 is valid and continuing.

The project works authorized and constructed under the special act of 1886 (24 Stat. 123) no longer substantially exist. The original project was rebuilt and modified a number of times since its initial construction. The original project authorized by Congress made no provisions for hydro-electric generating facilities, whereas, the project that exists today is comprised wholely of such facilities. In our view, it may not be presumed that the Congress by the Special Act of 1886 intended to authorize the replacement or modification of the originally authorized project works.

Upon consideration of the facts presented in the Petition, we conclude that Petitioner does not have a valid Federal permit for the replacement or modification of the original project works and that pursuant to Section 23(b) of the Federal Power Act, Petitioner is unlawfully maintaining and operating unlicensed project works on a navigable river of the United States. Accordingly, it will be necessary for Petitioner to file application and obtain a license, pursuant to the provisions of the Federal Power Act and the Commission's Rules and Regulations thereunder, for the continued maintenance and operation of its Little Falls Project on the Mississippi River in Morrison County in the State of Minnesota.

The Commission orders:

The Minnesota Power & Light Company shall, within 90 days from the date of issuance of this order file application for license, pursuant to the provisions

of the Federal Power Act and the Commission's Rules and Regulations thereunder, for the continued maintenance and operation of its Little Falls project works on the Mississippi River in Morrison County in the State of Minnesota.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, Harold C. Woodward, and David S. Black.

SINCLAIR OIL & GAS COMPANY, DOCKET NOS. G–9291 AND G–9292, ET AL.

ORDER APPROVING RATE SETTLEMENT PROPOSAL, TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued December 30, 1963)

By order issued herein on July 1, 1963, we conditionally approved a settlement agreement tendered by Sinclair Oil & Gas Company (Sinclair). Sinclair accepted the settlement as conditionally approved by the Commission but rehearing was granted for the purpose of considering objections to the distribution of refunds required by the Order of July 1, 1963. No objection was made to the level of rates or the total amount of refunds required by that order. By order issued herein on November 19, 1963, we required Sinclair to place the refund amounts in escrow pending further order of the Commission.

Our orders herein required full refund of all amounts collected, subject to refund, under each rate schedule above the settlement rates from January 1, 1962, to July 1, 1963, with interest until August 1, 1963. None of the parties objected to calculation of the refund amount on this basis but objections were filed to distribution of refunds in that manner. Sinclair proposed three separate methods for distribution of refunds and we understand that no party objects to Proposal C as set forth in Sinclair's settlement proposal. Under that method, the total amount of refund dollars would be refunded to purchasers under each rate schedule in the same percentage as the total excess payments made under that rate schedule bore to the total excess payments made under all rate schedules. Since Proposal C would return to each purchaser refunds in the same proportion in which it contributed to the total excess earnings of the producers, it affords equitable treatment to each purchaser and we shall approve the same.

The Commission finds:

The proposed settlement of the subject proceedings on the basis approved by our order of July 1, 1963, and accepted by Sinclair, as modified herein for payment of refunds on the basis of Sinclair's Proposal C, is in the public interest, is appropriate in carrying out the provisions of the Natural Gas Act and is approved.

The Commission orders:

(A) The settlement of these proceedings on the basis of the Settlement Proposal filed April 8, 1963, as modified by our order of July 1, 1963, and accepted by Sinclair, with refunds to be made on the basis of Sinclair's Proposal C, is hereby approved.

(B) Paragraph F of the order of July 1, 1963, is amended to read as follows:

(F) Within 90 days from the date of this order, Sinclair shall (1) refund, with interest, as specified in each docket computed to August 1, 1963, the difference between the rates collected subject to refund, on and after January 1, 1962, and the related settlement rates to July 1, 1963 (at which time Sinclair made the settlement rates effective), distribution of such refunds

to be in accordance with Proposal C of Sinclair's settlement proposal; (2) calculate refunds for June, 1963, and for each preceding month until the refunds required by this order are made under each rate schedule; and (3) report to the Commission, in writing, the amount of refunds made to each of its purchasers, showing separately the amount of principal and interest so paid, and the bases used for such determination, together with releases from the purchasers showing receipt of the refunds in conformity with this order.

(C) The reports required to be filed by Sinclair shall be filed within 90 days from the date of this order.

(D) The order of November 19, 1963, herein requiring establishment of an escrow fund is rescinded.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SKINNER CORPORATION (OPERATOR), ET AL., DOCKET NOS. G–17528, G–17720, G–20442, AND RI60–423

ORDER CONDITIONALLY ACCEPTING OFFERS OF SETTLEMENT, REQUIRING FILING OF NOTICES OF CHANGE AND CONTRACT AMENDMENTS, REQUIRING REFUNDS, AND TERMINATING PROCEEDINGS

(Issued December 30, 1963)

On October 9, 1963, Skinner Corporation (Operator), *et al.* (Skinner) submitted Offers of Settlement, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, in the above-designated proceedings which relate to the jurisdictional sale of natural gas by Skinner to Tennessee Gas Transmission Company, (TGT) in Texas Railroad Commission District Nos. 1, 2, and 4. The data pertinent to these sales are set forth in the following table:

Docket No.	Rate schedule No.	Rate in effect subject to refund [1]	Dates in effect subject to refund	Settlement rate
		Cents		*Cents*
G–17720	1	15.33333	Oct. 14, 1959 to present	15.0
G–17528	3	15.33333	Oct. 14, 1959 to present	15.0
G–20442	8	15.09520	May 28, 1960 to Nov. 26, 1960	15.0
RI60–423	8	17.24347	Nov. 27, 1960 to present	15.0
G–20442	9	[2] 15.09520	May 28, 1960 to Nov. 26, 1960	[2] 15.0
RI60–423	9	[2] 17.24347	Nov. 27, 1960 to present	[2] 15.0

[1] The pressure base is 14.65 psia.
[2] Subject to a deduction of 0.21931 cent per Mcf for dehydration.

Under the terms of the offers, Skinner proposes to delete the favored-nation, price redetermination and periodic escalation provisions from the rate schedules involved, and to establish a settlement rate of 15.0¢ per Mcf, inclusive of present tax reimbursement, for the remaining term of the contracts comprising the rate schedules involved. Skinner further offers to refund all amounts collected in excess of the settlement rates. The estimated total refund resulting from these settlement rates is approximately $124,000, plus interest. The estimated annual decrease in rates from the suspended rates is approximately $38,000.

Skinner's FPC Gas Rate Schedule No. 9 covers the sale of gas which requires dehydration by the buyer. The 15.0¢ per Mcf settlement rate is therefore subject to a deduction of 0.21931¢ per Mcf for dehydration.

The offers of settlement contains the following reservation:

> If Congress enacts any law which, by amendment of the Natural Gas Act or otherwise, removes, exempts, or releases from Commission jurisdiction sales of natural gas of the type covered hereby or any of the prices applicable thereto, or if Congress enacts any law pursuant to which Applicant would be entitled, but for this Settlement Proposal, to claim or receive a price or rate under any of the rate schedules covered hereby in excess of that specified as the settlement rate herein, Applicant shall have the right to claim and receive under any of such rate schedules the rate they would be entitled to claim and receive had this Settlement Proposal not be entered into, and nothing herein shall affect or prejudice such rights of Applicant.

The above reservation is similar to a reservation contained in an Offer of Settlement submitted by Warren Petroleum Corporation in Docket No. RI61–63 and rejected by order issued October 18, 1963. If accepted, Skinner would obtain a benefit that other producers in the same situation have not received. Further, such a reservation is basically inconsistent with the provision for "elimination of all price escalation clauses" in the Second Amendment to the Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order 264, issued March 27, 1963, in Docket No. R–234, 29 FPC 589. But this amendment gives a producer a higher price than he could otherwise secure without suspension if he agrees to eliminate all possible future increases by amending his contract to exclude the clauses therein giving him a *contractual* right to the increase. What Skinner seeks is to keep the *contractual* right to an increase in the event that Congress removes all possible regulatory bars thereto. Accordingly, we shall reject the proposed reservation.

In all other respects the proposed settlements are consistent with the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, and the Seventh Amendment issued November 27, 1963, 30 FPC 1370, for jurisdictional sales of natural gas in Texas Railroad Commission District Nos. 1, 2, and 4 and its acceptance would serve the public interest.

However, we desire to make it clear that acceptance of the Offers of Settlement shall not be construed as approval of any future rate increase filed in accordance with its reservation of the right to file increases to cover future tax increases.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, as more fully set forth in the Offers of Settlement filed by Skinner with the Commission on October 9, 1963, are in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The Offers of Settlement filed by Skinner with the Commission on October 9, 1963, as herein conditioned, are hereby approved in accordance with the provisions of this order.

(B) Skinner shall, over the signature of a responsible officer, file with the Commission, within 15 days from the date of issuance of this order, in writing,

an original and one copy of its acceptance or rejection of the terms and conditions of this order.

(C) Skinner, shall file, within 30 days from the date of issuance of this order, notices of change, and contractual amendments, providing for the 15.0¢ per Mcf settlement rates, including present tax reimbursement specified in its Offers of Settlement. The 15.0¢ per Mcf settlement rate under Skinner's Rate Schedule No. 9, however, is subject to the deduction of 0.21931¢ for dehydration. Both the notices of change and the contractual amendments shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(D) Within 30 days from the date of issuance of this order, Skinner shall refund to TGT all amounts collected under its FPC Gas Rate Schedule Nos. 1, 3, 8, and 9, in Docket Nos. G–17528, G–17720, G–20442, and RI60–423, in excess of the applicable settlement rate including present tax reimbursement, as indicated in paragraph (C) above together with simple interest as specified in each docket, from the date of receipt of such excess amounts by Skinner to the date of refund. Skinner shall bear all costs incidental to the making of such refunds.

(E) Within 45 days from the date of issuance of this order, Skinner shall report to the Commission in writing the details of its calculations resulting in refunds ordered pursuant to paragraph (D) above, together with a copy of a release from TGT with respect to such refunds.

(F) Upon notification by the Secretary of the Commission that Skinner has complied with the terms and conditions of this order, the rate and charge of 15.0¢ per Mcf at 14.55 psia, including present tax reimbursement, specified in its Offers of Settlement, shall be effective as of the date of issuance of this order, the above-designated proceedings shall be deemed terminated, and Skinner's refund obligation with respect to the above-designated proceedings shall be deemed discharged.

Commissioner O'Connor *not participating*.

Before Commissioners: Joseph C. Swidler, Chairman; Charles R. Ross, Harold C. Woodward, and David S. Black.

SOHIO PETROLEUM COMPANY, DOCKET NO. G–8488, ET AL.[1]

ORDER CONDITIONALLY APPROVING RATE SETTLEMENT PROPOSAL, TERMINATING PROCEEDINGS, AND REQUIRING REFUNDS

(Issued December 30, 1963)

There is before us for consideration a Petition for Approval of Settlement Proposal and Termination of Proceedings filed on July 8, 1963, by Sohio Petroleum Company (Sohio) encompassing the rates for 47 of Sohio's currently effective FPC Gas Rate Schedules.[2]

Comments have been filed by some of the participants in the settlement negotiations, all of which have been given due consideration.

In summary, the settlement proposal as submitted by Sohio provides:

(1) Settlement rates, including tax reimbursement, are equal to or less than the Commission's applicable area ceilings, with two exceptions hereinafter discussed.

---

[1] The additional dockets involved herein are set forth in Appendices A and B hereto.
[2] Sohio filed amendments to its settlement proposal on September 6 and 13, 1963.

(2) Sohio waives the right to file for contractually authorized increased rates until January 8, 1966. Sohio reserves the right to file for any increased rate, if contractually authorized, up to the applicable area-rate levels determined through area hearings or by amendment of the Commission's Statement of General Policy No. 61–1, or any contractually authorized increase in tax reimbursement.

Amendment of Sohio's Rate Schedule Nos. 1, 3, 4, 6 and 28 to eliminate any favored nation, price redetermination or periodic price escalation clauses contained therein.

(4) Refunds, with interest at the applicable rates, under each rate schedule where rates were charged subject to refund and those which would have been collected at the settlement rate, in each instance, commencing with September 1, 1961, to the date of the issuance of this order, with the interest obligation heretofore provided for terminating on July 31, 1963.

(5) Exclusion from the Settlement Proposal of all Permian Basin sales, sales related to previous offers of settlement accepted by the Commission, one sale consolidated with *Amerada Petroleum Corp., et al.*, Docket No. CI62–1544, *et al.*, and all sales for which deliveries commenced after April 1, 1963.

In support of its proposal, Sohio states that the settlement rates, refunds, moratorium period and other provisions thereof, some of which are not specifically noted herein, are in the public interest in that they are reasonable and will provide price stability for a long period of time for natural gas moving in interstate commerce.

With respect to refunds, the parties to the settlement conferences have utilized cost-of-service studies and revenues based on contract rates to determine Sohio's revenue-cost relationship. These studies indicate that it is appropriate that we require that refunds should be computed for sales made on and after September 1, 1961, to the date of issuance of this order, with applicable interest to August 31, 1963.

In past settlements of this type we have required interest on refunds to the date of actual refunds. However, we in this case are approving the termination of Sohio's interest obligation on August 31, 1963, because if the question of the distribution of refunds in Sinclair Oil and Gas Company settlement Docket No. G–9291, *et al.*, precedent case had been resolved the order approving Sohio's proposal could have been issued on or about that date. The refunds will be approximately $1,600,000, exclusive of interest. Sohio's future revenues will be decreased approximately $700,000 annually as a result of the settlement.

Sohio's proposal contemplated full refunds to each purchaser of amounts collected, subject to refund, for the period from September 1, 1961, to date. Objections have been filed to this proposal and action has been withheld on the settlement proposal pending determination of a similar problem in the settlement of Sinclair Oil & Gas Company, Docket No. G–9291, *et al.* For the reasons set forth in our Sinclair order issued today, we shall order distribution of refunds by the same method as in Sinclair.

Sohio's total refund obligation under the settlement shall be computed as hereinbefore described. For the purpose of distributing the total refund amount, Sohio shall compute: (1) The excess revenue collected (subject to refund) above the settlement rate under each rate schedule to the date of this order; (2) The total of all excess revenues collected under (1) above. The total refund amount shall be refunded to each purchaser (where collections have been made

subject to refund) in the proportion that each rate schedule's excess revenue computed under (1) above bears to the total excess revenue computed under (2) above. When the refund obligation is determined, such refund shall be first applied to Sohio's sales in the most recent month and then to each preceding month until the full refund amount under that rate schedule is made.

For the reasons set forth in our order in *Hunt Oil Co.*, Docket No. G–9065, *et al.*, Order issued July 16, 1963, 30 FPC 220, we shall condition our approval of this Settlement Proposal to require United Gas Pipe Line Company to retain (without interest obligation) the proportionate share of the refunds it will receive from Sohio and would flow-through to its jurisdictional pipeline customers who may assert that they are not under an obligation to pass on the refunds, and shall require these pipeline customers to submit a report setting forth their intentions with respect to any refunds they may receive and, if they do not intend to pass such sums on to their customers, why they believe they are entitled to retain such funds.

Exceptions to the applicable area ceilings are proposed by Sohio with respect to two sales: one a sale to Tennessee Gas Transmission Company (TGT) in Southern Louisiana commonly known as Sohio's six parish sale, and the second is a sale in the Oklahoma Panhandle to Panhandle Eastern Pipe Line Company (Panhandle). The sale to TGT is made under Sohio's FPC Gas Rate Schedule No. 20 and was initiated under a contract dated May 2, 1949, whereby Sohio dedicated 93,000 acres to TGT spread through six South Louisiana parishes. Throughout the term of this contract Sohio has made substantial additional dedications of acreage. For example, during the 1955–1961 period, approximately 42,000 acres were added to the contract, and approximately 26,000 of these additional acres were added in 1959 or thereafter, subsequent to the date when the sales price under this contract had escalated to 22.8¢ per Mcf. The addition of acreage resulted in increased annual deliveries under this contract. The proposed settlement rate of 17.75¢ per Mcf exceeds the increased rate ceiling but is below the initial rate ceiling. In view of the above circumstances, we find the settlement rate for this sale to be proper, and approve the same.

As to the sale to Panhandle, made under Sohio's FPC Gas Rate Schedule No. 31, the proposed settlement rate is 12.2827747¢ per Mcf. This rate is the result of a periodic rate increase which was accepted for filing. However, it is above the applicable area increased rate ceiling, and for the reasons set forth in our order issued on April 25, 1963, in *Gulf Oil Corporation, et al.*, Docket No. G–9520, *et al.*, 29 FPC 837, we shall condition our approval of this settlement proposal so as to require Sohio to reduce its rate under its FPC Gas Rate Schedule No. 31 to 11.3894829¢ per Mcf, which was the initial rate under said contract. Refunds under the rate schedule shall be computed as the difference between the presently effective rate, subject to refund, and 12.2827747¢ per Mcf.

We shall not approve the proposed settlement of the rate under Sohio's FPC Gas Rate Schedule No. 30 which covers a sale of natural gas in Texas Railroad District No. 3 to Union Texas Petroleum, since this rate is by contract related to that of the producer purchaser from Sohio, the purchaser's rate also being subject to suspension proceedings. Therefore, we shall exclude this sale from the settlement proposal.

The settlement proposal includes five sales for which issuance of related permanent certificates is pending. The certificate applications in Docket Nos.

G–17791, G–19421 and G–20101 involve upward BTU price provisions, and are presently consolidated for hearing in the proceedings in Sunray DX Oil Company, *et al.*, Docket No. G–4281, *et al.*, relating to the BTU adjustment provisions. Accordingly, permanent certificates should be issued in such proceedings, and not through the abridged hearing procedure. We shall, however, condition our approval of the settlement proposal to require that the total rates in Docket Nos. G–19421 and G–20101 not exceed the applicable area ceiling (17¢ per Mcf) regardless of the BTU adjustment clauses contained in each of the respective rate schedules. Because most of the sales being made under temporary authority in Docket No. G–17791 are under refund condition based on the applicable area ceiling, we do not deem it necessary to further condition such authority.

Included in the settlement proposal is one sale being made under a temporary certificate, issued in Docket No. CI62–826, at 17.24¢ per Mcf in Texas Railroad Commission District No. 4 under Sohio's FPC Gas Rate Schedule No. 72 to TGT. We presently have under consideration in Amerada Petroleum Company, *et al.*, Docket No. CI62–1544, *et al.*, the issue of the proper initial in-line rate in District No. 4 subsequent to September 28, 1960. We shall approve the present settlement proposal conditioned on Sohio's agreement that the rate under such rate schedule shall be subject to the final determination in the Amerada proceeding. If by final order in the Amerada proceeding a lower rate is established than that set forth in the settlement proposal, Sohio shall make further refunds from the date of this order of the difference between the settlement rate and the rate ordered in the Amerada proceeding.

The settlement rates conditionally approved herein, shall be applicable, during the moratorium period herein provided for, to all sales of natural gas from all acreage dedicated as of the date of the issuance of this Order under each of the rate schedules currently on file with the Commission whether such sales are made by Sohio, its successors, or assigns.

The foregoing has discussed all of the major comments filed by Long Island Lighting Company and Philadelphia Gas Works. Comments were also filed by Public Service Electric and Gas Company and Northern Natural Gas Company. These latter companies indicated support and approval of the settlement proposal. We believe the instant settlement proposal, as herein modified, and in other particulars not specifically noted or set forth herein, meets the criteria previously set forth in other of our recent settlement orders and accordingly we find it to be in the public interest and should be approved as hereinafter provided.

Our action herein does not constitute approval of any future rate increase that may be filed under the subject rate schedules, and is without prejudice to any findings or orders of the Commission in any future proceedings, including area rate proceedings, involving Sohio's rates and rate schedules.

The Commission finds:

The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in the settlement proposal filed on July 8, 1963, as herein modified, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that it be conditionally approved and conditionally made effective subject to the modifications hereinafter ordered, and good cause exists for approving the settlement rates.

The Commission orders:

(A) The settlement of these proceedings on the basis of the settlement proposal, filed July 8, 1963, as herein modified, is approved and made effective subject to the following terms and conditions.

(B) The applicable settlement rates set out in Appendices A and B are approved and such rates shall be effective as of the date of issuance of this order.

(C) The pending certificate proceedings indicated in Appendix B hereto shall not be terminated on the basis of the approval of the settlement proposal, but shall be determined after hearing as hereinabove provided in accordance with Section 7 of the Natural Gas Act.

(D) Sohio shall, over the signature of a responsible officer, file with the Commission, within 30 days from the date of the issuance of this order, an original and one copy of its acceptance or rejection of the terms and conditions of this order, including specifically the requirement for possible future refunds under its FPC Gas Rate Schedule No. 72.

(E) Within 45 days from the date of this order, Sohio shall make such filings under its rate schedules as are required to make effective the terms of the settlement proposal, as modified herein.

(F) Within 45 days from the date of this order, Sohio shall make refunds as hereinabove provided and shall report to the Commission, in writing the amount of refunds made to each of its purchasers showing the amount paid and the bases for such determinations, together with releases from its purchasers showing receipt of the refunds in conformity with the approved settlement.

(G) Within 15 days from date of receipt by it of the refunds herein provided, United Gas Pipe Line Company shall submit a report to the Commission, and serve a copy thereof upon each of its jurisdictional pipeline customers, setting forth a plan for distribution of such refunds to each of its pipeline customers. The report shall show separately the amount of principal and interest, together with a computation showing the manner in which such distribution was determined. United shall retain the refunds received pursuant to this order, subject to further order of the Commission, provided, however, that United shall not be required to pay interest on such funds.

(H) Any party to these proceedings or the settlement negotiations having objections to the terms of this order shall, within 30 days from the date of issuance of this order, set forth such objections to the Commission and shall serve copies of such objections on all other parties.

(I) Docket Nos. G–19538, RI61–217, RI62–89, RI62–269, RI62–320, RI62–507, RI63–118, RI63–121 and RI63–147 are hereby severed from the consolidated proceedings in Docket No. AR61–2, *et al.*; Docket Nos. G–12205, G–15399, G–19255, RI60–172, RI60–255, RI61–257, RI61–365, RI61–455, RI62–86, RI62–361, RI62–428, RI62–521 and RI63–174 are hereby severed from the consolidated proceedings in Docket No. AR64–1, *et al.*; and Docket Nos. G–11512, G–15211, G–16111, G–17133, G–19748, RI60–413, and RI60–424 are hereby severed from the consolidated proceedings in Docket No. AR64–2, *et al.*

(J) Upon full compliance by Sohio with all of the terms and provisions of this order applicable to it, the Section 4(e) proceedings listed in Appendices A and B hereof, and the Section 5(a) proceeding in Docket No. G–18355 shall terminate.

(K) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Sohio, the Commission Staff, or any affected party hereto, in any proceedings now pending, or hereafter instituted by or against Sohio or any other companies, person or parties affected by this Order.

[1] Louisiana and Wyoming rates at 15.025 psia; all other rates at 14.65 psia unless otherwise noted. All rates include tax reimbursement, if any.

[3] Sohio has not collected any refundable monies under any of these rate schedules subsequent to Sept. 1, 1961, and has either sold or abandoned the properties involved.

[5] Sohio shall eliminate the favored-nation and price redetermination provisions contained in these rate schedules.

[4] Sohio shall eliminate the favored-nation, price redetermination and periodic escalation clauses contained in this rate schedule.

[9] Refund provisions of this order shall apply to Supplement 6 of Rate Schedule No. 42 and Supplement 3 of Rate Schedule 43 since Sohio was not required to make refunds for these Supplements in the order issued Nov. 13, 1963, in *Union Texas Petroleum et al.*, Docket No. G-13221, *et al.*

[6] Subject to B.t.u. adjustment.

[7] Subject to B.t.u. adjustment but not to exceed the applicable area ceiling.

[8] The proposed increased rate of 17.00 cents per Mcf, which is the subject of this docket, has never been placed in effect, the suspension period having terminated June 1, 1963.

SOUTH CAROLINA ELECTRIC & GAS COMPANY, DOCKET NO. E-7146

ORDER TO SHOW CAUSE

(Issued December 30, 1963)

The respondent, South Carolina Electric & Gas Company (Company) operates and maintains the Stevens Creek hydroelectric project in Georgia and South Carolina on the Savannah River, about 8.7 miles upstream from Augusta, Georgia. Under the provisions of an Act of Congress approved August 5, 1909 (36 Stat. 180), as extended by the Act of March 5, 1912 (37 Stat. 72) and the General Dam Act of June 23, 1910 (36 Stat. 593), the War Department issued a permit on July 20, 1910 to the Company's predecessors.

The permit was amended from time to time and the Stevens Creek project was constructed in 1913–1914. It appears, therefore, that the fifty-year permit term prescribed by the General Dam Act of 1910 has expired and the Company is operating and maintaining the Stevens Creek project works without a valid federal permit isued prior to June 10, 1920 or a license under the Federal Power Act in violation of Section 23(b) of that Act (16 U.S.C. 817). The Savannah River is a navigable water of the United States. See *United States* v. *Twin City Power Company*, 350 U.S. 222.

The Commission finds:

In view of the foregoing, it is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 4(e), 4(g) and 23 thereof, that

South Carolina Electric & Gas Company show cause why it should not apply for and secure a license.

The Commission orders:

South Carolina Electric & Gas Company shall show cause, under oath, within 60 days from the receipt of a copy of this order, why it should not apply for and secure a license under Section 4(e) of the Federal Power Act, and the Commission's Regulations, for its project works on the Savannah River in the vicinity of Stevens Creek.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

TEXACO INC., DOCKET NO. G–8969, ET AL.[1]

ORDER APPROVING RATE SETTLEMENT PROPOSAL, TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued December 30, 1963)

There is before us for consideration a Motion for Approval of Settlement Proposal and Termination of Proceedings filed on November 12, 1963, by Texaco Inc. (Texaco) encompassing the rates for 173 of Texaco's currently effective FPC Gas Rate Schedules.

Comments have been filed by some of the parties to these proceedings, all of which have been given due consideration.

In summary, the settlement proposal as filed by Texaco provides:

(1) Settlement rates, including tax reimbursement, are equal to or less than the Commission's applicable area ceilings, with four exceptions hereinafter discussed;

(2) Texaco waives the right to file for contractually authorized increased rates until March 1, 1966. Texaco reserves the right to file for any increased rates, if contractually authorized, up to the applicable area-rate levels established by any order or rule of the Commission, or to file for any contractually authorized increase in tax reimbursement;

(3) Amendment of Texaco's Rate Schedule Nos. 54, 55 (basic acreage) 56, 57, 58, 59, 128, 130, 131, 132, 137, 138, 139, 141, 150, 154, 193, 257, 260, 261, 262, and 263 to eliminate any favored nation, price redetermination or periodic price escalation clauses contained therein;

(4) Refunds with interest at the applicable rates, under rate schedules where collection was made subject to refund, of the difference between the revenues actually collected and those which would have been collected at the settlement rate, in each instance, commencing with January 1, 1961, to the date of issuance of this Order;

(5) Exclusion from the Settlement Proposal of all Permian Basin sales, sales related to previous offers of settlement accepted by the Commission, two sales recently certificated in *Texaco Seaboard Inc., et al.*, Docket No. CI61–118 *et al.*, Opinion No. 383, issued March 27, 1963, 29 FPC 593, two sales, and three proceedings which only involve added acreage, presently involved in Sunray DX Oil Co., *et al.*, Docket No. G–4281, *et al.*, one sale involved in separate settlement negotiations and one involving a sale to another producer whose resale rate is under suspension.

---

[1] The additional dockets involved herein are set forth in Appendices A, B, and C attached hereto.

In support of its proposal, Texaco states that the settlement rates, refunds, moratorium periods and other provisions thereof, not specifically noted herein, are in the public interest in that they are reasonable and will provide price stability for a long period of time for natural gas moving in interstate commerce.

With respect to refunds, the parties to the settlement conferences have utilized cost of service studies and revenues based on contract rates to determine Texaco's revenue-cost relationship. These studies indicate that it is appropriate that we require that refunds should be computed for sales made on and after January 1, 1961. Texaco proposes, as noted above that refunds be made up to and including the date of issuance of this Order, with applicable interest to be paid on the refunds to November 30, 1963. The refunds will be approximately $7,000,000 inclusive of interest. Texaco's future revenues will be decreased approximately $2,600,000 annually as a result of the settlement.

Under the refund provisions of this Order, Texaco would ordinarily have been required to refund certain sums of monies to Colorado Interstate Gas Company (Colorado Interstate) which may take the position that it is not presently under obligation to flow-through to its jurisdictional customers their proportionate share of the amount it will receive from Texaco. For the reasons set forth in our Order in *Hunt Oil Co.*, Docket No. G–9065, *et al.*, order issued July 16, 1963, 30 FPC 220, we shall condition our approval of this Settlement Proposal to require Texaco to retain (without further interest obligation) the refunds due to Colorado Interstate in a special account and shall direct Colorado Interstate to submit a report setting forth what it intends to do with the refunds if they are made to it, and, if it proposes not to pass them on to its customers, why it believes it was entitled to these funds. Additionally, and for the same reasons, we shall require United Gas Pipe Line Company to retain (without interest obligation) the proportionate share of the refunds it will receive from Texaco and would flow-through to its jurisdictional pipeline customers who may assert that they are not under an obligation to pass on the refunds, and shall require these pipeline customers to submit a report setting forth their intentions with respect to any refunds they may receive and, if they do not intend to pass such sums on to their customers, why they believe they are entitled to retain such funds.

Settlement rates which are exceptions to the applicable area ceilings are proposed by Texaco for four sales of natural gas made by it in South Louisiana, two covering sales to United and the other two covering sales to United Fuel Gas Company (United Fuel).[2]

One of the sales made to United is made under Texaco's FPC Gas Rate Schedule No. 223 from the Houma and Hollywood Fields, Terrebonne Parish, Louisiana. Prior to June 2, 1960, this sale was made under an eight-year contract which was to expire in 1960. On June 2, 1960, the parties entered into a new contract for a twenty-year term, under which Texaco dedicated substantial additional acreage, which resulted in increased annual deliveries under this contract of approximately thirty percent. The current rate for gas sold under the renegotiated contract is 23.25¢ per Mcf, while the settlement rate is 17.5¢ per Mcf. The proposed settlement rate, therefore, exceeds the increased rate ceiling, but is below the initial rate ceiling. In view of the above circumstances surrounding this sale, we find the settlement rate of 17.5¢ per Mcf to be proper and approved the same.[3]

[2] United and United Fuel each had representatives who attended and actively participated in the settlement negotiations herein.

[3] See: *Shell Oil Co., et al.*, Docket No. G–9446, *et al.*, 28 FPC 257; *Gulf Oil Corp., et al.*, Docket No. G–9520, *et al.*, 29 FPC 837; and *Sinclair Oil & Gas Co.*, Docket No. G–9291, *et al.*, *supra* p. 1620, for similar circumstances where exceptions to the applicable area ceiling were granted.

The second sale to United is made under Texaco's FPC Gas Rate Schedule No. 102 from the Duck Lake Field, St. Mary and St. Martin Parishes, Louisiana, where the increased rate of 22.95¢ per Mcf, now being charged subject to refund, is proposed to be reduced to 18¢ per Mcf. The initial rate under which this sale was made was 13.5¢ per Mcf, however, this rate was for a period of approximately one year, at which time the contract provided that the rate would escalate to 21.2¢ per Mcf. During that period of time, the Supreme Court issued its opinion in *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672, and when Texaco subsequently filed for the agreed upon 21.2¢ it was suspended by order of the Commission, *The Texas Company*, Docket No. G–9576 (order issued October 28, 1955). The rate agreed upon by the parties is below the applicable area initial ceiling. We have considered all of the circumstances surrounding this sale and find them to be similar to others where we have in such circumstances, regarding other sales made in the same field, found the increased rate to be in the nature of an initial rate, *The Ohio Oil Company, et al.*, Docket No. RI60–92 *et al.*, 27 FPC 1373; *Cities Service Company, et al.*, Docket No. G–8921, *et al.*, 28 FPC 1108; *R. H. Goodrich, et al.*, Docket No. G–8977, *et al.*, 29 FPC 397; *and Hunt Oil Company*, Docket No. G–9065, *et al.* (order issued July 16, 1963) 30 FPC 220.

The first sale to United Fuel is made by Texaco under its Rate Schedule No. 2 from ten fields located in four South Louisiana parishes. This sale is made under a contract, dated May 22, 1953, which contained no acreage dedication, but contained a provision for a firm sales commitment of 15,000 Mcf per day. During 1960, Texaco developed additional reserves in the area and contractually increased the minimum contract to 30,000 Mcf per day. Texaco is presently selling and delivering approximately 70,000 Mcf per day to United Fuel at a rate of 20.7¢ per Mcf. Texaco proposes that the rate be reduced to 17.5¢ for the first 15,000 Mcf delivered daily (the initial contract quantity), and 19.9¢ per Mcf (the contract rate when the additional commitment was made) for the remaining daily deliveries. The assumption by Texaco of this contractual obligation to sell and deliver to United Fuel twice the original daily contract commitment, and the fact that it has been, and is now delivering twice that amount, was regarded by the parties to the settlement negotiations as being in the nature of a dedication of acreage, and an addition thereto. In view of the unique circumstances surrounding this sale, we find the settlement rates to be proper and approve the same.

The second sale to United Fuel is made by Texaco in the Valentine Field, La Fourche Parish, Louisiana. This sale is made under a contract entered into on May 22, 1953 (Texaco's Rate Schedule No. 3) and subsequent additions of acreage dedicated under said contract have substantially increased the dedicated reserves resulting in substantial increases in annual deliveries. For the reasons stated regarding Texaco's Rate Schedule No. 223, *supra*, and the exception approved for the proposed rate thereunder, and considering the circumstances surrounding this sale, we find Texaco's proposed reduction in rate from 20.7¢ to a settlement rate of 18.5¢ per Mcf to be proper and approve the same.

The Settlement Proposal also includes other rates for which issuance of related permanent certificates is pending; some of which are for deliveries presently being made under temporary authority.[4] We propose to set such proceedings for abridged hearing in accordance with Section 7 of the Natural Gas Act indicating that the settlement rates, as provided for herein shall be the initial price.

[4] See Appendix B attached hereto.

On December 12, 1963, The Public Service Commission of the State of New York (PSC) filed its response to Texaco's Settlement Proposal. PSC confined its response to four specific features of the proposal. We shall consider them seriatim. First, PSC states that Article III, paragraph 1.(a) "* * * purports to reserve unto Texaco the right to file for increases above the settlement levels if 'at any time' the applicable Statement of General Policy No. 61–1 levels are higher." We interpret this provision as reserving to Texaco only the right, if contractually authorized, to file an increase to the increased rate level provided by order or rule of the Commission and not to have any relation to initial price levels.[5]

Second, PSC notes that the settlement rate for Texaco's Rate Schedule No. 311, covering a sale in Duval County (Railroad District No. 4) Texas, in the Lundell Field is the permanently certificated rate of 16¢ per Mcf. The contract for this sale was entered into on March 3, 1963, and a permanent certificate was issued for this sale consistent with the guide line price established by the Fifth Amendment to our Statement of General Policy No. 61–1, issued August 30, 1962. Since no proceeding has ever been initiated under Section 5(a) of the Act against Texaco alone, the only proceeding wherein the subject rate is under review by this Commission is the *Texas Gulf Coast Area Proceedings*, AR64–2 (order issued November 27, 1963, 30 FPC 1354), and the lawfulness of the rate will be determined in that proceeding. Therefore, pending our final determination in that proceeding, we shall accept the settlement rate.

Third, PSC comments upon Texaco's Rate Schedule No. 6 involving a sale to United Fuel from the Erath Field in Southern Louisiana. Texaco proposes to reduce its rate for this sale from 23.675¢ to 21.25¢ per Mcf. And, fourth, PSC notes that Texaco proposes to settle its Rate Schedule No. 186, covering a sale to Southern Natural Gas Company from the Felice Bayou Field in Southern Louisiana at the permanently certificated price of 20.75¢ per Mcf. In regard to both of these sales it must be emphasized that both are permanently certificated, that the proposed moratorium period will apply to these sales, that the Erath Field settlement rate will result in a reduction in purchased gas cost annually of $315,000 to United Fuel, that no Section 5(a) proceeding respecting these rates is pending against Texaco other than area rate proceeding, Docket No. AR61–2, and, therefore, any action to be taken by this Commission other than approval of the proposed settlement rates must await the outcome of that area proceeding. Consequently, since each of said rates are subject to the outcome of that proceeding, and by approving the proposed settlement rates a substantial and immediate benefit will enure to the consuming public, we find that the proposed rates are proper and approve the same.

Further, PSC notes that in its Settlement Proposal (Article V, paragraph 3, page 10) Texaco states that by submitting its proposal "Texaco is not to be bound or prejudiced in any proceeding, negotiation or matter as to any principle or method involved or presumed to be involved in determining the settlement rates provided for * * *." PSC states that it has been of the belief that the same privilege must pertain to any other party to proceedings in which a settlement proposal is filed, whether a participant in conferences, a silent bystander or signatory. PSC is correct. Section 1.18(e) of our Rules of Practice and Procedure so provide, and in each of our orders approving a settlement we specifically so order

[5] On December 13, 1963, Texaco filed a telegram in answer to PSC's response stating: "Texaco has never considered the referenced language (Article III, Paragraph 1(a)) as granting the right for immediate filing of settlement prices under initial price ceilings and has reserved only the right for increased price filings under the then applicable increased price ceiling."

(see for example, the order in *Hunt Oil Company*, Docket No. G-9065, *et al.*, issued July 16, 1963, 30 FPC 220). Certainly, neither PSC by being a "silent bystander" in past settlement negotiations, whether they are successful or not, nor may any other party or participant, can be said to have agreed or disagreed to any principle or method involved in attempting to reach agreement. Nor do settlements prevent parties in other proceedings from arguing their positions as to the legal effect of settlements on the rates in such other proceedings.

The foregoing has discussed all of the major comments filed by the Memphis Light, Gas and Water Division of the City of Memphis, Tennessee, Long Island Lighting Company and the Philadelphia Electric Company. Comments were also filed by the Minnesota Valley Natural Gas Company. The latter company indicated support and approval of the Settlement Proposal.

We believe the instant settlement proposal as herein modified, and in other particulars not specifically noted or set forth herein, meets the criteria previously set forth in other of our recent settlement orders and accordingly we find it to be in the public interest and should be approved as hereinafter provided.

Our action herein should not be construed as constituting approval of any future rate increases, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate proceedings, involving Texaco's rates and rate schedules.

The Commission finds:

The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in the Settlement Proposal filed on November 12, 1963, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that it be approved and made effective as hereinafter ordered, and good cause exists for approving the settlement rates, for terminating certain proceedings and providing for refunds.

The Commission orders:

(A) The Settlement of these proceedings on the basis of the Settlement Proposal, filed November 12, 1963, is approved and made effective subject to the following terms and conditions.

(B) The applicable settlement rates set out in Appendix A hereto are approved and such rates shall be effective as of the date of issuance of this Order.

(C) The settlement rates approved herein shall be applicable during the moratorium period herein provided for to all sales of natural gas from all acreage dedicated as of the date of issuance of this Order under each of the rate schedules currently on file with the Commission whether such sales are made by Texaco, its successors or assigns.

(D) The pending certificate proceedings indicated in Appendix B hereto shall not be terminated on the basis of the approval of the Settlement Proposal, but shall be determined after hearing in accordance with Section 7 of the Natural Gas Act.

(E) Within 90 days from the date of this Order, Texaco shall make such filings under its rate schedules as are required to make effective the terms of the Settlement Proposal.

(F) Within 90 days from the date of this Order, Texaco shall (1) refund (except as provided by Paragraph I hereof), with interest as specified in each docket computed to November 30, 1963, the difference between the rates collected subject to refund, on and after January 1, 1961, and the related settlement rates to the date of this Order; and (2) report to the Commission, in writing, the

amount of refunds made to each of its purchasers or withheld under Paragraph I hereof, showing separately the amount of principal and interest so paid, and the bases used for such determination, together with releases from its purchasers showing receipt of the refunds in conformity with the Settlement Proposal as approved herein.

(G) Docket Nos. G–13155, G–13162, G–13190, G–14062, G–14096, G–16413 and G–16536 (related to sales made by Texaco in the Permian Basin) are hereby severed from the consolidated proceedings in Docket No. G–8969, *et al.*

(H) Within 15 days from date of receipt by it of the refunds herein provided, United Gas Pipe Line Company shall submit a report to the Commission, and serve a copy thereof upon each of its jurisdictional pipeline customers, setting forth a plan for distribution of such refunds to each of its pipeline customers. The report shall show separately the amount of principal and interest, together with a computation showing the manner in which such distribution was determined. United shall retain the refunds received pursuant to this order, subject to further order of the Commission, provided, however, that United shall not be required to pay interest on such funds.

(I) Texaco shall retain the refund due to Colorado Interstate Gas Company, which it shall have computed in accordance with Paragraph (F) above, in a special account, with no further interest obligation after November 30, 1963, pending Commission action and further order respecting such monies.

(J) Any party to the proceedings or settlement negotiations having objections to the terms of this Order shall within 30 days from the date of issuance of this Order set forth such objections in writing to the Commission (original and one copy), and by serving copies on the other parties.

(K) If as a result of any objections filed pursuant to Paragraph J hereof, the Commission by subsequent order changes Texaco's duties and obligations hereunder, Texaco's acceptance of this settlement order shall not be binding on it without its express agreement.

(L) Upon full compliance by Texaco with all the terms and provisions of this Order applicable to it, the Section 4(e) proceedings listed in Appendix A hereto shall terminate.

(M) Upon termination of the Section 4(e) proceedings listed in Appendix C hereto, in accordance with Paragraph (L) above, said proceedings shall be severed from the consolidated proceedings in Docket Nos. AR61–2, AR64–1 and AR64–2, respectively.

(N) This Order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Texaco, the Commission Staff, or any affected party hereto, in any proceedings now pending, or hereafter instituted by or against Texaco or any other companies, person or parties affected by this Order.

*Initial rate.
(T) Temporary Authority Issued. Permanent certificate not issued.
(A) Application for Certificate. Permanent certificate not issued.
[1] Rates shown are at 15.025 psia. Contract pressure base is 14.65 psia.
[2] Rate not to exceed 15 cents per Mcf with upward B.t.u. adjustment.
[3] Total price 13 cents per Mcf inclusive of tax reimbursement and minimum guarantee for liquids.
[4] Increase to 18.974 cents applicable to only the initial acreage under contract. 15.384 cents applicable to added acreage.
[5] Change to 16.410 cents tendered Jan. 25, 1963. Suspended to July 28, 1963 in RI63–347.
[6] Original rate filed was 13.00135 inclusive of tax reimbursement and minimum guarantee for liquids.
[7] Contract pressure base—15.025 psia.
[8] Contract pressure base—15.025 psia.
[9] Contract pressure base—14.73 psia.
[10] Subject to 0.21931 deduction for dehydration.
[11] Price is consistent with the Statement of General Policy No. 61–1, as amended, for sales under contracts w/o flexible price provisions. Texaco will amend its contracts accordingly and substitute 1 cent per Mcf fixed escalation for each five (5) year period until the end of the contract. (Not applicable to added acreage under Rate Schedule No. 55.)
[12] Filed for increase to 10.8198 cents per Mcf on Oct. 14, 1963.
[13] Change to 22.25 cents tendered Apr. 16, 1963. Suspended to Nov. 5, 1963 in RI63–424.
[14] Change to 17.4 cents tendered Jan. 29, 1963. Suspended to Aug. 21, 1963 in RI63–347.
[15] Change to 10.8262 cents per contract filed.
[16] Change to 17.4 cents tendered Jan. 29, 1963. Suspended to Sept. 27, 1963 in RI63–349.
Change to 17.4 cents tendered Mar. 25, 1963. Suspended to Oct. 10, 1963 in RI63–404.
Change to 17.4 cents tendered Apr. 17, 1963. Suspended to Nov. 5, 1963 in RI63–418.
[17] Total price inclusive of upward B.t.u. adjustment not to exceed 17.0 cents per Mcf.
[18] Average B.t.u. content—1120.
[19] Base acreage only. Added acreage consolidated in proceedings G–4281 et al.
[20] Prices shown are gross. Purchaser deducts 0.75 cents for dehydration.
[21] Average B.t.u. content—1050.
[22] Increase to 16.0 cents tendered May 28, 1963. Suspended to Dec. 1, 1963 in RI63–468.
[23] Total price inclusive of upward B.t.u. adjustment not to exceed 15.0 cents per Mcf.
[24] Total price inclusive of upward B.t.u. adjustment not to exceed 16.0 cents per Mcf.
[25] Average B.t.u. content—985.
[26] Average B.t.u. content—1054.
[27] Change to 16.56 cents tendered May 27, 1963. Suspended until Dec. 1, 1963 in RI63–463.
[28] Change to 16.56 cents tendered May 31, 1963. Suspended until Dec. 1, 1963 in RI63–463.
[29] Rate shown for gas well gas. Tax reimbursement varies with ratio of compressed gas versus gas well gas.
[30] Rates shown are at 14.65 psia. Contract pressure base is 16.4 psia.
[31] Change to 12.1116 cents tendered May 17, 1963. Suspended until Dec. 1, 1963 in RI63–449.
[32] 9.5 cents per Mcf before 0.5 cent reduction for sour gas.
[33] Increase of 1 cent to 16.5 cents for waiver of processing rights.
[34] Change to 17.5 cents tendered Mar. 29, 1963. Suspended until Oct. 2, 1963 in RI63–407.
[35] Consolidated in Texaco Rate Proceeding Docket No. G–8969, *et al.*
[36] Consolidated in Area Rate Proceeding Docket No. AR61–2, *et al.*

TEXAS GULF PRODUCING COMPANY, DOCKET NO. G–9476, ET AL.;[1] TEXAS GULF PRODUCING COMPANY, DOCKET NO. G–14832

ORDER APPROVING RATE SETTLEMENT PROPOSAL TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued December 30, 1963)

We have before us for consideration a Motion for Approval of Settlement Proposal and Termination of Proceedings filed on December 6, 1963, by Texas Gulf Producing Company (Texas Gulf) encompassing the rates for nineteen of Texas Gulf's currently effective gas rate schedules.

In summary, the settlement proposal as filed by Texas Gulf provides:

(1) Settlement rates, including tax reimbursement, equal to or less than the Commission's applicable area ceilings, with two exceptions hereinafter discussed;

(2) Texas Gulf waives the right to file for contractually authorized increased rates until April 1, 1966. Texas Gulf reserves the right to file for any increased rate, if contractually authorized up to the applicable area-rate levels determined through area hearings or amendment of the Commission's Statement of General Policy No. 61–1, or any contractually authorized increase in tax reimbursement;

(3) Amendment of Texas Gulf's Rate Schedule Nos. 3, 4, 6, 24 and 33 to eliminate any favored nation, price redetermination or periodic price escalation clauses contained therein;

(4) Refunds, with interest at the applicable rates, under each rate schedule where the collection was made subject to refund, of the difference between the revenues actually collected and those which would have been collected at the settlement rate, in each instance, commencing with July 1, 1961, to the date of issuance of this order;

[1] The additional dockets involved herein are set forth in the Appendix hereto.

(5) Extension of the make-up period clauses in the take-or-pay provisions in its Rate Schedule Nos. 25, 31 and 32 from the present period to ten years;

(6) Exclusion from the Settlement Proposal of all Permian Basin sales, one rate for which Texas Gulf filed a separate settlement proposal, and one rate for which Texas Gulf has filed an application for authority to abandon.

In support of its proposal, Texas Gulf states that the settlement rates, refunds, moratorium periods and other provisions thereof, some of which are not specifically noted herein, are in the public interest in that the rates are reasonable and will provide price stability for a long period of time for natural gas moving in interstate commerce.

With respect to refunds, the various parties to the settlement conferences utilized cost-of-service studies. Their studies revealed that during the first half of 1961, increased sales, and higher initial rates started to equalize Texas Gulf's revenue-cost relationship. In view of that and all the terms of the settlement proposal, it is appropriate that refunds should be computed for sales made on and after July 1, 1961, to the date of issuance of this order, with interest to be paid on the refunds to December 31, 1963. The refunds will be approximately $833,000 exclusive of interest. Texas Gulf's future revenues will be decreased approximately $410,000 per annum as a result of the settlement.

For the reasons set forth in our order in *Hunt Oil Co.*, Docket No. G–9065, *et al.*, Order issued July 16, 1963, 30 FPC 220, we shall condition our approval of this Settlement Proposal to require United Gas Pipe Line Company to retain (without interest obligation) the proportionate share of the refunds it will receive from Texas Gulf and would flow-through to its jurisdictional pipeline customers who may assert that they are not under an obligation to pass on the refunds, and shall require these pipeline customers to submit a report setting forth their intentions with respect to any refunds they may receive and, if they do not intend to pass such sums on to their customers, why they believe they are entitled to retain such funds.

The two exceptions to the applicable area ceilings are proposed by Texas Gulf with respect to two sales made to United Gas Pipe Line Company (United)[1] in the DeLarge Field (Rate Schedule No. 31) and the Dulac Field (Rate Schedule No. 32) which are related to the sale from Bayou Rambio Field (Rate Schedule No. 25). All of the sales are in Terrebonne Parish, South Louisiana. The presently effective rate under each of the Rate Schedules is 22.05¢ per Mcf. The rates under Rate Schedule Nos. 31 and 32 are subject to Section 4(e) proceedings; the rate under Rate Schedule No. 25, an initial rate, is not. Texas Gulf proposes to reduce the effective rate under each of said Rate Schedules to a settlement rate of 17.75¢ per Mcf.

Texas Gulf states in its proposal, that the participants to the negotiations considered the three sales to United as a unit. In support, Texas Gulf states that it entered into two contracts for its DeLarge and Dulac sales to United in 1949 and 1952 respectively. The contracts were for a term of ten years. Thereafter, Texas Gulf discovered substantial new reserves in the adjacent Bayou Rambio Field. After being advised by United that it would enter into twenty-year contracts for its DeLarge and Dulac sales, Texas Gulf, in 1957, entered into a twenty-year contract with United for the Bayou Rambio sale. As a result of the interdependent negotiations, Texas Gulf's reserve commitment to United in these contiguous fields increased from 43 BCF to 240 BCF; the number of leases dedicated under the contracts increased from 5 to 17; and

[1] Representatives of United attended and actively participated in the settlement conferences, excepting for some discussion of an alleged claim Texas Gulf has for deficiencies in takes, not considered relevant to the negotiations.

the dedicated acreage increased from 7,850 to 9,951. Consideration of all of the circumstances surrounding these sales, and the interdependence of the renegotiation of the DeLarge and Dulac sales with the dedication of the Bayou Rambio acreage, causes us to believe them to be similar to others where we have considered such a unique situation to warrant exceptions to the applicable area ceiling, *Gulf Oil Corporation, et al.*, Docket No. G–9520, *et al.*, 29 FPC 837. Therefore, we find the settlement rates for these three sales of 17.75¢ per Mcf to be proper, and approve the same.

The Public Service Commission of the State of New York has filed comments respecting the 16¢ rate under Texas Gulf's Rate Schedule No. 35 for a sale from Texas Railroad Commission District No. 4. The contract for this sale was entered into on March 3, 1963, and was permanently certificated at the guide line price established by the Fifth Amendment to our Statement of General Policy No. 61–1.

The Settlement Proposal includes one rate (Rate Schedule No. 30) for which issuance of a related permanent certificate is pending in Docket No. G–14832 and service is being rendered. Docket No. G–14832 is consolidated in the proceedings in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, wherein the hearings were concluded on July 25, 1963. We shall sever Docket No. G–14832 from the consolidated proceedings, and shall issue Texas Gulf a certificate of public convenience and necessity herein at an initial rate of 10.297¢ per Mcf, the rate which was in effect at the time Texas Gulf filed its certificate application. The settlement rate for this sale is 15.75¢ per Mcf.

The settlement rates approved herein shall be applicable during the moratorium period herein provided for all sales of natural gas from all acreage dedicated as of the date of issuance of this order under each of the rate schedules currently on file with the Commission whether such sales are made by Texas Gulf, its successors or assigns.

We believe the settlement proposal, as herein described, and in other particulars not specifically noted, meets the criteria previously set forth in other of our recent settlement orders and accordingly we find it to be in the public interest and should be approved as hereinafter provided.

Our action herein should not be construed as constituting approval of any future rate increase, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate proceedings, involving Texas Gulf's rates and rate schedules.

The Commission finds:

(1) The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in the settlement proposal filed on December 6, 1963, as herein modified, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that it be conditionally approved and conditionally made effective subject to the modifications hereinafter ordered, and good cause exists for approving the settlement rates, for terminating certain proceedings and providing for refunds.

(2) The sale of natural gas by Texas Gulf, as more fully described in its application, will be made in interstate commerce, subject to the jurisdiction of the Commission and such sale by Texas Gulf together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The sale of natural gas by Texas Gulf together with the construction and operation of any facilities subject to the jurisdiction of the Commission neces-

sary therefor, are required by the public convenience and necessity and a certificate therefor should be issued.

(4) Texas Gulf is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

The Commission orders:

(A) The Settlement of these proceedings on the basis of the Settlement proposal filed December 6, 1963, as herein modified, is approved and made effective subject to the following terms and conditions.

(B) The applicable settlement rates set out in the appendix hereto are approved and such rates shall be effective as of the date of issuance of this order.

(C) Within 90 days from the date of this order, Texas Gulf shall make such filings under its rate schedules as are required to make effective the terms of the Settlement Proposal, as modified herein.

(D) Within 90 days from the date of this order, Texas Gulf shall (1) refund, with interest as specified in each docket computed to December 31, 1963, the difference between the rates collected subject to refund, on and after July 1, 1961, and the related settlement rates to the date of this order; and (2) report to the Commission, in writing, the amount of refunds made to each of its purchasers, showing separately the amount of principal and interest so paid, and the bases used for such determination, together with releases from its purchasers showing receipt of the refunds in conformity with the Settlement Proposal as modified and approved herein.

(E) Within 15 days from date of receipt by it of the refunds herein provided, United Gas Pipe Line Company shall submit a report to the Commission, and serve a copy thereof upon each of its jurisdictional pipeline customers, setting forth a plan for distribution of such refunds to its jurisdictional pipeline customers. The report shall show separately the amount of principal and interest, together with a computation showing the manner in which such distribution was determined. United shall retain the refunds received pursuant to this order, subject to further order of the Commission, provided, however, that United shall not be required to pay interest on such funds.

(F) Texas Gulf shall, over the signature of a responsible officer, file with the Commission, within 30 days from the date of the issuance of this order, an original and one copy of its acceptance or rejection of the terms and conditions of this order applicable to it.

(G) The proceeding in Docket No. G–14832 is hereby severed from the consolidated proceedings in *Union Texas Petroleum, et al.* Docket No. G–13221, *et al.*, Docket Nos. G–9476, G–11536, G–13848, G–17158, G–19910, RI61–223, RI62–75, RI63–143 (except as they pertain to the interest of Pan American Petroleum Corporation) G–14069, G–14112, G–15056, G–17372, G–17373, G–17884, G–17925, RI60–402, RI60–403 and RI62–90 are hereby severed from the consolidated area proceedings in Docket No. AR61–2, *et al.* Docket Nos. G–16177, G–16240, G–19899, RI60–204, RI60–437 and RI63–390 are hereby severed from the consolidated area proceedings in Docket No. AR64–2, *et al.* Docket No. G–17925 is hereby severed from the consolidated proceedings in *Texaco Inc., et al.*, Docket No G–17613, *et al.*

(H) A certificate of public convenience and necessity be and the same is hereby issued in Docket No. G–14832, upon the terms and conditions of this order, authorizing the sale by Texas Gulf of natural gas in interstate commerce for resale together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary for such sale, all as fully described in its application and exhibits thereto.

(I) The certificate granted in paragraph (H) above is not transferable and shall be effective only so long as Texas Gulf continues the acts or operations

hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(J) The grant of the certificate issued in paragraph (H) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or Part 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Texas Gulf. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas purchase contracts herein involved. Nor shall the grant of the certificate aforesaid for service to the particular customer involved imply approval of all of the terms of the respective contracts, particularly as to the cessation of service upon termination of said contracts, as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificate.

(K) Upon full compliance by Texas Gulf with all the terms and provisions of this order applicable to it, the Section 4(e) proceedings listed in the appendix hereto shall terminate, except as to the interest of Pan American Petroleum Corporation in Docket Nos. G–9476, G–11536, G–13848, G–17158, G–19910, RI61–223, RI62–75 and RI63–143.

(L) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Texas Gulf, the Commission Staff, or any affected party hereto, in any proceedings now pending, or hereafter instituted by or against Texas Gulf or any other companies, person or parties affected by this order.

[1] The total settlement rates set out above as applicable to each sale to United Gas Pipe Line Company include a commodity rate and tax reimbursement. The tax reimbursement portion of each such total settlement rate shall be that portion expressed as tax reimbursement in each respective contract, and the remaining balance of such total settlement rate shall be considered as the commodity rate.

[2] Texas Gulf shall eliminate the favored nation, redetermination and periodic clauses from these rate schedules.

[3] Proceedings terminated except for the interest of Pan American Petroleum Corporation.

[4] Settlement rate applicable to the interest of Texas Gulf only.

[5] Settlement rate applicable to the interest of Texas Gulf only. Interest of non-operator, Clegg and Hunt, is depleted and an application to abandon is pending before the Commission.

[6] Reduction is effective rate of 22.05 cents to 17.75 cents as part of unit settlement of Rate Schedule Nos. 31, 32, and 25.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MORRIS MIZEL, ET AL., DOCKET NO. RI63-205

ORDER DENYING APPLICATION FOR REHEARING

(Issued December 31, 1963)

On November 29, 1963, Morris Mizel, *et al.*, filed an application for rehearing of the Commission's Opinion No. 407 and accompanying order issued October 29,

1963, 30 FPC 1103, in the above-entitled matter, in which the Commission determined that the correct rate effective as of June 7, 1954, for the sale of natural gas by the applicants to Elizabeth P. Henderson Trusts No. 2 is 11 cents per Mcf, and that the escalation clause in the applicants' contract with the buyer was not triggered on or prior to June 7, 1954. The petition for rehearing presents nothing which was not fully argued, and carefully considered by the Commission, prior to the aforesaid order of October 1963. After full reconsideration, we adhere to the said order for the reason stated in Opinion No. 407.

The Commission finds:

No new facts or principles of law have been presented by the applicants in their application for rehearing which either were not fully considered by the Commission prior to its order herein or, having now been considered, warrant further hearing, modification, or revocation of said order.

The Commission orders:

The Application for Rehearing herein by Morris Mizel, *et al.*, be and the same hereby is denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NOS. G–13875 AND CP61–190

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 31, 1963)

On October 29, 1963, Northern Natural Gas Company (Applicant) filed in Docket Nos. G–13875 and CP61–190 an application to amend the certificate issued on October 5, 1961, 26 FPC 557, in the above entitled proceeding, as hereinafter described, all as more fully described in the application.

Applicant requests deletion of Ordering Paragraph (D) of said order issued October 5, 1961, which reads: "Northern shall continue to furnish reports heretofore required with respect to Redfield Storage."

Applicant has been making monthly reports in compliance with paragraph (2) of the temporary certificate issued on July 10, 1958, in Docket No. G–13875. The temporary certificate granted Applicant authority to test the Mt. Simon Reservoir and limited the maximum inventory to 8 billion cubic feet of gas. This maximum has been revised or affected by several later amendments and has recently been increased to 70 billion cubic feet.

The record shows that Mt. Simon's proven ability to hold and supply large volumes of gas has made the monthly Redfield reports unnecessary but some reporting should be continued, as provided hereinafter.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and public convenience and necessity require that the aforementioned Ordering Paragraph (D) of the order issued October 5, 1961, in Docket No. G–13875 and CP61–190 be modified as hereinafter ordered.

The Commission orders:

(A) Ordering Paragraph (D) of the Commission's order issued October 5, 1961, in the instant dockets be and the same is hereby modified to read as follows: "Northern shall continue to furnish the reports heretofore required

with respect to Redfield Storage on a semi-annual basis with the first 6-month report period ending April 30, 1964, and with the second and last 6-month report period ending October 31, 1964."

(B) In all other respects, said order issued October 5, 1961, in Docket Nos. G–13875 and CP61–190 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, Harold C. Woodward, and David S. Black.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E–7141

ORDER AUTHORIZING ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued December 31, 1963)

Pacific Power & Light Company (Applicant) incorporated under the laws of the State of Maine and doing business as a qualified foreign corporation in the States of California, Oregon, Washington, Wyoming, Montana, and Idaho, with its principal place of business at Portland, Oregon, filed an application on November 22, 1963, for an order, pursuant to Section 203 of the Federal Power Act, authorizing it to acquire and merge or consolidate with its own facilities certain electric facilities of Columbia Basin Electric Cooperative, Inc. (Columbia Basin), in exchange for certain electric facilities which Applicant will transfer to Columbia Basin.

Applicant is engaged principally in the business of generating, purchasing, transmitting, distributing, and selling electric energy in California, Oregon, Washington, Wyoming, Montana and Idaho. Applicant also supplies water, steam-heating and telephone service in various communities in its service area. Columbia Basin is an electric cooperative operating in Wheeler, Gilliam, Morrow, Sherman and Umatilla Counties, Oregon, with its principal place of business in Heppner, Oregon.

Applicant and Columbia Basin each own facilities for distribution and sale of electric energy in substantially the same geographical areas of Wheeler, Gilliam and Morrow Counties, Oregon. The application states that Applicant and Columbia Basin are of the opinion that the existing duplication of facilities in such areas is contrary to sound electric utility practice and to the interest of their respective customers. In support of this position, the application refers to Chapter 727 of the Revised Statutes of Oregon which provides that the elimination of presently existing duplicate utility facilities and the prevention of the future duplication of facilities is a matter of state-wide concern.

Accordingly, Applicant and Columbia Basin entered into an agreement, dated November 12, 1963, in which a service area boundary line was agreed to and the parties agreed to exchange certain electric facilities to bring their properties within the confines of their respective service areas according to the boundary line.

Pursuant to the agreement, the facilities to be acquired by Applicant from Columbia Basin are located in Sherman, Morrow, and Gilliam Counties, Oregon and consist of approximately 16.6 miles of 69 kv transmission line and a minor portion of the distribution facilities of Columbia Basin, serving generally residential and small commercial customers. They include poles, conductors, transformers, and all appurtenances used in rendering the service affected, together with all other property, real, personal and mixed, related thereto. Approximately 60 customers are served by these facilities and Applicant will continue to operate the facilities acquired in the same manner as heretofore.

The facilities which Applicant will sell and transfer to Columbia Basin will constitute all of the electric facilities owned by Applicant in Morrow and Gilliam Counties, Oregon, south of the service area boundary line and all of the facilities owned by Applicant in Wheeler County, Oregon. These facilities include among others approximately 18 miles of 69 kv and 80 miles of 23 kv transmission lines; about 132 pole miles of distribution lines; five transmission and distribution substations with capacity totaling 16,200 kva; appurtenant facilities used to transform and distribute electric energy and franchises to serve five small towns. The facilities which Applicant will transfer to Columbia Basin serve approximately 2,000 customers. The agreement provides that Columbia Basin will continue to serve these customers at the rates presently charged by the Applicant.

The application indicates that the facilities to be exchanged, have original cost, accumulated provision for depreciation and depreciated original cost as follows:

	Original cost	*Provision for depreciation*	*Depreciated original cost*
(1) Facilities to be purchased by Applicant and sold by Columbia Basin:			
Transmission plant	$80,552	$9,096	$71,456
Distribution plant	155,713	45,875	109,838
Total	236,265	54,971	181,294
(2) Facilities to be sold by Applicant and acquired by Columbia Basin:			
Transmission plant	575,286	123,118	452,168
Distribution plant	1,055,978	191,768	864,210
General plant	7,591	2,320	5,271
Total	1,638,855	317,206	1,321,649

Applicant in consideration for the sale of facilities having a depreciated original cost of $1,321,649 will receive in payment therefore (1) other facilities having a depreciated original cost of $181,294; and (2) cash and a note receivable in the total amount of $1,492,000 and subject to adjustment for any change between March 15, 1963 and the closing date on the book amounts of the facilities involved in the exchange.

The over-all total consideration of $1,673,294 ($181,294 in plant, + $1,492,000 in cash and a note receivable) will result in a gain of $351,645 ($1,673,294 consideration —$1,321,649 depreciated original cost) on the books of Applicant. Applicant proposes to credit the gain to its Unappropriated Earned Surplus Account. Applicant also proposes to debit Unappropriated Earned Surplus with $87,911 and to credit Taxes Accrued with the same amount for the estimated Federal Income Tax Liability on the gain of $351,645. Therefore, the amount of the gain, $351,645, less estimated taxes of $87,911, will result in a net gain of about $263,734.

The consideration in cash and a note receivable in the total amount of $1,492,000 referred to above will be made up of a certified or cashier's check in the amount of $650,000 and a 6% secured promissory note payable not less than $150,000 annually until the entire amount plus interest has been paid.

Written notice of the application has been given to the California Public Utilities Commission, the Public Utility Commissioner of Oregon, the Washington Utilities and Transportation Commission, the Public Service Commission of Wyoming, the Board of Railroad Commissioners of Montana, and the Idaho Public Utilities Commission, and to the Governor of each of those States. Notice of the application has also been given by publication in the Federal Register on

December 13, 1963 (28 F.R. 13520) stating that any person desiring to be heard or to make any protest with reference to the application should on or before December 30, 1963, file with the Federal Power Commission, Washington, D.C., 20426, petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued March 28, 1962, *Pacific Power & Light Company*, Docket No. E-7025, (27 FPC 620).

(2) By the proposed acquisition as described above, Applicant will acquire and merge or consolidate its facilities subject to the jurisdiction of the Commission with facilities of Columbia Basin, another person within the meaning and subject to the requirements of Section 203 of the Act.

(3) By the proposed sale of facilities, Applicant will dispose of a part of its facilities subject to jurisdiction of the Commission within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(4) The proposed acquisition and merger or consolidation of facilities and the proposed sale of facilities, all as described above upon the terms and conditions set forth in the application and subject to the provisions of this order will be consistent with the public interest as expressed in Section 203 of the Federal Power Act for the reasons set forth above.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of the facilities of Columbia Basin with those of its own by Applicant and the proposed sale by Applicant of part of its facilities to Columbia Basin, all as described above are authorized and approved upon the terms and conditions and for the purposes set forth in the application, subject to the provisions of this order.

(B) Applicant shall acccount for the proposed transaction in accordance with the provisions of this Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transactions herein authorized are consummated within 90 days from the issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any other matter whatsoever which is now pending or may come before this Commission, and nothing in this order shall be construed as an acquiescence by this Commission in any estimate or determination of cost of any valuation of properly claimed or asserted.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NO. G-15451

ORDER DENYING MOTION

(Issued December 31, 1963)

On July 22, 1963, the Minneapolis Gas Company (Minneapolis), an intervener in this proceeding,[1] filed a motion requesting that the Commission fix a date

[1] Order issued herein on October 18, 1958.

for hearing of the matters and issues in this proceeding. The proceeding concerns the justness and reasonableness of proposed increased rates being charged Northern Natural Gas Company (Northern) by Socony-Mobil Oil Company, Inc. (Socony) for natural gas sold and delivered by Socony to Northern in the Hugoton Field of Kansas, under two of its FPC Gas Rate Schedules.[2] Northern is the sole supplier of natural gas to Minneapolis.

The proposed increased rates were tendered for filing on June 19, 1958 by Republic Natural Gas Company (Republic), and were suspended by Commission order issued July 18, 1958. By order of March 9, 1959, the proposed increased rates became effective, subject to refund, as of December 20, 1958. By order issued October 22, 1962, in Docket No. G–7637, *et al.*, Socony succeeded to the rate schedules of Republic involved herein, was substituted as respondent, and assumed the duties and obligations under undertakings theretofore filed by Republic, as of December 28, 1961.

In its motion, Minneapolis states that no hearing date has been fixed by the Commission to determine the justness and reasonableness of the increased rates, which Socony continues to charge Northern under the rate schedules involved herein. Minneapolis states that the presently effective rates exceed the applicable area ceiling fixed by the Statement of General Policy No. 61–1, on September 28, 1960, and it avers that the actual cost of producing gas from Socony's wells in the Kansas Hugoton ". . . is less than the area price . . .".

As we stated in the *Phillips* decision[3] and the *Statement of General Policy No. 61–1*, it is our intention to establish just and reasonable rates for sales by independent producers on an area basis. We have recently instituted an area rate proceeding (Docket No. AR64–1) which will determine the just and reasonable rate for the sales by Socony and by other producers in the area. Unlike the situations involved in those producer cases that we have set for individual hearing[4] subsequent to the *Phillips* decision, there are no exceptional circumstances presented here which would warrant similar action in this proceeding. We therefore conclude that determination of the just and reasonable rate for this sale by Socony should be made in the area rate proceeding.

The Commission finds:

For the reasons set forth above, the motion of the Minneapolis Gas Company should be denied.

The Commission orders:

The motion filed by the Minneapolis Gas Company for an order fixing date of hearing herein is denied.

Commissioner Ross *not participating.*

FORM L-3*

(REVISED NOVEMBER 1, 1963)

TERMS AND CONDITIONS OF LICENSE FOR CONSTRUCTED PROJECT AFFECTING NAVIGABLE WATERS OF THE UNITED STATES

Article 1. The entire project, as described in the order of the Commission, shall be subject to all the provisions, terms, and conditions of the license.

Article 2. No substantial change shall be made in the maps, plans, and statements described and designated as exhibits and approved by the Commission in its order as part of the license, until such change shall have been approved by the Commission: *Provided, however,* that if the Licensee or the Commission deems it necessary or desirable that said approved exhibits, or any of them, be changed, there shall be submitted to the Commission for approval amended, supplemental, or additional exhibit or exhibits covering the proposed change which, upon approval by the Commission, shall become a part of the license and shall supersede, in whole or in part, such exhibit or exhibits theretofore made a part of the license as may be specified by the Commission.

Article 3. The project area and project works shall be in conformity with the approved exhibits referred to in Article 2 hereof. If the Licensee shall contemplate any substantial alteration in or addition to the project works, the Licensee shall submit to the Commission for approval amended, supplemental, or additional exhibits as provided in Article 2 hereof to show and describe such alteration or addition, together with the statement in writing setting forth the reasons which necessitate or justify such alteration or addition. Except when emergency shall require for the protection of life, health, or property, no substantial alteration or addition not in conformity with the approved exhibits shall be made to any dam or other project works under the license without the prior approval of the Commission; and any emergency alteration or addition so made shall thereafter be subject to such modification and change as the Commission may direct.

Article 4. The project, including its operation and maintenance and any work incident to additions or alterations, shall be subject to the inspection and supervision of the Regional Engineer, Federal Power Commission, in the region wherein the project is located, or of such other officer or agent as the Commission may designate, who shall be the authorized representative of the Commission for such purposes. The Licensee shall furnish to said representative such information as he may require concerning the operation and maintenance of the project, and of any alteration thereof, and shall notify him of the date upon which work with respect to any alteration will begin, and as far in advance thereof as said representative may reasonably specify, and shall notify him promptly in writing of any suspension of work for a period of more than one week, and of its resumption and completion. The Licensee shall allow him and other officers or employees of the United States, showing proper credentials, free and unrestricted access to, through, and across the project lands and project works in the performance of their official duties.

Article 5. Insofar as any material is dredged or excavated in the prosecution of any work authorized under the license, or in the maintenance of the project, such material shall be removed and deposited so it will not interfere with naviga-

*Inadvertently omitted from publication with Opinion No. 411 (30 FPC 1338) and accompanying Order (30 FPC 1346) issued November 21, 1963.

tion, and will be to the satisfaction of the District Engineer, Department of the Army, in charge of the locality.

Article 6. The United States specifically retains and safeguards the right to use water in such amount, to be determined by the Secretary of the Army, as may be necessary for the purposes of navigation on the navigable waterway affected; and the operations of the Licensee, so far as they affect the use, storage and discharge from storage of waters affected by the license, shall at all times be controlled by such reasonable rules and regulations as the Secretary of the Army may prescribe in the interest of navigation, and as the Commission may prescribe for the protection of life, health, and property, and in the interest of the fullest practicable conservation and utilization of such waters for power purposes and for other beneficial public uses, including recreational purposes; and the Licensee shall release water from the project reservoir at such rate in cubic feet per second, or such volume in acre-feet per specified period of time, as the Secretary of the Army may prescribe in the interest of navigation, or as the Commission may prescribe for the other purposes hereinbefore mentioned.

Article 7. Whenever the United States shall desire to construct, complete, or improve navigation facilities in connection with the project, the Licensee shall convey to the United States, free of cost, such of its lands and its rights-of-way and such right of passage through its dams or other structures, and permit such control of pools as may be required to complete and maintain such navigation facilities.

Article 8. The Licensee shall furnish free of cost to the United States power for the operation and maintenance of navigation facilities at the voltage and frequency required by such facilities and at a point adjacent thereto whether said facilities are constructed by the Licensee or by the United States.

Article 9. The operation of any navigation facilities which may be constructed as a part of or in connection with any dam or diversion structure constituting a part of the project works shall at all times be controlled by such reasonable rules and regulations in the interest of navigation, including the control of the level of the pool caused by such dam or diversion structure, as may be made from time to time by the Secretary of the Army.

Article 10. The Licensee shall for the protection of navigation, construct, maintain and operate at its own expense such lights and other signals on fixed structures in or over navigable waters of the United States as may be directed by the Secretary of the Department in which the Coast Guard is operating.

Article 11. The actual legitimate original cost, estimated where not known, and the accrued depreciation of the project as of the effective date of the license shall be determined by the Commission in accordance with the Act and the rules and regulations of the Commission, and such cost less such accrued depreciation, so determined, shall be the net investment in the project as of such effective date.

Article 12. After the first twenty (20) years of operation of the project under the license, six (6) percent per annum shall be the specified rate of return on the net investment in the project for determining surplus earnings of the project for the establishment and maintenance of amortization reserves, pursuant to Section 10(d) of the Act; one-half of the project surplus earnings, if any, accumulated after the first twenty years of operation under the license, in excess of six (6) percent per annum on the net investment, shall be set aside in a project amortization reserve account as of the end of each fiscal year, provided that, if and to the extent that there is a deficiency of project earnings below six (6) percent per annum for any fiscal year or years after the first twenty years of operation under the license, the amount of such deficiency shall be deducted from the amount of any surplus earnings accumulated thereafter

until absorbed, and one-half of the remaining surplus earnings, if any, thus cumulatively computed, shall be set aside in the project amortization reserve account; and the amounts thus established in the project amortization reserve account shall be maintained therein until further order of the Commission.

Article 13. The Licensee shall install additional capacity or make other changes in the project as directed by the Commission, to the extent that it is economically sound and in the public interest to do so, after notice and opportunity for hearing.

Article 14. The Licensee shall, after notice and opportunity for hearing, coordinate the operation of the project, electrically and hydraulically, with such other power systems and in such manner as the Commission may direct in the interest of power and other beneficial public uses of water resources, and on such conditions concerning the equitable sharing of benefits by the Licensee as the Commission may order.

Article 15. The Licensee shall, for the conservation, and development of fish and wildlife resources, construct, maintain, and operate, or arrange for the construction, maintenance and operation of such facilities and comply with such reasonable modifications of the project structures and operation as may be ordered by the Commission upon its own motion or upon the recommendation of the Secretary of the Interior or the fish and wildlife agency or agencies of any State in which the project or a part thereof is located, after notice and opportunity for hearing and upon findings based on substantial evidence that such facilities and modifications are necessary and desirable, reasonably consistent with the primary purpose of the project, and consistent with the provisions of the Act.

Article 16. Whenever the United States shall desire, in connection with the project, to construct fish and wildlife facilities or to improve the existing fish and wildlife facilities at its own expense, the Licensee shall permit the United States or its designated agency to use, free of cost, such of Licensee's lands and interest in lands, reservoirs, waterways and project works as may be reasonably required to complete such facilities or such improvements thereof. In addition, after notice and opportunity for hearing, the Licensee shall modify the project operation as may be prescribed by the Commission, reasonably consistent with the primary purpose of the project, in order to permit the maintenance and operation of the fish and wildlife facilities constructed or improved by the United States under the provisions of this article. This article shall not be interpreted to place any obligation on the United States to construct or improve fish and wildlife facilities or to relieve the Licensee of any obligation under this license.

Article 17. The Licensee shall construct, maintain and operate or shall arrange for the construction, maintenance and operation of such recreational facilities including modifications thereto, such as access roads, wharves, launching ramps, beaches, picnic and camping areas, sanitary facilities and utilities, as may be prescribed hereafter by the Commission during the term of this license upon its own motion or upon the recommendation of the Secretary of the Interior or other interested Federal and State agencies, after notice and opportunity for hearing and upon findings based upon substantial evidence that such facilities are necessary and desirable, and reasonably consistent with the primary purpose of the project.

Article 18. So far as is consistent with proper operation of the project, the Licensee shall allow the public free access, to a reasonable extent, to project waters and adjacent project lands owned by the Licensee for the purpose of full public utilization of such lands and waters for navigation and recreational purposes, including fishing and hunting, and shall allow to a

reasonable extent for such purposes the construction of access roads, wharves, landings, and other facilities on its lands the occupancy of which may in appropriate circumstances be subject to payment of rent to the Licensee in a reasonable amount: *Provided*, that the Licensee may reserve from public access, such portions of the project waters, adjacent lands, and project facilities as may be necessary for the protection of life, health, and property and *Provided further*, that the Licensee's consent to the construction of access roads, wharves, landings, and other facilities shall not, without its express agreement, place upon the Licensee any obligation to construct or maintain such facilities. These facilities are in addition to the facilities that the Licensee may construct and maintain as required by the license.

Article 19. The Licensee shall be responsible for and shall minimize soil erosion and siltation on lands adjacent to the stream resulting from construction and operation of the project. The Commission upon request, or upon its own motion, may order the Licensee to construct and maintain such preventive works to accomplish this purpose and to revegetate exposed soil surface as the Commission may find to be necessary after notice and opportunity for hearing.

Article 20. No lease of the project or any part thereof whereby the lessee is granted the occupancy, possession, or use of the project, or any part thereof, shall be made without prior written approval of the Commission; and the Commission may, if in its judgment the situation warrants, require that all the conditions of the license, of the Act, and of the rules and regulations of the Commission shall be applicable to such property so leased to the same extent as if the lessee were the Licensee: *Provided*, that the provisions of this article shall not apply to leases of land or buildings or other property while not required to achieve the purposes of the license.

Article 21. The Licensee, its successors and assigns shall, during the period of the license, retain the possession of all project property covered by the license as issued or as later amended, including the project area, the project works, and all franchises, easements, water rights, and rights of occupancy and use; and none of such properties necessary or useful to the project and to the development, transmission, and distribution of power therefrom will be voluntarily sold, transferred, abandoned, or otherwise disposed of without the approval of the Commission: *Provided*, that a mortgage or trust deed or judicial sales made thereunder, or tax sales, shall not be deemed voluntary transfers within the meaning of this article. In the event the project is taken over by the United States upon the termination of the license, as provided in Section 14 of the Act, or is transferred to a new license under the provisions of Section 15 of the Act, the Licensee, its successors and assigns will be responsible for and will make good any defect of title to or of right of user in any of such project property which is necessary or appropriate or valuable and serviceable in the maintenance and operation of the project, and will pay and discharge, or will assume responsibility for payment and discharge, of all liens or incumbrances upon the project or project property created by the Licensee or created or incurred after the issuance of the license: *Provided*, that the provisions of this article are not intended to prevent the abandonment or the retirement from service of structures, equipment, or other project works in connection with replacements thereof when they become obsolete, inadequate, or inefficient for further service due to wear and tear, or to require the Licensee, for the purpose of transferring the project to the United States or to a new Licensee, to acquire any different title to or right of user in any of such subject property than was necessary to acquire for its own purposes as Licensee.

Article 22. For the purpose of determining the stage and flow of the stream or streams from which water is diverted for the operation of the project works, the amount of water held in and withdrawn from storage, and the effective head on the turbines, the Licensee shall install and thereafter maintain such gages and stream-gaging stations as the Commission may deem necessary and best adapted to the requirements; and shall provide for the required readings of such gages and for the adequate rating of such stations. The Licensee shall also install and maintain standard meters adequate for the determination of the amount of electric energy generated by said project works. The number, character, and location of gages, meters, or other measuring devices, and the method of operation thereof, shall at all times be satisfactory to the Commission and may be altered from time to time if necessary to secure adequate determinations, but such alteration shall not be made except with the approval of the Commission or upon the specific direction of the Commission. The installation of gages, the ratings of said stream or streams, and the determination of the flow thereof, shall be under the supervision of, or in cooperation with, the District Engineer of the United States Geological Survey having charge of stream-gaging operations in the region of said project, and the Licensee shall advance to the United States Geological Survey the amount of funds estimated to be necessary for such supervision or cooperation for such periods as may be mutually agreed upon. The Licensee shall keep accurate and sufficient record of the foregoing determinations to the satisfaction of the Commission, and shall make return of such records annually at such time and in such form as the Commission may prescribe.

Article 23. In the maintenance of the project works, the Licensee shall place and maintain suitable structures and devices to reduce to a reasonable degree the liability of contact between its transmission lines and telegraph, telephone, and other signal wires or power transmission lines constructed prior to its transmission lines and not owned by the Licensee, and shall also place and maintain suitable structures and devices to reduce to a reasonable degree the liability of any structures or wires falling and obstructing traffic and endangering life on highways, streets, or railroads.

Article 24. If the Licensee shall cause or suffer essential project property to be removed or destroyed or to become unfit for use, without replacement, or shall abandon or discontinue good faith operation of the project for a period of 3 years, or refuse or neglect to comply with the terms of the license and the lawful orders of the Commission mailed to the record address to the Licensee or its agent, the Commission will deem it to be the intent of the Licensee to surrender the license, and not less than 90 days after public notice may in its discretion terminate the license.

Article 25. Upon abandonment of the project the Licensee shall remove all buildings, equipment and power lines from lands of the United States and restore said lands to a condition satisfactory to agency having jurisdiction over the lands and shall fulfill such other obligations under the license as the Commission may prescribe.

Article 26. The right of the Licensee and of its transferees and successors to use or occupy navigable waters of the United States under the license for the purpose of maintaining the project works or otherwise, shall absolutely cease at the end of the license period, unless a new license is issued pursuant to the then existing laws and regulations.

Article 27. The terms and conditions expressly set forth in the license shall not be construed as impairing any terms and conditions of the Federal Power Act which are not expressly set forth herein.

APPLICATIONS OF PRODUCERS OF NATURAL GAS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY DISPOSED OF DURING THE PERIOD OF JULY 1, 1963 THROUGH DECEMBER 31, 1963; SERVICE BEGINNING SUBSEQUENT TO JUNE 7, 1954.
